There was a green light in the east that grew stronger, and the stars after their magnitudes were dissolving in the blue; only a few remained faintly visible. The sound of birds increased. Through the trees he saw towering up a great mauve thing like the back of a monster,--but that was nonsense, it was the crest of a steep hillside covered with woods of teak.

He stood up and stretched himself, and wondered whether he had dreamed of a tiger.

He tried to remember and retrace the course of his over-night wanderings.

A flight of emerald parakeets tore screaming through the trees, and then far away uphill he heard the creaking of a cart.

He followed the hint of a footmark, and went back up the glen slowly and thoughtfully.

Presently he came to a familiar place, a group of trees, a sheet of water, and the ruins of an old embankment. It was the ancient tank

of his overnight encounter. The pool of his dream?

With doubt still in his mind, he walked round its margin to the sandy level beyond, and cast about and sought intently, and at last found, and then found clearly, imposed upon the tracks of several sorts of deer and the footprints of many biggish birds, first the great spoor of the tiger and then his own. Here the beast had halted, and here it had leapt aside. Here his own footmarks stopped. Here his heels had come together.

It had been no dream.

There was a white mist upon the water of the old tank like the bloom upon a plum, and the trees about it seemed smaller and the sand-space wider and rougher than they had seemed in the moonshine. Then the ground had looked like a floor of frosted silver.

And thence he went on upward through the fresh morning, until just as the east grew red with sunrise, he reached the cart-track from which he had strayed overnight. It was, he found, a longer way back to the camp than he remembered it to be. Perhaps he had struck the path further along. It curved about and went up and down and crossed three ravines. At last he came to that trampled place of littered white blossom under great trees where he had seen the bears.

The sunlight went before him in a sheaf of golden spears, and his shadow, that was at first limitless, crept towards his feet. The dew had gone from the dead grass and the sand was hot to his dry boots before he came back into the open space about the great banyan and the tents. And Kepple, refreshed by a night's rest and coffee, was wondering loudly where the devil he had gone.

THE STORY

CHAPTER THE FIRST

THE BOY GROWS UP

1

Benham was the son of a schoolmaster. His father was assistant first at Cheltenham, and subsequently at Minchinghampton, and then he became head and later on sole proprietor of Martindale House, a high-class preparatory school at Seagate. He was extremely successful for some years, as success goes in the scholastic profession, and then disaster overtook him in the shape of a divorce. His wife, William Porphyry's mother, made the acquaintance of a rich young man named Nolan, who was recuperating at Seagate from the sequelae of snake-bite, malaria, and a gun accident in Brazil. She ran away with him, and she was divorced. She was, however, unable to marry him because he died at Wiesbaden only three days after the Reverend Harold Benham obtained his decree absolute. Instead, therefore, being a woman of great spirit, enterprise and sweetness, she married Godfrey Marayne, afterwards Sir Godfrey Marayne, the great London surgeon.

Nolan was a dark, rather melancholy and sentimental young man, and he left about a third of his very large fortune entirely to Mrs. Benham and the rest to her in trust for her son, whom he deemed himself to have injured. With this and a husband already distinguished, she returned presently to London, and was on the whole fairly well received there.

It was upon the reverend gentleman at Seagate that the brunt of this divorce fell. There is perhaps a certain injustice in the fact that a schoolmaster who has lost his wife should also lose the more valuable proportion of his pupils, but the tone of thought in England is against any association of a schoolmaster with matrimonial irregularity. And also Mr. Benham remarried. It would certainly have been better for him if he could have produced a sister. His school declined and his efforts to resuscitate it only hastened its decay. Conceiving that he could now only appeal to the broader-minded, more progressive type of parent, he became an educational reformer, and wrote upon modernizing the curriculum with increasing frequency to the TIMES. He expended a considerable fraction of his dwindling capital upon a science laboratory and a fives court; he added a London Bachelor of Science with a Teaching Diploma to the school staff, and a library of about a thousand volumes, including the Hundred Best Books as selected by the late Lord Avebury, to the school equipment. None of these things did anything but enhance the suspicion of laxity his wife's escapade had created in the limited opulent and discreet class to which his establishment appealed. One boy who, under the influence of the Hundred Best Books, had quoted the ZEND-AVESTA to an irascible but influential grandfather, was withdrawn without notice or compensation in the middle of the term. It intensifies the tragedy of the Reverend Harold Benham's failure that in no essential respect did his school depart from the pattern of all other properly-conducted preparatory schools.

In appearance he was near the average of scholastic English gentlemen. He displayed a manifest handsomeness somewhat weakened by disregard and disuse, a large moustache and a narrow high forehead. His rather tired brown eyes were magnified by glasses. He was an active man in unimportant things, with a love for the phrase "ship-shape," and he played cricket better than any one else on the staff. He walked in wide strides, and would sometimes use the tail of his gown on the blackboard. Like so many clergymen and

schoolmasters, he had early distrusted his natural impulse in conversation, and had adopted the defensive precaution of a rather formal and sonorous speech, which habit had made a part of him. His general effect was of one who is earnestly keeping up things that might otherwise give way, keeping them up by act and voice, keeping up an atmosphere of vigour and success in a school that was only too manifestly attenuated, keeping up a pretentious economy of administration in a school that must not be too manifestly impoverished, keeping up a claim to be in the scientific van and rather a flutterer of dovecots--with its method of manual training for example--keeping up ESPRIT DE CORPS and the manliness of himself

and every one about him, keeping up his affection for his faithful second wife and his complete forgetfulness of and indifference to that spirit of distracting impulse and insubordination away there in London, who had once been his delight and insurmountable difficulty. "After my visits to her," wrote Benham, "he would show by a hundred little expressions and poses and acts how intensely he wasn't noting that anything of the sort had occurred."

But one thing that from the outset the father seemed to have failed to keep up thoroughly was his intention to mould and dominate his son.

The advent of his boy had been a tremendous event in the reverend gentleman's life. It is not improbable that his disposition to monopolize the pride of this event contributed to the ultimate disruption of his family. It left so few initiatives within the home to his wife. He had been an early victim to that wave of philoprogenitive and educational enthusiasm which distinguished the closing decade of the nineteenth century. He was full of plans in those days for the education of his boy, and the thought of the youngster played a large part in the series of complicated emotional crises with which he celebrated the departure of his wife, crises in which a number of old school and college friends very generously

assisted--spending weekends at Seagate for this purpose, and mingling tobacco, impassioned handclasps and suchlike consolation with much patient sympathetic listening to his carefully balanced analysis of his feelings. He declared that his son was now his one living purpose in life, and he sketched out a scheme of moral and intellectual training that he subsequently embodied in five very stimulating and intimate articles for the SCHOOL WORLD, but never put into more than partial operation.

"I have read my father's articles upon this subject," wrote Benham, "and I am still perplexed to measure just what I owe to him. Did he ever attempt this moral training he contemplated so freely? I don't think he did. I know now, I knew then, that he had something in his mind. . . . There were one or two special walks we had together, he invited me to accompany him with a certain portentousness, and we would go out pregnantly making superficial remarks about the school cricket and return, discussing botany, with nothing said.

"His heart failed him.

"Once or twice, too, he seemed to be reaching out at me from the school pulpit.

"I think that my father did manage to convey to me his belief that there were these fine things, honour, high aims, nobilities. If I did not get this belief from him then I do not know how I got it. But it was as if he hinted at a treasure that had got very dusty in an attic, a treasure which he hadn't himself been able to spend. . . ."

The father who had intended to mould his son ended by watching him grow, not always with sympathy or understanding. He was an overworked man assailed by many futile anxieties. One sees him striding about the establishment with his gown streaming out behind him urging on the groundsman or the gardener, or dignified, expounding the particular advantages of Seagate to enquiring

parents, one sees him unnaturally cheerful and facetious at the midday dinner table, one imagines him keeping up high aspirations in a rather too hastily scribbled sermon in the school pulpit, or keeping up an enthusiasm for beautiful language in a badly-prepared lesson on Virgil, or expressing unreal indignation and unjustifiably exalted sentiments to evil doers, and one realizes his disadvantage against the quiet youngster whose retentive memory was storing up all these impressions for an ultimate judgment, and one understands, too, a certain relief that mingled with his undeniable emotion when at last the time came for young Benham, "the one living purpose" of his life, to be off to Minchinghampton and the next step in the mysterious ascent of the English educational system.

Three times at least, and with an increased interval, the father wrote fine fatherly letters that would have stood the test of publication. Then his communications became comparatively hurried and matter-of-fact. His boy's return home for the holidays was always rather a stirring time for his private feelings, but he became more and more inexpressive. He would sometimes lay a hand on those growing shoulders and then withdraw it. They felt braced-up shoulders, stiffly inflexible or--they would wince. And when one has let the habit of indefinite feelings grow upon one, what is there left to say? If one did say anything one might be asked questions. . . .

One or two of the long vacations they spent abroad together. The last of these occasions followed Benham's convalescence at Montana and his struggle with the Bisse; the two went to Zermatt and did several peaks and crossed the Theodule, and it was clear that their joint expeditions were a strain upon both of them. The father thought the son reckless, unskilful, and impatient; the son found the father's insistence upon guides, ropes, precautions, the recognized way, the highest point and back again before you get a chill, and talk about it sagely but very, very modestly over pipes, tiresome. He wanted to wander in deserts of ice and see over the

mountains, and discover what it is to be benighted on a precipice. And gradually he was becoming familiar with his father's repertory of Greek quotations. There was no breach between them, but each knew that holiday was the last they would ever spend together. . . .

The court had given the custody of young William Porphyry into his father's hands, but by a generous concession it was arranged that his mother should have him to see her for an hour or so five times a year. The Nolan legacy, however, coming upon the top of this, introduced a peculiar complication that provided much work for tactful intermediaries, and gave great and increasing scope for painful delicacies on the part of Mr. Benham as the boy grew up.

"I see," said the father over his study pipe and with his glasses fixed on remote distances above the head of the current sympathizer, "I see more and more clearly that the tale of my sacrifices is not yet at an end. . . . In many respects he is like her. . . . Quick. Too quick. . . . He must choose. But I know his choice. Yes, yes,--I'm not blind. She's worked upon him. . . . I have done what I could to bring out the manhood in him. Perhaps it will bear the strain. . . . It will be a wrench, old man--God knows."

He did his very best to make it a wrench.

2

Benham's mother, whom he saw quarterly and also on the first of May, because it was her birthday, touched and coloured his imagination far more than his father did. She was now Lady Marayne, and a prominent, successful, and happy little lady. Her dereliction had been forgiven quite soon, and whatever whisper of it remained was very completely forgotten during the brief period of moral

kindliness which followed the accession of King Edward the Seventh. It no doubt contributed to her social reinstatement that her former husband was entirely devoid of social importance, while, on the other hand, Sir Godfrey Marayne's temporary monopoly of the caecal operation which became so fashionable in the last decade of Queen Victoria's reign as to be practically epidemic, created a strong feeling in her favour.

She was blue-eyed and very delicately complexioned, quick-moving, witty, given to little storms of clean enthusiasm; she loved handsome things, brave things, successful things, and the respect and affection of all the world. She did quite what she liked upon impulse, and nobody ever thought ill of her.

Her family were the Mantons of Blent, quite good west-country people. She had broken away from them before she was twenty to marry Benham, whom she had idealized at a tennis party. He had talked of his work and she had seen it in a flash, the noblest work in the world, him at his daily divine toil and herself a Madonna surrounded by a troupe of Blessed Boys--all of good family, some of quite the best. For a time she had kept it up even more than he had, and then Nolan had distracted her with a realization of the heroism that goes to the ends of the earth. She became sick with desire for the forests of Brazil, and the Pacific, and--a peak in Darien. Immediately the school was frowsty beyond endurance, and for the first time she let herself perceive how dreadfully a gentleman and a scholar can smell of pipes and tobacco. Only one course lay open to a woman of spirit. . . .

For a year she did indeed live like a woman of spirit, and it was at Nolan's bedside that Marayne was first moved to admiration. She was plucky. All men love a plucky woman.

Sir Godfrey Marayne smelt a good deal of antiseptic soap, but he talked in a way that amused her, and he trusted as well as adored

her. She did what she liked with his money, her own money, and her son's trust money, and she did very well. From the earliest Benham's visits were to a gracious presence amidst wealthy surroundings. The transit from the moral blamelessness of Seagate had an entirely misleading effect of ascent.

Their earlier encounters became rather misty in his memory; they occurred at various hotels in Seagate. Afterwards he would go, first taken by a governess, and later going alone, to Charing Cross, where he would be met, in earlier times by a maid and afterwards by a deferential manservant who called him "Sir," and conveyed, sometimes in a hansom cab and later in a smart brougham, by Trafalgar Square, Lower Regent Street, Piccadilly, and streets of increasing wealth and sublimity to Sir Godfrey's house in Desborough Street. Very naturally he fell into thinking of these discreet and well-governed West End streets as a part of his mother's atmosphere.

The house had a dignified portico, and always before he had got down to the pavement the door opened agreeably and a second respectful manservant stood ready. Then came the large hall, with its noiseless carpets and great Chinese jars, its lacquered cabinets and the wide staircase, and floating down the wide staircase, impatient to greet him, light and shining as a flower petal, sweet and welcoming, radiating a joyfulness as cool and clear as a dewy morning, came his mother. "WELL, little man, my son," she would cry in her happy singing voice, "WELL?"

So he thought she must always be, but indeed these meetings meant very much to her, she dressed for them and staged them, she perceived the bright advantages of her rarity and she was quite determined to have her son when the time came to possess him. She kissed him but not oppressively, she caressed him cleverly; it was only on these rare occasions that he was ever kissed or caressed, and she talked to his shy boyishness until it felt a more spirited variety of manhood. "What have you been doing?" she asked, "since I

saw you last."

She never said he had grown, but she told him he looked tall; and though the tea was a marvellous display it was never an obtrusive tea, it wasn't poked at a fellow; a various plenty flowed well within reach of one's arm, like an agreeable accompaniment to their conversation.

"What have you done? All sorts of brave things? Do you swim now? I can swim. Oh! I can swim half a mile. Some day we will swim races together. Why not? And you ride? . . ."

"The horse bolted--and you stuck on? Did you squeak? I stick on, but I HAVE to squeak. But you--of course, No! you mustn't. I'm just a little woman. And I ride big horses. . . ."

And for the end she had invented a characteristic little ceremony.

She would stand up in front of him and put her hands on his shoulders and look into his face.

"Clean eyes?" she would say. "--still?"

Then she would take his ears in her little firm hands and kiss very methodically his eyes and his forehead and his cheeks and at last his lips. Her own eyes would suddenly brim bright with tears.

"GO," she would say.

That was the end.

It seemed to Benham as though he was being let down out of a sunlit fairyland to this grey world again.

The contrast between Lady Marayne's pretty amenities and the good woman at Seagate who urged herself almost hourly to forget that William Porphyry was not her own son, was entirely unfair. The second Mrs. Benham's conscientious spirit and a certain handsome ability about her fitted her far more than her predecessor for the onerous duties of a schoolmaster's wife, but whatever natural buoyancy she possessed was outweighed by an irrepressible conviction derived from an episcopal grandparent that the remarriage of divorced persons is sinful, and by a secret but well-founded doubt whether her husband loved her with a truly romantic passion. She might perhaps have borne either of these troubles singly, but the two crushed her spirit.

Her temperament was not one that goes out to meet happiness. She had reluctant affections and suspected rather than welcomed the facility of other people's. Her susceptibility to disagreeable impressions was however very ample, and life was fenced about with protections for her "feelings." It filled young Benham with inexpressible indignations that his sweet own mother, so gay, so brightly cheerful that even her tears were stars, was never to be mentioned in his stepmother's presence, and it was not until he had fully come to years of reflection that he began to realize with what honesty, kindness and patience this naturally not very happy lady had nursed, protected, mended for and generally mothered him.

As Benham grew to look manly and bear himself with pride, his

mother's affection for him blossomed into a passion. She made him come down to London from Cambridge as often as she could; she went about with him; she made him squire her to theatres and take her out to dinners and sup with her at the Carlton, and in the summer she had him with her at Chexington Manor, the Hertfordshire house Sir Godfrey had given her. And always when they parted she looked into his eyes to see if they were still clean--whatever she meant by that--and she kissed his forehead and cheeks and eyes and lips. She began to make schemes for his career, she contrived introductions she judged would be useful to him later.

Everybody found the relationship charming. Some of the more conscientious people, it is true, pretended to think that the Reverend Harold Benham was a first husband and long since dead, but that was all. As a matter of fact, in his increasingly futile way he wasn't, either at Seagate or in the Educational Supplement of the TIMES. But even the most conscientious of us are not obliged to go to Seagate or read the Educational Supplement of the TIMES.

Lady Marayne's plans for her son's future varied very pleasantly. She was an industrious reader of biographies, and more particularly of the large fair biographies of the recently contemporary; they mentioned people she knew, they recalled scenes, each sowed its imaginative crop upon her mind, a crop that flourished and flowered until a newer growth came to oust it. She saw her son a diplomat, a prancing pro-consul, an empire builder, a trusted friend of the august, the bold leader of new movements, the saviour of ancient institutions, the youngest, brightest, modernest of prime ministers--or a tremendously popular poet. As a rule she saw him unmarried--with a wonderful little mother at his elbow. Sometimes in romantic flashes he was adored by German princesses or eloped with Russian grand-duchesses! But such fancies were HORS D'OEUVRE. The modern biography deals with the career. Every project was bright, every project had GO--tremendous go. And they all demanded a hero, debonnaire and balanced. And Benham, as she began to perceive,

wasn't balanced. Something of his father had crept into him, a touch of moral stiffness. She knew the flavour of that so well. It was a stumbling, an elaboration, a spoil-sport and weakness. She tried not to admit to herself that even in the faintest degree it was there. But it was there.

"Tell me all that you are doing NOW," she said to him one afternoon when she had got him to herself during his first visit to Chexington Manor. "How do you like Cambridge? Are you making friends? Have you joined that thing--the Union, is it?--and delivered your maiden speech? If you're for politics, Poff, that's your game. Have you begun it?"

She lay among splashes of sunshine on the red cushions in the punt, a little curled-up figure of white, with her sweet pale animated face warmed by the reflection of her red sunshade, and her eyes like little friendly heavens. And he, lean, and unconsciously graceful, sat at her feet and admired her beyond measure, and rejoiced that now at last they were going to be ever so much together, and doubted if it would be possible ever to love any other woman so much as he did her.

He tried to tell her of Cambridge and his friends and the undergraduate life he was leading, but he found it difficult. All sorts of things that seemed right and good at Trinity seemed out of drawing in the peculiar atmosphere she created about her. All sorts of clumsiness and youthfulness in himself and his associates he felt she wouldn't accept, couldn't accept, that it would be wrong of her to accept. Before they could come before her they must wear a bravery. He couldn't, for instance, tell her how Billy Prothero, renouncing vanity and all social pretension, had worn a straw hat into November and the last stages of decay, and how it had been burnt by a special commission ceremonially in the great court. He couldn't convey to her the long sessions of beer and tobacco and high thinking that went on in Prothero's rooms into the small hours.

A certain Gothic greyness and flatness and muddiness through which the Cambridge spirit struggles to its destiny, he concealed from her. What remained to tell was--attenuated. He could not romance. So she tried to fill in his jejune outlines. She tried to inspire a son who seemed most unaccountably up to nothing.

"You must make good friends," she said. "Isn't young Lord Breeze at your college? His mother the other day told me he was. And Sir Freddy Quenton's boy. And there are both the young Baptons at Cambridge."

He knew one of the Baptons.

"Poff," she said suddenly, "has it ever occurred to you what you are going to do afterwards. Do you know you are going to be quite well off?"

Benham looked up with a faint embarrassment. "My father said something. He was rather vague. It wasn't his affair--that kind of thing."

"You will be quite well off," she repeated, without any complicating particulars. "You will be so well off that it will be possible for you to do anything almost that you like in the world. Nothing will tie you. Nothing. . . ."

"But--HOW well off?"

"You will have several thousands a year."

"Thousands?"

"Yes. Why not?"

"But--Mother, this is rather astounding. . . . Does this mean there

are estates somewhere, responsibilities?"

"It is just money. Investments."

"You know, I've imagined--. I've thought always I should have to DO something."

"You MUST do something, Poff. But it needn't be for a living. The world is yours without that. And so you see you've got to make plans. You've got to know the sort of people who'll have things in their hands. You've got to keep out of--holes and corners. You've got to think of Parliament and abroad. There's the army, there's diplomacy. There's the Empire. You can be a Cecil Rhodes if you like. You can be a Winston. . . ."

5

Perhaps it was only the innate eagerness of Lady Marayne which made her feel disappointed in her son's outlook upon life. He did not choose among his glittering possibilities, he did not say what he was going to be, proconsul, ambassador, statesman, for days. And he talked VAGUELY of wanting to do something fine, but all in a fog. A boy of nearly nineteen ought to have at least the beginnings of SAVOIR FAIRE.

Was he in the right set? Was he indeed in the right college? Trinity, by his account, seemed a huge featureless place--and might he not conceivably be LOST in it? In those big crowds one had to insist upon oneself. Poff never insisted upon himself--except quite at the wrong moment. And there was this Billy Prswer if it had not been for
the clash of their minds, was the chief topic of their conversation

for many months. From Why be brave? it spread readily enough to Why be honest? Why be clean?--all the great whys of life. . . . Because one believes. . . . But why believe it? Left to himself Benham would have felt the mere asking of this question was a thing ignoble, not to be tolerated. It was, as it were, treason to nobility. But Prothero putothero. BILLY! Like a goat or something. People called William don't get their Christian name insisted upon unless they are vulnerable somewhere. Any form of William stamps a weakness, Willie, Willy, Will, Billy, Bill; it's a fearful handle for one's friends. At any rate Poff had escaped that. But this Prothero!

"But who IS this Billy Prothero?" she asked one evening in the walled garden.

"He was at Minchinghampton."

"But who IS he? Who is his father? Where does he come from?"

Benham sought in his mind for a space. "I don't know," he said at last. Billy had always been rather reticent about his people. She demanded descriptions. She demanded an account of Billy's furniture, Billy's clothes, Billy's form of exercise. It dawned upon Benham that for some inexplicable reason she was hostile to Billy. It was like the unmasking of an ambush. He had talked a lot about Prothero's ideas and the discussions of social reform and social service that went on in his rooms, for Billy read at unknown times, and was open at all hours to any argumentative caller. To Lady Marayne all ideas were obnoxious, a form of fogging; all ideas, she held, were queer ideas. "And does he call himself a Socialist?" she asked. "I THOUGHT he would."

"Poff," she cried suddenly, "you're not a SOCIALIST?"

"Such a vague term."

"But these friends of yours--they seem to be ALL Socialists. Red ties and everything complete."

"They have ideas," he evaded. He tried to express it better. "They give one something to take hold of."

She sat up stiffly on the garden-seat. She lifted her finger at him, very seriously. "I hope," she said with all her heart, "that you will have nothing to do with such ideas. Nothing. SOCIALISM!"

"They make a case."

"Pooh! Any one can make a case."

"But--"

"There's no sense in them. What is the good of talking about upsetting everything? Just disorder. How can one do anything then? You mustn't. You mustn't. No. It's nonsense, little Poff. It's absurd. And you may spoil so much. . . . I HATE the way you talk of it. . . . As if it wasn't all--absolutely--RUBBISH. . . ."

She was earnest almost to the intonation of tears.

Why couldn't her son go straight for his ends, clear tangible ends, as she had always done? This thinking about everything! She had never thought about anything in all her life for more than half an hour--and it had always turned out remarkably well.

Benham felt baffled. There was a pause. How on earth could he go on telling her his ideas if this was how they were to be taken?

"I wish sometimes," his mother said abruptly, with an unusually sharp note in her voice, "that you wouldn't look quite so like your

father."

"But I'm NOT like my father!" said Benham puzzled.

"No," she insisted, and with an air of appealing to his soberer reason, "so why should you go LOOKING like him? That CONCERNED expression. . . .

She jumped to her feet. "Poff," she said, "I want to go and see the evening primroses pop. You and I are talking nonsense. THEY don't have ideas anyhow. They just pop--as God meant them to do. What stupid things we human beings are!"

Her philosophical moments were perhaps the most baffling of all.

6

Billy Prothero became the symbol in the mind of Lady Marayne for all that disappointed her in Benham. He had to become the symbol, because she could not think of complicated or abstract things, she had to make things personal, and he was the only personality available. She fretted over his existence for some days therefore (once she awakened and thought about him in the night), and then suddenly she determined to grasp her nettle. She decided to seize and obliterate this Prothero. He must come to Chexington and be thoroughly and conclusively led on, examined, ransacked, shown up, and disposed of for ever. At once. She was not quite clear how she meant to do this, but she was quite resolved that it had to be done. Anything is better than inaction.

There was a little difficulty about dates and engagements, but he came, and through the season of expectation Benham, who was now for

the first time in contact with the feminine nature, was delighted at the apparent change to cordiality. So that he talked of Billy to his mother much more than he had ever done before.

Billy had been his particular friend at Minchinghampton, at least during the closing two years of his school life. Billy had fallen into friendship with Benham, as some of us fall in love, quite suddenly, when he saw Benham get down from the fence and be sick after his encounter with the bull. Already Billy was excited by admiration, but it was the incongruity of the sickness conquered him. He went back to the school with his hands more than usually in his pockets, and no eyes for anything but this remarkable strung-up fellow-creature. He felt he had never observed Benham before, and he was astonished that he had not done so.

Billy Prothero was a sturdy sort of boy, generously wanting in good looks. His hair was rough, and his complexion muddy, and he walked about with his hands in his pockets, long flexible lips protruded in a whistle, and a rather shapeless nose well up to show he didn't care. Providence had sought to console him by giving him a keen eye for the absurdity of other people. He had a suggestive tongue, and he professed and practised cowardice to the scandal of all his acquaintances. He was said never to wash behind his ears, but this report wronged him. There had been a time when he did not do so, but his mother had won him to a promise, and now that operation was often the sum of his simple hasty toilet. His desire to associate himself with Benham was so strong that it triumphed over a defensive reserve. It enabled him to detect accessible moments, do inobtrusive friendly services, and above all amuse his quarry. He not only amused Benham, he stimulated him. They came to do quite a number of things together. In the language of schoolboy stories they became "inseparables."

Prothero's first desire, so soon as they were on a footing that enabled him to formulate desires, was to know exactly what Benham

thought he was up to in crossing a field with a bull in it instead of going round, and by the time he began to understand that, he had conceived an affection for him that was to last a lifetime.

"I wasn't going to be bullied by a beast," said Benham.

"Suppose it had been an elephant?" Prothero cried. . . . "A mad elephant? . . . A pack of wolves?"

Benham was too honest not to see that he was entangled. "Well, suppose in YOUR case it had been a wild cat? . . . A fierce mastiff? . . . A mastiff? . . . A terrier? . . . A lap dog?"

"Yes, but my case is that there are limits."

Benham was impatient at the idea of limits. With a faintly malicious pleasure Prothero lugged him back to that idea.

"We both admit there are limits," Prothero concluded. "But between the absolutely impossible and the altogether possible there's the region of risk. You think a man ought to take that risk--" He reflected. "I think--no--I think NOT."

"If he feels afraid," cried Benham, seeing his one point. "If he feels afraid. Then he ought to take it. . . ."

After a digestive interval, Prothero asked, "WHY? Why should he?"

The discussion of that momentous question, that Why? which Benham perhaps might never have dared ask himself, and which Prothero perhaps might never have attempted to anit one afternoon in a way that permitted

no high dismissal of their doubts. "You can't build your honour on fudge, Benham. Like committing sacrilege--in order to buy a cloth for the altar."

By that Benham was slipped from the recognized code and launched upon speculations which became the magnificent research.

It was not only in complexion and stature and ways of thinking that Billy and Benham contrasted. Benham inclined a little to eloquence, he liked very clean hands, he had a dread of ridiculous outlines. Prothero lapsed readily into ostentatious slovenliness, when his hands were dirty he pitied them sooner than scrubbed them, he would have worn an overcoat with one tail torn off rather than have gone cold. Moreover, Prothero had an earthy liking for animals, he could stroke and tickle strange cats until they wanted to leave father and mother and all earthly possessions and follow after him, and he mortgaged a term's pocket money and bought and kept a small terrier in the school house against all law and tradition, under the baseless pretence that it was a stray animal of unknown origin. Benham, on the other hand, was shy with small animals and faintly hostile to big ones. Beasts he thought were just beasts. And Prothero had a gift for caricature, while Benham's aptitude was for music.

It was Prothero's eyes and pencil that first directed Benham to the poor indolences and evasions and insincerities of the masters. It was Prothero's wicked pictures that made him see the shrivelled absurdity of the vulgar theology. But it was Benham who stood between Prothero and that rather coarsely conceived epicureanism that seemed his logical destiny. When quite early in their Cambridge days Prothero's revolt against foppery reached a nadir of personal neglect, and two philanthropists from the rooms below him, goaded beyond the normal tolerance of Trinity, and assisted by two sportsmen from Trinity Hall, burnt his misshapen straw hat (after partly filling it with gunpowder and iron filings) and sought to duck him in the fountain in the court, it was Benham, in a state between distress and madness, and armed with a horn-handled cane of exceptional size, who intervened, turned the business into a blend

of wrangle and scuffle, introduced the degrading topic of duelling into a simple wholesome rag of four against one, carried him off under the cloud of horror created by this impropriety and so saved him, still only slightly wetted, not only from this indignity but from the experiment in rationalism that had provoked it.

Because Benham made it perfectly clear what he had thought and felt about this hat.

Such was the illuminating young man whom Lady Marayne decided to invite to Chexington, into the neighbourhood of herself, Sir Godfrey, and her circle of friends.

7

He was quite anxious to satisfy the requirements of Benham's people and to do his friend credit. He was still in the phase of being a penitent pig, and he inquired carefully into the needs and duties of a summer guest in a country house. He knew it was quite a considerable country house, and that Sir Godfrey wasn't Benham's father, but like most people, he was persuaded that Lady Marayne had divorced the parental Benham. He arrived dressed very neatly in a brown suit that had only one fault, it had not the remotest suggestion of having been made for him. It fitted his body fairly well, it did annex his body with only a few slight incompatibilities, but it repudiated his hands and face. He had a conspicuously old Gladstone bag and a conspicuously new despatch case, and he had forgotten black ties and dress socks and a hair brush. He arrived in the late afternoon, was met by Benham, in tennis flannels, looking smartened up and a little unfamiliar, and taken off in a spirited dog-cart driven by a typical groom. He met his host and hostess at dinner.

Sir Godfrey was a rationalist and a residuum. Very much of him, too much perhaps, had gone into the acquirement and perfect performance of the caecal operation; the man one met in the social world was what was left over. It had the effect of being quiet, but in its unobtrusive way knobby. He had a knobby brow, with an air about it of having recently been intent, and his conversation was curiously spotted with little knobby arrested anecdotes. If any one of any distinction was named, he would reflect and say, "Of course,--ah, yes, I know him, I know him. Yes, I did him a little service--in '96."

And something in his manner would suggest a satisfaction, or a dissatisfaction with confidential mysteries.

He welcomed Billy Prothero in a colourless manner, and made conversation about Cambridge. He had known one or two of the higher dons. One he had done at Cambridge quite recently. "The inns are better than they are at Oxford, which is not saying very much, but the place struck me as being changed. The men seemed younger. . . ."

The burden of the conversation fell upon Lady Marayne. She looked extraordinarily like a flower to Billy, a little diamond buckle on a black velvet band glittered between the two masses of butter-coloured hair that flowed back from her forehead, her head was poised on the prettiest neck conceivable, and her shapely little shoulders and her shapely little arms came decidedly but pleasantly out of a softness and sparkle of white and silver and old rose. She talked what sounded like innocent commonplaces a little spiced by whim, though indeed each remark had an exploratory quality, and her soft blue eyes rested ever and again upon Billy's white tie. It seemed she did so by the merest inadvertency, but it made the young man wish he had after all borrowed a black one from Benham. But the manservant who had put his things out had put it out, and he hadn't been quite sure. Also she noted all the little things he did with

fork and spoon and glass. She gave him an unusual sense of being brightly, accurately and completely visible.

Chexington, it seemed to Billy, was done with a large and costly and easy completeness. The table with its silver and flowers was much more beautifully done than any table he had sat at before, and in the dimness beyond the brightness there were two men to wait on the four of them. The old grey butler was really wonderfully good. . . .

"You shoot, Mr. Prothero?"

"You hunt, Mr. Prothero?"

"You know Scotland well, Mr. Prothero?"

These questions disturbed Prothero. He did not shoot, he did not hunt, he did not go to Scotland for the grouse, he did not belong, and Lady Marayne ought to have seen that he did not belong to the class that does these things.

"You ride much, Mr. Prothero?"

Billy conceived a suspicion that these innocent inquiries were designed to emphasize a contrast in his social quality. But he could not be sure. One never could be sure with Lady Marayne. It might be just that she did not understand the sort of man he was. And in that case ought he to maintain the smooth social surface unbroken by pretending as far as possible to be this kind of person, or ought he to make a sudden gap in it by telling his realities. He evaded the shooting question anyhow. He left it open for Lady Marayne and the venerable butler and Sir Godfrey and every one to suppose he just happened to be the sort of gentleman of leisure who doesn't shoot. He disavowed hunting, he made it appear he travelled when he travelled in directions other than Scotland. But the fourth question brought him to bay. He regarded his questioner with his

small rufous eye.

"I have never been across a horse in my life, Lady Marayne."

"Tut, tut," said Sir Godfrey. "Why!--it's the best of exercise. Every man ought to ride. Good for the health. Keeps him fit. Prevents lodgments. Most trouble due to lodgments."

"I've never had a chance of riding. And I think I'm afraid of horses."

"That's only an excuse," said Lady Marayne. "Everybody's afraid of horses and nobody's really afraid of horses."

"But I'm not used to horses. You see--I live on my mother. And she can't afford to keep a stable."

His hostess did not see his expression of discomfort. Her pretty eyes were intent upon the peas with which she was being served.

"Does your mother live in the country?" she asked, and took her peas with fastidious exactness.

Prothero coloured brightly. "She lives in London."

"All the year?"

"All the year."

"But isn't it dreadfully hot in town in the summer?"

Prothero had an uncomfortable sense of being very red in the face. This kept him red. "We're suburban people," he said.

"But I thought--isn't there the seaside?"

"My mother has a business," said Prothero, redder than ever.

"O-oh!" said Lady Marayne. "What fun that must be for her?"

"It's a real business, and she has to live by it. Sometimes it's a worry."

"But a business of her own!" She surveyed the confusion of his visage with a sweet intelligence. "Is it an amusing sort of business, Mr. Prothero?"

Prothero looked mulish. "My mother is a dressmaker," he said. "In Brixton. She doesn't do particularly badly--or well. I live on my scholarship. I have lived on scholarships since I was thirteen. And you see, Lady Marayne, Brixton is a poor hunting country."

Lady Marayne felt she had unmasked Prothero almost indecently. Whatever happened there must be no pause. There must be no sign of a hitch.

"But it's good at tennis," she said. "You DO play tennis, Mr. Prothero?"

"I--I gesticulate," said Prothero.

Lady Marayne, still in flight from that pause, went off at a tangent.

"Poff, my dear," she said, "I've had a diving-board put at the deep end of the pond."

The remark hung unanswered for a moment. The transition had been too quick for Benham's state of mind.

"Do you swim, Mr. Prothero?" the lady asked, though a moment before she had determined that she would never ask him a question again. But this time it was a lucky question.

"Prothero mopped up the lot of us at Minchinghampton with his diving and swimming," Benham explained, and the tension was relaxed.

Lady Marayne spoke of her own swimming, and became daring and amusing at her difficulties with local feeling when first she swam in the pond. The high road ran along the far side of the pond--"And it didn't wear a hedge or anything," said Lady Marayne. "That was what they didn't quite like. Swimming in an undraped pond. . . ."

Prothero had been examined enough. Now he must be entertained. She told stories about the village people in her brightest manner. The third story she regretted as soon as she was fairly launched upon it; it was how she had interviewed the village dressmaker, when Sir Godfrey insisted upon her supporting local industries. It was very amusing but technical. The devil had put it into her head. She had to go through with it. She infused an extreme innocence into her eyes and fixed them on Prothero, although she felt a certain deepening pinkness in her cheeks was betraying her, and she did not look at Benham until her unhappy, but otherwise quite amusing anecdote, was dead and gone and safely buried under another. . . .

But people ought not to go about having dressmakers for mothers. . . .

And coming into other people's houses and influencing their sons. . . .

That night when everything was over Billy sat at the writing-table

of his sumptuous bedroom--the bed was gilt wood, the curtains of the three great windows were tremendous, and there was a cheval glass that showed the full length of him and seemed to look over his head for more,--and meditated upon this visit of his. It was more than he had been prepared for. It was going to be a great strain. The sleek young manservant in an alpaca jacket, who said "Sir" whenever you looked at him, and who had seized upon and unpacked Billy's most private Gladstone bag without even asking if he might do so, and put away and displayed Billy's things in a way that struck Billy as faintly ironical, was unexpected. And it was unexpected that the brown suit, with its pockets stuffed with Billy's personal and confidential sundries, had vanished. And apparently a bath in a bathroom far down the corridor was prescribed for him in the morning; he hadn't thought of a dressing-gown. And after one had dressed, what did one do? Did one go down and wander about the house looking for the breakfast-room or wait for a gong? Would Sir Godfrey read Family Prayers? And afterwards did one go out or hang about to be entertained? He knew now quite clearly that those wicked blue eyes would mark his every slip. She did not like him. She did not like him, he supposed, because he was common stuff. He didn't play up to her world and her. He was a discord in this rich, cleverly elaborate household. You could see it in the servants' attitudes. And he was committed to a week of this.

Billy puffed out his cheeks to blow a sigh, and then decided to be angry and say "Damn!"

This way of living which made him uncomfortable was clearly an irrational and objectionable way of living. It was, in a cumbersome way, luxurious. But the waste of life of it, the servants, the observances, all concentrated on the mere detail of existence? There came a rap at the door. Benham appeared, wearing an expensive-looking dressing-jacket which Lady Marayne had bought for him. He asked if he might talk for a bit and smoke. He sat down in a capacious chintz-covered easy chair beside Prothero, lit a

cigarette, and came to the point after only a trivial hesitation.

"Prothero," he said, "you know what my father is."

"I thought he ran a preparatory school."

There was the profoundest resentment in Prothero's voice.

"And, all the same, I'm going to be a rich man."

"I don't understand," said Prothero, without any shadow of congratulation.

Benham told Prothero as much as his mother had conveyed to him of the resources of his wealth. Her version had been adapted to his tender years and the delicacies of her position. The departed Nolan had become an eccentric godfather. Benham's manner was apologetic, and he made it clear that only recently had these facts come to him. He had never suspected that he had had this eccentric godfather. It altered the outlook tremendously. It was one of the reasons that made Benham glad to have Prothero there, one wanted a man of one's own age, who understood things a little, to try over one's new ideas. Prothero listened with an unamiable expression.

"What would you do, Prothero, if you found yourself saddled with some thousands a year?"

"Godfathers don't grow in Brixton," said Prothero concisely.

"Well, what am I to do, Prothero?"

"Does all THIS belong to you?"

"No, this is my mother's."

"Godfather too?"

"I've not thought. . . . I suppose so. Or her own."

Prothero meditated.

"THIS life," he said at last, "this large expensiveness-- . . ."

He left his criticism unfinished.

"I agree. It suits my mother somehow. I can't understand her living in any other way. But--for me. . . ."

"What can one do with several thousands a year?"

Prothero's interest in this question presently swamped his petty personal resentments. "I suppose," he said, "one might have rather a lark with money like that. One would be free to go anywhere. To set all sorts of things going. . . . It's clear you can't sell all you have and give it to the poor. That is pauperization nowadays. You might run a tremendously revolutionary paper. A real upsetting paper. How many thousands is it?"

"I don't know. SOME."

Prothero's interest was growing as he faced the possibilities.

"I've dreamt of a paper," he said, "a paper that should tell the brute truth about things."

"I don't know that I'm particularly built to be a journalist," Benham objected.

"You're not," said Billy. . . . "You might go into Parliament as a perfectly independent member. . . . Only you wouldn't get in. . . ."

"I'm not a speaker," said Benham.

"Of course," said Billy, "if you don't decide on a game, you'll just go on like this. You'll fall into a groove, you'll--you'll hunt. You'll go to Scotland for the grouse."

For the moment Prothero had no further suggestions.

Benham waited for a second or so before he broached his own idea.

"Why, first of all, at any rate, Billy, shouldn't one use one's money to make the best of oneself? To learn things that men without money and leisure find it difficult to learn? By an accident, however unjust it is, one is in the position of a leader and a privileged person. Why not do one's best to give value as that?"

"Benham, that's the thin end of aristocracy!"

"Why not?"

"I hate aristocracy. For you it means doing what you like. While you are energetic you will kick about and then you will come back to this."

"That's one's own look-out," said Benham, after reflection.

"No, it's bound to happen."

Benham retreated a little from the immediate question.

"Well, we can't suddenly at a blow change the world. If it isn't to be plutocracy to-day it has to be aristocracy."

Prothero frowned over this, and then he made a sweeping proposition.

"YOU CANNOT HAVE ARISTOCRACY," he said, "BECAUSE, YOU SEE--ALL MEN ARE RIDICULOUS. Democracy has to fight its way out from under plutocracy. There is nothing else to be done."

"But a man in my position--?"

"It's a ridiculous position. You may try to escape being ridiculous. You won't succeed."

It seemed to Benham for a moment as though Prothero had got to the bottom of the question, and then he perceived that he had only got to the bottom of himself. Benham was pacing the floor.

He turned at the open window, held out a long forefinger, and uttered his countervailing faith.

"Even if he is ridiculous, Prothero, a man may still be an aristocrat. A man may anyhow be as much of an aristocrat as he can be."

Prothero reflected. "No," he said, "it sounds all right, but it's wrong. I hate all these advantages and differences and distinctions. A man's a man. What you say sounds well, but it's the beginning of pretension, of pride--"

He stopped short.

"Better, pride than dishonour," said Benham, "better the pretentious life than the sordid life. What else is there?"

"A life isn't necessarily sordid because it isn't pretentious," said Prothero, his voice betraying a defensive disposition.

"But a life with a large income MUST be sordid unless it makes some sort of attempt to be fine. . . ."

9

By transitions that were as natural as they were complicated and untraceable Prothero found his visit to Chexington developing into a tangle of discussions that all ultimately resolved themselves into an antagonism of the democratic and the aristocratic idea. And his part was, he found, to be the exponent of the democratic idea. The next day he came down early, his talk with Benham still running through his head, and after a turn or so in the garden he was attracted to the front door by a sound of voices, and found Lady Marayne had been up still earlier and was dismounting from a large effective black horse. This extorted an unwilling admiration from him. She greeted him very pleasantly and made a kind of introduction of her steed. There had been trouble at a gate, he was a young horse and fidgeted at gates; the dispute was still bright in her. Benham she declared was still in bed. "Wait till I have a mount for him." She reappeared fitfully in the breakfast-room, and then he was left to Benham until just before lunch. They read and afterwards, as the summer day grew hot, they swam in the nude pond. She joined them in the water, splashing about in a costume of some elaboration and being very careful not to wet her hair. Then she came and sat with them on the seat under the big cedar and talked with them in a wrap that was pretty rather than prudish and entirely unmotherly. And she began a fresh attack upon him by asking him if he wasn't a Socialist and whether he didn't want to pull down Chexington and grow potatoes all over the park.

This struck Prothero as an inadequate statement of the Socialist project and he made an unsuccessful attempt to get it amended.

The engagement thus opened was renewed with great energy at lunch. Sir Godfrey had returned to London and the inmost aspect of his fellow-creatures, but the party of three was supplemented by a vague young lady from the village and an alert agent from the neighbouring Tentington estate who had intentions about a cottage. Lady Marayne insisted upon regarding Socialism as a proposal to reinaugurate the first French Revolution, as an inversion of society so that it would be bottom upward, as an attack upon rule, order, direction. "And what good are all these proposals? If you had the poor dear king beheaded, you'd only get a Napoleon. If you divided all the property up between everybody, you'd have rich and poor again in a year."

Billy perceived no way of explaining away this version of his Socialism that would not involve uncivil contradictions--and nobody ever contradicted Lady Marayne.

"But, Lady Marayne, don't you think there is a lot of disorder and injustice in the world?" he protested.

"There would be ever so much more if your Socialists had their way."

"But still, don't you think-- . . ."

It is unnecessary even to recapitulate these universal controversies of our time. The lunch-table and the dinner-table and the general talk of the house drifted more and more definitely at its own level in the same direction as the private talk of Prothero and Benham, towards the antagonism of the privileged few and the many, of the trained and traditioned against the natural and undisciplined, of aristocracy against democracy. At the week-end Sir Godfrey returned to bring fresh elements. He said that democracy was unscientific. "To deny aristocracy is to deny the existence of the fittest. It is on the existence of the fittest that progress depends."

"But do our social conditions exalt the fittest?" asked Prothero.

"That is another question," said Benham.

"Exactly," said Sir Godfrey. "That is another question. But speaking with some special knowledge, I should say that on the whole the people who are on the top of things OUGHT to be on the top of things. I agree with Aristotle that there is such a thing as a natural inferior."

"So far as I can understand Mr. Prothero," said Lady Marayne, "he thinks that all the inferiors are the superiors and all the superiors inferior. It's quite simple. . . ."

It made Prothero none the less indignant with this, that there was indeed a grain of truth in it. He hated superiors, he felt for inferiors.

10

At last came the hour of tipping. An embarrassed and miserable Prothero went slinking about the house distributing unexpected gold.

It was stupid, it was damnable; he had had to borrow the money from his mother. . . .

Lady Marayne felt he had escaped her. The controversy that should have split these two young men apart had given them a new interest in each other. When afterwards she sounded her son, very delicately, to see if indeed he was aware of the clumsiness, the social ignorance and uneasiness, the complete unsuitability of his

friend, she could get no more from him than that exasperating phrase, "He has ideas!"

What are ideas? England may yet be ruined by ideas.

He ought never to have gone to Trinity, that monster packet of everything. He ought to have gone to some little GOOD college, good all through. She ought to have asked some one who KNEW.

11

One glowing afternoon in October, as these two young men came over Magdalen Bridge after a long disputatious and rather tiring walk to Drayton--they had been talking of Eugenics and the "family"--Benham was almost knocked down by an American trotter driven by Lord Breeze. "Whup there!" said Lord Breeze in a voice deliberately brutal, and Benham, roused from that abstraction which is partly fatigue, had to jump aside and stumbled against the parapet as the gaunt pacer went pounding by.

Lord Breeze grinned the sort of grin a man remembers. And passed.

"Damnation!" said Benham with a face that had become suddenly very white.

Then presently. "Any fool can do that who cares to go to the trouble."

"That," said Prothero, taking up their unquenchable issue, "that is the feeling of democracy."

"I walk because I choose to," said Benham.

The thing rankled.

"This equestrianism," he began, "is a matter of time and money--time even more than money. I want to read. I want to deal with ideas. . . ."

"Any fool can drive. . . ."

"Exactly," said Prothero.

"As for riding, it means no more than the elaborate study and cultivation of your horse. You have to know him. All horses are individuals. A made horse perhaps goes its round like an omnibus, but for the rest. . . ."

Prothero made a noise of sympathetic assent.

"In a country where equestrianism is assertion I suppose one must be equestrian. . . ."

That night some malignant spirit kept Benham awake, and great American trotters with vast wide-striding feet and long yellow teeth, uncontrollable, hard-mouthed American trotters, pounded over his angry soul.

"Prothero," he said in hall next day, "we are going to drive tomorrow."

Next day, so soon as they had lunched, he led the way towards Maltby's, in Crosshampton Lane. Something in his bearing put a question into Prothero's mind. "Benham," he asked, "have you ever driven before?"

"NEVER," said Benham.

"Well?"

"I'm going to now."

Something between pleasure and alarm came into Prothero's eyes. He quickened his pace so as to get alongside his friend and scrutinize his pale determination. "Why are you doing this?" he asked.

"I want to do it."

"Benham, is it--EQUESTRIAN?"

Benham made no audible reply. They proceeded resolutely in silence.

An air of expectation prevailed in Maltby's yard. In the shafts of a high, bleak-looking vehicle with vast side wheels, a throne-like vehicle that impressed Billy Prothero as being a gig, a very large angular black horse was being harnessed.

"This is mine," said Benham compactly.

"This is yours, sir," said an ostler.

"He looks--QUIET."

"You'll find him fresh enough, sir."

Benham made a complicated ascent to the driver's seat and was handed the reins. "Come on," he said, and Prothero followed to a less exalted seat at Benham's side. They seemed to be at a very great height indeed. The horse was then led out into Crosshampton Lane, faced towards Trinity Street and discharged. "Check," said Benham, and touched the steed with his whip. They started quite well, and the ostlers went back into the yard, visibly unanxious. It struck Prothero that perhaps driving was less difficult than he had

supposed.

They went along Crosshampton Lane, that high-walled gulley, with dignity, with only a slight suggestion of the inaccuracy that was presently to become apparent, until they met a little old bearded don on a bicycle. Then some misunderstanding arose between Benham and the horse, and the little bearded don was driven into the narrow pavement and had to get off hastily. He made no comment, but his face became like a gargoyle. "Sorry," said Benham, and gave his mind to the corner. There was some difficulty about whether they were to turn to the right or the left, but at last Benham, it seemed, carried his point, and they went along the narrow street, past the grey splendours of King's, and rather in the middle of the way.

Prothero considered the beast in front of him, and how proud and disrespectful a horse in a dogcart can seem to those behind it! Moreover, unaccustomed as he was to horses, he was struck by the strong resemblance a bird's-eye view of a horse bears to a fiddle, a fiddle with devil's ears.

"Of course," said Prothero, "this isn't a trotter."

"I couldn't get a trotter," said Benham.

"I thought I would try this sort of thing before I tried a trotter," he added.

And then suddenly came disaster.

There was a butcher's cart on the right, and Benham, mistrusting the intelligence of his steed, insisted upon an excessive amplitude of clearance. He did not reckon with the hand-barrow on his left, piled up with dirty plates from the lunch of Trinity Hall. It had been left there; its custodian was away upon some mysterious errand.

Heaven knows why Trinity Hall exhibited the treasures of its crockery thus stained and deified in the Cambridge streets. But it did--for Benham's and Prothero's undoing. Prothero saw the great wheel over which he was poised entangle itself with the little wheel of the barrow. "God!" he whispered, and craned, fascinated. The little wheel was manifestly intrigued beyond all self-control by the great wheel; it clung to it, it went before it, heedless of the barrow, of which it was an inseparable part. The barrow came about with an appearance of unwillingness, it locked against the great wheel; it reared itself towards Prothero and began, smash, smash, smash, to shed its higher plates. It was clear that Benham was grappling with a crisis upon a basis of inadequate experience. A number of people shouted haphazard things. Then, too late, the barrow had persuaded the little wheel to give up its fancy for the great wheel, and there was an enormous crash.

"Whoa!" cried Benham. "Whoa!" but also, unfortunately, he sawed hard at the horse's mouth.

The animal, being in some perplexity, danced a little in the narrow street, and then it had come about and it was backing, backing, on the narrow pavement and towards the plate-glass window of a book and newspaper shop. Benham tugged at its mouth much harder than ever. Prothero saw the window bending under the pressure of the wheel. A sense of the profound seriousness of life and of the folly of this expedition came upon him. With extreme nimbleness he got down just as the window burst. It went with an explosion like a pistol shot, and then a clatter of falling glass. People sprang, it seemed, from nowhere, and jostled about Prothero, so that he became a peripheral figure in the discussion. He perceived that a man in a green apron was holding the horse, and that various people were engaged in simultaneous conversation with Benham, who with a pale serenity of face and an awful calm of manner, dealt with each of them in turn.

"I'm sorry," he was saying. "Somebody ought to have been in charge

of the barrow. Here are my cards. I am ready to pay for any damage. . . .

"The barrow ought not to have been there. . . .

"Yes, I am going on. Of course I'm going on. Thank you."

He beckoned to the man who had held the horse and handed him half-a-crown. He glanced at Prothero as one might glance at a stranger. "Check!" he said. The horse went on gravely. Benham lifted out his whip. He appeared to have clean forgotten Prothero. Perhaps presently he would miss him. He went on past Trinity, past the ruddy brick of St. John's. The curve of the street hid him from Prothero's eyes.

Prothero started in pursuit. He glimpsed the dog-cart turning into Bridge Street. He had an impression that Benham used the whip at the corner, and that the dog-cart went forward out of sight with a startled jerk. Prothero quickened his pace.

But when he got to the fork between the Huntingdon Road and the Cottenham Road, both roads were clear.

He spent some time in hesitation. Then he went along the Huntingdon Road until he came upon a road-mender, and learnt that Benham had passed that way. "Going pretty fast 'e was," said the road-mender, "and whipping 'is 'orse. Else you might 'a thought 'e was a boltin' with 'im." Prothero decided that if Benham came back at all he would return by way of Cottenham, and it was on the Cottenham Road that at last he encountered his friend again.

Benham was coming along at that good pace which all experienced horses when they are fairly turned back towards Cambridge display. And there was something odd about Benham, as though he had a large circular halo with a thick rim. This, it seemed, had replaced his

hat. He was certainly hatless. The warm light of the sinking sun shone upon the horse and upon Benham's erect figure and upon his face, and gleams of fire kept flashing from his head to this rim, like the gleam of drawn swords seen from afar. As he drew nearer this halo detached itself from him and became a wheel sticking up behind him. A large, clumsy-looking bicycle was attached to the dog-cart behind. The expression of Benham's golden face was still a stony expression; he regarded his friend with hard eyes.

"You all right, Benham?" cried Prothero, advancing into the road.

His eye examined the horse. It looked all right, if anything it was a trifle subdued; there was a little foam about its mouth, but not very much.

"Whoa!" said Benham, and the horse stopped. "Are you coming up, Prothero?"

Prothero clambered up beside him. "I was anxious," he said.

"There was no need to be."

"You've broken your whip."

"Yes. It broke. . . . GET up!"

They proceeded on their way to Cambridge.

"Something has happened to the wheel," said Prothero, trying to be at his ease.

"Merely a splinter or so. And a spoke perhaps."

"And what is this behind?"

Benham made a half-turn of the head. "It's a motor-bicycle."

Prothero took in details.

"Some of it is missing."

"No, the front wheel is under the seat."

"Oh!"

"Did you find it?" Prothero asked, after an interval.

"You mean?"

"He ran into a motor-car--as I was passing. I was perhaps a little to blame. He asked me to bring his machine to Cambridge. He went on in the car. . . . It is all perfectly simple."

Prothero glanced at the splinters in the wheel with a renewed interest.

"Did your wheel get into it?" he asked. Benham affected not to hear. He was evidently in no mood for story-telling.

"Why did you get down, Prothero?" he asked abruptly, with the note of suppressed anger thickening his voice.

Prothero became vividly red. "I don't know," he said, after an interval.

"I DO," said Benham, and they went on in a rich and active silence to Cambridge, and the bicycle repair shop in Bridge Street, and Trinity College. At the gate of Trinity Benham stopped, and conveyed rather by acts than words that Prothero was to descend. He got down meekly enough, although he felt that the return to Maltby's

yard might have many points of interest. But the spirit had gone out of him.

12

For three days the two friends avoided each other, and then Prothero went to Benham's room. Benham was smoking cigarettes--Lady Marayne, in the first warmth of his filial devotion, had prohibited his pipe--and reading Webb's INDUSTRIAL DEMOCRACY. "Hello!" he said coldly, scarcely looking up, and continued to read that absorbing work.

"I keep on thinking how I jumped down from that damned dog-cart," said Prothero, without any preface.

"It didn't matter in the least," said Benham distantly.

"Oh! ROT," said Prothero. "I behaved like a coward."

Benham shut his book.

"Benham," said Prothero. "You are right about aristocracy, and I am wrong. I've been thinking about it night and day."

Benham betrayed no emotion. But his tone changed. "Billy," he said, "there are cigarettes and whiskey in the corner. Don't make a fuss about a trifle."

"No whiskey," said Billy, and lit a cigarette. "And it isn't a trifle."

He came to Benham's hearthrug. "That business," he said, "has

changed all my views. No--don't say something polite! I see that if one hasn't the habit of pride one is bound to get off a dogcart when it seems likely to smash. You have the habit of pride, and I haven't. So far as the habit of pride goes, I come over to the theory of aristocracy."

Benham said nothing, but he put down Sidney and Beatrice Webb, and reached out for and got and lit a cigarette.

"I give up 'Go as you please.' I give up the natural man. I admit training. I perceive I am lax and flabby, unguarded, I funk too much, I eat too much, and I drink too much. And, yet, what I have always liked in you, Benham, is just this--that you don't."

"I do," said Benham.

"Do what?"

"Funk."

"Benham, I believe that naturally you funk as much as I do. You're more a thing of nerves than I am, far more. But you keep yourself up to the mark, and I have let myself get flabby. You're so right. You're so utterly right. These last nights I've confessed it--aloud. I had an inkling of it--after that rag. But now it's as clear as daylight. I don't know if you mean to go on with me, after what's happened, but anyhow I want you to know, whether you end our friendship or not "

"Billy, don't be an old ass," said Benham.

Both young men paused for a moment. They made no demonstrations. But the strain was at an end between them.

"I've thought it all out," Billy went on with a sudden buoyancy.

"We two are both of the same kind of men. Only you see, Benham, you have a natural pride and I haven't. You have pride. But we are both intellectuals. We both belong to what the Russians call the *Intelligentsia*. We have ideas, we have imagination, that is our strength. And that is our weakness. That makes us moral light-weights. We are flimsy and uncertain people. All intellectuals are flimsy and uncertain people. It's not only that they are critical and fastidious; they are weak-handed. They look about them; their attention wanders. Unless they have got a habit of controlling themselves and forcing themselves and holding themselves together."

"The habit of pride."

"Yes. And then--then we are lords of the world."

"All this, Billy," said Benham, "I steadfastly believe."

"I've seen it all now," said Prothero. "Lord! how clearly I see it! The intellectual is either a prince or he is a Greek slave in a Roman household. He's got to hold his chin up or else he becomes--even as these dons we see about us--a thing that talks appointments, a toady, a port-wine bibber, a mass of detail, a conscious maker of neat sayings, a growing belly under a dwindling brain. Their gladness is drink or gratified vanity or gratified malice, their sorrow is indigestion or--old maid's melancholy. They are the lords of the world who will not take the sceptre. . . . And what I want to say to you, Benham, more than anything else is, YOU go on--YOU make yourself equestrian. You drive your horse against Breeze's, and go through the fire and swim in the ice-cold water and climb the precipice and drink little and sleep hard. And--I wish I could do so too."

"But why not?"

"Because I can't. Now I admit I've got shame in my heart and pride

in my head, and I'm strung up. I might do something--this afternoon. But it won't last. YOU--you have pride in your bones. My pride will vanish at a laugh. My honour will go at a laugh. I'm just exalted by a crisis. That's all. I'm an animal of intelligence. Soul and pride are weak in me. My mouth waters, my cheek brightens, at the sight of good things. And I've got a lickerish tail, Benham. You don't know. You don't begin to imagine. I'm secretive. But I quiver with hot and stirring desires. And I'm indolent--dirty indolent. Benham, there are days when I splash my bath about without getting into it. There are days when I turn back from a walk because there's a cow in the field. . . . But, I spare you the viler details. . . . And it's that makes me hate fine people and try so earnestly to persuade myself that any man is as good as any man, if not a trifle better. Because I know it isn't so. . . ."

"Billy," said Benham, "you've the boldest mind that ever I met."

Prothero's face lit with satisfaction. Then his countenance fell again. "I know I'm better there," he said, "and yet, see how I let in a whole system of lies to cover my secret humiliations. There, at least, I will cling to pride. I will at least THINK free and clean and high. But you can climb higher than I can. You've got the grit to try and LIVE high. There you are, Benham."

Benham stuck one leg over the arm of his chair. "Billy," he said, "come and be--equestrian and stop this nonsense."

"No."

"Damn it--you DIVE!"

"You'd go in before me if a woman was drowning."

"Nonsense. I'm going to ride. Come and ride too. You've a

cleverer way with animals than I have. Why! that horse I was driving the other day would have gone better alone. I didn't drive it. I just fussed it. I interfered. If I ride for ever, I shall never have decent hands, I shall always hang on my horse's mouth at a gallop, I shall never be sure at a jump. But at any rate I shall get hard. Come and get hard too."

"You can," said Billy, "you can. But not I! Heavens, the TROUBLE of it! The riding-school! The getting up early! No!--for me the Trumpington Road on foot in the afternoon. Four miles an hour and panting. And my fellowship and the combination-room port. And, besides, Benham, there's the expense. I can't afford the equestrian order."

"It's not so great."

"Not so great! I don't mean the essential expense. But--the incidentals. I don't know whether any one can realize how a poor man is hampered by the dread of minor catastrophes. It isn't so much that he is afraid of breaking his neck, Benham, as that he is afraid of breaking something he will have to pay for. For instance--. Benham! how much did your little expedition the other day--?"

He stopped short and regarded his friend with round eyes and raised eyebrows.

A reluctant grin overspread Benham's face. He was beginning to see the humour of the affair.

"The claim for the motor-bicycle isn't sent in yet. The repair of the mudguards of the car is in dispute. Trinity Hall's crockery, the plate-glass window, the whip-lash and wheel and so forth, the hire of the horse and trap, sundry gratuities. . . . I doubt if the total will come very much under fifty pounds. And I seem to have lost a hat somewhere."

Billy regarded his toes and cleared his throat.

"Depending as I do on a widowed mother in Brixton for all the expenditure that isn't covered by my pot-hunting--"

"Of course," said Benham, "it wasn't a fair sample afternoon."

"Still--"

"There's footer," said Benham, "we might both play footer."

"Or boxing."

"And, anyhow, you must come with me when I drive again. I'm going to start a trotter."

"If I miss another drive may I be--lost for ever," said Billy, with the utmost sincerity. "Never more will I get down, Benham, wherever you may take me. Short of muffing my fellowship I'm with you always. . . . Will it be an American trotter?"

"It will be the rawest, gauntest, ungainliest brute that ever scared the motor-bicycles on the Northampton Road. It will have the legs and stride of an ostrich. It will throw its feet out like dealing cards. It will lift its head and look the sun in the eye like a vulture. It will have teeth like the English spinster in a French comic paper. . . . And we will fly. . . ."

"I shall enjoy it very much," said Prothero in a small voice after an interval for reflection. "I wonder where we shall fly. It will do us both a lot of good. And I shall insure my life for a small amount in my mother's interest. . . . Benham, I think I will, after all, take a whiskey. . . . Life is short. . . ."

He did so and Benham strolled to the window and stood looking out upon the great court.

"We might do something this afternoon," said Benham.

"Splendid idea," reflected Billy over his whiskey. "Living hard and thinking hard. A sort of Intelligentsia that is BLOODED. . . . I shall, of course, come as far as I can with you."

13

In one of the bureau drawers that White in this capacity of literary executor was examining, there were two documents that carried back right to these early days. They were both products of this long wide undergraduate argumentation that had played so large a part in the making of Benham. One recorded the phase of maximum opposition, and one was the outcome of the concluding approach of the antagonists. They were debating club essays. One had been read to a club in Pembroke, a club called the ENQUIRERS, of which White also had been a member, and as he turned it over he found the circumstances of its reading coming back to his memory. He had been present, and Carnac's share in the discussion with his shrill voice and stumpy gestures would alone have sufficed to have made it a memorable occasion. The later one had been read to the daughter club of the ENQUIRERS, the SOCIAL ENQUIRERS, in the year after White had gone down, and it was new to him.

Both these papers were folded flat and neatly docketed; they were rather yellow and a little dog-eared, and with the outer sheet pencilled over with puzzling or illegible scribblings, Benham's memoranda for his reply. White took the earlier essay in his hand.

At the head of the first page was written in large letters, "Go slowly, speak to the man at the back." It brought up memories of his own experiences, of rows of gaslit faces, and of a friendly helpful voice that said, "Speak up?"

Of course this was what happened to every intelligent contemporary, this encounter with ideas, this restatement and ventilation of the old truths and the old heresies. Only in this way does a man make a view his own, only so does he incorporate it. These are our real turning points. The significant, the essential moments in the life of any one worth consideration are surely these moments when for the first time he faces towards certain broad ideas and certain broad facts. Life nowadays consists of adventures among generalizations. In class-rooms after the lecture, in studies in the small hours, among books or during solitary walks, the drama of the modern career begins. Suddenly a man sees his line, his intention. Yet though we are all of us writing long novels--White's world was the literary world, and that is how it looked to him--which profess to set out the lives of men, this part of the journey, this crucial passage among the Sphinxes, is still done--when it is done at all--slightly, evasively. Why?

White fell back on his professionalism. "It does not make a book. It makes a novel into a treatise, it turns it into a dissertation."

But even as White said this to himself he knew it was wrong, and it slid out of his thoughts again. Was not this objection to the play of ideas merely the expression of that conservative instinct which fights for every old convention? The traditional novel is a love story and takes ideas for granted, it professes a hero but presents a heroine. And to begin with at least, novels were written for the reading of heroines. Miss Lydia Languish sets no great store upon the contents of a man's head. That is just the stuffing of the doll. Eyes and heart are her game. And so there is never any more sphinx in the story than a lady may impersonate. And as inevitably

the heroine meets a man. In his own first success, White reflected, the hero, before he had gone a dozen pages, met a very pleasant young woman very pleasantly in a sunlit thicket; the second opened at once with a bicycle accident that brought two young people together so that they were never afterwards disentangled; the third, failing to produce its heroine in thirty pages, had to be rearranged. The next--

White returned from an unprofitable digression to the matter before him.

14

The first of Benham's early essays was written in an almost boyish hand, it was youthfully amateurish in its nervous disposition to definitions and distinctions, and in the elaborate linking of part to part. It was called TRUE DEMOCRACY. Manifestly it was written before the incident of the Trinity Hall plates, and most of it had been done after Prothero's visit to Chexington. White could feel that now inaudible interlocutor. And there were even traces of Sir Godfrey Marayne's assertion that democracy was contrary to biology. From the outset it was clear that whatever else it meant, True Democracy, following the analogy of True Politeness, True Courage, True Honesty and True Marriage, did not mean democracy at all. Benham was, in fact, taking Prothero's word, and trying to impose upon it his own solidifying and crystallizing opinion of life.

They were not as yet very large or well-formed crystals. The proposition he struggled to develop was this, that True Democracy did not mean an equal share in the government, it meant an equal opportunity to share in the government. Men were by nature and in the most various ways unequal. True Democracy aimed only at the

removal of artificial inequalities. . . .

It was on the truth of this statement, that men were by nature unequal, that the debate had turned. Prothero was passionately against the idea at that time. It was, he felt, separating himself from Benham more and more. He spoke with a personal bitterness. And he found his chief ally in a rigorous and voluble Frenchman named Carnac, an aggressive Roman Catholic, who opened his speech by saying that the first aristocrat was the devil, and shocked Prothero by claiming him as probably the only other sound Christian in the room. Several biologists were present, and one tall, fair youth with a wearisome forefinger tried to pin Carnac with questions.

"But you must admit some men are taller than others?"

"Then the others are broader."

"Some are smaller altogether."

"Nimble--it's notorious."

"Some of the smaller are less nimble than the others."

"Then they have better nightmares. How can you tell?"

The biologist was temporarily incapacitated, and the talk went on over his prostrate attempts to rally and protest.

A second biologist seemed to Benham to come nearer the gist of the dispute when he said that they were not discussing the importance of men, but their relative inequalities. Nobody was denying the equal importance of everybody. But there was a virtue of this man and a virtue of that. Nobody could dispute the equal importance of every wheel in a machine, of every atom in the universe. Prothero and Carnac were angry because they thought the denial of absolute

equality was a denial of equal importance. That was not so. Every man mattered in his place. But politically, or economically, or intellectually that might be a lowly place. . . .

At this point Carnac interrupted with a whooping and great violence, and a volley of obscure French colloquialisms.

He was understood to convey that the speaker was a Jew, and did not in the least mean what he was saying. . . .

15

The second paper was an altogether maturer and more characteristic production. It was no longer necessary to answer Prothero. Prothero had been incorporated. And Benham had fairly got away with his great idea. It was evident to White that this paper had been worked over on several occasions since its first composition and that Benham had intended to make it a part of his book. There were corrections in pencil and corrections in a different shade of ink, and there was an unfinished new peroration, that was clearly the latest addition of all. Yet its substance had been there always. It gave the youth just grown to manhood, but anyhow fully grown. It presented the far-dreaming intellectualist shaped.

Benham had called it ARISTOCRACY. But he was far away by now from political aristocracy.

This time he had not begun with definitions and generalizations, but with a curiously subjective appeal. He had not pretended to be theorizing at large any longer, he was manifestly thinking of his own life and as manifestly he was thinking of life as a matter of difficulty and unexpected thwartings.

"We see life," he wrote, "not only life in the world outside us, but life in our own selves, as an immense choice of possibilities; indeed, for us in particular who have come up here, who are not under any urgent necessity to take this line or that, life is apparently pure choice. It is quite easy to think we are all going to choose the pattern of life we like best and work it out in our own way. . . . And, meanwhile, there is no great hurry. . . .

"I want to begin by saying that choice isn't so easy and so necessary as it seems. We think we are going to choose presently, and in the end we may never choose at all. Choice needs perhaps more energy than we think. The great multitude of older people we can observe in the world outside there, haven't chosen either in the matter of the world outside, where they shall go, what they shall do, what part they shall play, or in the matter of the world within, what they will be and what they are determined they will never be. They are still in much the same state of suspended choice as we seem to be in, but in the meanwhile **THINGS HAPPEN TO THEM**. And things are happening to us, things will happen to us, while we still suppose ourselves in the wings waiting to be consulted about the casting of the piece. . . .

"Nevertheless this immense appearance of choice which we get in the undergraduate community here, is not altogether illusion; it is more reality than illusion even if it has not the stable and complete reality it appears to have. And it is more a reality for us than it was for our fathers, and much more a reality now than it was a few centuries ago. The world is more confused and multitudinous than ever it was, the practicable world far wider, and ourselves far less under the pressure of inflexible moulding forces and inevitable necessities than any preceding generations. I want to put very clearly how I see the new world, the present world, the world of novel choice to which our youth and inexperience faces, and I want to define to you a certain selection of choices which I am going to

call aristocratic, and to which it is our manifest duty and destiny as the elect and favoured sons of our race to direct ourselves.

"It isn't any choice of Hercules I mean, any mere alternative whether we will be, how shall I put it?--the bridegrooms of pleasure or the bridegrooms of duty. It is infinitely vaster and more subtly moral than that. There are a thousand good lives possible, of which we may have one, lives which are soundly good, or a thousand bad lives, if you like, lives which are thoroughly bad--that's the old and perpetual choice, that has always been--but what is more evident to me and more remarkable and disconcerting is that there are nowadays ten thousand muddled lives lacking even so much moral definition, even so much consistency as is necessary for us to call them either good or bad, there are planless indeterminate lives, more and more of them, opening out as the possible lives before us, a perfect wilderness between salvation and damnation, a wilderness so vast and crowded that at last it seems as though the way to either hell or heaven would be lost in its interminable futility. Such planless indeterminate lives, plebeian lives, mere lives, fill the world, and the spectacle of whole nations, our whole civilization, seems to me to re-echo this planlessness, this indeterminate confusion of purpose. Plain issues are harder and harder to find, it is as if they had disappeared. Simple living is the countryman come to town. We are deafened and jostled and perplexed. There are so many things afoot that we get nothing. . . .

"That is what is in my mind when I tell you that we have to gather ourselves together much more than we think. We have to clench ourselves upon a chosen end. We have to gather ourselves together out of the swill of this brimming world.

"Or--we are lost. . . ."

("Swill of this brimming world," said White. "Some of this sounds uncommonly like Prothero." He mused for a moment and then resumed

his reading.)

"That is what I was getting at when, three years ago, I made an attack upon Democracy to the mother society of this society, an attack that I expressed ill and failed to drive home. That is what I have come down now to do my best to make plainer. This age of confusion is Democracy; it is all that Democracy can ever give us. Democracy, if it means anything, means the rule of the planless man, the rule of the unkempt mind. It means as a necessary consequence this vast boiling up of collectively meaningless things.

"What is the quality of the common man, I mean of the man that is common to all of us, the man who is the Standard for such men as Carnac, the man who seems to be the ideal of the Catholic Democrat? He is the creature of a few fundamental impulses. He begins in blind imitation of the life about him. He lusts and takes a wife, he hungers and tills a field or toils in some other way to earn a living, a mere aimless living, he fears and so he does not wander, he is jealous and stays by his wife and his job, is fiercely yet often stupidly and injuriously defensive of his children and his possessions, and so until he wearies. Then he dies and needs a cemetery. He needs a cemetery because he is so afraid of dissolution that even when he has ceased to be, he still wants a place and a grave to hold him together and prevent his returning to the All that made him. Our chief impression of long ages of mankind comes from its cemeteries. And this is the life of man, as the common man conceives and lives it. Beyond that he does not go, he never comprehends himself collectively at all, the state happens about him; his passion for security, his gregarious self-defensiveness, makes him accumulate upon himself until he congests in cities that have no sense of citizenship and states that have no structure; the clumsy, inconsecutive lying and chatter of his newspapers, his hoardings and music-halls gives the measure of his congested intelligences, the confusion of ugly, half empty churches and chapels and meeting-halls gauge the intensity of his congested

souls, the tricks and slow blundering dishonesties of Diet and Congress and Parliament are his statecraft and his wisdom. . . .

"I do not care if this instant I am stricken dead for pride. I say here now to you and to High Heaven that **THIS LIFE IS NOT GOOD ENOUGH**

FOR ME. I know there is a better life than this muddle about us, a better life possible now. I know it. A better individual life and a better public life. If I had no other assurances, if I were blind to the glorious intimations of art, to the perpetually widening promise of science, to the mysterious beckonings of beauty in form and colour and the inaccessible mockery of the stars, I should still know this from the insurgent spirit within me. . . .

"Now this better life is what I mean when I talk of Aristocracy. This idea of a life breaking away from the common life to something better, is the consuming idea in my mind.

"Constantly, recurrently, struggling out of the life of the farm and the shop, the inn and the market, the street and the crowd, is something that is not of the common life. Its way of thinking is Science, its dreaming is Art, its will is the purpose of mankind. It is not the common thing. But also it is not an unnatural thing. It is not as common as a rat, but it is no less natural than a panther.

"For it is as natural to be an explorer as it is to be a potato grower, it is rarer but it is as natural; it is as natural to seek explanations and arrange facts as it is to make love, or adorn a hut, or show kindness to a child. It is a folly I will not even dispute about, that man's only natural implement is the spade. Imagination, pride, exalted desire are just as much Man, as are hunger and thirst and sexual curiosities and the panic dread of unknown things. . . .

"Now you see better what I mean about choice. Now you see what I am driving at. We have to choose each one for himself and also each one for the race, whether we will accept the muddle of the common life, whether we ourselves will be muddled, weakly nothings, children of luck, steering our artful courses for mean success and tawdry honours, or whether we will be aristocrats, for that is what it amounts to, each one in the measure of his personal quality an aristocrat, refusing to be restrained by fear, refusing to be restrained by pain, resolved to know and understand up to the hilt of his understanding, resolved to sacrifice all the common stuff of his life to the perfection of his peculiar gift, a purged man, a trained, selected, artificial man, not simply free, but lordly free, filled and sustained by pride. Whether you or I make that choice and whether you or I succeed in realizing ourselves, though a great matter to ourselves, is, I admit, a small matter to the world. But the great matter is this, that **THE CHOICE IS BEING MADE**, that it will continue to be made, and that all around us, so that it can never be arrested and darkened again, is the dawn of human possibility. . . ."

(White could also see his dead friend's face with its enthusiastic paleness, its disordered hair and the glowing darknesses in the eyes. On such occasions Benham always had an expression of **ESCAPE**. Temporary escape. And thus would his hand have clutched the reading-desk; thus would his long fingers have rustled these dry papers.)

"Man has reached a point when a new life opens before him. . . .

"The old habitual life of man is breaking up all about us, and for the new life our minds, our imaginations, our habits and customs are all unprepared. . . .

"It is only now, after some years of study and living, that I begin to realize what this tremendous beginning we call Science means to

mankind. Every condition that once justified the rules and imperatives, the manners and customs, the sentiments, the morality, the laws and limitations which make up the common life, has been or is being destroyed. . . . Two or three hundred years more and all that life will be as much a thing past and done with as the life that was lived in the age of unpolished stone. . . .

"Man is leaving his ancestral shelters and going out upon the greatest adventure that ever was in space or time, he is doing it now, he is doing it in us as I stand here and read to you."

CHAPTER THE SECOND

THE YOUNG MAN ABOUT TOWN

1

The oldest novel in the world at any rate, White reflected, was a story with a hero and no love interest worth talking about. It was the story of Tobias and how he came out from the shelters of his youth into this magic and intricate world. Its heroine was incidental, part of the spoil, a seven times relict. . . .

White had not read the book of Tobit for many years, and what he was really thinking of was not that ancient story at all, but Botticelli's picture, that picture of the sunlit morning of life. When you say "Tobias" that is what most intelligent people will recall. Perhaps you will remember how gaily and confidently the young man strides along with the armoured angel by his side. Absurdly enough, Benham and his dream of high aristocracy reminded

White of that. . . .

"We have all been Tobias in our time," said White.

If White had been writing this chapter he would have in all probability called it THE TOBIAS STAGE, forgetful that there was no Tobit behind Benham and an entirely different Sara in front of him.

2

From Cambridge Benham came to London. For the first time he was to live in London. Never before had he been in London for more than a few days at a time. But now, guided by his mother's advice, he was to have a flat in Finacue street, just round the corner from Desborough Street, a flat very completely and delightfully furnished under her supervision. It had an admirable study, in which she had arranged not only his books, but a number of others in beautiful old leather bindings that it had amused her extremely to buy; it had a splendid bureau and business-like letter-filing cabinets, a neat little drawing-room and a dining-room, well-placed abundant electric lights, and a man called Merkle whom she had selected very carefully and who she felt would not only see to Benham's comfort but keep him, if necessary, up to the mark.

This man Merkle seemed quite unaware that humanity "here and now"--even as he was engaged in meticulously putting out Benham's clothes--was "leaving its ancestral shelters and going out upon the greatest adventure that ever was in space or time." If he had been told as much by Benham he would probably have said, "Indeed, sir," and proceeded accurately with his duties. And if Benham's voice had seemed to call for any additional remark, he would probably have added, "It's 'igh time, sir, something of the sort was done. Will

you have the white wesket as before, sir, or a fresh one this evening? . . . Unless it's a very special occasion, sir. . . . Exactly, sir. THANK you, sir."

And when her son was properly installed in his apartments Lady Marayne came round one morning with a large experienced-looking portfolio and rendered an account of her stewardship of his estate that was already some months overdue. It was all very confused and confusing, and there were inexplicable incidents, a heavy overdraft at the bank for example, but this was Sir Godfrey's fault, she explained. "He never would help me with any of this business," she said. "I've had to add sometimes for HOURS. But, of course, you are a man, and when you've looked through it all, I know you'll understand."

He did look through it enough to see that it was undesirable that he should understand too explicitly, and, anyhow, he was manifestly very well off indeed, and the circumstances of the case, even as he understood them, would have made any businesslike book-keeping ungracious. The bankers submitted the corroborating account of securities, and he found himself possessed of his unconditional six thousand a year, with, as she put it, "the world at his feet." On the whole it seemed more wonderful to him now than when he had first heard of it. He kissed her and thanked her, and left the portfolio open for Merkle's entirely honest and respectful but very exact inspection, and walked back with her to Desborough Street, and all the while he was craving to ask the one tremendous question he knew he would never ask, which was just how exactly this beneficent Nolan came in. . . .

Once or twice in the small hours, and on a number of other occasions, this unspeakable riddle assumed a portentous predominance in his mind. He was forced back upon his inner consciousness for its consideration. He could discuss it with nobody else, because that would have been discussing his mother.

Probably most young men who find themselves with riches at large in the world have some such perplexity as this mixed in with the gift. Such men as the Cecils perhaps not, because they are in the order of things, the rich young Jews perhaps not, because acquisition is their principle, but for most other intelligent inheritors there must be this twinge of conscientious doubt. "Why particularly am I picked out for so tremendous an advantage?" If the riddle is not Nolan, then it is rent, or it is the social mischief of the business, or the particular speculative COUP that established their fortune.

"PECUNIA NON OLET," Benham wrote, "and it is just as well. Or the west-ends of the world would reek with deodorizers. Restitution is inconceivable; how and to whom? And in the meanwhile here we are lifted up by our advantage to a fantastic appearance of opportunity. Whether the world looks to us or not to do tremendous things, it ought to look to us. And above all we ought to look to ourselves. RICHESSE OBLIGE."

3

It is not to be supposed that Benham came to town only with a general theory of aristocracy. He had made plans for a career. Indeed, he had plans for several careers. None of them when brought into contrast with the great spectacle of London retained all the attractiveness that had saturated them at their inception.

They were all more or less political careers. Whatever a democratic man may be, Prothero and he had decided that an aristocratic man is a public man. He is made and protected in what he is by laws and the state and his honour goes out to the state. The aristocrat has

no right to be a voluptuary or a mere artist or a respectable nonentity, or any such purely personal things. Responsibility for the aim and ordering of the world is demanded from him as imperatively as courage.

Benham's deliberate assumption of the equestrian role brought him into contact with a new set of acquaintances, conscious of political destinies. They were amiable, hard young men, almost affectedly unaffected; they breakfasted before dawn to get in a day's hunting, and they saw to it that Benham's manifest determination not to discredit himself did not lead to his breaking his neck. Their bodies were beautifully tempered, and their minds were as flabby as Prothero's body. Among them were such men as Lord Breeze and Peter Westerton, and that current set of Corinthians who supposed themselves to be resuscitating the Young England movement and Tory Democracy. Poor movements which indeed have never so much lived as suffered chronic resuscitation. These were days when Tariff Reform was only an inglorious possibility for the Tory Party, and Young England had yet to demonstrate its mental quality in an anti-socialist campaign. Seen from the perspectives of Cambridge and Chexington, the Tory party was still a credible basis for the adventure of a young man with an aristocratic theory in his mind.

These were the days when the strain and extremity of a dangerous colonial war were fresh in people's minds, when the quality of the public consciousness was braced up by its recent response to unanticipated demands. The conflict of stupidities that had caused the war was overlaid and forgotten by a hundred thousand devotions, by countless heroic deaths and sufferings, by a pacification largely conceived and broadly handled. The nation had displayed a belated regard for its honour and a sustained passion for great unities. It was still possible for Benham to regard the empire as a splendid opportunity, and London as the conceivable heart of the world. He could think of Parliament as a career, and of a mingling of aristocratic socialism based on universal service with a civilizing

imperialism as a purpose. . . .

But his thoughts had gone wider and deeper than that. . . .

Already when Benham came to London he had begun to dream of possibilities that went beyond the accidental states and empires of to-day. Prothero's mind, replete with historical detail, could find nothing but absurdity in the alliances and dynasties and loyalties of our time. "Patched up things, Benham, temporary, pretentious. All very well for the undignified man, the democratic man, to take shelter under, all very well for the humourist to grin and bear, all very well for the crowd and the quack, but not for the aristocrat--No!--his mind cuts like steel and burns like fire. Lousy sheds they are, plastered hoardings . . . and such a damned nuisance too! For any one who wants to do honourable things! With their wars and their diplomacies, their tariffs and their encroachments; all their humbugging struggles, their bloody and monstrous struggles, that finally work out to no end at all. . . . If you are going for the handsome thing in life then the world has to be a united world, Benham, as a matter of course. That was settled when the railways and the telegraph came. Telephones, wireless telegraphy, aeroplanes insist on it. We've got to mediatise all this stuff, all these little crowns and boundaries and creeds, and so on, that stand in the way. Just as Italy had to be united in spite of all the rotten little dukes and princes and republics, just as Germany had to be united in spite of its scores of kingdoms and duchies and liberties, so now the world. Things as they are may be fun for lawyers and politicians and court people and--douaniers; they may suit the loan-mongers and the armaments shareholders, they may even be more comfortable for the middle-aged, but what, except as an inconvenience, does that matter to you or me?

Prothero always pleased Benham when he swept away empires. There was always a point when the rhetoric broke into gesture.

"We've got to sweep them away, Benham," he said, with a wide gesture of his arm. "We've got to sweep them all away."

Prothero helped himself to some more whiskey, and spoke hastily, because he was afraid some one else might begin. He was never safe from interruption in his own room. The other young men present sucked at their pipes and regarded him doubtfully. They were never quite certain whether Prothero was a prophet or a fool. They could not understand a mixed type, and he was so manifestly both.

"The only sane political work for an intelligent man is to get the world-state ready. For that we have to prepare an aristocracy--"

"Your world-state will be aristocratic?" some one interpolated.

"Of course it will be aristocratic. How can uninformed men think all round the globe? Democracy dies five miles from the parish pump. It will be an aristocratic republic of all the capable men in the world. . . ."

"Of course," he added, pipe in mouth, as he poured out his whiskey, "it's a big undertaking. It's an affair of centuries. . . ."

And then, as a further afterthought: "All the more reason for getting to work at it. . . ."

In his moods of inspiration Prothero would discourse through the tobacco smoke until that great world-state seemed imminent--and Part Two in the Tripos a thing relatively remote. He would talk until the dimly-lit room about him became impalpable, and the young men squatting about it in elaborately careless attitudes caught glimpses of cities that are still to be, bridges in wild places, deserts tamed and oceans conquered, mankind no longer wasted by bickerings, going forward to the conquest of the stars. . . .

An aristocratic world-state; this political dream had already taken hold of Benham's imagination when he came to town. But it was a dream, something that had never existed, something that indeed may never materialize, and such dreams, though they are vivid enough in a study at night, fade and vanish at the rustle of a daily newspaper or the sound of a passing band. To come back again. . . . So it was with Benham. Sometimes he was set clearly towards this world-state that Prothero had talked into possibility. Sometimes he was simply abreast of the patriotic and socially constructive British Imperialism of Breeze and Westerton. And there were moods when the two things were confused in his mind, and the glamour of world dominion rested wonderfully on the slack and straggling British Empire of Edward the Seventh--and Mr. Rudyard Kipling and Mr. Chamberlain. He did go on for a time honestly entertaining both these projects in his mind, each at its different level, the greater impalpable one and the lesser concrete one within it. In some unimaginable way he could suppose that the one by some miracle of ennoblement--and neglecting the Frenchman, the Russian, the German, the American, the Indian, the Chinaman, and, indeed, the greater part of mankind from the problem--might become the other. . . .

All of which is recorded here, without excess of comment, as it happened, and as, in a mood of astonished reminiscences, he came finally to perceive it, and set it down for White's meditative perusal.

4

But to the enthusiasm of the young, dreams have something of the substance of reality and realities, something of the magic of dreams. The London to which Benham came from Cambridge and the disquisitions of Prothero was not the London of a mature and

disillusioned vision. It was London seen magnified and distorted through the young man's crystalline intentions. It had for him a quality of multitudinous, unquenchable activity. Himself filled with an immense appetite for life, he was unable to conceive of London as fatigued. He could not suspect these statesmen he now began to meet and watch, of jaded wills and petty spites, he imagined that all the important and influential persons in this large world of affairs were as frank in their private lives and as unembarrassed in their financial relationships as his untainted self. And he had still to reckon with stupidity. He believed in the statecraft of leader-writers and the sincerity of political programmes. And so regarded, what an avenue to Empire was Whitehall! How momentous was the sunrise in St. James's Park, and how significant the clustering knot of listeners and speakers beneath the tall column that lifts our Nelson to the windy sky!

For a time Benham was in love with the idea of London. He got maps of London and books about London. He made plans to explore its various regions. He tried to grasp it all, from the conscious picturesqueness of its garden suburbs to the factories of Croydon, from the clerk-villadoms of Ealing to the inky streams of Bow. In those days there were passenger steamboats that would take one from the meadows of Hampton Court past the whole spectacle of London out to the shipping at Greenwich and the towed liners, the incessant tugs, the heaving portals of the sea. . . . His time was far too occupied for him to carry out a tithe of these expeditions he had planned, but he had many walks that bristled with impressions. Northward and southward, eastward and westward a dreaming young man could wander into a wilderness of population, polite or sombre, poor, rich, or middle-class, but all ceaselessly active, all urgently pressing, as it seemed, to their part in the drama of the coming years. He loved the late afternoon, when every artery is injected and gorged with the multitudinous home-going of the daily workers, he loved the time of lighting up, and the clustering excitements of the late hours. And he went out southward and

eastward into gaunt regions of reeking toil. As yet he knew nothing of the realities of industrialism. He saw only the beauty of the great chimneys that rose against the sullen smoke-barred sunsets, and he felt only the romance of the lurid shuddering flares that burst out from squat stacks of brickwork and lit the emptiness of strange and slovenly streets. . . .

And this London was only the foreground of the great scene upon which he, as a prosperous, well-befriended young Englishman, was free to play whatever part he could. This narrow turbid tidal river by which he walked ran out under the bridges eastward beneath the grey-blue clouds towards Germany, towards Russia, and towards Asia, which still seemed in those days so largely the Englishman's Asia. And when you turned about at Blackfriars Bridge this sense of the round world was so upon you that you faced not merely Westminster, but the icy Atlantic and America, which one could yet fancy was a land of Englishmen--Englishmen a little estranged. At any rate they assimilated, they kept the tongue. The shipping in the lower reaches below the Tower there carried the flags of every country under the sky. . . . As he went along the riverside he met a group of dusky students, Chinese or Japanese. Cambridge had abounded in Indians; and beneath that tall clock tower at Westminster it seemed as though the world might centre. The background of the Englishman's world reached indeed to either pole, it went about the earth, his background it was--for all that he was capable of doing. All this had awaited him. . . .

Is it any wonder if a young man with an excitable imagination came at times to the pitch of audible threats? If the extreme indulgence of his opportunity and his sense of ability and vigour lifted his vanity at moments to the kingly pitch? If he ejaculated and made a gesture or so as he went along the Embankment?

In the disquisition upon choice that opened Benham's paper on ARISTOCRACY, he showed himself momentarily wiser than his day-dreams. For in these day-dreams he did seem to himself to be choosing among unlimited possibilities. Yet while he dreamt other influences were directing his movements. There were for instance his mother, Lady Marayne, who saw a very different London from what he did, and his mother Dame Nature, who cannot see London at all. She was busy in his blood as she is busy in the blood of most healthy young men; common experience must fill the gaps for us; and patiently and thoroughly she was preparing for the entrance of that heroine, whom not the most self-centred of heroes can altogether avoid. . . .

And then there was the power of every day. Benham imagined himself at large on his liberating steed of property while indeed he was mounted on the made horse of Civilization; while he was speculating whither he should go, he was already starting out upon the round. One hesitates upon the magnificent plan and devotion of one's lifetime and meanwhile there is usage, there are engagements. Every morning came Merkle, the embodiment of the established routine, the herald of all that the world expected and required Benham to be and do. Usually he awakened Benham with the opening of his door and the soft tinkle of the curtain rings as he let in the morning light. He moved softly about the room, gathering up and removing the crumpled hulls of yesterday; that done he reappeared at the bedside with a cup of admirable tea and one thin slice of bread-and-butter, reported on the day's weather, stood deferential for instructions. "You will be going out for lunch, sir. Very good, sir. White slips of course, sir. You will go down into the country in the afternoon? Will that be the serge suit, sir, or the brown?"

These matters settled, the new aristocrat could yawn and stretch

like any aristocrat under the old dispensation, and then as the sound of running water from the bathroom ceased, stick his toes out of bed.

The day was tremendously indicated. World-states and aristocracies of steel and fire, things that were as real as coal-scuttles in Billy's rooms away there at Cambridge, were now remoter than Sirius.

He was expected to shave, expected to bath, expected to go in to the bright warmth and white linen and silver and china of his breakfast-table. And there he found letters and invitations, loaded with expectation. And beyond the coffee-pot, neatly folded, lay the TIMES, and the DAILY NEWS and the TELEGRAPH all with an air of requiring his attention. There had been more fighting in Thibet and Mr. Ritchie had made a Free Trade speech at Croydon. The Japanese had torpedoed another Russian ironclad and a British cruiser was ashore in the East Indies. A man had been found murdered in an empty house in Hoxton and the King had had a conversation with General Booth. Tadpole was in for North Winchelsea, beating Taper by nine votes, and there had been a new cut in the Atlantic passenger rates. He was expected to be interested and excited by these things.

Presently the telephone bell would ring and he would hear the clear little voice of his mother full of imperative expectations. He would be round for lunch? Yes, he would be round to lunch. And the afternoon, had he arranged to do anything with his afternoon? No!-- put off Chexington until tomorrow. There was this new pianist, it was really an EXPERIENCE, and one might not get tickets again. And then tea at Panton's. It was rather fun at Panton's. . . . Oh!-- Weston Massinghay was coming to lunch. He was a useful man to know. So CLEVER. . . . So long, my dear little Son, till I see you. . . .

So life puts out its Merkle threads, as the poacher puts his hair noose about the pheasant's neck, and while we theorize takes hold of

us. . . .

It came presently home to Benham that he had been down from Cambridge for ten months, and that he was still not a step forward with the realization of the new aristocracy. His political career waited. He had done a quantity of things, but their net effect was incoherence. He had not been merely passive, but his efforts to break away into creative realities had added to rather than diminished his accumulating sense of futility.

The natural development of his position under the influence of Lady Marayne had enormously enlarged the circle of his acquaintances. He had taken part in all sorts of social occasions, and sat and listened to a representative selection of political and literary and social personages, he had been several times to the opera and to a great number and variety of plays, he had been attentively inconspicuous in several really good week-end parties. He had spent a golden October in North Italy with his mother, and escaped from the glowing lassitude of Venice for some days of climbing in the Eastern Alps. In January, in an outbreak of enquiry, he had gone with Lionel Maxim to St. Petersburg and had eaten zakuska, brightened his eyes with vodka, talked with a number of charming people of the war that was then imminent, listened to gipsy singers until dawn, careered in sledges about the most silent and stately of capitals, and returned with Lionel, discoursing upon autocracy and assassination, Japan, the Russian destiny, and the government of Peter the Great. That excursion was the most after his heart of all the dispersed employments of his first year. Through the rest of the winter he kept himself very fit, and still further qualified that nervous dislike for the horse that he had acquired from Prothero by hunting once a week in Essex. He was incurably a bad horseman; he rode without sympathy, he was unready and convulsive at hedges and ditches, and he judged distances badly. His white face and rigid seat and a certain joylessness of bearing in the saddle earned him the singular nickname, which never reached his ears, of

the "Galvanized Corpse." He got through, however, at the cost of four quite trifling spills and without damaging either of the horses he rode. And his physical self-respect increased.

On his writing-desk appeared a few sheets of manuscript that increased only very slowly. He was trying to express his Cambridge view of aristocracy in terms of Finacue Street, West.

The artistic and intellectual movements of London had made their various demands upon his time and energies. Art came to him with a noble assumption of his interest and an intention that presently became unpleasantly obvious to sell him pictures that he did not want to buy and explain away pictures that he did. He bought one or two modern achievements, and began to doubt if art and aristocracy had any necessary connection. At first he had accepted the assumption that they had. After all, he reflected, one lives rather for life and things than for pictures of life and things or pictures arising out of life and things. This Art had an air of saying something, but when one came to grips with it what had it to say? Unless it was Yah! The drama, and more particularly the intellectual drama, challenged his attention. In the hands of Shaw, Barker, Masefield, Galsworthy, and Hankin, it, too, had an air of saying something, but he found it extremely difficult to join on to his own demands upon life anything whatever that the intellectual drama had the air of having said. He would sit forward in the front row of the dress-circle with his cheek on his hand and his brow slightly knit. His intentness amused observant people. The drama that did not profess to be intellectual he went to with Lady Marayne, and usually on first nights. Lady Marayne loved a big first night at St. James's Theatre or His Majesty's. Afterwards, perhaps, Sir Godfrey would join them at a supper party, and all sorts of clever and amusing people would be there saying keen intimate things about each other. He met Yeats, who told amusing stories about George Moore, and afterwards he met George Moore, who told amusing stories about Yeats, and it was all, he felt, great fun

for the people who were in it. But he was not in it, and he had no very keen desire to be in it. It wasn't his stuff. He had, though they were nowadays rather at the back of his mind, quite other intentions. In the meanwhile all these things took up his time and distracted his attention.

There was, as yet, no practicable aviation to beguile a young man of spirit, but there were times when Benham found himself wondering whether there might not be something rather creditable in the possession and control of a motor-car of exceptional power. Only one might smash people up. Should an aristocrat be deterred by the fear of smashing people up? If it is a selfish fear of smashing people up, if it is nerves rather than pity? At any rate it did not come to the car.

6

Among other things that delayed Benham very greatly in the development of his aristocratic experiments was the advice that was coming to him from every quarter. It came in extraordinary variety and volume, but always it had one unvarying feature. It ignored and tacitly contradicted his private intentions.

We are all of us disposed to be propagandists of our way of living, and the spectacle of a wealthy young man quite at large is enough to excite the most temperate of us without distinction of age or sex. "If I were you," came to be a familiar phrase in his ear. This was particularly the case with political people; and they did it not only from the natural infirmity of humanity, but because, when they seemed reluctant or satisfied with him as he was, Lady Marayne egged them on.

There was a general assumption that he was to go into Parliament, and most of his counsellors assumed further that on the whole his natural sympathies would take him into the Conservative party. But it was pointed out to him that just at present the Liberal party was the party of a young man's opportunity; sooner or later the swing of the pendulum which would weed the Conservatives and proliferate Liberals was bound to come, there was always more demand and opportunity for candidates on the Liberal side, the Tariff Reformers were straining their ministerial majority to the splitting point, and most of the old Liberal leaders had died off during the years of exile. The party was no longer dominated; it would tolerate ideas. A young man who took a distinctive line--provided it was not from the party point of view a vexatious or impossible line--might go very rapidly far and high. On the other hand, it was urged upon him that the Tariff Reform adventure called also for youth and energy. But there, perhaps, there was less scope for the distinctive line--and already they had Garvin. Quite a number of Benham's friends pointed out to him the value of working out some special aspect of our national political interests. A very useful speciality was the Balkans. Mr. Pope, the well-known publicist, whose very sound and considerable reputation was based on the East Purblow Labour Experiment, met Benham at lunch and proposed to go with him in a spirit of instructive association to the Balkans, rub up their Greek together, and settle the problem of Albania. He wanted, he said, a foreign speciality to balance his East Purblow interest. But Lady Beach Mandarin warned Benham against the Balkans; the Balkans were getting to be too handy for Easter and summer holidays, and now that there were several good hotels in Servia and Montenegro and Sofia, they were being overdone. Everybody went to the Balkans and came back with a pet nationality. She loathed pet nationalities. She believed most people loathed them nowadays. It was stale: it was GLADSTONIAN. She was all for specialization in social reform. She thought Benham ought to join the Fabian Society and consult the Webbs. Quite a number of able young men had been placed with the assistance of the Webbs. They were, she said, "a perfect fount. . . ."

Two other people, independently of each other, pointed out to Benham the helpfulness of a few articles in the half-crown monthlies. . . .

"What are the assumptions underlying all this?" Benham asked himself in a phase of lucidity.

And after reflection. "Good God! The assumptions! What do they think will satisfy me? . . ."

Everybody, however, did not point to Parliament. Several people seemed to think Travel, with a large T, was indicated. One distant cousin of Sir Godfrey's, the kind of man of the world who has long moustaches, was for big game shooting. "Get right out of all this while you are young," he said. "There's nothing to compare with stopping a charging lion at twenty yards. I've done it, my boy. You can come back for all this pow-wow afterwards." He gave the diplomatic service as a second choice. "There you are," he said, "first-rate social position, nothing to do, theatres, operas, pretty women, colour, life. The best of good times. Barring Washington, that is. But Washington, they say, isn't as bad as it used to be--since Teddy has Europeanized 'em. . . ."

Even the Reverend Harold Benham took a subdued but thoughtful share in his son's admonition. He came up to the flat--due precautions were taken to prevent a painful encounter--he lunched at his son's new club, and he was visibly oppressed by the contrast between the young man's youthful fortunes and his own. As visibly he bore up bravely. "There are few men, Poff, who would not envy you your opportunities," he said. "You have the Feast of Life spread out at your feet. . . . I hope you have had yourself put up for the Athenaeum. They say it takes years. When I was a young man--and ambitious--I thought that some day I might belong to the Athenaeum. . . . One has to learn. . . ."

And with an effect of detachment, just as though it didn't belong to the rest of him at all, there was beginning a sort of backstairs and underside to Benham's life. There is no need to discuss how inevitable that may or may not be in the case of a young man of spirit and large means, nor to embark upon the discussion of the temptations and opportunities of large cities. Several ladies, of various positions and qualities, had reflected upon his manifest need of education. There was in particular Mrs. Skelmersdale, a very pretty little widow with hazel eyes, black hair, a mobile mouth, and a pathetic history, who talked of old music to him and took him to a Dolmetsch concert in Clifford's Inn, and expanded that common interest to a general participation in his indefinite outlook. She advised him about his probable politics--everybody did that--but when he broke through his usual reserve and suggested views of his own, she was extraordinarily sympathetic. She was so sympathetic and in such a caressing way that she created a temporary belief in her understanding, and it was quite imperceptibly that he was drawn into the discussion of modern ethical problems. She herself was a rather stimulating instance of modern ethical problems. She told him something of her own story, and then their common topics narrowed down very abruptly. He found he could help her in several ways. There is, unhappily, a disposition on the part of many people, who ought to know better, to regard a role played by Joseph during his earlier days in Egypt as a ridiculous one. This point of view became very inopportunistly dominant in Benham's mind when he was lunching TETE A TETE with Mrs. Skelmersdale at her flat. . . .

The ensuing intimacy was of an entirely concealed and respectable nature, but a certain increased preoccupation in his manner set Lady

Marayne thinking. He had as a matter of fact been taken by surprise.

Still he perceived that it is no excuse for a man that he has been taken by surprise. Surprises in one's own conduct ought not to happen. When they do happen then an aristocrat ought to stick to what he had done. He was now in a subtle and complicated relationship to Mrs. Skelmersdale, a relationship in which her pride had become suddenly a matter of tremendous importance. Once he had launched himself upon this affair, it was clear to him that he owed it to her never to humiliate her. And to go back upon himself now would be a tremendous humiliation for her. You see, he had helped her a little financially. And she looked to him, she wanted him. . . .

She wasn't, he knew, altogether respectable. Indeed, poor dear, her ethical problems, already a little worn, made her seem at times anything but respectable. He had met her first one evening at Jimmy Gluckstein's when he was forming his opinion of Art. Her manifest want of interest in pictures had attracted him. And that had led to music. And to the mention of a Clementi piano, that short, gentle, sad, old, little sort of piano people will insist upon calling a spinet, in her flat.

And so to this. . . .

It was very wonderful and delicious, this first indulgence of sense.

It was shabby and underhand.

The great god Pan is a glorious god. (And so was Swinburne.) And what can compare with the warmth of blood and the sheen of sunlit limbs?

But Priapus. . . .

She was the most subtle, delightful and tender of created beings.

She had amazing streaks of vulgarity.

And some astonishing friends.

Once she had seemed to lead the talk deliberately to money matters.

She loved him and desired him. There was no doubt of it.

There was a curious effect about her as though when she went round the corner she would become somebody else. And a curious recurrent feeling that round the corner there was somebody else.

He had an extraordinary feeling that his mother knew about this business. This feeling came from nothing in her words or acts, but from some indefinable change in her eyes and bearing towards him. But how could she know?

It was unlikely that she and Mrs. Skelmersdale would ever meet, and it seemed to him that it would be a particularly offensive incident for them to meet.

There were times now when life took on a grey and boring quality such as it had never had before he met Mrs. Skelmersdale, and the only remedy was to go to her. She could restore his nervous tranquillity, his feeling of solidity and reality, his pride in himself. For a time, that is.

Nevertheless his mind was as a whole pervaded by the feeling that he ought not to have been taken by surprise.

And he had the clearest conviction in his mind that if now he could be put back again to the day before that lunch. . . .

No! he should not have gone there to lunch.

He had gone there to see her Clementi piano.

Had he or had he not thought beforehand of any other possibility?

On a point so vital his memory was curiously unsure.

8

The worry and disorganization of Benham's life and thoughts increased as the spring advanced. His need in some way to pull things together became overpowering. He began to think of Billy Prothero, more and more did it seem desirable to have a big talk with Billy and place everything that had got disturbed. Benham thought of going to Cambridge for a week of exhaustive evenings. Small engagements delayed that expedition. . . .

Then came a day in April when all the world seemed wrong to Benham. He was irritable; his will was unstable; whatever presented itself to be done presented itself as undesirable; he could settle to nothing. He had been keeping away from Mrs. Skelmersdale and in the morning there came a little note from her designed to correct this abstention. She understood the art of the attractive note. But he would not decide to go to her. He left the note unanswered.

Then came his mother at the telephone and it became instantly certain to Benham that he could not play the dutiful son that evening. He answered her that he could not come to dinner. He had engaged himself. "Where?"

"With some men."

There was a pause and then his mother's voice came, flattened by disappointment. "Very well then, little Poff. Perhaps I shall see you to-morrow."

He replaced the receiver and fretted back into his study, where the notes on aristocracy lay upon his desk, the notes he had been pretending to work over all the morning.

"Damned liar!" he said, and then, "Dirty liar!" He decided to lunch at the club, and in the afternoon he was moved to telephone an appointment with his siren. And having done that he was bound to keep it.

About one o'clock in the morning he found himself walking back to Finacue Street. He was no longer a fretful conflict of nerves, but if anything he was less happy than he had been before. It seemed to him that London was a desolate and inglorious growth.

London ten years ago was much less nocturnal than it is now. And not so brightly lit. Down the long streets came no traffic but an occasional hansom. Here and there a cat halted or bolted in the road. Near Piccadilly a policeman hovered artfully in a doorway, and then came a few belated prostitutes waylaying the passers-by, and a few youths and men, wearily lust driven.

As he turned up New Bond Street he saw a figure that struck him as familiar. Surely!--it was Billy Prothero! Or at any rate it was astonishingly like Billy Prothero. He glanced again and the likeness was more doubtful. The man had his back to Benham, he was halting and looking back at a woman.

By some queer flash of intuition it came to Benham that even if this was not Prothero, still Prothero did these things. It might very well be Prothero even, though, as he now saw, it wasn't. Everybody did these things. . . .

It came into Benham's head for the first time that life could be tiresome.

This Bond Street was a tiresome place; with its shops all shut and muffled, its shops where in the crowded daytime one bought costly furniture, costly clothes, costly scent, sweets, bibelots, pictures, jewellery, presents of all sorts, clothes for Mrs. Skelmersdale, sweets for Mrs. Skelmersdale, presents for Mrs. Skelmersdale, all the elaborate fittings and equipage of--THAT!

"Good night, dear," a woman drifted by him.

"I've SAID good night," he cried, "I've SAID good night," and so went on to his flat. The unquenchable demand, the wearisome insatiability of sex! When everything else has gone, then it shows itself bare in the bleak small hours. And at first it had seemed so light a matter! He went to bed, feeling dog-tired, he went to bed at an hour and with a finished completeness that Merkle would have regarded as entirely becoming in a young gentleman of his position.

And a little past three o'clock in the morning he awoke to a mood of indescribable desolation. He awoke with a start to an agony of remorse and self-reproach.

9

For a time he lay quite still staring at the darkness, then he groaned and turned over. Then, suddenly, like one who fancies he hears a strange noise, he sat up in bed and listened. "Oh, God!" he said at last.

And then: "Oh! The DIRTINESS of life! The dirty muddle of life!

"What are we doing with life? What are we all doing with life?"

"It isn't only this poor Milly business. This only brings it to a head. Of course she wants money. . . ."

His thoughts came on again.

"But the ugliness!

"Why did I begin it?"

He put his hands upon his knees and pressed his eyes against the backs of his hands and so remained very still, a blankness beneath his own question.

After a long interval his mind moved again.

And now it was as if he looked upon his whole existence, he seemed to see in a large, clear, cold comprehensiveness, all the wasted days, the fruitless activities, the futilities, the perpetual postponements that had followed his coming to London. He saw it all as a joyless indulgence, as a confusion of playthings and undisciplined desires, as a succession of days that began amiably and weakly, that became steadily more crowded with ignoble and trivial occupations, that had sunken now to indignity and uncleanness. He was overwhelmed by that persuasion, which only freshly soiled youth can feel in its extreme intensity, that life was slipping away from him, that the sands were running out, that in a little while his existence would be irretrievably lost.

By some trick of the imagination he saw life as an interminable Bond Street, lit up by night lamps, desolate, full of rubbish, full of the very best rubbish, trappings, temptations, and down it all he

drove, as the damned drive, wearily, inexplicably.

WHAT ARE WE UP TO WITH LIFE! WHAT ARE WE MAKING OF LIFE!

But hadn't he intended to make something tremendous of life? Hadn't he come to London trailing a glory? . . .

He began to remember it as a project. It was the project of a great World-State sustained by an aristocracy of noble men. He was to have been one of those men, too fine and far-reaching for the dull manoeuvres of such politics as rule the world to-day. The project seemed still large, still whitely noble, but now it was unlit and dead, and in the foreground he sat in the flat of Mrs. Skelmersdale, feeling dissipated and fumbling with his white tie. And she was looking tired. "God!" he said. "How did I get there?"

And then suddenly he reached out his arms in the darkness and prayed aloud to the silences.

"Oh, God! Give me back my visions! Give me back my visions!"

He could have imagined he heard a voice calling upon him to come out into life, to escape from the body of this death. But it was his own voice that called to him. . . .

10

The need for action became so urgent in him, that he got right out of his bed and sat on the edge of it. Something had to be done at once. He did not know what it was but he felt that there could be no more sleep, no more rest, no dressing nor eating nor going forth

before he came to decisions. Christian before his pilgrimage began was not more certain of this need of flight from the life of routine and vanities.

What was to be done?

In the first place he must get away and think about it all, think himself clear of all these--these immediacies, these associations and relations and holds and habits. He must get back to his vision, get back to the God in his vision. And to do that he must go alone.

He was clear he must go alone. It was useless to go to Prothero, one weak man going to a weaker. Prothero he was convinced could help him not at all, and the strange thing is that this conviction had come to him and had established itself incontestably because of that figure at the street corner, which had for just one moment resembled Prothero. By some fantastic intuition Benham knew that Prothero would not only participate but excuse. And he knew that he himself could endure no excuses. He must cut clear of any possibility of qualification. This thing had to be stopped. He must get away, he must get free, he must get clean. In the extravagance of his reaction Benham felt that he could endure nothing but solitary places and to sleep under the open sky.

He wanted to get right away from London and everybody and lie in the quiet darkness and stare up at the stars.

His plans grew so definite that presently he was in his dressing-gown and turning out the maps in the lower drawer of his study bureau. He would go down into Surrey with a knapsack, wander along the North Downs until the Guildford gap was reached, strike across the Weald country to the South Downs and then beat eastward. The very thought of it brought a coolness to his mind. He knew that over those southern hills one could be as lonely as in the wilderness and as free to talk to God. And there he would settle

something. He would make a plan for his life and end this torment.

When Merkle came in to him in the morning he was fast asleep.

The familiar curtain rings awakened Benham. He turned his head over, stared for a moment and then remembered.

"Merkle," he said, "I am going for a walking tour. I am going off this morning. Haven't I a rucksack?"

"You 'ave a sort of canvas bag, sir, with pockets to it," said Merkle. "Will you be needing the VERY 'eavy boots with 'obnails-- Swiss, I fancy, sir--or your ordinary shooting boots?"

"And when may I expect you back, sir?" asked Merkle as the moment for departure drew near.

"God knows," said Benham, "I don't."

"Then will there be any address for forwarding letters, sir?"

Benham hadn't thought of that. For a moment he regarded Merkle's scrupulous respect with a transient perplexity.

"I'll let you know, Merkle," he said. "I'll let you know."

For some days at least, notes, telephone messages, engagements, all this fuss and clamour about nothing, should clamour for him in vain. . . .

"But how closely," cried White, in a mood of cultivated enthusiasm; "how closely must all the poor little stories that we tell to-day follow in the footsteps of the Great Exemplars! A little while ago and the springtime freshness of Tobias irradiated the page. Now see! it is Christian--."

Indeed it looked extremely like Christian as Benham went up across the springy turf from Epsom Downs station towards the crest of the hill. Was he not also fleeing in the morning sunlight from the City of Destruction? Was he not also seeking that better city whose name is Peace? And there was a bundle on his back. It was the bundle, I think, that seized most firmly upon the too literary imagination of White.

But the analogy of the bundle was a superficial one. Benham had not the slightest desire to lose it from his shoulders. It would have inconvenienced him very greatly if he had done so. It did not contain his sins. Our sins nowadays are not so easily separated. It contained a light, warm cape-coat he had bought in Switzerland and which he intended to wrap about him when he slept under the stars, and in addition Merkle had packed it with his silk pyjamas, an extra pair of stockings, tooth-brush, brush and comb, a safety razor. . . . And there were several sheets of the Ordnance map.

12

The urgency of getting away from something dominated Benham to the exclusion of any thought of what he might be getting to. That muddle of his London life had to be left behind. First, escape. . .

.

Over the downs great numbers of larks were singing. It was warm

April that year and early. All the cloud stuff in the sky was gathered into great towering slow-sailing masses, and the rest was blue of the intensest. The air was so clean that Benham felt it clean in the substance of his body. The chestnuts down the hill to the right were flowering, the beeches were luminously green, and the oaks in the valley foaming gold. And sometimes it was one lark filled his ears, and sometimes he seemed to be hearing all the larks for miles about him. Presently over the crest he would be out of sight of the grand stand and the men exercising horses, and that brace of red-jacketed golfers. . . .

What was he to do?

For a time he could think of nothing to do except to keep up and out of the valley. His whole being seemed to have come to his surfaces to look out at the budding of the year and hear the noise of the birds. And then he got into a long road from which he had to escape, and trespassing southward through plantations he reached the steep edge of the hills and sat down over above a great chalk pit somewhere near Dorking and surveyed all the tumbled wooded spaces of the Weald. . . . It is after all not so great a country this Sussex, nor so hilly, from deepest valley to highest crest is not six hundred feet, yet what a greatness of effect it can achieve! There is something in those downland views which, like sea views, lifts a mind out to the skies. All England it seemed was there to Benham's vision, and the purpose of the English, and his own purpose in the world. For a long time he surveyed the large delicacy of the detail before him, the crests, the tree-protected houses, the fields and farmsteads, the distant gleams of water. And then he became interested in the men who were working in the chalk pit down below.

They at any rate were not troubled with the problem of what to do with their lives.

Benham found his mind was now running clear, and so abundantly that he could scarcely, he felt, keep pace with it. As he thought his flow of ideas was tinged with a fear that he might forget what he was thinking. In an instant, for the first time in his mental existence, he could have imagined he had discovered Labour and seen it plain. A little while ago and he had seemed a lonely man among the hills, but indeed he was not lonely, these men had been with him all the time, and he was free to wander, to sit here, to think and choose simply because those men down there were not free. HE WAS SPENDING THEIR LEISURE. . . . Not once but many times with Prothero

had he used the phrase RICHESSE OBLIGE. Now he remembered it. He began to remember a mass of ideas that had been overlaid and stifling within him. This was what Merkle and the club servants and the entertainments and engagements and his mother and the artistic touts and the theatrical touts and the hunting and the elaboration of games and--Mrs. Skelmersdale and all that had clustered thickly round him in London had been hiding from him. Those men below there had not been trusted to choose their work; they had been given it. And he had been trusted. . . .

And now to grapple with it! Now to get it clear! What work was he going to do? That settled, he would deal with his distractions readily enough. Until that was settled he was lax and exposed to every passing breeze of invitation.

"What work am I going to do? What work am I going to do?" He repeated it.

It is the only question for the aristocrat. What amusement? That for a footman on holiday. That for a silly child, for any creature

that is kept or led or driven. That perhaps for a tired invalid, for a toiler worked to a rag. But able-bodied amusement! The arms of Mrs. Skelmersdale were no worse than the solemn aimlessness of hunting, and an evening of dalliance not an atom more reprehensible than an evening of chatter. It was the waste of him that made the sin. His life in London had been of a piece together. It was well that his intrigue had set a light on it, put a point to it, given him this saving crisis of the nerves. That, indeed, is the chief superiority of idle love-making over other more prevalent forms of idleness and self-indulgence; it does at least bear its proper label. It is reprehensible. It brings your careless honour to the challenge of concealment and shabby evasions and lies. . . .

But in this pellucid air things took their proper proportions again.

And now what was he to do?

"Politics," he said aloud to the turf and the sky.

Is there any other work for an aristocratic man? . . . Science? One could admit science in that larger sense that sweeps in History, or Philosophy. Beyond that whatever work there is is work for which men are paid. Art? Art is nothing aristocratic except when it is a means of scientific or philosophical expression. Art that does not argue nor demonstrate nor discover is merely the craftsman's impudence.

He pulled up at this and reflected for a time with some distinguished instances in his mind. They were so distinguished, so dignified, they took their various arts with so admirable a gravity that the soul of this young man recoiled from the verdicts to which his reasoning drove him. "It's not for me to judge them," he decided, "except in relation to myself. For them there may be tremendous significances in Art. But if these do not appear to me, then so far as I am concerned they do not exist for me. They are

not in my world. So far as they attempt to invade me and control my attitudes or my outlook, or to judge me in any way, there is no question of their impudence. Impudence is the word for it. My world is real. I want to be really aristocratic, really brave, really paying for the privilege of not being a driven worker. The things the artist makes are like the things my private dream-artist makes, relaxing, distracting. What can Art at its greatest be, pure Art that is, but a more splendid, more permanent, transmissible reverie! The very essence of what I am after is NOT to be an artist. . . ."

After a large and serious movement through his mind he came back to Science, Philosophy or Politics as the sole three justifications for the usurpation of leisure.

So far as devotion to science went, he knew he had no specific aptitude for any departmentalized subject, and equally he felt no natural call to philosophy. He was left with politics. . . .

"Or else, why shouldn't I go down there and pick up a shovel and set to work? To make leisure for my betters. . . ."

And now it was that he could take up the real trouble that more than anything else had been keeping him ineffective and the prey of every chance demand and temptation during the last ten months. He had not been able to get himself into politics, and the reason why he had not been able to do so was that he could not induce himself to fit in. Statecraft was a remote and faded thing in the political life of the time; politics was a choice of two sides in a game, and either side he found equally unattractive. Since he had come down from Cambridge the Tariff Reform people had gone far to capture the Conservative party. There was little chance of a candidature for him without an adhesion to that. And he could find nothing he could imagine himself working for in the declarations of the Tariff Reform people. He distrusted them, he disliked them. They took all the

light and pride out of imperialism, they reduced it to a shabby conspiracy of the British and their colonies against foreign industrialism. They were violent for armaments and hostile to education. They could give him no assurance of any scheme of growth and unification, and no guarantees against the manifest dangers of economic disturbance and political corruption a tariff involves. Imperialism without noble imaginations, it seemed to him, was simply nationalism with megalomania. It was swaggering, it was greed, it was German; its enthusiasm was forced, its nobility a vulgar lie. No. And when he turned to the opposite party he found little that was more attractive. They were prepared, it seemed, if they came into office, to pull the legislature of the British Isles to pieces in obedience to the Irish demand for Home Rule, and they were totally unprepared with any scheme for doing this that had even a chance of success. In the twenty years that had elapsed since Gladstone's hasty and disastrous essay in political surgery they had studied nothing, learnt nothing, produced no ideas whatever in the matter. They had not had the time. They had just negotiated, like the mere politicians they were, for the Nationalist vote. They seemed to hope that by a marvel God would pacify Ulster. Lord Dunraven, Plunkett, were voices crying in the wilderness. The sides in the party game would as soon have heeded a poet. . . . But unless Benham was prepared to subscribe either to Home Rule or Tariff Reform there was no way whatever open to him into public life. He had had some decisive conversations. He had no illusions left upon that score. . . .

Here was the real barrier that had kept him inactive for ten months. Here was the problem he had to solve. This was how he had been left out of active things, a prey to distractions, excitements, idle temptations--and Mrs. Skelmersdale.

Running away to shoot big game or explore wildernesses was no remedy. That was just running away. Aristocrats do not run away. What of his debt to those men down there in the quarry? What of his

debt to the unseen men in the mines away in the north? What of his debt to the stokers on the liners, and to the clerks in the city? He reiterated the cardinal article of his creed: The aristocrat is a privileged man in order that he may be a public and political man.

But how is one to be a political man when one is not in politics?

Benham frowned at the Weald. His ideas were running thin.

He might hammer at politics from the outside. And then again how? He would make a list of all the things that he might do. For example he might write. He rested one hand on his knee and lifted one finger and regarded it. COULD he write? There were one or two men who ran papers and seemed to have a sort of independent influence. Strachey, for example, with his SPECTATOR; Maxse, with his NATIONAL REVIEW. But they were grown up, they had formed their ideas. He had to learn first.

He lifted a second finger. How to learn? For it was learning that he had to do.

When one comes down from Oxford or Cambridge one falls into the mistake of thinking that learning is over and action must begin. But until one perceives clearly just where one stands action is impossible.

How is one with no experience of affairs to get an experience of affairs when the door of affairs is closed to one by one's own convictions? Outside of affairs how can one escape being flimsy? How can one escape becoming merely an intellectual like those wordy Fabians, those writers, poseurs, and sham publicists whose wrangles he had attended? And, moreover, there is danger in the leisure of your intellectual. One cannot be always reading and thinking and

discussing and inquiring. . . . WOULD IT NOT BE BETTER AFTER ALL TO MAKE A CONCESSION, SWALLOW HOME RULE OR TARIFF REFORM, AND SO AT LEAST GET HIS HANDS ON THINGS?

And then in a little while the party conflict would swallow him up?

Still it would engage him, it would hold him. If, perhaps, he did not let it swallow him up. If he worked with an eye open for opportunities of self-assertion. . . .

The party game had not altogether swallowed "Mr. Arthur." . . .

But every one is not a Balfour. . . .

He reflected profoundly. On his left knee his left hand rested with two fingers held up. By some rapid mental alchemy these fingers had now become Home Rule and Tariff Reform. His right hand which had hitherto taken no part in the controversy, had raised its index finger by imperceptible degrees. It had been raised almost subconsciously. And by still obscurer processes this finger had become Mrs. Skelmersdale. He recognized her sudden reappearance above the threshold of consciousness with mild surprise. He had almost forgotten her share in these problems. He had supposed her dismissed to an entirely subordinate position. . . .

Then he perceived that the workmen in the chalk pit far below had knocked off and were engaged upon their midday meal. He understood why his mind was no longer moving forward with any alacrity.

Food?

The question where he should eat arose abruptly and dismissed all other problems from his mind. He unfolded a map. Here must be the

chalk pit, here was Dorking. That village was Brockham Green. Should he go down to Dorking or this way over Box Hill to the little inn at Burford Bridge. He would try the latter.

14

The April sunset found our young man talking to himself for greater emphasis, and wandering along a turfy cart-track through a wilderness mysteriously planted with great bushes of rhododendra on the Downs above Shere. He had eaten a belated lunch at Burford Bridge, he had got some tea at a little inn near a church with a splendid yew tree, and for the rest of the time he had wandered and thought. He had travelled perhaps a dozen or fifteen miles, and a good way from his first meditations above the Dorking chalk pit.

He had recovered long ago from that remarkable conception of an active if dishonest political career as a means of escaping Mrs. Skelmersdale and all that Mrs. Skelmersdale symbolized. That would be just louting from one bad thing to another. He had to settle Mrs. Skelmersdale clean and right, and he had to do as exquisitely right in politics as he could devise. If the public life of the country had got itself into a stupid antagonism of two undesirable things, the only course for a sane man of honour was to stand out from the parties and try and get them back to sound issues again. There must be endless people of a mind with himself in this matter. And even if there were not, if he was the only man in the world, he still had to follow his lights and do the right. And his business was to find out the right. . . .

He came back from these imaginative excursions into contemporary politics with one idea confirmed in his mind, an idea that had been indeed already in his mind during his Cambridge days. This was the

idea of working out for himself, thoroughly and completely, a political scheme, a theory of his work and duty in the world, a plan of the world's future that should give a rule for his life. The Research Magnificent was emerging. It was an alarmingly vast proposal, but he could see no alternative but submission, a plebeian's submission to the currents of life about him.

Little pictures began to flit before his imagination of the way in which he might build up this tremendous inquiry. He would begin by hunting up people, everybody who seemed to have ideas and promise ideas he would get at. He would travel far--and exhaustively. He would, so soon as the ideas seemed to indicate it, hunt out facts. He would learn how the world was governed. He would learn how it did its thinking. He would live sparingly. ("Not TOO sparingly," something interpolated.) He would work ten or twelve hours a day. Such a course of investigation must pass almost of its own accord into action and realization. He need not trouble now how it would bring him into politics. Inevitably somewhere it would bring him into politics. And he would travel. Almost at once he would travel. It is the manifest duty of every young aristocrat to travel. Here he was, ruling India. At any rate, passively, through the mere fact of being English, he was ruling India. And he knew nothing of India. He knew nothing indeed of Asia. So soon as he returned to London his preparations for this travel must begin, he must plot out the men to whom he would go, and so contrive that also he would go round the world. Perhaps he would get Lionel Maxim to go with him. Or if Maxim could not come, then possibly Prothero. Some one surely could be found, some one thinking and talking of statecraft and the larger idea of life. All the world is not swallowed up in every day. . . .

His mind shifted very suddenly from these large proposals to an entirely different theme. These mental landslips are not unusual when men are thinking hard and wandering. He found himself holding a trial upon himself for Presumptuousness, for setting himself up against the wisdom of the ages, and the decisions of all the established men in the world, for being in short a Presumptuous Sort of Ass. He was judge and jury and prosecutor, but rather inexplicably the defence was conducted in an irregular and undignified way by some inferior stratum of his being.

At first the defence contented itself with arguments that did at least aim to rebut the indictment. The decisions of all the established men in the world were notoriously in conflict. However great was the gross wisdom of the ages the net wisdom was remarkably small. Was it after all so very immodest to believe that the Liberals were right in what they said about Tariff Reform, and the Tories right in their criticism of Home Rule?

And then suddenly the defence threw aside its mask and insisted that Benham had to take this presumptuous line because there was no other tolerable line possible for him.

"Better die with the Excelsior chap up the mountains," the defence interjected.

Than what?

Consider the quality Benham had already betrayed. He was manifestly incapable of a decent modest mediocre existence. Already he had ceased to be--if one may use so fine a word for genteel abstinence--virtuous. He didn't ride well, he hadn't good hands, and he hadn't good hands for life. He must go hard and harsh, high or low. He was a man who needed BITE in his life. He was exceptionally capable of boredom. He had been bored by London. Social occasions

irritated him, several times he had come near to gross incivilities, art annoyed him, sport was an effort, wholesome perhaps, but unattractive, music he loved, but it excited him. The defendant broke the sunset calm by uttering amazing and improper phrases.

"I can't smug about in a state of falsified righteousness like these Crampton chaps.

"I shall roll in women. I shall rollick in women. If, that is, I stay in London with nothing more to do than I have had this year past.

"I've been sliding fast to it. . . .

"NO! I'M DAMNED IF I DO! . . .

16

For some time he had been bothered by a sense of something, something else, awaiting his attention. Now it came swimming up into his consciousness. He had forgotten. He was, of course, going to sleep out under the stars.

He had settled that overnight, that was why he had this cloak in his rucksack, but he had settled none of the details. Now he must find some place where he could lie down. Here, perhaps, in this strange forgotten wilderness of rhododendra.

He turned off from the track and wandered among the bushes. One might lie down anywhere here. But not yet; it was as yet barely twilight. He consulted his watch. HALF-PAST SEVEN.

Nearly dinner-time. . . .

No doubt Christian during the earlier stages of his pilgrimage noticed the recurrence of the old familiar hours of his life of emptiness and vanity. Or rather of vanity--simply. Why drag in the thought of emptiness just at this point? . . .

It was very early to go to bed.

He might perhaps sit and think for a time. Here for example was a mossy bank, a seat, and presently a bed. So far there were only three stars visible but more would come. He dropped into a reclining attitude. DAMP!

When one thinks of sleeping out under the stars one is apt to forget the dew.

He spread his Swiss cloak out on the soft thick carpeting of herbs and moss, and arranged his knapsack as a pillow. Here he would lie and recapitulate the thoughts of the day. (That squealing might be a young fox.) At the club at present men would be sitting about holding themselves back from dinner. Excellent the clear soup always was at the club! Then perhaps a Chateaubriand. That--what was that? Soft and large and quite near and noiseless. An owl!

The damp feeling was coming through his cloak. And this April night air had a knife edge. Early ice coming down the Atlantic perhaps. It was wonderful to be here on the top of the round world and feel the icebergs away there. Or did this wind come from Russia? He wasn't quite clear just how he was oriented, he had turned about so much. Which was east? Anyhow it was an extremely cold wind.

What had he been thinking? Suppose after all that ending with Mrs. Skelmersdale was simply a beginning. So far he had never looked sex in the face. . . .

He sat up and sneezed violently.

It would be ridiculous to start out seeking the clue to one's life and be driven home by rheumatic fever. One should not therefore incur the risk of rheumatic fever.

Something squealed in the bushes.

It was impossible to collect one's thoughts in this place. He stood up. The night was going to be bitterly cold, savagely, cruelly cold. . . .

No. There was no thinking to be done here, no thinking at all. He would go on along the track and presently he would strike a road and so come to an inn. One can solve no problems when one is engaged in a struggle with the elements. The thing to do now was to find that track again. . . .

It took Benham two hours of stumbling and walking, with a little fence climbing and some barbed wire thrown in, before he got down into Shere to the shelter of a friendly little inn. And then he negotiated a satisfying meal, with beef-steak as its central fact, and stipulated for a fire in his bedroom.

The landlord was a pleasant-faced man; he attended to Benham himself and displayed a fine sense of comfort. He could produce wine, a half-bottle of Australian hock, Big Tree brand No. 8, a virile wine, he thought of sardines to precede the meal, he provided a substantial Welsh rarebit by way of a savoury, he did not mind in the least that it was nearly ten o'clock. He ended by suggesting coffee. "And a liqueur?"

Benham had some Benedictine!

One could not slight such sympathetic helpfulness. The Benedictine was genuine. And then came the coffee.

The cup of coffee was generously conceived and honestly made.

A night of clear melancholy ensued. . . .

17

Hitherto Benham had not faced in any detail the problem of how to break with Mrs. Skelmersdale. Now he faced it pessimistically. She would, he knew, be difficult to break with. (He ought never to have gone there to lunch.) There would be something ridiculous in breaking off. In all sorts of ways she might resist. And face to face with her he might find himself a man divided against himself. That opened preposterous possibilities. On the other hand it was out of the question to do the business by letter. A letter hits too hard; it lies too heavy on the wound it has made. And in money matters he could be generous. He must be generous. At least financial worries need not complicate her distresses of desertion. But to suggest such generousities on paper, in cold ink, would be outrageous. And, in brief--he ought not to have gone there to lunch. After that he began composing letters at a great rate. Delicate--explanatory. Was it on the whole best to be explanatory? . . .

It was going to be a tremendous job, this breaking with her. And it had begun so easily. . . .

There was, he remembered with amazing vividness, a little hollow he had found under her ear, and how when he kissed her there it always made her forget her worries and ethical problems for a time and turn

to him. . . .

"No," he said grimly, "it must end," and rolled over and stared at the black. . . .

Like an insidious pedlar, that old rascal whom young literary gentlemen call the Great God Pan, began to spread his wares in the young man's memory. . . .

After long and feverish wanderings of the mind, and some talking to himself and walking about the room, he did at last get a little away from Mrs. Skelmersdale.

He perceived that when he came to tell his mother about this journey around the world there would be great difficulties. She would object very strongly, and if that did not do then she would become extremely abusive, compare him to his father, cry bitterly, and banish him suddenly and heartbrokenly from her presence for ever. She had done that twice already--once about going to the opera instead of listening to a lecture on Indian ethnology and once about a week-end in Kent. . . . He hated hurting his mother, and he was beginning to know now how easily she was hurt. It is an abominable thing to hurt one's mother--whether one has a justification or whether one hasn't.

Recoiling from this, he was at once resumed by Mrs. Skelmersdale. Who had in fact an effect of really never having been out of the room. But now he became penitent about her. His penitence expanded until it was on a nightmare scale. At last it blotted out the heavens. He felt like one of those unfortunate victims of religious mania who are convinced they have committed the Sin against the Holy Ghost. (Why had he gone there to lunch? That was the key to it. WHY had he gone there to lunch?) . . . He began to have remorse for everything, for everything he had ever done, for everything he he give in to

sex.

It's the same thing really. The misleading of instinct."

This set the key of his thought throughout the afternoon--until Amanda happened to him.

CHAPTER THE THIRD

AMANDA

1

Amanda happened to Benham very suddenly.

From Haslemere he had gone on to further heaths and gorse beyond Liphook, and thence he had wandered into a pretty district beset with Hartings. He had foh socialistic art as bookbinding. They were clearly 'advanced' people. And Amanda was tremendously important to them, she was their light, their pride, their most living thing. They focussed on her. When he talked to them all in general he talked to her in particular. He felt that some introduction of himself was due to these welcoming people. He tried to give it mixed with an itinerary and a sketch of his experiences. He praised the heather country and Harting Coombe and the Hartings. He told them that London had suddenly become intolerable--"In the spring sunshine."

"You live in London?" said Mrs. Wilder.

Yes. ad

ever not done, for everything in the world. In a moment of lucidity he even had remorse for drinking that stout honest cup of black coffee. . . .

And so on and so on and so on. . . .

When daylight came it found Benham still wide awake. Things crept mournfully out of the darkness into a reproachful clearness. The sound of birds that had been so delightful on the yesterday was now no longer agreeable. The thrushes, he thought, repeated themselves a great deal.

He fell asleep as it seemed only a few minutes before the landlord, accompanied by a great smell of frying bacon, came to call him.

18

The second day opened rather dully for Benham. There was not an idea left in his head about anything in the world. It was--SOLID. He walked through Bramley and Godalming and Witley and so came out upon the purple waste of Hindhead. He strayed away from the road and found a sunny place of turf amidst the heather and lay down and slept for an hour or so. He arose refreshed. He got some food at the Huts Inn on the Hindhead crest and went on across sunlit heathery wildernesses variegated by patches of spruce and fir and silver birch. And then suddenly his mental inanition was at an end and his thoughts were wide and brave again. He was astonished that for a moment he could have forgotten that he was vowed to the splendid life.

"Contenance by preoccupation;" he tried the phrase. . . .

"A man must not give in to fear; neither must he hunt himself upon a sandy ridge

looking very

beautifully into a sudden steep valley that he learnt was Harting Coombe; he had been through a West Harting and a South Harting and read finger-posts pointing to others of the clan; and in the evening, at the foot of a steep hill where two roads met, he sat down to consider whether he should go back and spend the night in one of the two kindly-looking inns of the latter place or push on over the South Downs towards the unknown luck of Singleton or Chichester. As he sat down two big retrievers, black and brown, came headlong down the road. The black carried a stick, the brown disputed and pursued. As they came abreast of him the foremost a little relaxed his hold, the pursuer grabbed at it, and in an instant the rivalry had flared to rage and a first-class dogfight was in progress.

Benham detested dog-fights. He stood up, pale and distressed. "Lie down!" he cried. "Shut up, you brutes!" and was at a loss for further action.

Then it was Amanda leapt into his world, a light, tall figure of a girl, fluttering a short petticoat. Hatless she was, brown, flushed, and her dark hair tossing loose, and in a moment she had the snarling furious dogs apart, each gripped firmly by its collar. Then with a wriggle black was loose and had closed again. Inspired by the best traditions of chivalry Benham came to her assistance. He was not expert with dogs. He grasped the black dog under its ear. He was bitten in the wrist, rather in excitement than malice, and with a certain excess of zeal he was strangling the brute before you could count ten.

Amanda seized the fallen stick and whacked the dog she held, reasonably but effectively until its yelps satisfied her. "There!" she said pitching her victim from her, and stood erect again. She

surveyed the proceedings of her helper for the first time.

"You needn't," she said, "choke Sultan anymore."

"Ugh!" she said, as though that was enough for Sultan. And peace was restored.

"I'm obliged to you. But-- . . . I say! He didn't bite you, did he? Oh, SULTAN!"

Sultan tried to express his disgust at the affair. Rotten business. When a fellow is fighting one can't be meticulous. And if people come interfering. Still--SORRY! So Sultan by his code of eye and tail.

"May I see? . . . Something ought to be done to this. . . ."

She took his wrist in her hand, and her cheek and eyelashes came within a foot of his face.

Some observant element in his composition guessed, and guessed quite accurately, that she was nineteen. . . .

2

She had an eyebrow like a quick stroke of a camel's-hair brush, she had a glowing face, half childish imp, half woman, she had honest hazel eyes, a voice all music, a manifest decision of character. And he must have this bite seen to at once. She lived not five minutes away. He must come with her.

She had an aunt who behaved like a mother and a mother who behaved

like a genteel visitor, and they both agreed with Amanda that although Mr. Walter Long and his dreadful muzzles and everything did seem to have stamped out rabies, yet you couldn't be too careful with a dog bite. A dog bite might be injurious in all sorts of ways--particularly Sultan's bite. He was, they had to confess, a dog without refinement, a coarse-minded omnivorous dog. Both the elder ladies insisted upon regarding Benham's wound as clear evidence of some gallant rescue of Aman And he had wanted to think things out.

In London one could do no thinking--

"Here we do nothing else," said Amanda.

"Except dog-fights," said the elder cousin.

"I thought I would just wander and think and sleep in the open air. Have you ever tried to sleep in the open air?"

"In the summer we all do," said the younger cousin. "Amanda makes us. We go out on to the little lawn at the back."

"You see Amanda has some friends at Limpsfield. And there they all go out from imminent danger--

"she's always so RECKLESS with those dogs," as though Amanda was not manifestly capable of taking care of herself; and when he had been Listerined and bandaged, they would have it that he should join them at their supper-dinner, which was already prepared and waiting. They treated him as if he were still an undergraduate, they took his arrangements in hand as though he was a favourite nephew. He must stay in Harting that night. Both the Ship and the Coach and Horses were excellent inns, and over the Downs there would be nothing for miles and miles. . . .

The house was a little long house with a verandah and a garden in

front of it with flint-edged paths; the room in which they sat and ate was long and low and equipped with pieces of misfitting good furniture, an accidental-looking gilt tarnished mirror, and a sprinkling of old and middle-aged books. Some one had lit a fire, which cracked and spurted about cheerfully in a motherly fireplace, and a lamp and some candles got lit. Mrs. Wilder, Amanda's aunt, a comfortable dark broad-browed woman, directed things, and sat at the end of the table and placed Benham on her right hand between herself and Amanda. Amanda's mother remained undeveloped, a watchful little woman with at least an eyebrow like her daughter's. Her name, it seemed, was Morris. No servant appeared, but two cousins of a vague dark picturesqueness and with a stamp of thirty upon them, the first young women Benham had ever seen dressed in djibbahs, sat at the table or moved about and attended to the simple needs of the service. The reconciled dogs were in the room and shifted inquiring noses from one human being to another.

Amanda's people were so easy and intelligent and friendly, and Benham after his thirty hours of silence so freshly ready for human association, that in a very little while he could have imagined he had known and trusted this household for years. He had never met such people before, and yet there was something about them that seemed familiar--and then it occurred to him that something of their easy-going freedom was to be found in Russian novels. A photographic enlargement of somebody with a vegetarian expression of face and a special kind of slouch hat gave the atmosphere a flavour of Socialism, and a press and tools and stamps and pigments on an oak table in the corner suggested some suet and camp and sleep in the woods."

"Of course," reflected Mrs. Wilder, "in April it must be different."

"It IS different," said Benham with feeling; "the night comes five hours too soon. And it comes wet." He described his experiences and his flight to Shere and the kindly landlord and the cup of

coffee. "And after that I thought with a vengeance."

"Do you write things?" asked Amanda abruptly, and it seemed to him with a note of hope.

"No. No, it was just a private puzzle. It was something I couldn't get straight."

"And you have got it straight?" asked Amanda.

"I think so."

"You were making up your mind about something?"

"Amanda DEAR!" cried her mother.

"Oh! I don't mind telling you," said Benham.

They seemed such unusual people that he was moved to unusual confidences. They had that effect one gets at times with strangers freshly met as though they were not really in the world. And there was something about Amanda that made him want to explain himself to her completely.

"What I wanted to think about was what I should do with my life."

"Haven't you any WORK--?" asked the elder cousin.

"None that I'm obliged to do."

"That's where a man has the advantage," said Amanda with the tone of profound reflection. "You can choose. And what are you going to do with your life?"

"Amanda," her mother protested, "really you mustn't!"

"I'm going round the world to think about it," Benham told her.

"I'd give my soul to travel," said Amanda.

She addressed her remark to the salad in front of her.

"But have you no ties?" asked Mrs. Wilder.

"None that hold me," said Benham. "I'm one of those unfortunates who needn't do anything at all. I'm independent. You see my riddles. East and west and north and south, it's all my way for the taking. There's not an indication."

"If I were you," said Amanda, and reflected. Then she half turned herself to him. "I should go first to India," she said, "and I should shoot, one, two, three, yes, three tigers. And then I would see Farukhabad Sikri--I was reading in a book about it yesterday--where the jungle grows in the palaces; and then I would go right up the Himalayas, and then, then I would have a walking tour in Japan, and then I would sail in a sailing ship down to Borneo and Java and set myself up as a Ranee-- . . . And then I would think what I would do next."

"All alone, Amanda?" asked Mrs. Wilder.

"Only when I shoot tigers. You and mother should certainly come to Japan."

"But Mr. Benham perhaps doesn't intend to shoot tigers, Amanda?" said Amanda's mother.

"Not at once. My way will be a little different. I think I shall go first through Germany. And then down to Constantinople. And then I've some idea of getting across Asia Minor and Persia to

India. That would take some time. One must ride."

"Asia Minor ought to be fun," said Amanda. "But I should prefer India because of the tigers. It would be so jolly to begin with the tigers right away."

"It is the towns and governments and peoples I want to see rather than tigers," said Benham. "Tigers if they are in the programme. But I want to find out about--other things."

"Don't you think there's something to be found out at home?" said the elder cousin, blushing very brightly and speaking with the effort of one who speaks for conscience' sake.

"Betty's a Socialist," Amanda said to Benham with a suspicion of apology.

"Well, we're all rather that," Mrs. Wilder protested.

"If you are free, if you are independent, then don't you owe something to the workers?" Betty went on, getting graver and redder with each word.

"It's just because of that," said Benham, "that I am going round the world."

3

He was as free with these odd people as if he had been talking to Prothero. They were--alert. And he had been alone and silent and full of thinking for two clear days. He tried to explain why he found Socialism at once obvious and inadequate. . . .

Presently the supper things got themselves put away and the talk moved into a smaller room with several armchairs and a fire. Mrs. Wilder and the cousins and Amanda each smoked a cigarette as if it were symbolical, and they were joined by a grave grey-bearded man with a hyphenated name and slightly Socratic manner, dressed in a very blue linen shirt and collar, a very woolly mustard-coloured suit and loose tie, and manifestly devoted to one of those branches of exemplary domestic decoration that grow upon Socialist soil in England. He joined Betty in the opinion that the duty of a free and wealthy young man was to remain in England and give himself to democratic Socialism and the abolition of "profiteering." "Consider that chair," he said. But Benham had little feeling for the craftsmanship of chairs.

Under cross-examination Mr. Rathbone-Sanders became entangled and prophetic. It was evident he had never thought out his "democratic," he had rested in some vague tangle of idealism from which Benham now set himself with the zeal of a specialist to rout him. Such an argument sprang up as one meets with rarely beyond the happy undergraduate's range. Everybody lived in the discussion, even Amanda's mother listened visibly. Betty said she herself was certainly democratic and Mrs. Wilder had always thought herself to be so, and outside the circle round the fire Amanda hovered impatiently, not quite sure of her side as yet, but eager to come down with emphasis at the first flash of intimation.

She came down vehemently on Benham's.

And being a very clear-cutting personality with an instinct for the material rendering of things, she also came and sat beside him on by the lamp and read the REPUBLIC very intently and very thoughtfully, occasionally turning over a page.

When Benham got back to London he experienced an unwonted desire to perform his social obligations to the utmost.

So soon as he had had some dinner at his club he wrote his South Harting friends a most agreeable letter of thanks for their kindness to him. In a little while he hoped he should see them again. His mother, too, was most desirous to meet them. . . . That done, he went on to his flat and to various aspects of life for which he was quite unprepared.

But here we may note that Amanda answered him. Her reply came some four days later. It was written in a square schoolgirl hand, it covered three sheets of notepaper, and it was a very intelligent essay upon the REPUBLIC of Plato. "Of course," she wrote, "the Guardians are inhumanthe little square-cornered sofa.

"Of course, Mr. Rathbone-Sanders," she said, "of course the world must belong to the people who dare. Of course people aren't all alike, and dull people, as Mr. Benham says, and spiteful people, and narrow people have no right to any voice at all in things. . . .

In saying this she did but echo Benham's very words, and all she said and did that evening was in quick response to Benham's earnest expression of his views. She found Benham a delightful novelty. She liked to argue because there was no other talk so lively, and

she had perhaps a lurking intellectual grudge against Mr. Rathbone-Sanders that made her welcome an ally. Everything from her that night that even verges upon the notable has been told, and yet it sufficed, together with something in the clear, long line of her limbs, in her voice, in her general physical quality, to convince Benham that she was the freest, finest, bravest spirit that he had ever encountered.

In the papers he left behind him was to be found his perplexed endeavours to explain this mental leap, that after all his efforts still remained unexplained. He had been vividly impressed by the decision and courage of her treatment of the dogs; it was just the sort of thing he could not do. And there was a certain contagiousness in the petting admiration with which her family treated her. But she was young and healthy and so was he, and in a second mystery lies the key of the first. He had fallen in love with her, and that being so whatever he needed that instantly she was. He needed a companion, clean and brave and understanding. . . .

In his bed in the Ship that night he thought of nothing but her before he went to sleep, and when next morning he walked on his way over the South Downs to Chichester his mind was full of her image and of a hundred pleasant things about her. In his confessions he wrote, "I felt there was a sword in her spirit. I felt she was as clean as the wind."

Love is the most chastening of powers, and he did not even remember now that two days before he had told the wind and the twilight that he would certainly "roll and rollick in women" unless there was work for him to do. She had a peculiarly swift and easy stride that went with him in his thoughts along the turf by the wayside halfway and more to Chichester. He thought always of the two of them as being side by side. His imagination became childishly romantic. The open down about him with its scrub of thorn and yew became the wilderness of the world, and through it they went--in armour, weightless

armour--and they wore long swords. There was a breeze blowing and larks were singing and something, something dark and tortuous dashed suddenly in headlong flight from before their feet. It was an ethical problem such as those Mrs. Skelmersdale nursed in her bosom. But at the sight of Amanda it had straightened out--and fled. . . .

And interweaving with such imaginings, he was some day to record, there were others. She had brought back to his memory the fancies that had been aroused in his first reading of Plato's REPUBLIC; she made him think of those women Guardians, who were the friends and mates of men. He wanted now to re-read that book and the LAWS. He could not remember if the Guardians were done in the LAWS as well as in the REPUBLIC. He wished he had both these books in his rucksack, but as he had not, he decided he would hunt for them in Chichester. When would he see Amanda again? He would ask his mother to make the acquaintance of these very interesting people, but as they did not come to London very much it might be some time before he had a chance of seeing her again. And, besides, he was going to America and India. The prospect of an exploration of the world was still noble and attractive; but he realized it would stand very much in the way of his seeing more of Amanda. Would it be a startling and unforgivable thing if presently he began to write to her? Girls of that age and spirit living in out-of-the-way villages have been known to marry. . . .

Marriage didn't at this stage strike Benham as an agreeable aspect of Amanda's possibilities; it was an inconvenience; his mind was running in the direction of pedestrian tours in armour of no particular weight, amidst scenery of a romantic wildness. . . .

When he had gone to the house and taken his leave that morning it had seemed quite in the vein of the establishment that he should be received by Amanda alone and taken up the long garden before anybody else appeared, to see the daffodils and the early apple-trees in blossom and the pear-trees white and delicious.

Then he had taken his leave of them all and made his social tentatives. Did they ever come to London? When they did they must let his people know. He would so like them to know his mother, Lady Marayne. And so on with much gratitude.

Amanda had said that she and the dogs would come with him up the hill,, but it was a glorious sort of inhumanity.

They had a spirit--like sharp knives cutting through life."

It was her best bit of phrasing and it pleased Benham very much. But, indeed, it was not her own phrasing, she had culled it from a disquisition into which she had led Mr. Rathbone-me from going to pieces--and wasting existence. It's rather difficult sometimes to tell what one thinks and feels--"

She had not really listened to him.

"Who is that woman," she interrupted sudd she had said it exactly as a boy might have said it, she had brought him up to the corner of Up Park and had sat down there on a heap of stones and watched him until he was out of sight, waving to him when he looked back. "Come back again," she had cried.

In Chichester he found a little green-bound REPUBLIC in a second-hand book-shop near the Cathedral, but there was no copy of the LAWS to be found in the place. Then he was taken with the brilliant idea of sleeping the night in Chichester and going back next day via Harting to Petersfield station and London. He carried out this scheme and got to South Harting neatly about four o'clock in the afternoon. He found Mrs. Wilder and Mrs. Morris and Amanda and the dogs entertaining Mr. Rathbone-Sanders at tea, and they all seemed a little surprised, and, except Mr. Rathbone-Sanders, they all seemed

pleased to see him again so soon. His explanation of why he hadn't gone back to London from Chichester struck him as a little unconvincing in the cold light of Mr. Rathbone-Sanders' eye. But Amanda was manifestly excited by his return, and he told them his impressions of Chichester and described the entertainment of the evening guest at a country inn and suddenly produced his copy of the REPUBLIC. "I found this in a book-shop," he said, "and I brought it for you, because it describes one of the best dreams of aristocracy there has ever been dreamt."

At first she praised it as a pretty book in the dearest little binding, and then realized that there were deeper implications, and became grave and said she would read it through and through, she loved such speculative reading.

She came to the door with the others and stayed at the door after they had gone in again. When he looked back at the corner of the road to Petersfield she was still at the door and waved farewell to him.

He only saw a light slender figure, but when she came back into the sitting-room Mr. Rathbone-Sanders noted the faint flush in her cheek and an unwonted abstraction in her eye.

And in the evening she tucked her feet up in the armchair Sanders, and she had sent it to Benham as she might have sent him a flower.

6

Benham re-entered the flat from which he had fled so precipitately with three very definite plans in his mind. The first was to set out upon his grand tour of the world with as little delay as

possible, to shut up this Finacue Street establishment for a long time, and get rid of the soul-destroying perfections ofenly, "Mrs. Fly-by-Night, or some such name, who rings you up on the telephone?"

Benham hesitaon't start saying things like a moral windmill in a whirlwind. It's all a muddle. I suppose every one in London is getting in or out of these entanglements--or something of the sort. And this seems a comparatively slight one. I wish it hadn't happened. They do happen."

An expression of perplexity came into her face. She looked at him. "Why do you want to throw her over?"

"I WANT to throw her over," said Benham.

He stood up and went to the hearthrug, and his mother reflected that this was exactly what all men did at just this phase of a discussion. Then things ceased to be sensible.

From overhead he said to her: "I want to get away from this complication, this servitude. I want to do some--some work. I want to get my mind clear and my hands clear. I want to study government and the big business of the world."

"And she's in the way?"

He assented.

"You men!" said Lady Marayne after a little pause. "What queer beasts you are! Here is a woman who is kind to you. She's fond of you. I could tell she's fond of you directly I heard her. And you amuse yourself with her. And then it's Gobble, Gobble, Gobble, Great Work, Hands Clear, Big Business of the World. Why couldn't you think of that before, Poff? Why did you begin with her Merkle. The

second was to end his ill-advised intimacy with little Mrs. Skelmersdale as generously and cheerfully as possible. The third was to bring Lady Marayne into social relations with the Wilder and Morris MENAGE at South Harting. It did not strike him that there was any incompatibility among these projects or any insurmountable difficulty in any of them until he was back in his flat.

The accumulation of letters, packages and telephone memoranda upon his desk included a number of notes and slips to remind him that both Mrs. Skelmersdale and his mother were ladies of some determination. Even as he stood turning over the pile of documents the mechanical vehemence of the telephone filled him with a restored sense of the adverse will in things. "Yes, mam," he heard Merkle's voice, "yes, mam. I will tell him, mam. Will you keep possession, mam." And then in the doorway of the study, "Mrs. Skelmersdale, sir. Upon the telephone, sir."

Benham reflected with various notes in his hand. Then he went to the telephone.

"You Wicked Boy, where have you been hiding?"

"I've been away. I may have to go away again."

"Not before you have seen me. Come round and tell me all about it."

Benham lied about an engagement.

"Then to-morrow in the morning." . . . Impossible.

"In the afternoon. You don't WANT to see me." Benham did want to see her.

"Come round and have a jolly little evening to-morrow night. I've got some more of that harpsichord music. And I'm dying to see you.

Don't you understand?"

Further lies. "Look here," said Benham, "can you come and have a talk in Kensington Gardens? You know the place, near that Chinese garden. Paddington Gate. . . ."

The lady's voice fell to flatness. She agreed. "But why not come to see me HERE?" she asked.

Benham hung up the receiver abruptly.

He walked slowly back to his study. "Phew!" he whispered to himself. It was like hitting her in the face. He didn't want to be a brute, but short of being a brute there was no way out for him from this entanglement. Why, oh! why the devil had he gone there to lunch? . . .

He resumed his examination of the waiting letters with a ruffled mind. The most urgent thing about them was the clear evidence of gathering anger on the part of his mother. He had missed a lunch party at Sir Godfrey's on Tuesday and a dinner engagement at Philip Magnet's, quite an important dinner in its way, with various promising young Liberals, on Wednesday evening. And she was furious at "this stupid mystery. Of course you're bound to be found out, and of course there will be a scandal." . . . He perceived that this last note was written on his own paper. "Merkle!" he cried sharply.

"Yessir!"

Merkle had been just outside, on call.

"Did my mother write any of these notes here?" he asked.

"Two, sir. Her ladyship was round here three times, sir."

"Did she see all these letters?"

"Not the telephone calls, sir. I 'ad put them on one side. But. . . . It's a little thing, sir."

He paused and came a step nearer. "You see, sir," he explained with the faintest flavour of the confidential softening his mechanical respect, "yesterday, when 'er ladyship was 'ere, sir, some one rang up on the telephone--"

"But you, Merkle--"

"Exactly, sir. But 'er ladyship said 'I'll go to that, Merkle,' and just for a moment I couldn't exactly think 'ow I could manage it, sir, and there 'er ladyship was, at the telephone. What passed, sir, I couldn't 'ear. I 'eard her say, 'Any message?' And I FANCY, sir, I 'eard 'er say, 'I'm the 'ousemaid,' but that, sir, I think must have been a mistake, sir."

"Must have been," said Benham. "Certainly--must have been. And the call you think came from--?"

"There again, sir, I'm quite in the dark. But of course, sir, it's usually Mrs. Skelmersdale, sir. Just about her time in the afternoon. On an average, sir. . . ."

7

"I went out of London to think about my life."

It was manifest that Lady Marayne did not believe him.

"Alone?" she asked.

"Of course alone."

"STUFF!" said Lady Marayne.

She had taken him into her own little sitting-room, she had thrown aside gloves and fan and theatre wrap, curled herself comfortably into the abundantly cushioned corner by the fire, and proceeded to a mixture of cross-examination and tirade that he found it difficult to make head against. She was vibrating between distressed solicitude and resentful anger. She was infuriated at his going away and deeply concerned at what could have taken him away. "I was worried," he said. "London is too crowded to think in. I wanted to get myself alone."

"And there I was while you were getting yourself alone, as you call it, wearing my poor little brains out to think of some story to tell people. I had to stuff them up you had a sprained knee at Chexington, and for all I knew any of them might have been seeing you that morning. Besides what has a boy like you to worry about? It's all nonsense, Poff."

She awaited his explanations. Benham looked for a moment like his father.

"I'm not getting on, mother," he said. "I'm scattering myself. I'm getting no grip. I want to get a better hold upon life, or else I do not see what is to keep ted, blushed, and regretted it.

"Mrs. Skelmersdale," he said after a little pause.

"It's all the same. Who is she?"

"She's a woman I met at a studio somewhere, and I went with her to one of those Dolmetsch concerts."

He stopped.

Lady Marayne considered him in silence for a little while. "All men," she said at last, "are alike. Husbands, sons and brothers, they are all alike. Sons! One expects them to be different. They aren't different. Why should they be? I suppose I ought to be shocked, Poff. But I'm not. She seems to be very fond of you."

"She's--she's very good--in her way. She's had a difficult life. . . ."

"You can't leave a man about for a moment," Lady Marayne reflected. "Poff, I wish you'd fetch me a glass of water."

When he returned she was looking very fixedly into the fire. "Put it down," she said, "anywhere. Poff! is this Mrs. Helter-Skelter a discreet sort of woman? Do you like her?" She asked a few additional particulars and Benham made his grudging admission of facts. "What I still don't understand, Poff, is why you have been away."

"I went away," said Benham, "because I want to clear things up."

"But why? Is there some one else?"

"No."

"You went alone? All the time?"

"I've told you I went alone. Do you think I tell you lies, mother?"

"Everybody tells lies somehow," said Lady Marayne. "Easy lies or stiff ones. Don't FLOURISH, Poff. D?"

"It was unexpected. . . ."

"STUFF!" said Lady Marayne for a second time. "Well," she said, "well. Your Mrs. Fly-by-Night,--oh it doesn't matter!--whatever she calls herself, must look after herself. I can't do anything for her. I'm not supposed even to know about her. I daresay she'll find her consolations. I suppose you want to go out of London and get away from it all. I can help you there, perhaps. I'm tired of London too. It's been a tiresome season. Oh! tiresome and disappointing! I want to go over to Ireland and travel about a little. The Pothercareys want us to come. They've asked us twice. . . ."

Benham braced himself to face fresh difficulties. It was amazing how different the world could look from his mother's little parlour and from the crest of the North Downs.

"But I want to start round the world," he cried with a note of acute distress. "I want to go to Egypt and India and see what is happening in the East, all this wonderful waking up of the East, I know nothing of the way the world is going-- . . ."

"India!" cried Lady Marayne. "The East. Poff, what is the MATTER with you? Has something happened--something else? Have you been having a love affair? --a REAL love affair?"

"Oh, DAMN love affairs!" cried Benham. "Mother!--I'm sorry, mother! But don't you see there's other things in the world for a man than having a good time and making love. I'm for something else than that. You've given me the splendidest time-- . . ."

"I see," cried Lady Marayne, "I see. I've bored you. I might have known I should have bored you."

"You've NOT bored me!" cried Benham.

He threw himself on the rug at her feet. "Oh, mother!" he said, "little, dear, gallant mother, don't make life too hard for me. I've got to do my job, I've got to find my job."

"I've bored you," she wept.

Suddenly she was weeping with all the unconcealed distressing grief of a disappointed child. She put her pretty be-ringed little hands in front of her face and recited the accumulation of her woes.

"I've done all I can for you, planned for you, given all my time for you and I've BORED you."

"Mother!"

"Don't come near me, Poff! Don't TOUCH me! All my plans. All my ambitions. Friends--every one. You don't know all I've given up for you. . . ."

He had never seen his mother weep before. Her self-abandonment amazed him. Her words were distorted by her tears. It was the most terrible and distressing of crises. . . .

"Go away from me! How can you help me? All I've done has been a failure! Failure! Failure!"

8

That night the silences of Finacue Street heard Benham's voice again. "I must do my job," he was repeating, "I must do my job."

Anyhow. . . ."

And then after a long pause, like a watchword and just a little unsurely: "Aristocracy. . . ."

The next day his resolution had to bear the brunt of a second ordeal. Mrs. Skelmersdale behaved beautifully and this made everything tormentingly touching and difficult. She convinced him she was really in love with him, and indeed if he could have seen his freshness and simplicity through her experienced eyes he would have known there was sound reason why she should have found him exceptional. And when his clumsy hints of compensation could no longer be ignored she treated him with a soft indignation, a tender resentment, that left him soft and tender. She looked at him with pained eyes and a quiver of the lips. What did he think she was? And then a little less credibly, did he think she would have given herself to him if she hadn't been in love with him? Perhaps that was not altogether true, but at any rate it was altogether true to her when she said it, and it was manifest that she did not for a moment intend him to have the cheap consolation of giving her money. But, and that seemed odd to Benham, she would not believe, just as Lady Marayne would not believe, that there was not some other woman in the case. He assured her and she seemed reassured, and then presently she was back at exactly the same question. Would no woman ever understand the call of Asia, the pride of duty, the desire for the world?

One sort of woman perhaps. . . .

It was odd that for the first time now, in the sunshine of Kensington Gardens, he saw the little gossamer lines that tell that thirty years and more have passed over a face, a little wrinkling of the eyelids, a little hardening of the mouth. How slight it is, how invisible it has been, how suddenly it appears! And the sunshine of the warm April afternoon, heightened it may be by her determined

unmercenary pose, betrayed too the faintest hint of shabbiness in her dress. He had never noticed these shadows upon her or her setting before and their effect was to fill him with a strange regretful tenderness. . . .

Perhaps men only begin to love when they cease to be dazzled and admire. He had thought she might reproach him, he had felt and feared she might set herself to stir his senses, and both these expectations had been unjust to her he saw, now that he saw her beside him, a brave, rather ill-advised and unlucky little struggler, stung and shamed. He forgot the particulars of that first lunch of theirs together and he remembered his mother's second contemptuous "STUFF!"

Indeed he knew now it had not been unexpected. Why hadn't he left this little sensitive soul and this little sensitive body alone? And since he hadn't done so, what right had he now to back out of their common adventure? He felt a sudden wild impulse to marry Mrs. Skelmersdale, in a mood between remorse and love and self-immolation, and then a sunlit young woman with a leaping stride in her paces, passed across his heavens, pointing to Asia and Utopia and forbidding even another thought of the banns. . . .

"You will kiss me good-bye, dear, won't you?" said Mrs. Skelmersdale, brimming over. "You will do that."

He couldn't keep his arm from her little shoulders. And as their lips touched he suddenly found himself weeping also. . . .

His spirit went limping from that interview. She chose to stay behind in her chair and think, she said, and each time he turned back she was sitting in the same attitude looking at him as he receded, and she had one hand on the chair back and her arm drawn up to it. The third time he waved his hat clumsily, and she started and then answered with her hand. Then the trees hid her. . . .

This sex business was a damnable business. If only because it made one hurt women. . . .

He had trampled on Mrs. Skelmersdale, he had hurt and disappointed his mother. Was he a brute? Was he a cold-blooded prig? What was this aristocracy? Was his belief anything more than a theory? Was he only dreaming of a debt to the men in the quarry, to the miners, to the men in the stokeholes, to the drudges on the fields? And while he dreamt he wounded and distressed real living creatures in the sleep-walk of his dreaming. . . .

So long as he stuck to his dream he must at any rate set his face absolutely against the establishment of any further relations with women.

Unless they were women of an entirely different type, women hardened and tempered, who would understand.

9

So Benham was able to convert the unfortunate Mrs. Skelmersdale into a tender but for a long time an entirely painful memory. But mothers are not so easily disposed of, and more particularly a mother whose conduct is coloured deeply by an extraordinary persuasion of having paid for her offspring twice over. Nolan was inexplicable; he was, Benham understood quite clearly, never to be mentioned again; but somehow from the past his shadow and his legacy cast a peculiar and perplexing shadow of undefined obligation upon Benham's outlook. His resolution to go round the world carried on his preparations rapidly and steadily, but at the same time his mother's thwarted and angry bearing produced a torture of remorse in

him. It was constantly in his mind, like the suit of the importunate widow, that he ought to devote his life to the little lady's happiness and pride, and his reason told him that even if he wanted to make this sacrifice he couldn't; the mere act of making it would produce so entirely catastrophic a revulsion. He could as soon have become a croquet champion or the curate of Chexington church, lines of endeavour which for him would have led straightly and simply to sacrilegious scandal or manslaughter with a mallet.

There is so little measure in the wild atonements of the young that it was perhaps as well for the Research Magnificent that the remorse of this period of Benham's life were too complicated and scattered for a cumulative effect. In the background of his mind and less subdued than its importance could seem to warrant was his promise to bring the Wilder-Morris people into relations with Lady Marayne. They had been so delightful to him that he felt quite acutely the slight he was putting upon them by this delay. Lady Marayne's moods, however, had been so uncertain that he had found no occasion to broach this trifling matter, and when at last the occasion came he perceived in the same instant the fullest reasons for regretting it.

"Ah!" she said, hanging only for a moment, and then: "you told me you were alone!" . . .

Her mind leapt at once to the personification of these people as all that had puzzled and baffled her in her son since his flight from London. They were the enemy, they had got hold of him.

"When I asked you if you were alone you pretended to be angry," she remembered with a flash. "You said, 'Do I tell lies?'"

"I WAS alone. Until-- It was an accident. On my walk I was alone."

But he flinched before her accusing, her almost triumphant, forefinger.

From the instant she heard of them she hated these South Harting people unrestrainedly. She made no attempt to conceal it. Her valiant bantam spirit caught at this quarrel as a refuge from the rare and uncongenial ache of his secession. "And who are they? What are they? What sort of people can they be to drag in a passing young man? I suppose this girl of theirs goes out every evening-- Was she painted, Poff?"

She whipped him with her questions as though she was slashing his face. He became dead-white and grimly civil, answering every question as though it was the sanest, most justifiable inquiry.

"Of course I don't know who they are. How should I know? What need is there to know?"

"There are ways of finding out," she insisted. "If I am to go down and make myself pleasant to these people because of you."

"But I implore you not to."

"And five minutes ago you were imploring me to! Of course I shall."

"Oh well!--well!"

"One has to know SOMETHING of the people to whom one commits oneself, surely."

"They are decent people; they are well-behaved people."

"Oh!--I'll behave well. Don't think I'll disgrace your casual acquaintances. But who they are, what they are, I WILL know. . . ."

On that point Lady Marayne was to score beyond her utmost expectations.

"Come round," she said over the telephone, two mornings later. "I've something to tell you."

She was so triumphant that she was sorry for him. When it came to telling him, she failed from her fierceness.

"Poff, my little son," she said, "I'm so sorry I hardly know how to tell you. Poff, I'm sorry. I have to tell you--and it's utterly beastly."

"But what?" he asked.

"These people are dreadful people."

"But how?"

"You've heard of the great Kent and Eastern Bank smash and the Marlborough Building Society frauds eight or nine years ago?"

"Vaguely. But what has that to do with them?"

"That man Morris."

She stopped short, and Benham nodded for her to go on.

"Her father," said Lady Marayne.

"But who was Morris? Really, mother, I don't remember."

"He was sentenced to seven years--ten years--I forget. He had done all sorts of dreadful things. He was a swindler. And when he went out of the dock into the waiting-room-- He had a signet ring with

prussic acid in it-- . . ."

"I remember now," he said.

A silence fell between them.

Benham stood quite motionless on the hearthrug and stared very hard at the little volume of Henley's poetry that lay upon the table.

He cleared his throat presently.

"You can't go and see them then," he said. "After all--since I am going abroad so soon-- . . . It doesn't so very much matter."

10

To Benham it did not seem to be of the slightest importance that Amanda's father was a convicted swindler who had committed suicide. Never was a resolved and conscious aristocrat so free from the hereditary delusion. Good parents, he was convinced, are only an advantage in so far as they have made you good stuff, and bad parents are no discredit to a son or daughter of good quality. Conceivably he had a bias against too close an examination of origins, and he held that the honour of the children should atone for the sins of the fathers and the questionable achievements of any intervening testator. Not half a dozen rich and established families in all England could stand even the most conventional inquiry into the foundations of their pride, and only a universal amnesty could prevent ridiculous distinctions. But he brought no accusation of inconsistency agt of you I knew that. . . ."

They embraced--alertly furtive.

Then they stood a little apart. Some one was coming towards them. Amanda's bearing changed swiftly. She put up her little face to his, confidently and intimately.

"Don't TELL any one," she whispered eagerly shaking his arm to emphasize her words. "Don't tell any one--not yet. Not for a few days. . . ."

She pushed him from her quickly as the shadowy form of Betty appeared in a little path between the artichokes and raspberry canes.

"Listening to the nightingales?" cried Betty.

"Yes, aren't they?" said Amanda inconsecutively.

"That's our very own nightingale!" cried Betty advancing. "Do you hear it, Mr. Benham? No, not that one. That is a quite inferior bird that performs in the vicarage trees. . . ."

11

When a man has found and won his mate then the best traditions demainst his mother. She looked at things with a lighter logic and a kind of genius for the acceptance of superficial values. She was condoned and forgiven, a rescued lamb, re-established, notoriously bright and nice, and the Morrises were damned. That was their status, exclusion, damnation, as fixed as colour in Georgia or caste in Bengal. But if his mother's mind worked in that way there was no reason why his should. So far as he was concerned, he told himself, it did not matter whether Amanda was

the daughter of a swindler or the daughter of a god. He had no doubt that she herself had the spirit and quality of divinity. He had seen it.

So there was nothing for it in the failure of his mother's civilities but to increase his own. He would go down to Harting and take his leave of these amiable outcasts himself. With a certain effusion. He would do this soon because he was now within sight of the beginning of his world tour. He had made his plans and prepared most of his equipment. Little remained to do but the release of Merkle, the wrappering and locking up of Finacue Street, which could await him indefinitely, and the buying of tickets. He decided to take the opportunity afforded by a visit of Sir Godfrey and Lady Marayne to the Blights, big iron people in the North of England of so austere a morality that even Benham was ignored by it. He announced his invasion in a little note to Mrs. Wilder. He parted from his mother on Friday afternoon; she was already, he perceived, a little reconciled to his project of going abroad; and contrived his arrival at South Harting for that sunset hour which was for his imagination the natural halo of Amanda.

"I'm going round the world," he told them simply. "I may be away for two years, and I thought I would like to see you all again before I started."

That was quite the way they did things.

The supper-party included Mr. Rathbone-Sanders, who displayed a curious tendency to drift in between Benham and Amanda, a literary youth with a Byronic visage, very dark curly hair, and a number of extraordinarily mature chins, a girl-friend of Betty's who had cycled down from London, and who it appeared maintained herself at large in London by drawing for advertisements, and a silent colourless friend of Mr. Rathbone-Sanders. The talk lit by Amanda's enthusiasm circled actively round Benham's expedition. It was clear

that the idea of giving some years to thinking out one's possible work in the world was for some reason that remained obscure highly irritating to both Mr. Rathbone-Sanders and the Byronic youth. Betty too regarded it as levity when there was "so much to be done," and the topic whacked about and rose to something like a wrangle, and sat down and rested and got up again reinvigorated, with a continuity of interest that Benham had never yet encountered in any London gathering. He made a good case for his modern version of the Grand Tour, and he gave them something of his intellectual enthusiasm for the distances and views, the cities and seas, the multitudinous wide spectacle of the world he was to experience. He had been reading about Benares and North China. As he talked Amanda, who had been animated at first, fell thoughtful and silent. And then it was discovered that the night was wonderfully warm and the moon shining. They drifted out into the garden, but Mr. Rathbone-Sanders was suddenly entangled and drawn back by Mrs. Wilder and the young woman from London upon some technical point, and taken to the work-table in the corner of the dining-room to explain. He was never able to get to the garden.

Benham found himself with Amanda upon a side path, a little isolated by some swaggering artichokes and a couple of apple trees and so forth from the general conversation. They cut themselves off from the continuation of that by a little silence, and then she spoke abruptly and with the quickness of a speaker who has thought out something to say and fears interruption: "Why did you come down here?"

"I wanted to see you before I went."

"You disturb me. You fill me with envy."

"I didn't think of that. I wanted to see you again."

"And then you will go off round the world, you will see the Tropics,

you will see India, you will go into Chinese cities all hung with vermilion, you will climb mountains. Oh! men can do all the splendid things. Wnd a lyrical interlude. It should be possible to tell, in that

ecstatic manner which melts words into moonshine, makes prose almost uncomfortably rhythmic, and brings all the freshness of every spring that ever was across the page, of the joyous exaltation of the happy lover. This at any rate was what White had always done in his novels hitherto, and what he hy do you come here to remind me of it? I have

never been anywhere, anywhere at all. I never shall go anywhere. Never in my life have I seen a mountain. Those Downs there--look at them!--are my highest. And while you are travelling I shall think of you--and think of you. . . ."

"Would YOU like to travel?" he asked as though that was an extraordinary idea.

"Do you think EVERY girl wants to sit at home and rock a cradle?"

"I never thought YOU did."

"Then what did you think I wanted?"

"What DO you want?"

She held her arms out widely, and the moonlight shone in her eyes as she turned her face to him.

"Just what you want," she said; "--THE WHOLE WORLD!"

"Life is like a feast," she went on; "it is spread before everybody and nobody must touch it. What am I? Just a prisoner. In a cottage garden. Looking for ever over a hedge. I should be happier if I couldn't look. I remember once, only a little time ago, there

was a cheap excursion to London. Our only servant went. She had to get up at an unearthly hour, and I--I got up too. I helped her to get off. And when she was gone I went up to my bedroom again and cried. I cried with envy for any one, any one who could go away. I've been nowhere--except to school at Chichester and three or four times to Emsworth and Bognor--for eight years. When you go"--the tears glittered in the moonlight--"I shall cry. It will be worse than the excursion to London. . . . Ever since you were here before I've been thinking of it."

It seemed to Benham that here indeed was the very sister of his spirit. His words sprang into his mind as one thinks of a repartee. "But why shouldn't you come too?" he said.

She stared at him in silence. The two white-lit faces examined each other. Both she and Benham were trembling.

"COME TOO?" she repeated.

"Yes, with me."

"But--HOW?"

Then suddenly she was weeping like a child that is teased; her troubled eyes looked out from under puckered brows. "You don't mean it," she said. "You don't mean it."

And then indeed he meant it.

"Marry me," he said very quickly, glancing towards the dark group at the end of the garden. "And we will go together."

He seized her arm and drew her to him. "I love you," he said. "I love your spirit. You are not like any one else."

There was a moment's hesitation.

Both he and she looked to see how far they were still alone.

Then they turned their dusky faces to each other. He drew her still closer.

"Oh!" she said, and yielded herself to be kissed. Their lips touched, and for a moment he held her lithe body against his own.

"I wantn you," he whispered close to her. "You are my mate. From the first sighawould certainly have done at this point had he had the telling of Benham's story uncontrolledly in his hands. But, indeed, indeed, in real life, in very truth, the heart has not this simplicity. Only the heroes of romance, and a few strong simple clean-shaven Americans have that much emotional integrity. (And even the Americans do at times seem to an observant eye to be putting in work at the job and keeping up their gladness.) Benham was excited that night, but not in the proper bright-eyed, red-cheeked way; he did not dance down the village street of Harting to his harbour at the Ship, and the expression in his eyes as he sat on the edge of his bed was not the deep elemental wonder one could have wished there, but amazement. Do not suppose that he did not love Amanda, that a rich majority of his being was not triumphantly glad to have won her, that the image of the two armour-clad lovers was not still striding and flourishing through the lit wilderness of his imagination. For three weeks things had pointed him to this. They would do everything together now, he and his mate, they would scale mountains together and ride side by side towards ruined cities across the deserts of the World. He could have wished no better thing. But at the same time, even as he felt and admitted this and rejoiced at it, the sky of his mind was black with consternation. . . .

It is remarkable, White reflected, as he turned over the abundant but confused notes upon this perplexing phase of Benham's

development that lay in the third drawer devoted to the Second Limitation, how dependent human beings are upon statement. Man is the animal that states a case. He lives not in things but in expressed ideas, and what was troubling Benham inordinately that night, a night that should have been devoted to purely blissful and exalted expectations, was the sheer impossibility of stating what had happened in any terms that would be tolerable either to Mrs. Skelmersdale or Lady Marayne. The thing had happened with the suddenness of a revelation. Whatever had been going on in the less illuminated parts of his mind, his manifest resolution had been merely to bid South Harting good-bye-- And in short they would never understand. They would accuse him of the meanest treachery. He could see his mother's face, he could hear her voice saying, "And so because of this sudden infatuation for a swindler's daughter, a girl who runs about the roads with a couple of retrievers hunting for a man, you must spoil all my plans, ruin my year, tell me a lot of pretentious stuffy lies. . . ." And Mrs. Skelmersdale too would say, "Of course he just talked of the world and duty and all that rubbish to save my face. . . ."

It wasn't so at all.

But it looked so frightfully like it!

Couldn't they realize that he had fled out of London before ever he had seen Amanda? They might be able to do it perhaps, but they never would. It just happened that in the very moment when the edifice of his noble resolutions had been ready, she had stepped into it--out of nothingness and nowhere. She wasn't an accident; that was just the point upon which they were bound to misjudge her; she was an embodiment. If only he could show her to them as she had first shown herself to him, swift, light, a little flushed from running but not in the least out of breath, quick as a leopard upon the dogs. . . . But even if the improbable opportunity arose, he perceived it might still be impossible to produce the Amanda he

loved, the Amanda of the fluttering short skirt and the clear enthusiastic voice. Because, already he knew she was not the only Amanda. There was another, there might be others, there was this perplexing person who had flashed into being at the very moment of their mutual confession, who had produced the entirely disconcerting demand that nobody must be told. Then Betty had intervened. But that sub-Amanda and her carneying note had to be dealt with on the first occasion, because when aristocrats love they don't care a rap who is told and who is not told. They just step out into the light side by side. . . .

"Don't tell any one," she had said, "not for a few days. . . ."

This sub-Amanda was perceptible next morning again, flitting about in the background of a glad and loving adventuress, a pre-occupied Amanda who had put her head down while the real Amanda flung her chin up and contemplated things on the Asiatic scale, and who was apparently engaged in disentangling something obscure connected with Mr. Rathbone-Sanders that ought never to have been entangled. . . .

"A human being," White read, "the simplest human being, is a clustering mass of aspects. No man will judge another justly who judges everything about him. And of love in particular is this true. We love not persons but revelations. The woman one loves is like a goddess hidden in a shrine; for her sake we live on hope and suffer the kindred priestesses that make up herself. The art of love is patience till the gleam returns. . . ."

Sunday and Monday did much to develop this idea of the intricate complexity of humanity in Benham's mind. On Monday morning he went up from the Ship again to get Amanda alone and deliver his ultimatum against a further secrecy, so that he could own her openly and have no more of the interventions and separations that had barred him from any intimate talk with her throughout the whole of Sunday. The front door stood open, the passage hall was empty, but as he

hesitated whether he should proclaim himself with the knocker or walk through, the door of the little drawing-room flew open and a black-clad cylindrical clerical person entirely unknown to Benham stumbled over the threshold, blundered blindly against him, made a sound like "MOO" and a pitiful gesture with his arm, and fled forth. . . .

It was a curate and he was weeping bitterly. . . .

Benham stood in the doorway and watched a clumsy broken-hearted flight down the village street.

He had been partly told and partly left to infer, and anyhow he was beginning to understand about Mr. Rathbone-Sanders. That he could dismiss. But--why was the curate in tears?

12

He found Amanda standing alone in the room from which this young man had fled. She had a handful of daffodils in her hand, and others were scattered over the table. She had been arranging the big bowl of flowers in the centre. He left the door open behind him and stopped short with the table between them. She looked up at him--intelligently and calmly. Her pose had a divine dignity.

"I want to tell them now," said Benham without a word of greeting.

"Yes," she said, "tell them now."

They heard steps in the passage outside. "Betty!" cried Amanda.

Her mother's voice answered, "Do you want Betty?"

"We want you all," answered Amanda. "We have something to tell you. . . ."

"Carrie!" they heard Mrs. Morris call her sister after an interval, and her voice sounded faint and flat and unusual. There was the soft hissing of some whispered words outside and a muffled exclamation. Then Mrs. Wilder and Mrs. Morris and Betty came into the room. Mrs. Wilder came first, and Mrs. Morris with an alarmed face as if sheltering behind her. "We want to tell you something," said Amanda.

"Amanda and I are going to marry each other," said Benham, standing in front of her.

For an instant the others made no answer; they looked at each other.

"BUT DOES HE KNOW?" Mrs. Morris said in a low voice.

Amanda turned her eyes to her lover. She was about to speak, she seemed to gather herself for an effort, and then he knew that he did not want to hear her explanation. He checked her by a gesture.

"I KNOW," he said, and then, "I do not see that it matters to us in the least."

He went to her holding out both his hands to her.

She took them and stood shyly for a moment, and then the watchful gravity of her face broke into soft emotion. "Oh!" she cried and seized his face between her hands in a passion of triumphant love and kissed him.

And then he found himself being kissed by Mrs. Morris.

She kissed him thrice, with solemnity, with thankfulness, with relief, as if in the act of kissing she transferred to him precious and entirely incalculable treasures.

CHAPTER THE FOURTH

THE SPIRITED HONEYMOON

1

It was a little after sunrise one bright morning in September that Benham came up on to the deck of the sturdy Austrian steamboat that was churning its way with a sedulous deliberation from Spalato to Cattaro, and lit himself a cigarette and seated himself upon a deck chair. Save for a yawning Greek sailor busy with a mop the first-class deck was empty.

Benham surveyed the haggard beauty of the Illyrian coast. The mountains rose gaunt and enormous and barren to a jagged fantastic silhouette against the sun; their almost vertical slopes still plunged in blue shadow, broke only into a little cold green and white edge of olive terraces and vegetation and houses before they touched the clear blue water. An occasional church or a house perched high upon some seemingly inaccessible ledge did but accentuate the vast barrenness of the land. It was a land desolated and destroyed. At Ragusa, at Salona, at Spalato and Zara and Pola Benham had seen only variations upon one persistent theme, a dwindled and uncreative human life living amidst the giant ruins of preceding times, as worms live in the sockets of a skull. Forward an unsavoury group of passengers still slumbered amidst fruit-peel

and expectorations, a few soldiers, some squalid brigands armed with preposterous red umbrellas, a group of curled-up human lumps brooded over by an aquiline individual caparisoned with brass like a horse, his head wrapped picturesquely in a shawl. Benham surveyed these last products of the "life force" and resumed his pensive survey of the coast. The sea was deserted save for a couple of little lateen craft with suns painted on their gaudy sails, sea butterflies that hung motionless as if unawakened close inshore. . . .

The travel of the last few weeks had impressed Benham's imagination profoundly. For the first time in his life he had come face to face with civilization in defeat. From Venice hitherward he had marked with cumulative effect the clustering evidences of effort spent and power crumbled to nothingness. He had landed upon the marble quay of Pola and visited its deserted amphitheatre, he had seen a weak provincial life going about ignoble ends under the walls of the great Venetian fortress and the still more magnificent cathedral of Zara; he had visited Spalato, clustered in sweltering grime within the ample compass of the walls of Diocletian's villa, and a few troublesome sellers of coins and iridescent glass and fragments of tessellated pavement and such-like loot was all the population he had found amidst the fallen walls and broken friezes and columns of Salona. Down this coast there ebbed and flowed a mean residual life, a life of violence and dishonesty, peddling trades, vendettas and war. For a while the unstable Austrian ruled this land and made a sort of order that the incalculable chances of international politics might at any time shatter. Benham was drawing near now to the utmost limit of that extended peace. Ahead beyond the mountain capes was Montenegro and, further, Albania and Macedonia, lands of lawlessness and confusion. Amanda and he had been warned of the impossibility of decent travel beyond Cattaro and Cettinje but this had but whetted her adventurousness and challenged his spirit. They were going to see Albania for themselves.

The three months of honeymoon they had been spending together had

developed many remarkable divergences of their minds that had not been in the least apparent to Benham before their marriage. Then their common resolve to be as spirited as possible had obliterated all minor considerations. But that was the limit of their unanimity. Amanda loved wild and picturesque things, and Benham strong and clear things; the vines and brushwood amidst the ruins of Salona that had delighted her had filled him with a sense of tragic retrogression. Salona had revived again in the acutest form a dispute that had been smouldering between them throughout a fitful and lengthy exploration of north and central Italy. She could not understand his disgust with the mediaeval colour and confusion that had swamped the pride and state of the Roman empire, and he could not make her feel the ambition of the ruler, the essential discipline and responsibilities of his aristocratic idea. While his adventurousness was conquest, hers, it was only too manifest, was brigandage. His thoughts ran now into the form of an imaginary discourse, that he would never deliver to her, on the decay of states, on the triumphs of barbarians over rulers who will not rule, on the relaxation of patrician orders and the return of the robber and assassin as lordship decays. This coast was no theatrical scenery for him; it was a shattered empire. And it was shattered because no men had been found, united enough, magnificent and steadfast enough, to hold the cities, and maintain the roads, keep the peace and subdue the brutish hates and suspicions and cruelties that devastated the world.

And as these thoughts came back into his mind, Amanda flickered up from below, light and noiseless as a sunbeam, and stood behind his chair.

Freedom and the sight of the world had if possible brightened and invigorated her. Her costume and bearing were subtly touched by the romance of the Adriatic. There was a flavour of the pirate in the cloak about her shoulders and the light knitted cap of scarlet she had stuck upon her head. She surveyed his preoccupation for a

moment, glanced forward, and then covered his eyes with her hands. In almost the same movement she had bent down and nipped the tip of his ear between her teeth.

"Confound you, Amanda!"

"You'd forgotten my existence, you star-gazing Cheetah. And then, you see, these things happen to you!"

"I was thinking."

"Well--DON'T. . . . I distrust your thinking. This coast is wilder and grimmer than yesterday. It's glorious. . . ."

She sat down on the chair he unfolded for her.

"Is there nothing to eat?" she asked abruptly.

"It is too early."

2

"This coast is magnificent," she said presently.

"It's hideous," he answered. "It's as ugly as a heap of slag."

"It's nature at its wildest."

"That's Amanda at her wildest."

"Well, isn't it?"

"No! This land isn't nature. It's waste. Not wilderness. It's the other end. Those hills were covered with forests; this was a busy civilized coast just a little thousand years ago. The Venetians wasted it. They cut down the forests; they filled the cities with a mixed mud of population, THAT stuff. Look at it!"--he indicated the sleepers forward by a movement of his head.

"I suppose they WERE rather feeble people," said Amanda.

"Who?"

"The Venetians."

"They were traders--and nothing more. Just as we are. And when they were rich they got splendid clothes and feasted and rested. Much as we do."

Amanda surveyed him. "We don't rest."

"We idle."

"We are seeing things."

"Don't be a humbug, Amanda. We are making love. Just as they did. And it has been--ripping. In Salona they made love tremendously. They did nothing else until the barbarians came over the mountains. . . ."

"Well," said Amanda virtuously, "we will do something else."

He made no answer and her expression became profoundly thoughtful. Of course this wandering must end. He had been growing impatient for some time. But it was difficult, she perceived, to decide just what to do with him. . . .

Benham picked up the thread of his musing.

He was seeing more and more clearly that all civilization was an effort, and so far always an inadequate and very partially successful effort. Always it had been aristocratic, aristocratic in the sense that it was the work of minorities, who took power, who had a common resolution against the inertia, the indifference, the insubordination and instinctive hostility of the mass of mankind. And always the set-backs, the disasters of civilization, had been failures of the aristocratic spirit. Why had the Roman purpose faltered and shrivelled? Every order, every brotherhood, every organization carried with it the seeds of its own destruction. Must the idea of statecraft and rule perpetually reappear, reclothe itself in new forms, age, die, even as life does--making each time its almost infinitesimal addition to human achievement? Now the world is crying aloud for a renaissance of the spirit that orders and controls. Human affairs sway at a dizzy height of opportunity. Will they keep their footing there, or stagger? We have got back at last to a time as big with opportunity as the early empire. Given only the will in men and it would be possible now to turn the dazzling accidents of science, the chancy attainments of the nineteenth century, into a sane and permanent possession, a new starting point. . . . What a magnificence might be made of life!

He was aroused by Amanda's voice.

"When we go back to London, old Cheetah," she said, "we must take a house."

For some moments he stared at her, trying to get back to their point of divergence.

"Why?" he asked at length.

"We must have a house," she said.

He looked at her face. Her expression was profoundly thoughtful, her eyes were fixed on the slumbering ships poised upon the transparent water under the mountain shadows.

"You see," she thought it out, "you've got to TELL in London. You can't just sneak back there. You've got to strike a note of your own. With all these things of yours."

"But how?"

"There's a sort of little house, I used to see them when I was a girl and my father lived in London, about Brook Street and that part. Not too far north. . . . You see going back to London for us is just another adventure. We've got to capture London. We've got to scale it. We've got advantages of all sorts. But at present we're outside. We've got to march in."

Her clear hazel eyes contemplated conflicts and triumphs.

She was roused by Benham's voice.

"What the deuce are you thinking of, Amanda?"

She turned her level eyes to his. "London," she said. "For you."

"I don't want London," he said.

"I thought you did. You ought to. I do."

"But to take a house! Make an invasion of London!"

"You dear old Cheetah, you can't be always frisking about in the wilderness, staring at the stars."

"But I'm not going back to live in London in the old way, theatres, dinner-parties, chatter--"

"Oh no! We aren't going to do that sort of thing. We aren't going to join the ruck. We'll go about in holiday times all over the world. I want to see Fusi-yama. I mean to swim in the South Seas. With you. We'll dodge the sharks. But all the same we shall have to have a house in London. We have to be FELT there."

She met his consternation fairly. She lifted her fine eyebrows. Her little face conveyed a protesting reasonableness.

"Well, MUSTN'T we?"

She added, "If we want to alter the world we ought to live in the world."

Since last they had disputed the question she had thought out these new phrases.

"Amanda," he said, "I think sometimes you haven't the remotest idea of what I am after. I don't believe you begin to suspect what I am up to."

She put her elbows on her knees, dropped her chin between her hands and regarded him impudently. She had a characteristic trick of looking up with her face downcast that never failed to soften his regard.

"Look here, Cheetah, don't you give way to your early morning habit of calling your own true love a fool," she said.

"Simply I tell you I will not go back to London."

"You will go back with me, Cheetah."

"I will go back as far as my work calls me there."

"It calls you through the voice of your mate and slave and doormat to just exactly the sort of house you ought to have. . . . It is the privilege and duty of the female to choose the lair."

For a space Benham made no reply. This controversy had been gathering for some time and he wanted to state his view as vividly as possible. The Benham style of connubial conversation had long since decided for emphasis rather than delicacy.

"I think," he said slowly, "that this wanting to take London by storm is a beastly VULGAR thing to want to do."

Amanda compressed her lips.

"I want to work out things in my mind," he went on. "I do not want to be distracted by social things, and I do not want to be distracted by picturesque things. This life--it's all very well on the surface, but it isn't real. I'm not getting hold of reality. Things slip away from me. God! but how they slip away from me!"

He got up and walked to the side of the boat.

She surveyed his back for some moments. Then she went and leant over the rail beside him.

"I want to go to London," she said.

"I don't."

"Where do you want to go?"

"Where I can see into the things that hold the world together."

"I have loved this wandering--I could wander always. But . . .
Cheetah! I tell you I WANT to go to London."

He looked over his shoulder into her warm face. "NO," he said.

"But, I ask you."

He shook his head.

She put her face closer and whispered. "Cheetah! big beast of my heart. Do you hear your mate asking for something?"

He turned his eyes back to the mountains. "I must go my own way."

"Haven't I, so far, invented things, made life amusing, Cheetah?
Can't you trust the leopard's wisdom?"

He stared at the coast inexorably.

"I wonder," she whispered.

"What?"

"You ARE that, Cheetah, that lank, long, EAGER beast--."

Suddenly with a nimble hand she had unbuttoned and rolled up the sleeve of her blouse. She stuck her pretty blue-veined arm before his eyes. "Look here, sir, it was you, wasn't it? It was your powerful jaw inflicted this bite upon the arm of a defenceless young leopardess--"

"Amanda!"

"Well." She wrinkled her brows.

He turned about and stood over her, he shook a finger in her face and there was a restrained intensity in his voice as he spoke.

"Look here, Amanda!" he said, "if you think that you are going to make me agree to any sort of project about London, to any sort of complication of our lives with houses in smart streets and a campaign of social assertion--by THAT, then may I be damned for an uxorious fool!"

Her eyes met his and there was mockery in her eyes.

"This, Cheetah, is the morning mood," she remarked.

"This is the essential mood. Listen, Amanda--"

He stopped short. He looked towards the gangway, they both looked. The magic word "Breakfast" came simultaneously from them.

"Eggs," she said ravenously, and led the way.

A smell of coffee as insistent as an herald's trumpet had called a truce between them.

3

Their marriage had been a comparatively inconspicuous one, but since that time they had been engaged upon a honeymoon of great extent and variety. Their wedding had taken place at South Harting church in the marked absence of Lady Marayne, and it had been marred by only one untoward event. The Reverend Amos Pugh who, in spite of the earnest advice of several friends had insisted upon sharing in the

ceremony, had suddenly covered his face with the sleeves of his surplice and fled with a swift rustle to the vestry, whence an uproar of inadequately smothered sorrow came as an obligato accompaniment to the more crucial passages of the service. Amanda appeared unaware of the incident at the time, but afterwards she explained things to Benham. "Curates," she said, "are such pent-up men. One ought, I suppose, to remember that. But he never had anything to go upon at all--not anything--except his own imaginations."

"I suppose when you met him you were nice to him."

"I was nice to him, of course. . . ."

They drove away from Harting, as it were, over the weeping remains of this infatuated divine. His sorrow made them thoughtful for a time, and then Amanda nestled closer to her lover and they forgot about him, and their honeymoon became so active and entertaining that only very rarely and transitorily did they ever think of him again.

The original conception of their honeymoon had been identical with the plans Benham had made for the survey and study of the world, and it was through a series of modifications, replacements and additions that it became at last a prolonged and very picturesque tour in Switzerland, the Austrian Tyrol, North Italy, and down the Adriatic coast. Amanda had never seen mountains, and longed, she said, to climb. This took them first to Switzerland. Then, in spite of their exalted aims, the devotion of their lives to noble purposes, it was evident that Amanda had no intention of scamping the detail of love, and for that what background is so richly beautiful as Italy? An important aspect of the grand tour round the world as Benham had planned it, had been interviews, inquiries and conversations with every sort of representative and understanding person he could reach. An unembarrassed young man who wants to know

and does not promise to bore may reach almost any one in that way, he is as impersonal as pure reason and as mobile as a letter, but the presence of a lady in his train leaves him no longer unembarrassed. His approach has become a social event. The wife of a great or significant personage must take notice or decide not to take notice. Of course Amanda was prepared to go anywhere, just as Benham's shadow; it was the world that was unprepared. And a second leading aspect of his original scheme had been the examination of the ways of government in cities and the shifting and mixture of nations and races. It would have led to back streets, and involved and complicated details, and there was something in the fine flame of girlhood beside him that he felt was incompatible with those shadows and that dust. And also they were lovers and very deeply in love. It was amazing how swiftly that draggled shameful London sparrow-gamin, Eros, took heart from Amanda, and became wonderful, beautiful, glowing, life-giving, confident, clear-eyed; how he changed from flesh to sweet fire, and grew until he filled the sky. So that you see they went to Switzerland and Italy at last very like two ordinary young people who were not aristocrats at all, had no theory about the world or their destiny, but were simply just ardently delighted with the discovery of one another.

Nevertheless Benham was for some time under a vague impression that in a sort of way still he was going round the world and working out his destinies.

It was part of the fascination of Amanda that she was never what he had supposed her to be, and that nothing that he set out to do with her ever turned out as they had planned it. Her appreciations marched before her achievement, and when it came to climbing it seemed foolish to toil to summits over which her spirit had flitted days before. Their Swiss expeditions which she had foreseen as glorious wanderings amidst the blue ice of crevasses and nights of exalted hardihood became a walking tour of fitful vigour and abundant fun and delight. They spent a long day on the ice of the

Aletsch glacier, but they reached the inn on its eastward side with magnificent appetites a little late for dinner.

Amanda had revealed an unexpected gift for nicknames and pretty fancies. She named herself the Leopard, the spotless Leopard; in some obscure way she intimated that the colour was black, but that was never to be admitted openly, there was supposed to be some lurking traces of a rusty brown but the word was spotless and the implication white, a dazzling white, she would play a thousand variations on the theme; in moments of despondency she was only a black cat, a common lean black cat, and sacks and half-bricks almost too good for her. But Benham was always a Cheetah. That had come to her as a revelation from heaven. But so clearly he was a Cheetah. He was a Hunting Leopard; the only beast that has an up-cast face and dreams and looks at you with absent-minded eyes like a man. She laced their journeys with a fantastic monologue telling in the third person what the Leopard and the Cheetah were thinking and seeing and doing. And so they walked up mountains and over passes and swam in the warm clear water of romantic lakes and loved each other mightily always, in chestnut woods and olive orchards and flower-starred alps and pine forests and awning-covered boats, and by sunset and moonlight and starshine; and out of these agreeable solitudes they came brown and dusty, striding side by side into sunlit entertaining fruit-piled market-places and envious hotels. For days and weeks together it did not seem to Benham that there was anything that mattered in life but Amanda and the elemental joys of living. And then the Research Magnificent began to stir in him again. He perceived that Italy was not India, that the clue to the questions he must answer lay in the crowded new towns that they avoided, in the packed bookshops and the talk of men, and not in the picturesque and flowery solitudes to which their lovemaking carried them.

Moods began in which he seemed to forget Amanda altogether.

This happened first in the Certosa di Pavia whither they had gone one afternoon from Milan. That was quite soon after they were married. They had a bumping journey thither in a motor-car, a little doubtful if the excursion was worth while, and they found a great amazement in the lavish beauty and decorative wealth of that vast church and its associated cloisters, set far away from any population as it seemed in a flat wilderness of reedy ditches and patchy cultivation. The distilleries and outbuildings were deserted--their white walls were covered by one monstrously great and old wisteria in flower--the soaring marvellous church was in possession of a knot of unattractive guides. One of these conducted them through the painted treasures of the gold and marble chapels; he was an elderly but animated person who evidently found Amanda more wonderful than any church. He poured out great accumulations of information and compliments before her. Benham dropped behind, went astray and was presently recovered dreaming in the great cloister. The guide showed them over two of the cells that opened thereupon, each a delightful house for a solitary, bookish and clean, and each with a little secret walled garden of its own. He was covertly tipped against all regulations and departed regretfully with a beaming dismissal from Amanda. She found Benham wondering why the Carthusians had failed to produce anything better in the world than a liqueur. "One might have imagined that men would have done something in this beautiful quiet; that there would have come thought from here or will from here."

"In these dear little nests they ought to have put lovers," said Amanda.

"Oh, of course, YOU would have made the place Thelema. . . ."

But as they went shaking and bumping back along the evil road to Milan, he fell into a deep musing. Suddenly he said, "Work has to be done. Because this order or that has failed, there is no reason why we should fail. And look at those ragged children in the road

ahead of us, and those dirty women sitting in the doorways, and the foul ugliness of these gaunt nameless towns through which we go! They are what they are, because we are what we are--idlers, excursionists. In a world we ought to rule. . . .

"Amanda, we've got to get to work. . . ."

That was his first display of this new mood, which presently became a common one. He was less and less content to let the happy hours slip by, more and more sensitive to the reminders in giant ruin and deserted cell, in a chance encounter with a string of guns and soldiers on their way to manoeuvres or in the sight of a stale newspaper, of a great world process going on in which he was now playing no part at all. And a curious irritability manifested itself more and more plainly, whenever human pettiness obtruded upon his attention, whenever some trivial dishonesty, some manifest slovenliness, some spiritless failure, a cheating waiter or a wayside beggar brought before him the shiftless, selfish, aimless elements in humanity that war against the great dream of life made glorious. "Accursed things," he would say, as he flung some importunate cripple at a church door a ten-centime piece; "why were they born? Why do they consent to live? They are no better than some chance fungus that is because it must."

"It takes all sorts to make a world," said Amanda.

"Nonsense," said Benham. "Where is the megatherium? That sort of creature has to go. Our sort of creature has to end it."

"Then why did you give it money?"

"Because-- I don't want the thing to be more wretched than it is. But if I could prevent more of them-- . . . What am I doing to prevent them?"

"These beggars annoy you," said Amanda after a pause. "They do me. Let us go back into the mountains."

But he fretted in the mountains.

They made a ten days' tour from Macugnaga over the Monte Moro to Sass, and thence to Zermatt and back by the Theodule to Macugnaga. The sudden apparition of douaniers upon the Monte Moro annoyed Benham, and he was also irritated by the solemn English mountain climbers at Saas Fee. They were as bad as golfers, he said, and reflected momentarily upon his father. Amanda fell in love with Monte Rosa, she wanted to kiss its snowy forehead, she danced like a young goat down the path to Mattmark, and rolled on the turf when she came to gentians and purple primulas. Benham was tremendously in love with her most of the time, but one day when they were sitting over the Findelen glacier his perceptions blundered for the first time upon the fundamental antagonism of their quality. She was sketching out jolly things that they were to do together, expeditions, entertainments, amusements, and adventures, with a voluble swiftness, and suddenly in a flash his eyes were opened, and he saw that she would never for a moment feel the quality that made life worth while for him. He saw it in a flash, and in that flash he made his urgent resolve not to see it. From that moment forth his bearing was poisoned by his secret determination not to think of this, not to admit it to his mind. And forbidden to come into his presence in its proper form, this conflict of intellectual temperaments took on strange disguises, and the gathering tension of his mind sought to relieve itself along grotesque irrelevant channels.

There was, for example, the remarkable affair of the drive from Macugnaga to Piedimulera.

They had decided to walk down in a leisurely fashion, but with the fatigues of the precipitous clamber down from Switzerland still upon

them they found the white road between rock above and gorge below wearisome, and the valley hot in the late morning sunshine, and already before they reached the inn they had marked for lunch Amanda had suggested driving the rest of the way. The inn had a number of brigand-like customers consuming such sustenance as garlic and salami and wine; it received them with an indifference that bordered on disrespect, until the landlord, who seemed to be something of a beauty himself, discovered the merits of Amanda. Then he became markedly attentive. He was a large, fat, curly-headed person with beautiful eyes, a cherished moustache, and an air of great gentility, and when he had welcomed his guests and driven off the slatternly waiting-maid, and given them his best table, and consented, at Amanda's request, to open a window, he went away and put on a tie and collar. It was an attention so conspicuous that even the group of men in the far corner noticed and commented on it, and then they commented on Amanda and Benham, assuming an ignorance of Italian in the visitors that was only partly justifiable. "Bellissima," "bravissima," "signorina," "Inglese," one need not be born in Italy to understand such words as these. Also they addressed sly comments and encouragements to the landlord as he went to and fro.

Benham was rather still and stiff during the meal, but it ill becomes an English aristocrat to discuss the manners of an alien population, and Amanda was amused by the effusion of the landlord and a little disposed to experiment upon him. She sat radiating light amidst the shadows.

The question of the vehicle was broached. The landlord was doubtful, then an idea, it was manifestly a questionable idea, occurred to him. He went to consult an obscure brown-faced individual in the corner, disappeared, and the world without became eloquent. Presently he returned and announced that a carozza was practicable. It had been difficult, but he had contrived it. And

he remained hovering over the conclusion of their meal, asking questions about Amanda's mountaineering and expressing incredulous admiration.

His bill, which he presented with an uneasy flourish, was large and included the carozza.

He ushered them out to the carriage with civilities and compliments. It had manifestly been difficult and contrived. It was dusty and blistered, there had been a hasty effort to conceal its recent use as a hen-roost, the harness was mended with string. The horse was gaunt and scandalous, a dirty white, and carried its head apprehensively. The driver had but one eye, through which there gleamed a concentrated hatred of God and man.

"No wonder he charged for it before we saw it," said Benham.

"It's better than walking," said Amanda.

The company in the inn gathered behind the landlord and scrutinized Amanda and Benham intelligently. The young couple got in. "Avanti," said Benham, and Amanda bestowed one last ineradicable memory on the bowing landlord.

Benham did not speak until just after they turned the first corner, and then something portentous happened, considering the precipitous position of the road they were upon. A small boy appeared sitting in the grass by the wayside, and at the sight of him the white horse shied extravagantly. The driver rose in his seat ready to jump. But the crisis passed without a smash. "Cheetah!" cried Amanda suddenly. "This isn't safe." "Ah!" said Benham, and began to act with the vigour of one who has long accumulated force. He rose in his place and gripped the one-eyed driver by the collar. "ASPETTO," he said, but he meant "Stop!" The driver understood that he meant "Stop," and obeyed.

Benham wasted no time in parleying with the driver. He indicated to him and to Amanda by a comprehensive gesture that he had business with the landlord, and with a gleaming appetite upon his face went running back towards the inn.

The landlord was sitting down to a little game of dominoes with his friends when Benham reappeared in the sunlight of the doorway. There was no misunderstanding Benham's expression.

For a moment the landlord was disposed to be defiant. Then he changed his mind. Benham's earnest face was within a yard of his own, and a threatening forefinger was almost touching his nose.

"Albergo cattivissimo," said Benham. "Cattivissimo! Pranzo cattivissimo 'orrido. Cavallo cattivissimo, dangerousissimo. Gioco abominablissimo, damnissimo. Capisce. Eh?" *

* This is vile Italian. It may--with a certain charity to Benham--be rendered: "The beastliest inn! The beastliest! The beastliest, most awful lunch! The vilest horse! Most dangerous! Abominable trick! Understand?"

The landlord made deprecatory gestures.

"YOU understand all right," said Benham. "Da me il argento per il carrozzo. Subito?" *

* "Give me back the money for the carriage. QUICKLY!"

The landlord was understood to ask whether the signor no longer

wished for the carriage.

"SUBITO!" cried Benham, and giving way to a long-restrained impulse seized the padrone by the collar of his coat and shook him vigorously.

There were dissuasive noises from the company, but no attempt at rescue. Benham released his hold.

"Adesso!" said Benham. *

* "NOW!"

The landlord decided to disgorge. It was at any rate a comfort that the beautiful lady was not seeing anything of this. And he could explain afterwards to his friends that the Englishman was clearly a lunatic, deserving pity rather than punishment. He made some sound of protest, but attempted no delay in refunding the money Benham had prepaid. Outside sounded the wheels of the returning carriage. They stopped. Amanda appeared in the doorway and discovered Benham dominant.

He was a little short of breath, and as she came in he was addressing the landlord with much earnestness in the following compact sentences.

"Attendez! Ecco! Adesso noi andiamo con questa cattivissimo cavallo a Piedimulera. Si noi arrivero in safety, sicuro that is, pagaremo. Non altro. Si noi abbiamo accidento Dio--Dio have mercy on your sinful soul. See! Capisce? That's all." *

* "Now we will go with this beastly horse to Piedimulera. If we get

there safely I will pay. If we have an accident, then--"

He turned to Amanda. "Get back into the thing," he said. "We won't have these stinking beasts think we are afraid of the job. I've just made sure he won't have a profit by it if we smash up. That's all. I might have known what he was up to when he wanted the money beforehand." He came to the doorway and with a magnificent gesture commanded the perplexed driver to turn the carriage.

While that was being done he discoursed upon his adjacent fellow-creatures. "A man who pays beforehand for anything in this filthy sort of life is a fool. You see the standards of the beast. They think of nothing but their dirty little tricks to get profit, their garlic, their sour wine, their games of dominoes, their moments of lust. They crawl in this place like cockroaches in a warm corner of the fireplace until they die. Look at the scabby frontage of the house. Look at the men's faces. . . . Yes. So! Adequato. Aspettate. . . . Get back into the carriage, Amanda."

"You know it's dangerous, Cheetah. The horse is a shier. That man is blind in one eye."

"Get back into the carriage," said Benham, whitely angry. "I AM GOING TO DRIVE!"

"But--!"

Just for a moment Amanda looked scared. Then with a queer little laugh she jumped in again.

Amanda was never a coward when there was excitement afoot. "We'll smash!" she cried, by no means woefully.

"Get up beside me," said Benham speaking in English to the driver

but with a gesture that translated him. Power over men radiated from Benham in this angry mood. He took the driver's seat. The little driver ascended and then with a grim calmness that brooked no resistance Benham reached over, took and fastened the apron over their knees to prevent any repetition of the jumping out tactics.

The recovering landlord became voluble in the doorway.

"In Piedimulera pagero," said Benham over his shoulder and brought the whip across the white outstanding ribs. "Get up!" said Benham.

Amanda gripped the sides of the seat as the carriage started into motion.

He laid the whip on again with such vigour that the horse forgot altogether to shy at the urchin that had scared it before.

"Amanda," said Benham leaning back. "If we do happen to go over on THAT side, jump out. It's all clear and wide for you. This side won't matter so--"

"MIND!" screamed Amanda and recalled him to his duties. He was off the road and he had narrowly missed an outstanding chestnut tree.

"No, you don't," said Benham presently, and again their career became erratic for a time as after a slight struggle he replaced the apron over the knees of the deposed driver. It had been furtively released. After that Benham kept an eye on it that might have been better devoted to the road.

The road went down in a series of curves and corners. Now and then there were pacific interludes when it might have been almost any road. Then, again, it became specifically an Italian mountain road. Now and then only a row of all too infrequent granite stumps separated them from a sheer precipice. Some of the corners were

miraculous, and once they had a wheel in a ditch for a time, they shaved the parapet of a bridge over a gorge and they drove a cyclist into a patch of maize, they narrowly missed a goat and jumped three gullies, thrice the horse stumbled and was jerked up in time, there were sickening moments, and withal they got down to Piedimulera unbroken and unspilt. It helped perhaps that the brake, with its handle like a barrel organ, had been screwed up before Benham took control. And when they were fairly on the level outside the town Benham suddenly pulled up, relinquished the driving into the proper hands and came into the carriage with Amanda.

"Safe now," he said compactly.

The driver appeared to be murmuring prayers very softly as he examined the brake.

Amanda was struggling with profound problems. "Why didn't you drive down in the first place?" she asked. "Without going back."

"The landlord annoyed me," he said. "I had to go back. . . . I wish I had kicked him. Hairy beast! If anything had happened, you see, he would have had his mean money. I couldn't bear to leave him."

"And why didn't you let HIM drive?" She indicated the driver by a motion of the head.

"I was angry," said Benham. "I was angry at the whole thing."

"Still--"

"You see I think I did that because he might have jumped off if I hadn't been up there to prevent him--I mean if we had had a smash. I didn't want him to get out of it."

"But you too--"

"You see I was angry. . . ."

"It's been as good as a switchback," said Amanda after reflection.

"But weren't you a little careless about me, Cheetah?"

"I never thought of you," said Benham, and then as if he felt that inadequate: "You see--I was so annoyed. It's odd at times how annoyed one gets. Suddenly when that horse shied I realized what a beastly business life was--as those brutes up there live it. I want to clear out the whole hot, dirty, little aimless nest of them. . . ."

"No, I'm sure," he repeated after a pause as though he had been digesting something "I wasn't thinking about you at all."

4

The suppression of his discovery that his honeymoon was not in the least the great journey of world exploration he had intended, but merely an impulsive pleasure hunt, was by no means the only obscured and repudiated conflict that disturbed the mind and broke out upon the behaviour of Benham. Beneath that issue he was keeping down a far more intimate conflict. It was in those lower, still less recognized depths that the volcanic fire arose and the earthquakes gathered strength. The Amanda he had loved, the Amanda of the gallant stride and fluttering skirt was with him still, she marched rejoicing over the passes, and a dearer Amanda, a soft whispering creature with dusky hair, who took possession of him when she chose, a soft creature who was nevertheless a fierce creature, was also interwoven with his life. But-- But there was now also a multitude of other Amandas who had this in common that they roused him to

opposition, that they crossed his moods and jarred upon his spirit. And particularly there was the Conquering Amanda not so much proud of her beauty as eager to test it, so that she was not unmindful of the stir she made in hotel lounges, nor of the magic that may shine memorably through the most commonplace incidental conversation. This Amanda was only too manifestly pleased to think that she made peasant lovers discontented and hotel porters unmercenary; she let her light shine before men. We lovers, who had deemed our own subjugation a profound privilege, love not this further expansiveness of our lady's empire. But Benham knew that no aristocrat can be jealous; jealousy he held to be the vice of the hovel and farmstead and suburban villa, and at an enormous expenditure of will he ignored Amanda's waving flags and roving glances. So, too, he denied that Amanda who was sharp and shrewd about money matters, that flash of an Amanda who was greedy for presents and possessions, that restless Amanda who fretted at any cessation of excitement, and that darkly thoughtful Amanda whom chance observations and questions showed to be still considering an account she had to settle with Lady Marayne. He resisted these impressions, he shut them out of his mind, but still they worked into his thoughts, and presently he could find himself asking, even as he and she went in step striding side by side through the red-scarred pinewoods in the most perfect outward harmony, whether after all he was so happily mated as he declared himself to be a score of times a day, whether he wasn't catching glimpses of reality through a veil of delusion that grew thinner and thinner and might leave him disillusioned in the face of a relationship--

Sometimes a man may be struck by a thought as though he had been struck in the face, and when the name of Mrs. Skelmersdale came into his head, he glanced at his wife by his side as if it were something that she might well have heard. Was this indeed the same thing as that? Wonderful, fresh as the day of Creation, clean as flame, yet the same! Was Amanda indeed the sister of Mrs. Skelmersdale--wrought of clean fire, but her sister? . . .

But also beside the inimical aspects which could set such doubts afoot there were in her infinite variety yet other Amandas neither very dear nor very annoying, but for the most part delightful, who entertained him as strangers might, Amandas with an odd twist which made them amusing to watch, jolly Amandas who were simply irrelevant. There was for example Amanda the Dog Mistress, with an astonishing tact and understanding of dogs, who could explain dogs and the cock of their ears and the droop of their tails and their vanity and their fidelity, and why they looked up and why they suddenly went off round the corner, and their pride in the sound of their voices and their dastardly thoughts and sniffing satisfactions, so that for the first time dogs had souls for Benham to see. And there was an Amanda with a striking passion for the sleekness and soft noses of horses. And there was an Amanda extremely garrulous, who was a biographical dictionary and critical handbook to all the girls in the school she had attended at Chichester--they seemed a very girlish lot of girls; and an Amanda who was very knowing--knowing was the only word for it--about pictures and architecture. And these and all the other Amandas agreed together to develop and share this one quality in common, that altogether they pointed to no end, they converged on nothing. She was, it grew more and more apparent, a miscellany bound in a body. She was an animated discursiveness. That passion to get all things together into one aristocratic aim, that restraint of purpose, that imperative to focus, which was the structural essential of Benham's spirit, was altogether foreign to her composition.

There were so many Amandas, they were as innumerable as the Venuses--Cytherea, Cypria, Paphia, Popularia, Euploea, Area, Verticordia, Etaira, Basilea, Myrtea, Libertina, Freya, Astarte, Philommedis, Telessigamma, Anadyomene, and a thousand others to whom men have bowed and built temples, a thousand and the same, and yet it seemed to Benham there was still one wanting.

The Amanda he had loved most wonderfully was that Amanda in armour who had walked with him through the wilderness of the world along the road to Chichester--and that Amanda came back to him no more.

5

Amanda too was making her observations and discoveries.

These moods of his perplexed her; she was astonished to find he was becoming irritable; she felt that he needed a firm but gentle discipline in his deportment as a lover. At first he had been perfect. . . .

But Amanda was more prepared for human inconsecutiveness than Benham, because she herself was inconsecutive, and her dissatisfaction with his irritations and preoccupation broadened to no general discontent. He had seemed perfect and he wasn't. So nothing was perfect. And he had to be managed, just as one must manage a dog or a cousin or a mother or a horse. Anyhow she had got him, she had no doubt that she held him by a thousand ties, the spotless leopard had him between her teeth, he was a prisoner in the dusk of her hair, and the world was all one vast promise of entertainment.

6

But the raid into the Balkans was not the tremendous success she had expected it to be. They had adventures, but they were not the

richly coloured, mediaeval affairs she had anticipated. For the most part until Benham broke loose beyond Ochrida they were adventures in discomfort. In those remote parts of Europe inns die away and cease, and it had never occurred to Amanda that inns could die away anywhere. She had thought that they just became very simple and natural and quaint. And she had thought that when benighted people knocked at a door it would presently open hospitably. She had not expected shots at random from the window. And it is not usual in Albania generally for women, whether they are Christian or Moslem, to go about unveiled; when they do so it leads to singular manifestations. The moral sense of the men is shocked and staggered, and they show it in many homely ways. Small boys at that age when feminine beauty does not yet prevail with them, pelt. Also in Mahometan districts they pelt men who do not wear fezzes, while occasionally Christians of the shawl-headed or skull-cap persuasions will pelt a fez. Sketching is always a peltable or mobable offence, as being contrary to the Koran, and sitting down tempts the pelter. Generally they pelt. The dogs of Albania are numerous, big, dirty, white dogs, large and hostile, and they attack with little hesitation. The women of Albania are secluded and remote, and indisposed to be of service to an alien sister. Roads are infrequent and most bridges have broken down. No bridge has been repaired since the later seventeenth century, and no new bridge has been made since the decline and fall of the Roman Empire. There are no shops at all. The scenery is magnificent but precipitous, and many of the high roads are difficult to trace. And there is rain. In Albania there is sometimes very heavy rain.

Yet in spite of these drawbacks they spent some splendid hours in their exploration of that wild lost country beyond the Adriatic headlands. There was the approach to Cattaro for example, through an arm of the sea, amazingly beautiful on either shore, that wound its way into the wild mountains and ended in a deep blue bay under the tremendous declivity of Montenegro. The quay, with its trees and lateen craft, ran along under the towers and portcullised gate

of the old Venetian wall, within clustered the town, and then the fortifications zigzagged up steeply to a monstrous fantastic fortress perched upon a great mountain headland that overhung the town. Behind it the rocks, slashed to and fro with the road to Cettinje, continued to ascend into blue haze, upward and upward until they became a purple curtain that filled half the heavens. The paved still town was squalid by day, but in the evening it became theatrically incredible, with an outdoor cafe amidst flowers and creepers, a Hungarian military band, a rabble of promenaders like a stage chorus in gorgeous costumes and a great gibbous yellow moon.

And there was Kroia, which Benham and Amanda saw first through the branches of the great trees that bordered the broad green track they were following. The town and its castle were poised at a tremendous height, sunlit and brilliant against a sombre mass of storm cloud, over vast cliffs and ravines. Kroia continued to be beautiful through a steep laborious approach up to the very place itself, a clustering group of houses and bazaars crowned with a tower and a minaret, and from a painted corridor upon this crest they had a wonderful view of the great seaward levels, and even far away the blue sea itself stretching between Scutari and Durazzo. The eye fell in succession down the stages of a vast and various descent, on the bazaars and tall minarets of the town, on jagged rocks and precipices, on slopes of oak forest and slopes of olive woods, on blue hills dropping away beyond blue hills to the coast. And behind them when they turned they saw great mountains, sullenly magnificent, cleft into vast irregular masses, dense with woods below and grim and desolate above. . . .

These were unforgettable scenes, and so too was the wild lonely valley through which they rode to Ochrida amidst walnut and chestnut trees and scattered rocks, and the first vision of that place itself, with its fertile levels dotted with sheep and cattle, its castle and clustering mosques, its spacious blue lake and the great

mountains rising up towards Olympus under the sun. And there was the first view of the blue Lake of Presba seen between silvery beech stems, and that too had Olympus in the far background, plain now and clear and unexpectedly snowy. And there were midday moments when they sat and ate under vines and heard voices singing very pleasantly, and there were forest glades and forest tracks in a great variety of beauty with mountains appearing through their parted branches, there were ilex woods, chestnut woods, beech woods, and there were strings of heavily-laden mules staggering up torrent-worn tracks, and strings of blue-swathed mysterious-eyed women with burthens on their heads passing silently, and white remote houses and ruins and deep gorges and precipices and ancient half-ruinous bridges over unruly streams. And if there was rain there was also the ending of rain, rainbows, and the piercing of clouds by the sun's incandescence, and sunsets and the moon, first full, then new and then growing full again as the holiday wore on.

They found tolerable accommodation at Cattaro and at Cetinje and at a place halfway between them. It was only when they had secured a guide and horses, and pushed on into the south-east of Montenegro that they began to realize the real difficulties of their journey. They aimed for a place called Podgoritza, which had a partially justifiable reputation for an inn, they missed the road and spent the night in the open beside a fire, rolled in the blankets they had very fortunately bought in Cetinje. They supped on biscuits and Benham's brandy flask. It chanced to be a fine night, and, drawn like moths by the fire, four heavily-armed mountaineers came out of nowhere, sat down beside Benham and Amanda, rolled cigarettes, achieved conversation in bad Italian through the muleteer and awaited refreshment. They approved of the brandy highly, they finished it, and towards dawn warmed to song. They did not sing badly, singing in chorus, but it appeared to Amanda that the hour might have been better chosen. In the morning they were agreeably surprised to find one of the Englishmen was an Englishwoman, and followed every accessible detail of her toilette with great

interest. They were quite helpful about breakfast when the trouble was put to them; two vanished over a crest and reappeared with some sour milk, a slabby kind of bread, goat's cheese young but hardened, and coffee and the means of making coffee, and they joined spiritedly in the ensuing meal. It ought to have been extraordinarily good fun, this camp under the vast heavens and these wild visitors, but it was not such fun as it ought to have been because both Amanda and Benham were extremely cold, stiff, sleepy, grubby and cross, and when at last they were back in the way to Podgoritza and had parted, after some present-giving from their chance friends, they halted in a sunlit grassy place, rolled themselves up in their blankets and recovered their arrears of sleep.

Podgoritza was their first experience of a khan, those oriental substitutes for hotels, and it was a deceptively good khan, indeed it was not a khan at all, it was an inn; it provided meals, it had a kind of bar, or at any rate a row of bottles and glasses, it possessed an upper floor with rooms, separate rooms, opening on to a gallery. The room had no beds but it had a shelf about it on which Amanda and Benham rolled up in their blankets and slept. "We can do this sort of thing all right," said Amanda and Benham. "But we mustn't lose the way again."

"In Scutari," said Benham, "we will get an extra horse and a tent."

The way presently became a lake and they reached Scutari by boat towards the dawn of the next day. . . .

The extra horse involved the addition of its owner, a small suspicious Latin Christian, to the company, and of another horse for him and an ugly almost hairless boy attendant. Moreover the British consul prevailed with Benham to accept the services of a picturesque Arnaut CAVASSE, complete with a rifle, knives, and other implements and the name of Giorgio. And as they got up into the highlands

beyond Scutari they began to realize the deceitfulness of Podgoritza and the real truth about khans. Their next one they reached after a rainy evening, and it was a cavernous room with a floor of indurated mud and full of eye-stinging wood-smoke and wind and the smell of beasts, unpartitioned, with a weakly hostile custodian from whom no food could be got but a little goat's flesh and bread. The meat Giorgio stuck upon a skewer in gobbets like cats-meat and cooked before the fire. For drink there was coffee and raw spirits. Against the wall in one corner was a slab of wood rather like the draining board in a scullery, and on this the guests were expected to sleep. The horses and the rest of the party camped loosely about the adjacent corner after a bitter dispute upon some unknown point between the horse owner and the custodian.

Amanda and Benham were already rolled up on their slanting board like a couple of chrysalids when other company began to arrive through the open door out of the moonlight, drawn thither by the report of a travelling Englishwoman.

They were sturdy men in light coloured garments adorned ostentatiously with weapons, they moved mysteriously about in the firelit darknesses and conversed in undertones with Giorgio. Giorgio seemed to have considerable powers of exposition and a gift for social organization. Presently he came to Benham and explained that raki was available and that hospitality would do no harm; Benham and Amanda sat up and various romantic figures with splendid moustaches came forward and shook hands with him, modestly ignoring Amanda. There was drinking, in which Benham shared, incomprehensible compliments, much ineffective saying of "BUONA NOTTE," and at last Amanda and Benham counterfeited sleep. This seemed to remove a check on the conversation and a heated discussion in tense undertones went on, it seemed interminably. . . . Probably very few aspects of Benham and Amanda were ignored. . . . Towards morning the twanging of a string proclaimed the arrival of a querulous-faced minstrel with a sort of embryonic one-stringed horse-headed fiddle,

and after a brief parley singing began, a long high-pitched solo. The fiddle squealed pitifully under the persuasion of a semicircular bow. Two heads were lifted enquiringly.

The singer had taken up his position at their feet and faced them. It was a compliment.

"OH!" said Amanda, rolling over.

The soloist obliged with three songs, and then, just as day was breaking, stopped abruptly and sprawled suddenly on the floor as if he had been struck asleep. He was vocal even in his sleep. A cock in the far corner began crowing and was answered by another outside. . . .

But this does not give a full account of the animation of the khan. "OH!" said Amanda, rolling over again with the suddenness of accumulated anger.

"They're worse than in Scutari," said Benham, understanding her trouble instantly.

"It isn't days and nights we are having," said Benham a few days later, "it's days and nightmares."

But both he and Amanda had one quality in common. The deeper their discomfort the less possible it was to speak of turning back from the itinerary they had planned. . . .

They met no robbers, though an excited little English Levantine in Scutari had assured them they would do so and told a vivid story of a ride to Ipek, a delay on the road due to a sudden inexplicable lameness of his horse after a halt for refreshment, a political discussion that delayed him, his hurry through the still twilight to make up for lost time, the coming on of night and the sudden silent

apparition out of the darkness of the woods about the road of a dozen armed men each protruding a gun barrel. "Sometimes they will wait for you at a ford or a broken bridge," he said. "In the mountains they rob for arms. They assassinate the Turkish soldiers even. It is better to go unarmed unless you mean to fight for it. . . . Have you got arms?"

"Just a revolver," said Benham.

But it was after that that he closed with Giorgio.

If they found no robbers in Albania, they met soon enough with bloodshed. They came to a village where a friend of a friend of Giorgio's was discovered, and they slept at his house in preference to the unclean and crowded khan. Here for the first time Amanda made the acquaintance of Albanian women and was carried off to the woman's region at the top of the house, permitted to wash, closely examined, shown a baby and confided in as generously as gesture and some fragments of Italian would permit. Benham slept on a rug on the first floor in a corner of honour beside the wood fire. There had been much confused conversation and some singing, he was dog-tired and slept heavily, and when presently he was awakened by piercing screams he sat up in a darkness that seemed to belong neither to time nor place. . . .

Near his feet was an ashen glow that gave no light.

His first perplexity gave way to dismay at finding no Amanda by his side. "Amanda!" he cried. . . .

Her voice floated down through a chink in the floor above. "What can it be, Cheetah?"

Then: "It's coming nearer."

The screaming continued, heart-rending, eviscerating shrieks. Benham, still confused, lit a match. All the men about him were stirring or sitting up and listening, their faces showing distorted and ugly in the flicker of his light. "CHE E?" he tried. No one answered. Then one by one they stood up and went softly to the ladder that led to the stable-room below. Benham struck a second match and a third.

"Giorgio!" he called.

The cavasse made an arresting gesture and followed discreetly and noiselessly after the others, leaving Benham alone in the dark.

Benham heard their shuffling patten, one after the other, down the ladder, the sounds of a door being unbarred softly, and then no other sound but that incessant shrieking in the darkness.

Had they gone out? Were they standing at the door looking out into the night and listening?

Amanda had found the chink and her voice sounded nearer.

"It's a woman," she said.

The shrieking came nearer and nearer, long, repeated, throat-tearing shrieks. Far off there was a great clamour of dogs. And there was another sound, a whisper--?

"RAIN!"

The shrieks seemed to turn into a side street and receded. The tension of listening relaxed. Men's voices sounded below in question and answer. Dogs close at hand barked shortly and then stopped enquiringly.

Benham seemed to himself to be sitting alone for an interminable time. He lit another match and consulted his watch. It was four o'clock and nearly dawn. . . .

Then slowly and stumbling up the ladder the men began to return to Benham's room.

"Ask them what it is," urged Amanda.

But for a time not even Giorgio would understand Benham's questions. There seemed to be a doubt whether he ought to know. The shrieking approached again and then receded. Giorgio came and stood, a vague thoughtful figure, by the embers of the fire. Explanation dropped from him reluctantly. It was nothing. Some one had been killed: that was all. It was a vendetta. A man had been missing overnight, and this morning his brother who had been prowling and searching with some dogs had found him, or rather his head. It was on this side of the ravine, thrown over from the other bank on which the body sprawled stiffly, wet through, and now growing visible in the gathering daylight. Yes--the voice was the man's wife. It was raining hard. . . . There would be shrieking for nine days. Yes, nine days. Confirmation with the fingers when Benham still fought against the facts. Her friends and relatives would come and shriek too. Two of the dead man's aunts were among the best keeners in the whole land. They could keen marvellously. It was raining too hard to go on. . . . The road would be impossible in rain. . . . Yes it was very melancholy. Her house was close at hand. Perhaps twenty or thirty women would join her. It was impossible to go on until it had stopped raining. It would be tiresome, but what could one do? . . .

As they sat upon the parapet of a broken bridge on the road between Elbassan and Ochrida Benham was moved to a dissertation upon the condition of Albania and the politics of the Balkan peninsula.

"Here we are," he said, "not a week from London, and you see the sort of life that men live when the forces of civilization fail. We have been close to two murders--"

"Two?"

"That little crowd in the square at Scutari-- That was a murder. I didn't tell you at the time."

"But I knew it was," said Amanda.

"And you see the filth of it all, the toiling discomfort of it all. There is scarcely a house here in all the land that is not filthier and viler than the worst slum in London. No man ventures far from his village without arms, everywhere there is fear. The hills are impassable because of the shepherd's dogs. Over those hills a little while ago a stranger was torn to pieces by dogs--and partially eaten. Amanda, these dogs madden me. I shall let fly at the beasts. The infernal indignity of it! But that is by the way. You see how all this magnificent country lies waste with nothing but this crawling, ugly mockery of human life."

"They sing," said Amanda.

"Yes," said Benham and reflected, "they do sing. I suppose singing is the last thing left to men. When there is nothing else you can still sit about and sing. Miners who have been buried in mines will sing, people going down in ships."

"The Sussex labourers don't sing," said Amanda. "These people sing well."

"They would probably sing as well if they were civilized. Even if they didn't I shouldn't care. All the rest of their lives is muddle and cruelty and misery. Look at the women. There was that party of bent creatures we met yesterday, carrying great bundles, carrying even the men's cloaks and pipes, while their rascal husbands and brothers swaggered behind. Look at the cripples we have seen and the mutilated men. If we have met one man without a nose, we have met a dozen. And stunted people. All these people are like evil schoolboys; they do nothing but malicious mischief; there is nothing adult about them but their voices; they are like the heroic dreams of young ruffians in a penitentiary. You saw that man at Scutari in the corner of the bazaar, the gorgeous brute, you admired him--."

"The man with the gold inlaid pistols and the diamonds on his yataghan. He wanted to show them to us."

"Yes. You let him see you admired him."

"I liked the things on his stall."

"Well, he has killed nearly thirty people."

"In duels?"

"Good Lord! NO! Assassinations. His shoemaker annoyed him by sending in a bill. He went to the man's stall, found him standing with his child in his arms and blew out his brains. He blundered against a passer-by in the road and shot him. Those are his feats. Sometimes his pistols go off in the bazaar just by accident."

"Does nobody kill him?"

"I wanted to," said Benham and became thoughtful for a time. "I think I ought to have made some sort of quarrel. But then as I am

an Englishman he might have hesitated. He would have funk'd a strange beast like me. And I couldn't have shot him if he had hesitated. And if he hadn't--"

"But doesn't a blood feud come down on him?"

"It only comes down on his family. The shoemaker's son thought the matter over and squared accounts by putting the muzzle of a gun into the small of the back of our bully's uncle. It was easier that way. . . . You see you're dealing with men of thirteen years old or thereabouts, the boy who doesn't grow up."

"But doesn't the law--?"

"There's no law. Only custom and the Turkish tax collector."

"You see this is what men are where there is no power, no discipline, no ruler, no responsibility. This is a masterless world. This is pure democracy. This is the natural state of men. This is the world of the bully and the brigand and assassin, the world of the mud-pelter and brawler, the world of the bent woman, the world of the flea and the fly, the open drain and the baying dog. This is what the British sentimentalist thinks a noble state for men."

"They fight for freedom."

"They fight among each other. There are their private feuds and their village feuds and above all that great feud religion. In Albania there is only one religion and that is hate. But there are three churches for the better cultivation of hate and cruelty, the Latin, the Greek and the Mahometan."

"But no one has ever conquered these people."

"Any one could, the Servians, the Bulgarians, the Greeks, the Italians, the Austrians. Why, they can't even shoot! It's just the balance of power and all that foolery keeps this country a roadless wilderness. Good God, how I tire of it! These men who swagger and stink, their brawling dogs, their greasy priests and dervishes, the down-at-heel soldiers, the bribery and robbery, the cheating over the money. . . ."

He slipped off the parapet, too impatient to sit any longer, and began to pace up and down in the road.

"One marvels that no one comes to clear up this country, one itches to be at the job, and then one realizes that before one can begin here, one must get to work back there, where the fools and pedants of WELT POLITIK scheme mischief one against another. This country frets me. I can't see any fun in it, can't see the humour of it. And the people away there know no better than to play off tribe against tribe, sect against sect, one peasant prejudice against another. Over this pass the foolery grows grimmer and viler. We shall come to where the Servian plots against the Bulgarian and the Greek against both, and the Turk, with spasmodic massacres and indulgences, broods over the brew. Every division is subdivided. There are two sorts of Greek church, Exarchic, Patriarchic, both teaching by threat and massacre. And there is no one, no one, with the sense to over-ride all these squalid hostilities. All those fools away there in London and Vienna and St. Petersburg and Rome take sides as though these beastly tribes and leagues and superstitions meant anything but blank, black, damnable ignorance. One fool stands up for the Catholic Albanians, another finds heroes in the Servians, another talks of Brave Little Montenegro, or the Sturdy Bulgarian, or the Heroic Turk. There isn't a religion in the whole Balkan peninsula, there isn't a tribal or national sentiment that deserves a moment's respect from a sane man. They're things like niggers' nose-rings and Chinese secret societies; childish things, idiot things that have to go. Yet there is no one who will

preach the only possible peace, which is the peace of the world-state, the open conspiracy of all the sane men in the world against the things that break us up into wars and futilities. And here am I--who have the light--WANDERING! Just wandering!"

He shrugged his shoulders and came to stare at the torrent under the bridge.

"You're getting ripe for London, Cheetah," said Amanda softly.

"I want somehow to get to work, to get my hands on definite things."

"How can we get back?"

She had to repeat her question presently.

"We can go on. Over the hills is Ochrida and then over another pass is Presba, and from there we go down into Monastir and reach a railway and get back to the world of our own times again."

8

But before they reached the world of their own times Macedonia was to show them something grimmer than Albania.

They were riding through a sunlit walnut wood beyond Ochrida when they came upon the thing.

The first they saw of it looked like a man lying asleep on a grassy bank. But he lay very still indeed, he did not look up, he did not stir as they passed, the pose of his hand was stiff, and when Benham glanced back at him, he stifled a little cry of horror. For this

man had no face and the flies had been busy upon him. . . .

Benham caught Amanda's bridle so that she had to give her attention to her steed.

"Ahead!" he said, "Ahead! Look, a village!"

(Why the devil didn't they bury the man? Why?

And that fool Giorgio and the others were pulling up and beginning to chatter. After all she might look back.)

Through the trees now they could see houses. He quickened his pace and jerked Amanda's horse forward. . . .

But the village was a still one. Not a dog barked.

Here was an incredible village without even a dog!

And then, then they saw some more people lying about. A woman lay in a doorway. Near her was something muddy that might have been a child, beyond were six men all spread out very neatly in a row with their faces to the sky.

"Cheetah!" cried Amanda, with her voice going up. "They've been killed. Some one has killed them."

Benham halted beside her and stared stupidly. "It's a band," he said. "It's--propaganda. Greeks or Turks or Bulgarians."

"But their feet and hands are fastened! And-- . . . WHAT HAVE THEY BEEN DOING TO THEM? . . ."

"I want to kill," cried Benham. "Oh! I want to kill people. Come on, Amanda! It blisters one's eyes. Come away. Come away! Come!"

Her face was white and her eyes terror-stricken. She obeyed him mechanically. She gave one last look at those bodies. . . .

Down the deep-rutted soil of the village street they clattered. They came to houses that had been set on fire. . . .

"What is that hanging from a tree?" cried Amanda. "Oh, oh!"

"Come on. . . ."

Behind them rode the others scared and hurrying.

The sunlight had become the light of hell. There was no air but horror. Across Benham's skies these fly-blown trophies of devilry dangled mockingly in the place of God. He had no thought but to get away.

Presently they encountered a detachment of Turkish soldiers, very greasy and ragged, with worn-out boots and yellow faces, toiling up the stony road belatedly to the village. Amanda and Benham riding one behind the other in a stricken silence passed this labouring column without a gesture, but presently they heard the commander stopping and questioning Giorgio. . . .

Then Giorgio and the others came clattering to overtake them.

Giorgio was too full to wait for questions. He talked eagerly to Benham's silence.

It must have happened yesterday, he explained. They were Bulgarians--traitors. They had been converted to the Patriarchists by the Greeks--by a Greek band, that is to say. They had betrayed one of their own people. Now a Bulgarian band had descended upon them. Bulgarian bands it seemed were always particularly rough on

Bulgarian-speaking Patriarchists. . . .

9

That night they slept in a dirty little room in a peasant's house in Resnia, and in the middle of the night Amanda woke up with a start and heard Benham talking. He seemed to be sitting up as he talked. But he was not talking to her and his voice sounded strange.

"Flies," he said, "in the sunlight!"

He was silent for a time and then he repeated the same words.

Then suddenly he began to declaim. "Oh! Brutes together. Apes. Apes with knives. Have they no lord, no master, to save them from such things? This is the life of men when no man rules. . . . When no man rules. . . . Not even himself. . . . It is because we are idle, because we keep our wits slack and our wills weak that these poor devils live in hell. These things happen here and everywhere when the hand that rules grows weak. Away in China now they are happening. Persia. Africa. . . . Russia staggers. And I who should serve the law, I who should keep order, wander and make love. . . . My God! may I never forget! May I never forget! Flies in the sunlight! That man's face. And those six men!

"Grip the savage by the throat.

"The weak savage in the foreign office, the weak savage at the party headquarters, feud and indolence and folly. It is all one world. This and that are all one thing. The spites of London and the mutilations of Macedonia. The maggots that eat men's faces and the maggots that rot their minds. Rot their minds. Rot their minds.

Rot their minds. . . ."

To Amanda it sounded like delirium.

"CHEETAH!" she said suddenly between remonstrance and a cry of terror.

The darkness suddenly became quite still. He did not move.

She was afraid. "Cheetah!" she said again.

"What is it, Amanda?"

"I thought--. Are you all right?"

"Quite."

"But do you feel well?"

"I've got this cold I caught in Ochrida. I suppose I'm feverish. But--yes, I'm well."

"You were talking."

Silence for a time.

"I was thinking," he said.

"You talked."

"I'm sorry," he said after another long pause.

The next morning Benham had a pink spot on either cheek, his eyes were feverishly bright, he would touch no food and instead of coffee he wanted water. "In Monastir there will be a doctor," he said. "Monastir is a big place. In Monastir I will see a doctor. I want a doctor."

They rode out of the village in the freshness before sunrise and up long hills, and sometimes they went in the shade of woods and sometimes in a flooding sunshine. Benham now rode in front, preoccupied, intent, regardless of Amanda, a stranger, and she rode close behind him wondering.

"When you get to Monastir, young man," she told him, inaudibly, "you will go straight to bed and we'll see what has to be done with you."

"AMMALATO," said Giorgio confidentially, coming abreast of her.

"MEDICO IN MONASTIR," said Amanda.

"SI,--MOLTI MEDICI, MONASTIR," Giorgio agreed.

Then came the inevitable dogs, big white brutes, three in full cry charging hard at Benham and a younger less enterprising beast running along the high bank above yapping and making feints to descend.

The goatherd, reclining under the shadow of a rock, awaited Benham's embarrassment with an indolent malice.

"You UNCIVILIZED Beasts!" cried Benham, and before Amanda could realize what he was up to, she heard the crack of his revolver and saw a puff of blue smoke drift away above his right shoulder. The foremost beast rolled over and the goatherd had sprung to his feet.

He shouted with something between anger and dismay as Benham, regardless of the fact that the other dogs had turned and were running back, let fly a second time. Then the goatherd had clutched at the gun that lay on the grass near at hand, Giorgio was bawling in noisy remonstrance and also getting ready to shoot, and the horse-owner and his boy were clattering back to a position of neutrality up the stony road. "BANG!" came a flight of lead within a yard of Benham, and then the goatherd was in retreat behind a rock and Giorgio was shouting "AVANTI, AVANTI!" to Amanda.

She grasped his intention and in another moment she had Benham's horse by the bridle and was leading the retreat. Giorgio followed close, driving the two baggage mules before him.

"I am tired of dogs," Benham said. "Tired to death of dogs. All savage dogs must be shot. All through the world. I am tired--"

Their road carried them down through the rocky pass and then up a long slope in the open. Far away on the left they saw the goatherd running and shouting and other armed goatherds appearing among the rocks. Behind them the horse-owner and his boy came riding headlong across the zone of danger.

"Dogs must be shot," said Benham, exalted. "Dogs must be shot."

"Unless they are GOOD dogs," said Amanda, keeping beside him with an eye on his revolver.

"Unless they are good dogs to every one," said Benham.

They rushed along the road in a turbulent dusty huddle of horses and mules and riders. The horse-owner, voluble in Albanian, was trying to get past them. His boy pressed behind him. Giorgio in the rear had unslung his rifle and got it across the front of his saddle. Far away they heard the sound of a shot, and a kind of shudder in

the air overhead witnessed to the flight of the bullet. They crested a rise and suddenly between the tree boughs Monastir was in view, a wide stretch of white town, with many cypress and plane trees, a winding river with many wooden bridges, clustering minarets of pink and white, a hilly cemetery, and scattered patches of soldiers' tents like some queer white crop to supplement its extensive barracks.

As they hurried down towards this city of refuge a long string of mules burthened with great bales of green stuff appeared upon a convergent track to the left. Besides the customary muleteers there were, by way of an escort, a couple of tattered Turkish soldiers. All these men watched the headlong approach of Benham's party with apprehensive inquiry. Giorgio shouted some sort of information that made the soldiers brighten up and stare up the hill, and set the muleteers whacking and shouting at their convoy. It struck Amanda that Giorgio must be telling lies about a Bulgarian band. In another moment Benham and Amanda found themselves swimming in a torrent of mules. Presently they overtook a small flock of fortunately nimble sheep, and picked up several dogs, dogs that happily disregarded Benham in the general confusion. They also comprehended a small springless cart, two old women with bundles and an elderly Greek priest, before their dusty, barking, shouting cavalcade reached the outskirts of Monastir. The two soldiers had halted behind to cover the retreat.

Benham's ghastly face was now bedewed with sweat and he swayed in his saddle as he rode. "This is NOT civilization, Amanda," he said, "this is NOT civilization."

And then suddenly with extraordinary pathos:

"Oh! I want to go to BED! I want to go to BED! A bed with sheets. . . ."

To ride into Monastir is to ride into a maze. The streets go nowhere in particular. At least that was the effect on Amanda and Benham. It was as if Monastir too had a temperature and was slightly delirious. But at last they found an hotel--quite a civilized hotel. . . .

The doctor in Monastir was an Armenian with an ambition that outran his capacity to speak English. He had evidently studied the language chiefly from books. He thought THESE was pronounced "theser" and THOSE was pronounced "thoser," and that every English sentence should be taken at a rush. He diagnosed Benham's complaint in various languages and failed to make his meaning clear to Amanda. One combination of words he clung to obstinately, having clearly the utmost faith in its expressiveness. To Amanda it sounded like, "May, Ah! Slays," and it seemed to her that he sought to intimate a probable fatal termination of Benham's fever. But it was clear that the doctor was not satisfied that she understood. He came again with a queer little worn book, a parallel vocabulary of half-a-dozen European languages.

He turned over the pages and pointed to a word. "May! Ah! Slays!" he repeated, reproachfully, almost bitterly.

"Oh, MEASLES!" cried Amanda. . . .

So the spirited honeymoon passed its zenith.

11

The Benhams went as soon as possible down to Smyrna and thence by way of Uskub tortuously back to Italy. They recuperated at the best hotel of Locarno in golden November weather, and just before

Christmas they turned their faces back to England.

Benham's plans were comprehensive but entirely vague; Amanda had not so much plans as intentions. . . .

CHAPTER THE FIFTH

THE ASSIZE OF JEALOUSY

1

It was very manifest in the disorder of papers amidst which White spent so many evenings of interested perplexity before this novel began to be written that Benham had never made any systematic attempt at editing or revising his accumulation at all. There were not only overlapping documents, in which he had returned again to old ideas and restated them in the light of fresh facts and an apparent unconsciousness of his earlier effort, but there were mutually destructive papers, new views quite ousting the old had been tossed in upon the old, and the very definition of the second limitation, as it had first presented itself to the writer, had been abandoned. To begin with, this second division had been labelled "Sex," in places the heading remained, no effective substitute had been chosen for some time, but there was d many appetites that are not sexual yet turn to bodily pleasure, and on the other there are elements of pride arising out of sex and passing into other regions, all the elements of rivalry for example, that have strained my first definition to the utmost. And I conceive it, marches to its end. It saves itself for the truth rather than sacrifices itself

romantically for a friend. It justifies vivisection if thereby knowledge is won for ever. It upholds that Brutus who killed his sons. It forbids devotion to women, courts of love and all such decay of the chivalry closely-written memorandum, very much erased and written over and amended, which showed Benham's early dissatisfaction with that crude rendering of what he had in mind. This memorandum was tacked to an interrupted fragment of autobiography, a manuscript soliloquy in which Benham had been discussing his married life.

"It was not until I had been married for the better part of a year, and had spent more than six months in London, that I faced the plain issue between the aims I had set before myself and the claims and immediate necessities of my personal life. For all that time I struggled not so much to reconcile them as to serve them simultaneously. . . ."

At that the autobiography stopped short, and the intercalary note began.

This intercalary note ran as follows:

"I suppose a mind of my sort cannot help but tend towards simplification, towards making all life turn upon some one dominant idea, complex perhaps in its reality but reducible at last to one consistent simple statement, a dominant idea which is essential as nothing else is essential, which makes and sustains and justifies. This is perhaps the innate disposition of the human mind, at least of the European mind--for I have some doubts about the Chinese. Theology drives obstinately towards an ultimate unity in God, science towards an ultimate unity in law, towards a fundamental element and a universal material truth from which all material truths evolve, and in matters of conduct there is the same tendency to refer to a universal moral law. Now this may be a simplification due to the need of the human mind to comprehend, and its inability

to do so until the load is lightened by neglecting factors. William James has suggested that on account of this, theology may be obstinately working away from the truth, that the truth may be that there are several or many in compatible and incommensurable gods; science, in the same search for unity, may follow divergent methods of inquiry into ultimately uninterchangeable generalizations; and there may be not only not one universal moral law, but no effective reconciliation of the various rights and duties of a single individual. At any rate I find myself doubtful to this day about my own personal systems of right and wrong. I can never get all my life into one focus. It is exactly like examining a rather thick section with a microscope of small penetration; sometimes one level is clear and the rest foggy and monstrous, and sometimes another.

"Now the ruling ME, I do not doubt, is the man who has set his face to this research after aristocracy, and from the standpoint of this research it is my duty to subordinate all other considerations to this work of clearing up the conception of rule and nobility in human affairs. This is my aristocratic self. What I did not grasp for a long time, and which now grows clearer and clearer to me, is firstly that this aristocratic self is not the whole of me, it has absolutely nothing to do with a pain in my ear or in my heart, with a scar on my hand or my memory, and secondly that it is not altogether mine. Whatever knowledge I have of the quality of science, whatever will I have towards right, is of it; but if from without, from the reasoning or demonstration or reproof of some one else, there comes to me clear knowledge, clarified will, that also is as it were a part of my aristocratic self coming home to me from the outside. How often have I not found my own mind in Prothero after I have failed to find it in myself? It is, to be paradoxical, my impersonal personality, this Being that I have in common with all scientific-spirited and aristocratic-spirited men. This it is that I am trying to get clear from the great limitations of humanity. When I assert a truth for the sake of truth to my own discomfort or injury, there again is this incompatibility of the aristocratic self

and the accepted, confused, conglomerate self of the unanalyzed man. The two have a separate system of obligations. One's affections, compounded as they are in the strangest way of physical reactions and emotional associations, one's implicit pledges to particular people, one's involuntary reactions, one's pride and jealousy, all that one might call the dramatic side of one's life, may be in conflict with the definitely seen rightnesses of one's higher use. . . ."

The writing changed at this point.

"All this seems to me at once as old as the hills and too new to be true. This is like the conflict of the Superior Man of Confucius to control himself, it is like the Christian battle of the spirit with the flesh, it savours of that eternal wrangle between the general and the particular which is metaphysics, it was for this aristocratic self, for righteousness' sake, that men have hungered and thirsted, and on this point men have left father and mother and child and wife and followed after salvation. This world-wide, ever-returning antagonism has filled the world in every age with hermits and lamas, recluses and teachers, devoted and segregated lives. It is a perpetual effort to get above the simplicity of barbarism. Whenever men have emerged from the primitive barbarism of the farm and the tribe, then straightway there has emerged this conception of a specialized life a little lifted off the earth; often, for the sake of freedom, celibate, usually disciplined, sometimes directed, having a generalized aim, beyond personal successes and bodily desires. So it is that the philosopher, the scientifically concentrated man, has appeared, often, I admit, quite ridiculously at first, setting out upon the long journey that will end only when the philosopher is king. . . .

"At first I called my Second Limitation, Sex. But from the outset I meant more than mere sexual desire, lust and lustful imaginings, more than personal reactions to beauty and spirited living, more

even than what is called love. On the one hand I had in mind now that this Second Limitation as I first imagined it spreads out without any definite boundary, to include one's rivalries with old schoolfellows, for example, one's generousities to beggars and dependents, one's desire to avenge an injured friend, one's point of honour, one's regard for the good opinion of an aunt and one's concern for the health of a pet cat. All these things may enrich, but they may also impede and limit the aristocratic scheme. I thought for a time I would call this ill-defined and miscellaneous wilderness of limitation the Personal Life. But at last I have decided to divide this vast territory of difficulties into two subdivisions and make one of these Indulgence, meaning thereby pleasurable indulgence of sense or feeling, and the other a great mass of self-regarding motives that will go with a little stretching under the heading of Jealousy. I admit motives are continually playing across the boundary of these two divisions, I should find it difficult to argue a case for my classification, but in practice these two groupings have a quite definite meaning for me. There is pride in the latter group of impulses and not in the former; the former are always a little apologetic. Fear, Indulgence, Jealousy, these are the First Three Limitations of the soul of man. And the greatest of these is Jealousy, because it can use pride. Over them the Life Aristocratic, as I have my idea. And it resigns--so many things that no common Man of Spirit will resign. Its intention transcends these things. Over all the world it would maintain justice, order, a noble peace, and it would do this without indignation, without resentment, without mawkish tenderness or individualized enthusiasm or any queen of beauty. It is of a cold austere quality, commanding sometimes admiration but having small hold upon the affections of men. So that it is among its foremost distinctions that its heart is steeled. . . ."

There this odd fragment ended and White was left to resume the interrupted autobiography.

What moods, what passions, what nights of despair and gathering storms of anger, what sudden cruelties and amazing tendernesses are buried and hidden and implied in every love story! What a waste is there of exquisite things! So each spring sees a million glorious beginnings, a sunlit heaven in every opening leaf, warm perfection in every stirring egg, hope and fear and beauty beyond computation in every forest tree; and in the autumn before the snows come they have all gone, of all that incalculable abundance of life, of all that hope and adventure, excitement and deliciousness, there is scarcely more to be found than a soiled twig, a dirty seed, a dead leaf, black mould or a rotting feather. . . .

White held the ten or twelve pencilled pages that told how Benham and Amanda drifted into antagonism and estrangement and as he held it he thought of the laughter and delight they must have had together, the exquisite excitements of her eye, the racing colour of her cheek, the gleams of light upon her skin, the flashes of wit between them, the sense of discovery, the high rare paths they had followed, the pools in which they had swum together. And now it was all gone into nothingness, there was nothing left of it, nothing at all, but just those sheets of statement, and it may be, stored away in one single mind, like things forgotten in an attic, a few neglected faded memories. . . .

And even those few sheets of statement were more than most love leaves behind it. For a time White would not read them. They lay neglected on his knee as he sat back in Benham's most comfortable chair and enjoyed an entirely beautiful melancholy.

White too had seen and mourned the spring.

Indeed, poor dear! he had seen and mourned several springs. . . .

With a sigh he took up the manuscript and read Benham's desiccated story of intellectual estrangement, and how in the end he had decided to leave his wife and go out alone upon that journey of inquiry he had been planning when first he met her.

3

Amanda had come back to England in a state of extravagantly vigorous womanhood. Benham's illness, though it lasted only two or three weeks, gave her a sense of power and leadership for which she had been struggling instinctively ever since they came together. For a time at Locarno he was lax-minded and indolent, and in that time she formed her bright and limited plans for London. Benham had no plans as yet but only a sense of divergence, as though he was being pulled in opposite directions by two irresistible forces. To her it was plain that he needed occupation, some distinguished occupation, and she could imagine nothing better for him than a political career. She perceived he had personality, that he stood out among men so that his very silences were effective. She loved him immensely, and she had tremendous ambitions for him and through him.

And also London, the very thought of London, filled her with appetite. Her soul thirsted for London. It was like some enormous juicy fruit waiting for her pretty white teeth, a place almost large enough to give her avidity the sense of enough. She felt it waiting for her, household, servants, a carriage, shops and the jolly delight of buying and possessing things, the opera, first-nights, picture exhibitions, great dinner-parties, brilliant lunch parties, crowds seen from a point of vantage, the carriage in a long string

of fine carriages with the lamplit multitude peering, Amanda in a thousand bright settings, in a thousand various dresses. She had had love; it had been glorious, it was still glorious, but her love-making became now at times almost perfunctory in the contemplation of these approaching delights and splendours and excitements.

She knew, indeed, that ideas were at work in Benham's head; but she was a realist. She did not see why ideas should stand in the way of a career. Ideas are a brightness, the good looks of the mind. One talks ideas, but **THE THING THAT IS, IS THE THING THAT IS.** And though she believed that Benham had a certain strength of character of his own, she had that sort of confidence in his love for her and in the power of her endearments that has in it the assurance of a faint contempt. She had mingled pride and sense in the glorious realization of the power over him that her wit and beauty gave her. She had held him faint with her divinity, intoxicated with the pride of her complete possession, and she did not dream that the moment when he should see clearly that she could deliberately use these ultimate delights to rule and influence him, would be the end of their splendour and her power. Her nature, which was just a nest of vigorous appetites, was incapable of suspecting his gathering disillusionment until it burst upon her.

Now with her attention set upon London ahead he could observe her. In the beginning he had never seemed to be observing her at all, they dazzled one another; it seemed extraordinary now to him to note how much he had been able to disregard. There were countless times still when he would have dropped his observation and resumed that mutual exaltation very gladly, but always now other things possessed her mind. . . .

There was still an immense pleasure for him in her vigour; there was something delightful in her pounce, even when she was pouncing on things superficial, vulgar or destructive. She made him understand and share the excitement of a big night at the opera, the glitter

and prettiness of a smart restaurant, the clustering little acute adventures of a great reception of gay people, just as she had already made him understand and sympathize with dogs. She picked up the art world where he had laid it down, and she forced him to feel dense and slow before he rebelled against her multitudinous enthusiasms and admirations. South Harting had had its little group of artistic people; it is not one of your sleepy villages, and she slipped back at once into the movement. Those were the great days of John, the days before the Post Impressionist outbreak. John, Orpen, Tonks, she bought them with vigour. Artistic circles began to revolve about her. Very rapidly she was in possession. . . . And among other desirable things she had, it seemed, pounced upon and captured Lady Marayne.

At any rate it was clear that that awful hostile silence and aloofness was to end. Benham never quite mastered how it was done. But Amanda had gone in one morning to Desborough Street, very sweetly and chastely dressed, had abased herself and announced a possible (though subsequently disproved) grandchild. And she had appreciated the little lady so highly and openly, she had so instantly caught and reproduced her tone, that her success, though only temporary in its completeness, was immediate. In the afternoon Benham was amazed by the apparition of his mother amidst the scattered unsettled furnishings of the new home Amanda had chosen in Lancaster Gate. He was in the hall, the door stood open awaiting packing-cases from a van without. In the open doorway she shone, looking the smallest of dainty things. There was no effect of her coming but only of her having arrived there, as a little blue butterfly will suddenly alight on a flower.

"Well, Poff!" said Lady Marayne, ignoring abysses, "What are you up to now, Poff? Come and embrace me. . . ."

"No, not so," she said, "stiffest of sons. . . ."

She laid hold of his ears in the old fashion and kissed one eye.

"Congratulations, dear little Poff. Oh! congratulations! In heaps. I'm so GLAD."

Now what was that for?

And then Amanda came out upon the landing upstairs, saw the encounter with an involuntary cry of joy, and came downstairs with arms wide open. It was the first intimation he had of their previous meeting. He was for some minutes a stunned, entirely inadequate Benham. . . .

4

At first Amanda knew nobody in London, except a few people in the Hampstead Garden suburb that she had not the slightest wish to know, and then very quickly she seemed to know quite a lot of people. The artistic circle brought in people, Lady Marayne brought in people; they spread. It was manifest the Benhams were a very bright young couple; he would certainly do something considerable presently, and she was bright and daring, jolly to look at and excellent fun, and, when you came to talk to her, astonishingly well informed. They passed from one hostess's hand to another: they reciprocated. The Clynes people and the Rushtones took her up; Mr. Evesham was amused by her, Lady Beach Mandarin proclaimed her charm like a trumpet, the Young Liberal people made jealous advances, Lord Moggeridge found she listened well, she lit one of the brightest weekend parties Lady Marayne had ever gathered at Chexington. And her descriptions of recent danger and adventure in Albania not only entertained her hearers but gave her just that flavour of personal courage which completes the fascination of a young woman. People in the gaps of a

halting dinner-table conversation would ask: "Have you met Mrs. Benham?"

Meanwhile Benham appeared to be talking. A smiling and successful young woman, who a year ago had been nothing more than a leggy girl with a good lot of miscellaneous reading in her head, and vaguely engaged, or at least friendly to the pitch of engagement, to Mr. Rathbone-Sanders, may be forgiven if in the full tide of her success she does not altogether grasp the intention of her husband's discourse. It seemed to her that he was obsessed by a responsibility for civilization and the idea that he was aristocratic. (Secretly she was inclined to doubt whether he was justified in calling himself aristocratic; at the best his mother was county-stuff; but still if he did there was no great harm in it nowadays.) Clearly his line was Tory-Democracy, social reform through the House of Lords and friendly intimacy with the more spirited young peers. And it was only very slowly and reluctantly that she was forced to abandon this satisfactory solution of his problem. She reproduced all the equipment and comforts of his Finacue Street study in their new home, she declared constantly that she would rather forego any old social thing than interfere with his work, she never made him go anywhere with her without first asking if his work permitted it. To relieve him of the burthen of such social attentions she even made a fag or so. The making of fags out of manifestly stricken men, the keeping of tamed and hopeless admirers, seemed to her to be the most natural and reasonable of feminine privileges. They did their useful little services until it pleased the Lord Cheetah to come to his own. That was how she put it. . . .

But at last he was talking to her in tones that could no longer be ignored. He was manifestly losing his temper with her. There was a novel austerity in his voice and a peculiar whiteness about his face on certain occasions that lingered in her memory.

He was indeed making elaborate explanations. He said that what he wanted to do was to understand "the collective life of the world," and that this was not to be done in a West-End study. He had an extraordinary contempt, it seemed, for both sides in the drama of British politics. He had extravagant ideas of beginning in some much more fundamental way. He wanted to understand this "collective life of the world," because ultimately he wanted to help control it. (Was there ever such nonsense?) The practical side of this was serious enough, however; he was back at his old idea of going round the earth. Later on that might be rather a jolly thing to do, but not until they had struck root a little more surely in London.

And then with amazement, with incredulity, with indignation, she began to realize that he was proposing to go off by himself upon this vague extravagant research, that all this work she had been doing to make a social place for him in London was as nothing to him, that he was thinking of himself as separable from her. . . .

"But, Cheetah! How can you leave your spotless leopard? You would howl in the lonely jungle!"

"Possibly I shall. But I am going."

"Then I shall come."

"No." He considered her reasons. "You see you are not interested."

"But I am."

"Not as I am. You would turn it all into a jolly holiday. You don't want to see things as I want to do. You want romance. All the world is a show for you. As a show I can't endure it. I want to lay hands on it."

"But, Cheetah!" she said, "this is separation."

"You will have your life here. And I shall come back."

"But, Cheetah! How can we be separated?"

"We are separated," he said.

Her eyes became round with astonishment. Then her face puckered.

"Cheetah!" she cried in a voice of soft distress, "I love you. What do you mean?"

And she staggered forward, tear-blinded, and felt for his neck and shoulders, so that she might weep in his arms. . . .

5

"Don't say we are separated," she whispered, putting her still wet face close to his.

"No. We're mates," he answered softly, with his arm about her.

"How could we ever keep away from each uvver?" she whispered.

He was silent.

"How COULD we?"

He answered aloud. "Amanda," he said, "I mean to go round the world."

She disentangled herself from his arm and sat up beside him.

"What is to become of me," she asked suddenly in a voice of despair, "while you go round the world? If you desert me in London," she said, "if you shame me by deserting me in London-- If you leave me, I will never forgive you, Cheetah! Never." Then in an almost breathless voice, and as if she spoke to herself, "Never in all my days."

6

It was after that that Amanda began to talk about children. There was nothing involuntary about Amanda. "Soon," she said, "we must begin to think of children. Not just now, but a little later. It's good to travel and have our fun, but life is unreal until there are children in the background. No woman is really content until she is a mother. . . ." And for nearly a fortnight nothing more was said about that solitary journey round the world.

But children were not the only new topic in Amanda's talk. She set herself with an ingenious subtlety to remind her husband that there were other men in the world. The convenient fags, sometimes a little embarrassed, found their inobtrusive services being brought into the light before Benham's eyes. Most of them were much older men than himself, elderly philanderers of whom it seemed to him no sane man need be jealous, men often of forty or more, but one was a contemporary, Sir Philip Easton, a man with a touch of Spanish blood and a suggestion of Spanish fire, who quite manifestly was very much in love with Amanda and of whom she spoke with a slight perceptible difference of manner that made Benham faintly uneasy. He was ashamed of the feeling. Easton it seemed was a man of a peculiarly fine honour, so that Amanda could trust herself with him to an extent that would have been inadvisable with men of a commoner

substance, and he had a gift of understanding and sympathy that was almost feminine; he could cheer one up when one was lonely and despondent. For Amanda was so methodical in the arrangement of her time that even in the full rush of a London season she could find an hour now and then for being lonely and despondent. And he was a liberal and understanding purchaser of the ascendant painters; he understood that side of Amanda's interests, a side upon which Benham was notably deficient. . . .

"Amanda seems to like that dark boy, Poff; what is his name?--Sir Philip Easton?" said Lady Marayne.

Benham looked at her with a slightly hostile intelligence, and said nothing.

"When a man takes a wife, he has to keep her," said Lady Marayne.

"No," said Benham after consideration. "I don't intend to be a wife-herd."

"What?"

"Wife-herd--same as goat-herd."

"Coarse, you are sometimes, Poff--nowadays."

"It's exactly what I mean. I can understand the kind of curator's interest an Oriental finds in shepherding a large establishment, but to spend my days looking after one person who ought to be able to look after herself--"

"She's very young."

"She's quite grown up. Anyhow I'm not a moral nursemaid."

"If you leave her about and go abroad--"

"Has she been talking to you, mother?"

"The thing shows."

"But about my going abroad?"

"She said something, my little Poff."

Lady Marayne suddenly perceived that beneath Benham's indifference was something strung very tight, as though he had been thinking inordinately. He weighed his words before he spoke again. "If Amanda chooses to threaten me with a sort of conditional infidelity, I don't see that it ought to change the plans I have made for my life. . . ."

7

"No aristocrat has any right to be jealous," Benham wrote. "If he chances to be mated with a woman who does not see his vision or naturally go his way, he has no right to expect her, much less to compel her to go his way. What is the use of dragging an unwilling companion through morasses of uncongenial thought to unsought ends? What is the use of dragging even a willing pretender, who has no inherent will to seek and live the aristocratic life?"

"But that does not excuse him from obedience to his own call. . . ."

He wrote that very early in his examination of the Third Limitation. Already he had thought out and judged Amanda. The very charm of her, the sweetness, the nearness and magic of her, was making him

more grimly resolute to break away. All the elaborate process of thinking her over had gone on behind the mask of his silences while she had been preoccupied with her housing and establishment in London; it was with a sense of extraordinary injustice, of having had a march stolen upon her, of being unfairly trapped, that Amanda found herself faced by foregone conclusions. He was ready now even with the details of his project. She should go on with her life in London exactly as she had planned it. He would take fifteen hundred a year for himself and all the rest she might spend without check or stint as it pleased her. He was going round the world for one or two years. It was even possible he would not go alone. There was a man at Cambridge he might persuade to come with him, a don called Prothero who was peculiarly useful in helping him to hammer out his ideas. . . .

To her it became commandingly necessary that none of these things should happen.

She tried to play upon his jealousy, but her quick instinct speedily told her that this only hardened his heart. She perceived that she must make a softer appeal. Now of a set intention she began to revive and imitate the spontaneous passion of the honeymoon; she perceived for the first time clearly how wise and righteous a thing it is for a woman to bear a child. "He cannot go if I am going to have a child," she told herself. But that would mean illness, and for illness in herself or others Amanda had the intense disgust natural to her youth. Yet even illness would be better than this intolerable publication of her husband's ability to leave her side. . . .

She had a wonderful facility of enthusiasm and she set herself forthwith to cultivate a philoprogenitive ambition, to communicate it to him. Her dread of illness disappeared; her desire for offspring grew.

"Yes," he said, "I want to have children, but I must go round the world none the less."

She argued with all the concentrated subtlety of her fine keen mind. She argued with persistence and repetition. And then suddenly so that she was astonished at herself, there came a moment when she ceased to argue.

She stood in the dusk in a window that looked out upon the park, and she was now so intent upon her purpose as to be still and self-forgetful; she was dressed in a dinner-dress of white and pale green, that set off her slim erect body and the strong clear lines of her neck and shoulders very beautifully, some greenish stones caught a light from without and flashed soft whispering gleams from amidst the misty darkness of her hair. She was going to Lady Marayne and the opera, and he was bound for a dinner at the House with some young Liberals at which he was to meet two representative Indians with a grievance from Bengal. Husband and wife had but a few moments together. She asked about his company and he told her.

"They will tell you about India."

"Yes."

She stood for a moment looking out across the lights and the dark green trees, and then she turned to him.

"Why cannot I come with you?" she asked with sudden passion. "Why cannot I see the things you want to see?"

"I tell you you are not interested. You would only be interested through me. That would not help me. I should just be dealing out my premature ideas to you. If you cared as I care, if you wanted to know as I want to know, it would be different. But you don't. It isn't your fault that you don't. It happens so. And there is no

good in forced interest, in prescribed discovery."

"Cheetah," she asked, "what is it that you want to know--that I don't care for?"

"I want to know about the world. I want to rule the world."

"So do I."

"No, you want to have the world."

"Isn't it the same?"

"No. You're a greedier thing than I am, you Black Leopard you--standing there in the dusk. You're a stronger thing. Don't you know you're stronger? When I am with you, you carry your point, because you are more concentrated, more definite, less scrupulous. When you run beside me you push me out of my path. . . . You've made me afraid of you. . . . And so I won't go with you, Leopard. I go alone. It isn't because I don't love you. I love you too well. It isn't because you aren't beautiful and wonderful. . . ."

"But, Cheetah! nevertheless you care more for this that you want than you care for me."

Benham thought of it. "I suppose I do," he said.

"What is it that you want? Still I don't understand."

Her voice had the break of one who would keep reasonable in spite of pain.

"I ought to tell you."

"Yes, you ought to tell me."

"I wonder if I can tell you," he said very thoughtfully, and rested his hands on his hips. "I shall seem ridiculous to you."

"You ought to tell me."

"I think what I want is to be king of the world."

She stood quite still staring at him.

"I do not know how I can tell you of it. Amanda, do you remember those bodies--you saw those bodies--those mutilated men?"

"I saw them," said Amanda.

"Well. Is it nothing to you that those things happen?"

"They must happen."

"No. They happen because there are no kings but pitiful kings. They happen because the kings love their Amandas and do not care."

"But what can YOU do, Cheetah?"

"Very little. But I can give my life and all my strength. I can give all I can give."

"But how? How can you help it--help things like that massacre?"

"I can do my utmost to find out what is wrong with my world and rule it and set it right."

"YOU! Alone."

"Other men do as much. Every one who does so helps others to do so."

You see-- . . . In this world one may wake in the night and one may resolve to be a king, and directly one has resolved one is a king. Does that sound foolishness to you? Anyhow, it's fair that I should tell you, though you count me a fool. This--this kingship--this dream of the night--is my life. It is the very core of me. Much more than you are. More than anything else can be. I mean to be a king in this earth. KING. I'm not mad. . . . I see the world staggering from misery to misery and there is little wisdom, less rule, folly, prejudice, limitation, the good things come by chance and the evil things recover and slay them, and it is my world and I am responsible. Every man to whom this light has come is responsible. As soon as this light comes to you, as soon as your kingship is plain to you, there is no more rest, no peace, no delight, except in work, in service, in utmost effort. As far as I can do it I will rule my world. I cannot abide in this smug city, I cannot endure its self-complacency, its routine, its gloss of success, its rottenness. . . . I shall do little, perhaps I shall do nothing, but what I can understand and what I can do I will do. Think of that wild beautiful country we saw, and the mean misery, the filth and the warring cruelty of the life that lives there, tragedy, tragedy without dignity; and think, too, of the limitless ugliness here, and of Russia slipping from disorder to massacre, and China, that sea of human beings, sliding steadily to disaster. Do you think these are only things in the newspapers? To me at any rate they are not things in newspapers; they are pain and failure, they are torment, they are blood and dust and misery. They haunt me day and night. Even if it is utterly absurd I will still do my utmost. It IS absurd. I'm a madman and you and my mother are sensible people. . . . And I will go my way. . . . I don't care for the absurdity. I don't care a rap."

He stopped abruptly.

"There you have it, Amanda. It's rant, perhaps. Sometimes I feel it's rant. And yet it's the breath of life to me. . . . There you

are. . . . At last I've been able to break silence and tell you. . . ."

He stopped with something like a sob and stood regarding the dusky mystery of her face. She stood quite still, she was just a beautiful outline in the twilight, her face was an indistinctness under the black shadow of her hair, with eyes that were two patches of darkness.

He looked at his watch, lifting it close to his face to see the time. His voice changed. "Well--if you provoke a man enough, you see he makes speeches. Let it be a lesson to you, Amanda. Here we are talking instead of going to our dinners. The car has been waiting ten minutes."

Amanda, so still, was the most disconcerting of all Amandas. . . .

A strange exaltation seized upon her very suddenly. In an instant she had ceased to plot against him. A vast wave of emotion swept her forward to a resolution that astonished her.

"Cheetah!" she said, and the very quality of her voice had changed, "give me one thing. Stay until June with me."

"Why?" he asked.

Her answer came in a voice so low that it was almost a whisper.

"Because--now--no, I don't want to keep you any more--I am not trying to hold you any more. . . . I want. . . ."

She came forward to him and looked up closely at his face.

"Cheetah," she whispered almost inaudibly, "Cheetah--I didn't understand. But now--. I want to bear your child."

He was astonished. "Old Leopard!" he said.

"No," she answered, putting her hands upon his shoulders and drawing very close to him, "Queen---if I can be--to your King."

"You want to bear me a child!" he whispered, profoundly moved.

8

The Hindu agitators at the cavernous dinner under the House of Commons came to the conclusion that Benham was a dreamer. And over against Amanda at her dinner-party sat Sir Sidney Umber, one of those men who know that their judgments are quoted.

"Who is the beautiful young woman who is seeing visions?" he asked of his neighbour in confidential undertones. . . .

He tittered. "I think, you know, she ought to seem just SLIGHTLY aware that the man to her left is talking to her. . . ."

9

A few days later Benham went down to Cambridge, where Prothero was now a fellow of Trinity and Brissenden Trust Lecturer. . . .

All through Benham's writing there was manifest a persuasion that in some way Prothero was necessary to his mind. It was as if he looked to Prothero to keep him real. He suspected even while he obeyed

that upward flourish which was his own essential characteristic. He had a peculiar feeling that somehow that upward bias would betray him; that from exaltation he might presently float off, into the higher, the better, and so to complete unreality. He fled from priggishness and the terror of such sublimity alike to Prothero. Moreover, in relation to so many things Prothero in a peculiar distinctive manner SAW. He had less self-control than Benham, less integrity of purpose, less concentration, and things that were before his eyes were by the very virtue of these defects invariably visible to him. Things were able to insist upon themselves with him. Benham, on the other hand, when facts contradicted his purpose too stoutly, had a way of becoming blind to them. He repudiated inconvenient facts. He mastered and made his world; Prothero accepted and recorded his. Benham was a will towards the universe where Prothero was a perception and Amanda a confusing responsive activity. And it was because of his realization of this profound difference between them that he was possessed by the idea of taking Prothero with him about the world, as a detachable kind of vision--rather like that eye the Graiae used to hand one another. . . .

After the busy sunlit streets of Maytime Cambridge, Prothero's rooms in Trinity, their windows full of Gothic perspectives and light-soaked blue sky, seemed cool and quiet. A flavour of scholarship pervaded them--a little blended with the flavour of innumerable breakfasts nearly but not completely forgotten. Prothero's door had been locked against the world, and he had appeared after a slight delay looking a little puffy and only apprehending who his visitor was after a resentful stare for the better part of a second. He might have been asleep, he might have been doing anything but the examination papers he appeared to be doing. The two men exchanged personal details; they had not met since some months before Benham's marriage, and the visitor's eye went meanwhile from his host to the room and back to his host's face as though they were all aspects of the thing he was after, the Prothero humour, the earthly touch, the distinctive Prothero flavour. Then his eye was caught by a

large red, incongruous, meretricious-looking volume upon the couch that had an air of having been flung aside, VENUS IN GEM AND MARBLE, its cover proclaimed. . . .

His host followed that glance and blushed. "They send me all sorts of inappropriate stuff to review," he remarked.

And then he was denouncing celibacy.

The transition wasn't very clear to Benham. His mind had been preoccupied by the problem of how to open his own large project. Meanwhile Prothero got, as it were, the conversational bit between his teeth and bolted. He began to say the most shocking things right away, so that Benham's attention was caught in spite of himself.

"Inflammatory classics."

"What's that?"

"Celibacy, my dear Benham, is maddening me," said Prothero. "I can't stand it any longer."

It seemed to Benham that somewhere, very far away, in another world, such a statement might have been credible. Even in his own life,-- it was now indeed a remote, forgotten stage--there had been something distantly akin. . . .

"You're going to marry?"

"I must."

"Who's the lady, Billy?"

"I don't know. Venus."

His little red-brown eye met his friend's defiantly. "So far as I know, it is Venus Anadyomene." A flash of laughter passed across his face and left it still angrier, still more indecorously defiant. "I like her best, anyhow. I do, indeed. But, Lord! I feel that almost any of them--"

"Tut, tut!" said Benham.

Prothero flushed deeply but stuck to his discourse.

"Wasn't it always your principle, Benham, to look facts in the face? I am not pronouncing an immoral principle. Your manner suggests I am. I am telling you exactly how I feel. That is how I feel. I want--Venus. I don't want her to talk to or anything of that sort. . . . I have been studying that book, yes, that large, vulgar, red book, all the morning, instead of doing any work. Would you like to see it? . . . NO! . . .

"This spring, Benham, I tell you, is driving me mad. It is a peculiarly erotic spring. I cannot sleep, I cannot fix my mind, I cannot attend to ordinary conversation. These feelings, I understand, are by no means peculiar to myself. . . . No, don't interrupt me, Benham; let me talk now that the spirit of speech is upon me. When you came in you said, 'How are you?' I am telling you how I am. You brought it on yourself. Well--I am--inflamed. I have no strong moral or religious convictions to assist me either to endure or deny this--this urgency. And so why should I deny it? It's one of our chief problems here. The majority of my fellow dons who look at me with secretive faces in hall and court and combination-room are in just the same case as myself. The fever in oneself detects the fever in others. I know their hidden thoughts. Their fishy eyes defy me to challenge their hidden thoughts. Each covers his miserable secret under the cloak of a wholesome manly

indifference. A tattered cloak. . . . Each tries to hide his abandonment to this horrible vice of continence--"

"Billy, what's the matter with you?"

Prothero grimaced impatience. "Shall I NEVER teach you not to be a humbug, Benham?" he screamed, and in screaming became calmer. "Nature taunts me, maddens me. My life is becoming a hell of shame. 'Get out from all these books,' says Nature, 'and serve the Flesh.' The Flesh, Benham. Yes--I insist--the Flesh. Do I look like a pure spirit? Is any man a pure spirit? And here am I at Cambridge like a lark in a cage, with too much port and no Aspasia. Not that I should have liked Aspasia."

"Mutual, perhaps, Billy."

"Oh! you can sneer!"

"Well, clearly--Saint Paul is my authority--it's marriage, Billy."

Prothero had walked to the window. He turned round.

"I CAN'T marry," he said. "The trouble has gone too far. I've lost my nerve in the presence of women. I don't like them any more. They come at one--done up in a lot of ridiculous clothes, and chattering about all sorts of things that don't matter. . . . He surveyed his friend's thoughtful attitude. "I'm getting to hate women, Benham. I'm beginning now to understand the bitterness of spinsters against men. I'm beginning to grasp the unkindliness of priests. The perpetual denial. To you, happily married, a woman is just a human being. You can talk to her, like her, you can even admire her calmly; you've got, you see, no grudge against her. . . ."

He sat down abruptly.

Benham, upon the hearthrug before the empty fireplace, considered him.

"Billy! this is delusion," he said. "What's come over you?"

"I'm telling you," said Prothero.

"No," said Benham.

Prothero awaited some further utterance.

"I'm looking for the cause of it. It's feeding, Billy. It's port and stimulants where there is no scope for action. It's idleness. I begin to see now how much fatter you are, how much coarser."

"Idleness! Look at this pile of examination answers. Look at that filing system like an arsenal of wisdom. Useless wisdom, I admit, but anyhow not idleness."

"There's still bodily idleness. No. That's your trouble. You're stuffy. You've enlarged your liver. You sit in this room of a warm morning after an extravagant breakfast--. And peep and covet."

"Just eggs and bacon!"

"Think of it! Coffee and toast it ought to be. Come out of it, Billy, and get aired."

"How can one?"

"Easily. Come out of it now. Come for a walk, you Pig!"

"It's an infernally warm morning.

"Walk with me to Grantchester."

"We might go by boat. You could row."

"WALK."

"I ought to do these papers."

"You weren't doing them."

"No. . . ."

"Walk with me to Grantchester. All this affliction of yours is--horrid--and just nothing at all. Come out of it! I want you to come with me to Russia and about the world. I'm going to leave my wife--"

"Leave your wife!"

"Why not? And I came here hoping to find you clear-headed, and instead you are in this disgusting state. I've never met anything in my life so hot and red and shiny and shameless. Come out of it, man! How can one talk to you?"

10

"You pull things down to your own level," said Benham as they went through the heat to Grantchester.

"I pull them down to truth," panted Prothero.

"Truth! As though being full of gross appetites was truth, and discipline and training some sort of falsity!"

"Artificiality. And begetting pride, Benham, begetting a prig's pride."

For a time there was more than the heat of the day between them. . . .

The things that Benham had come down to discuss were thrust into the background by the impassioned materialism of Prothero.

"I'm not talking of Love," he said, remaining persistently outrageous. "I'm talking of physical needs. That first. What is the good of arranging systems of morality and sentiment before you know what is physically possible. . . .

"But how can one disentangle physical and moral necessities?"

"Then why don't we up and find out?" said Billy.

He had no patience with the secrecy, the ignorance, the emotion that surrounded these questions. We didn't worship our ancestors when it came to building bridges or working metals or curing disease or studying our indigestion, and why should we become breathless or wordless with awe and terror when it came to this fundamental affair? Why here in particular should we give way to Holy Fear and stifled submission to traditional suppressions and the wisdom of the ages? "What is the wisdom of the ages?" said Prothero. "Think of the corners where that wisdom was born. . . . Flea-bitten sages in stone-age hovels. . . . Wandering wise man with a rolling eye, a fakir under a tree, a Jewish sheik, an Arab epileptic. . . ."

"Would you sweep away the experience of mankind?" protested Benham.

The experience of mankind in these matters had always been bitter experience. Most of it was better forgotten. It didn't convince. It had never worked things out. In this matter just as in every

other matter that really signified things had still to be worked out. Nothing had been worked out hitherto. The wisdom of the ages was a Cant. People had been too busy quarrelling, fighting and running away. There wasn't any digested experience of the ages at all. Only the mis-remembered hankey-pankey of the Dead Old Man.

"Is this love-making a physical necessity for most men and women or isn't it?" Prothero demanded. "There's a simple question enough, and is there anything whatever in your confounded wisdom of the ages to tell me yes or no? Can an ordinary celibate be as healthy and vigorous as a mated man? Is a spinster of thirty-eight a healthy human being? Can she be? I don't believe so. Then why in thunder do we let her be? Here am I at a centre of learning and wisdom and I don't believe so; and there is nothing in all our colleges, libraries and roomsfull of wiseacres here, to settle that plain question for me, plainly and finally. My life is a grubby torment of cravings because it isn't settled. If sexual activity IS a part of the balance of life, if it IS a necessity, well let's set about making it accessible and harmless and have done with it. Swedish exercises. That sort of thing. If it isn't, if it can be reduced and done without, then let us set about teaching people HOW to control themselves and reduce and get rid of this vehement passion. But all this muffled mystery, this pompous sneak's way we take with it!"

"But, Billy! How can one settle these things? It's a matter of idiosyncrasy. What is true for one man isn't true for another. There's infinite difference of temperaments!"

"Then why haven't we a classification of temperaments and a moral code for each sort? Why am I ruled by the way of life that is convenient for Rigdon the vegetarian and fits Bowler the saint like a glove? It isn't convenient for me. It fits me like a hair-shirt. Of course there are temperaments, but why can't we formulate them and exercise the elementary charity of recognizing that one man's

health in these matters is another man's death? Some want love and gratification and some don't. There are people who want children and people who don't want to be bothered by children but who are full of vivid desires. There are people whose only happiness is chastity, and women who would rather be courtesans than mothers. Some of us would concentrate upon a single passion or a single idea; others overflow with a miscellaneous--tenderness. Yes,--and you smile! Why spit upon and insult a miscellaneous tenderness, Benham? Why grin at it? Why try every one by the standards that suit oneself? We're savages, Benham, shamefaced savages, still. Shamefaced and persecuting.

"I was angry about sex by seventeen," he went on. "Every year I live I grow angrier."

His voice rose to a squeal of indignation as he talked.

"Think," he said, "of the amount of thinking and feeling about sex that is going on in Cambridge this morning. The hundreds out of these thousands full of it. A vast tank of cerebration. And we put none of it together; we work nothing out from that but poor little couplings and casual stories, patchings up of situations, misbehaviours, blunders, disease, trouble, escapes; and the next generation will start, and the next generation after that will start with nothing but your wisdom of the ages, which isn't wisdom at all, which is just awe and funk, taboos and mystery and the secretive cunning of the savage. . . ."

"What I really want to do is my work," said Prothero, going off quite unexpectedly again. "That is why all this business, this incessant craving and the shame of it and all makes me so infernally angry. . . ."

"There I'm with you," cried Benham, struggling out of the thick torrent of Prothero's prepossessions. "What we want to do is our work."

He clung to his idea. He raised his voice to prevent Prothero getting the word again.

"It's this, that you call Work, that I call--what do I call it?--living the aristocratic life, which takes all the coarse simplicity out of this business. If it was only submission. . . . YOU think it is only submission--giving way. . . . It isn't only submission. We'd manage sex all right, we'd be the happy swine our senses would make us, if we didn't know all the time that there was something else to live for, something far more important. And different. Absolutely different and contradictory. So different that it cuts right across all these considerations. It won't fit in. . . . I don't know what this other thing is; it's what I want to talk about with you. But I know that it IS, in all my bones. . . . YOU know. . . . It demands control, it demands continence, it insists upon disregard."

But the ideas of continence and disregard were unpleasant ideas to Prothero that day.

"Mankind," said Benham, "is overcharged with this sex. It suffocates us. It gives life only to consume it. We struggle out of the urgent necessities of a mere animal existence. We are not so much living as being married and given in marriage. All life is swamped in the love story. . . ."

"Man is only overcharged because he is unsatisfied," said Prothero, sticking stoutly to his own view.

It was only as they sat at a little table in the orchard at Grantchester after their lunch that Benham could make head against Prothero and recover that largeness of outlook which had so easily touched the imagination of Amanda. And then he did not so much dispose of Prothero's troubles as soar over them. It is the last triumph of the human understanding to sympathize with desires we do not share, and to Benham who now believed himself to be loved beyond the chances of life, who was satisfied and tranquil and austerely content, it was impossible that Prothero's demands should seem anything more than the grotesque and squalid squealings of the beast that has to be overridden and rejected altogether. It is a freakish fact of our composition that these most intense feelings in life are just those that are most rapidly and completely forgotten; hate one may recall for years, but the magic of love and the flame of desire serve their purpose in our lives and vanish, leaving no trace, like the snows of Venice. Benham was still not a year and a half from the meretricious delights of Mrs. Skelmersdale, and he looked at Prothero as a marble angel might look at a swine in its sty. . . .

What he had now in mind was an expedition to Russia. When at last he could sufficiently release Prothero's attention, he unfolded the project that had been developing steadily in him since his honeymoon experience.

He had discovered a new reason for travelling. The last country we can see clearly, he had discovered, is our own country. It is as hard to see one's own country as it is to see the back of one's head. It is too much behind us, too much ourselves. But Russia is like England with everything larger, more vivid, cruder; one felt

that directly one walked about St. Petersburg. St. Petersburg upon its Neva was like a savage untamed London on a larger Thames; they were seagull-haunted tidal cities, like no other capitals in Europe. The shipping and buildings mingled in their effects. Like London it looked over the heads of its own people to a limitless polyglot empire. And Russia was an aristocratic land, with a middle-class that had no pride in itself as a class; it had a British toughness and incompetence, a British disregard of logic and meticulous care. Russia, like England, was outside Catholic Christendom, it had a state church and the opposition to that church was not secularism but dissent. One could draw a score of such contrasted parallels. And now it was in a state of intolerable stress, that laid bare the elemental facts of a great social organization. It was having its South African war, its war at the other end of the earth, with a certain defeat instead of a dubious victory. . . .

"There is far more freedom for the personal life in Russia than in England," said Prothero, a little irrelevantly.

Benham went on with his discourse about Russia. . . .

"At the college of Troitzka," said Prothero, "which I understand is a kind of monster Trinity unencumbered by a University, Binns tells me that although there is a profession of celibacy within the walls, the arrangements of the town and more particularly of the various hotels are conceived in a spirit of extreme liberality."

Benham hardly attended at all to these interruptions.

He went on to point out the elemental quality of the Russian situation. He led up to the assertion that to go to Russia, to see Russia, to try to grasp the broad outline of the Russian process, was the manifest duty of every responsible intelligence that was free to do as much. And so he was going, and if Prothero cared to come too--

"Yes," said Prothero, "I should like to go to Russia."

13

But throughout all their travel together that summer Benham was never able to lift Prothero away from his obsession. It was the substance of their talk as the Holland boat stood out past waiting destroyers and winking beacons and the lights of Harwich, into the smoothly undulating darkness of the North Sea; it rose upon them again as they sat over the cakes and cheese of a Dutch breakfast in the express for Berlin. Prothero filled the Sieges Allee with his complaints against nature and society, and distracted Benham in his contemplation of Polish agriculture from the windows of the train with turgid sexual liberalism. So that Benham, during this period until Prothero left him and until the tragic enormous spectacle of Russia in revolution took complete possession of him, was as it were thinking upon two floors. Upon the one he was thinking of the vast problems of a society of a hundred million people staggering on the verge of anarchy, and upon the other he was perplexed by the feverish inattention of Prothero to the tremendous things that were going on all about them. It was only presently when the serenity of his own private life began to be ruffled by disillusionment, that he began to realize the intimate connexion of these two systems of thought. Yet Prothero put it to him plainly enough.

"Inattentive," said Prothero, "of course I am inattentive. What is really the matter with all this--this social mess people are in here, is that nearly everybody is inattentive. These Big Things of yours, nobody is thinking of them really. Everybody is thinking about the Near Things that concern himself."

"The bombs they threw yesterday? The Cossacks and the whips?"

"Nudges. Gestures of inattention. If everybody was thinking of the Res Publica would there be any need for bombs?"

He pursued his advantage. "It's all nonsense to suppose people think of politics because they are in 'em. As well suppose that the passengers on a liner understand the engines, or soldiers a war. Before men can think of to-morrow, they must think of to-day. Before they can think of others, they must be sure about themselves. First of all, food; the private, the personal economic worry. Am I safe for food? Then sex, and until one is tranquil and not ashamed, not irritated and dissatisfied, how can one care for other people, or for next year or the Order of the World? How can one, Benham?"

He seized the illustration at hand. "Here we are in Warsaw--not a month after bomb-throwing and Cossack charging. Windows have still to be mended, smashed doors restored. There's blood-stains still on some of the houses. There are hundreds of people in the Citadel and in the Ochrana prison. This morning there were executions. Is it anything more than an eddy in the real life of the place? Watch the customers in the shops, the crowd in the streets, the men in the cafes who stare at the passing women. They are all swallowed up again in their own business. They just looked up as the Cossacks galloped past; they just shifted a bit when the bullets spat. . . ."

And when the streets of Moscow were agog with the grotesque amazing adventure of the Potemkin mutineers, Prothero was in the full tide of the private romance that severed him from Benham and sent him back to Cambridge--changed.

Before they reached Moscow Benham was already becoming accustomed to disregard Prothero. He was looking over him at the vast heaving trouble of Russia, which now was like a sea that tumbles under the

hurrying darkneses of an approaching storm. In those days it looked as though it must be an overwhelming storm. He was drinking in the wide and massive Russian effects, the drifting crowds in the entangling streets, the houses with their strange lettering in black and gold, the innumerable barbaric churches, the wildly driven droshkys, the sombre red fortress of the Kremlin, with its bulbous churches clustering up into the sky, the crosses, the innumerable gold crosses, the mad church of St. Basil, carrying the Russian note beyond the pitch of permissible caricature, and in this setting the obscure drama of clustering, staring, sash-wearing peasants, long-haired students, sane-eyed women, a thousand varieties of uniform, a running and galloping to and fro of messengers, a flutter of little papers, whispers, shouts, shots, a drama elusive and portentous, a gathering of forces, an accumulation of tension going on to a perpetual clash and clamour of bells. Benham had brought letters of introduction to a variety of people, some had vanished, it seemed. They were "away," the porters said, and they continued to be "away,"--it was the formula, he learnt, for arrest; others were evasive, a few showed themselves extraordinarily anxious to inform him about things, to explain themselves and things about them exhaustively. One young student took him to various meetings and showed him in great detail the scene of the recent murder of the Grand Duke Sergius. The buildings opposite the old French cannons were still under repair. "The assassin stood just here. The bomb fell there, look! right down there towards the gate; that was where they found his arm. He was torn to fragments. He was scraped up. He was mixed with the horses. . . ."

Every one who talked spoke of the outbreak of revolution as a matter of days or at the utmost weeks. And whatever question Benham chose to ask these talkers were prepared to answer. Except one. "And after the revolution," he asked, "what then? . . ." Then they waved their hands, and failed to convey meanings by reassuring gestures.

He was absorbed in his effort to understand this universal ominous

drift towards a conflict. He was trying to piece together a process, if it was one and the same process, which involved riots in Lodz, fighting at Libau, wild disorder at Odessa, remote colossal battlings in Manchuria, the obscure movements of a disastrous fleet lost somewhere now in the Indian seas, steaming clumsily to its fate, he was trying to rationalize it all in his mind, to comprehend its direction. He was struggling strenuously with the obscurities of the language in which these things were being discussed about him, a most difficult language demanding new sets of visual images because of its strange alphabet. Is it any wonder that for a time he failed to observe that Prothero was involved in some entirely disconnected affair.

They were staying at the big Cosmopolis bazaar in the Theatre Square. Thither, through the doors that are opened by distraught-looking men with peacocks' feathers round their caps, came Benham's friends and guides to take him out and show him this and that. At first Prothero always accompanied Benham on these expeditions; then he began to make excuses. He would stay behind in the hotel. Then when Benham returned Prothero would have disappeared. When the porter was questioned about Prothero his nescience was profound.

One night no Prothero was discoverable at any hour, and Benham, who wanted to discuss a project for going on to Kieff and Odessa, was alarmed.

"Moscow is a late place," said Benham's student friend. "You need not be anxious until after four or five in the morning. It will be quite time--**QUITE** time to be anxious to-morrow. He may be--close at hand."

When Benham hunted up Prothero in his room next morning he found him sleepy and irritable.

"I don't trouble if **YOU** are late," said Prothero, sitting up in his

bed with a red resentful face and crumpled hair. "I wasn't born yesterday."

"I wanted to talk about leaving Moscow."

"I don't want to leave Moscow."

"But Odessa--Odessa is the centre of interest just now."

"I want to stay in Moscow."

Benham looked baffled.

Prothero stuck up his knees and rested his night-shirted arms upon them. "I don't want to leave Moscow," he said, "and I'm not going to do so."

"But haven't we done--"

Prothero interrupted. "You may. But I haven't. We're not after the same things. Things that interest you, Benham, don't interest me. I've found--different things."

His expression was extraordinarily defiant.

"I want," he went on, "to put our affairs on a different footing. Now you've opened the matter we may as well go into it. You were good enough to bring me here. . . . There was a sort of understanding we were working together. . . . We aren't. . . . The long and short of it is, Benham, I want to pay you for my journey here and go on my own--independently."

His eye and voice achieved a fierceness that Benham found nearly incredible in him.

Something that had got itself overlooked in the press of other matters jerked back into Benham's memory. It popped back so suddenly that for an instant he wanted to laugh. He turned towards the window, picked his way among Prothero's carelessly dropped garments, and stood for a moment staring into the square, with its drifting, assembling and dispersing fleet of trains and its long line of blue-coated IZVOSHTCHIKS. Then he turned.

"Billy," he said, "didn't I see you the other evening driving towards the Hermitage?"

"Yes," said Prothero, and added, "that's it."

"You were with a lady."

"And she IS a lady," said Prothero, so deeply moved that his face twitched as though he was going to weep.

"She's a Russian?"

"She had an English mother. Oh, you needn't stand there and look so damned ironical! She's--she's a woman. She's a thing of kindness. . . ."

He was too full to go on.

"Billy, old boy," said Benham, distressed, "I don't want to be ironical--"

Prothero had got his voice again.

"You'd better know," he said, "you'd better know. She's one of those women who live in this hotel."

"Live in this hotel!"

"On the fourth floor. Didn't you know? It's the way in most of these big Russian hotels. They come down and sit about after lunch and dinner. A woman with a yellow ticket. Oh! I don't care. I don't care a rap. She's been kind to me; she's--she's dear to me. How are you to understand? I shall stop in Moscow. I shall take her to England. I can't live without her, Benham. And then-- And then you come worrying me to come to your damned Odessa!"

And suddenly this extraordinary young man put his hands to his face as though he feared to lose it and would hold it on, and after an apoplectic moment burst noisily into tears. They ran between his fingers. "Get out of my room," he shouted, suffocatingly. "What business have you to come prying on me?"

Benham sat down on a chair in the middle of the room and stared round-eyed at his friend. His hands were in his pockets. For a time he said nothing.

"Billy," he began at last, and stopped again. "Billy, in this country somehow one wants to talk like a Russian. Billy, my dear-- I'm not your father, I'm not your judge. I'm--unreasonably fond of you. It's not my business to settle what is right or wrong for you. If you want to stay in Moscow, stay in Moscow. Stay here, and stay as my guest. . . ."

He stopped and remained staring at his friend for a little space.

"I didn't know," said Prothero brokenly; "I didn't know it was possible to get so fond of a person. . . ."

Benham stood up. He had never found Prothero so attractive and so abominable in his life before.

"I shall go to Odessa alone, Billy. I'll make things all right here

before I go. . . ."

He closed the door behind him and went in a state of profound thought to his own room. . . .

Presently Prothero came to him with a vague inopportune desire to explain what so evidently did not need explaining. He walked about the room trying ways of putting it, while Benham packed.

In an unaccountable way Prothero's bristling little mind seemed to have shrunken to something sleek and small.

"I wish," he said, "you could stay for a later train and have lunch and meet her. She's not the ordinary thing. She's--different."

Benham plumbed depths of wisdom. "Billy," he said, "no woman IS the ordinary thing. They are all--different. . . ."

14

For a time this affair of Prothero's seemed to be a matter as disconnected from the Research Magnificent as one could imagine any matter to be. While Benham went from Moscow and returned, and travelled hither and thither, and involved himself more and more in the endless tangled threads of the revolutionary movement in Russia, Prothero was lost to all those large issues in the development of his personal situation. He contributed nothing to Benham's thought except attempts at discouragement. He reiterated his declaration that all the vast stress and change of Russian national life was going on because it was universally disregarded. "I tell you, as I told you before, that nobody is attending. You think because all Moscow, all Russia, is in the picture, that everybody is concerned.

Nobody is concerned. Nobody cares what is happening. Even the men who write in newspapers and talk at meetings about it don't care. They are thinking of their dinners, of their clothes, of their money, of their wives. They hurry home. . . ."

That was his excuse.

Manifestly it was an excuse.

His situation developed into remarkable complications of jealousy and divided counsels that Benham found altogether incomprehensible. To Benham in those days everything was very simple in this business of love. The aristocrat had to love ideally; that was all. He had to love Amanda. He and Amanda were now very deeply in love again, more in love, he felt, than they had ever been before. They were now writing love-letters to each other and enjoying a separation that was almost voluptuous. She found in the epistolatory treatment of her surrender to him and to the natural fate of women, a delightful exercise for her very considerable powers of expression. Life pointed now wonderfully to the great time ahead when there would be a Cheetah cub in the world, and meanwhile the Cheetah loped about the wild world upon a mighty quest. In such terms she put it. Such foolishness written in her invincibly square and youthful hand went daily from London to Russia, and stacked up against his return in the porter's office at the Cosmopolis Bazaar or pursued him down through the jarring disorders of south-west Russia, or waited for him at ill-chosen post-offices that deflected his journeyings wastefully or in several instances went altogether astray. Perhaps they supplied self-educating young strikers in the postal service with useful exercises in the deciphering of manuscript English. He wrote back five hundred different ways of saying that he loved her extravagantly. . . .

It seemed to Benham in those days that he had found the remedy and solution of all those sexual perplexities that distressed the world;

Heroic Love to its highest note--and then you go about your business. It seemed impossible not to be happy and lift one's chin high and diffuse a bracing kindliness among the unfortunate multitudes who stewed in affliction and hate because they had failed as yet to find this simple, culminating elucidation. And Prothero-- Prothero, too, was now achieving the same grand elementariness, out of his lusts and protests and general physical squalor he had flowered into love. For a time it is true it made rather an ineffective companion of him, but this was the mere goose-stepping for the triumphal march; this way ultimately lay exaltation. Benham had had as yet but a passing glimpse of this Anglo-Russian, who was a lady and altogether unlike her fellows; he had seen her for a doubtful second or so as she and Prothero drove past him, and his impression was of a rather little creature, white-faced with dusky hair under a red cap, paler and smaller but with something in her, a quiet alertness, that gave her a touch of kinship with Amanda. And if she liked old Prothero-- And, indeed, she must like old Prothero or could she possibly have made him so deeply in love with her?

They must stick to each other, and then, presently, Prothero's soul would wake up and face the world again. What did it matter what she had been?

Through stray shots and red conflict, long tediums of strained anxiety and the physical dangers of a barbaric country staggering towards revolution, Benham went with his own love like a lamp within him and this affair of Prothero's reflecting its light, and he was quite prepared for the most sympathetic and liberal behaviour when he came back to Moscow to make the lady's acquaintance. He intended to help Prothero to marry and take her back to Cambridge, and to assist by every possible means in destroying and forgetting the official yellow ticket that defined her status in Moscow. But he reckoned without either Prothero or the young lady in this expectation.

It only got to him slowly through his political preoccupations that there were obscure obstacles to this manifest course. Prothero hesitated; the lady expressed doubts.

On closer acquaintance her resemblance to Amanda diminished. It was chiefly a similarity of complexion. She had a more delicate face than Amanda, and its youthful brightness was deadened; she had none of Amanda's glow, and she spoke her mother's language with a pretty halting limp that was very different from Amanda's clear decisions.

She put her case compactly.

"I would not DO in Cambridge," she said with an infinitesimal glance at Prothero.

"Mr. Benham," she said, and her manner had the gravity of a woman of affairs," now do you see me in Cambridge? Now do you see me? Kept outside the walls? In a little DATCHA? With no occupation? Just to amuse him."

And on another occasion when Prothero was not with her she achieved still completer lucidity.

"I would come if I thought he wanted me to come," she said. "But you see if I came he would not want me to come. Because then he would have me and so he wouldn't want me. He would just have the trouble. And I am not sure if I should be happy in Cambridge. I am not sure I should be happy enough to make him happy. It is a very learned and intelligent and charming society, of course; but here, THINGS HAPPEN. At Cambridge nothing happens--there is only education. There is no revolution in Cambridge; there are not even sinful people to be sorry for. . . . And he says himself that Cambridge people are particular. He says they are liberal but very, very particular, and perhaps I could not always act my part well. Sometimes I am not always well behaved. When there is music I

behave badly sometimes, or when I am bored. He says the Cambridge people are so liberal that they do not mind what you are, but he says they are so particular that they mind dreadfully how you are what you are. . . . So that it comes to exactly the same thing. . . ."

"Anna Alexievna," said Benham suddenly, "are you in love with Prothero?"

Her manner became conscientiously scientific.

"He is very kind and very generous--too generous. He keeps sending for more money--hundreds of roubles, I try to prevent him."

"Were you EVER in love?"

"Of course. But it's all gone long ago. It was like being hungry. Only very fine hungry. Exquisite hungry. . . . And then being disgusted. . . ."

"He is in love with you."

"What is love?" said Anna. "He is grateful. He is by nature grateful." She smiled a smile, like the smile of a pale Madonna who looks down on her bambino.

"And you love nothing?"

"I love Russia--and being alone, being completely alone. When I am dead perhaps I shall be alone. Not even my own body will touch me then."

Then she added, "But I shall be sorry when he goes."

Afterwards Benham talked to Prothero alone. "Your Anna," he said,

"is rather wonderful. At first, I tell you now frankly I did not like her very much, I thought she looked 'used,' she drank vodka at lunch, she was gay, uneasily; she seemed a sham thing. All that was prejudice. She thinks; she's generous, she's fine."

"She's tragic," said Prothero as though it was the same thing.

He spoke as though he noted an objection. His next remark confirmed this impression. "That's why I can't take her back to Cambridge," he said.

"You see, Benham," he went on, "she's human. She's not really feminine. I mean, she's--unsexed. She isn't fitted to be a wife or a mother any more. We've talked about the possible life in England, very plainly. I've explained what a household in Cambridge would mean. . . . It doesn't attract her. . . . In a way she's been let out from womanhood, forced out of womanhood, and I see now that when women are let out from womanhood there's no putting them back. I could give a lecture on Anna. I see now that if women are going to be wives and mothers and homekeepers and ladies, they must be got ready for it from the beginning, sheltered, never really let out into the wild chances of life. She has been. Bitterly. She's REALLY emancipated. And it's let her out into a sort of nothingness. She's no longer a woman, and she isn't a man. She ought to be able to go on her own--like a man. But I can't take her back to Cambridge. Even for her sake."

His perplexed eyes regarded Benham.

"You won't be happy in Cambridge--alone," said Benham.

"Oh, damnably not! But what can I do? I had at first some idea of coming to Moscow for good--teaching."

He paused. "Impossible. I'm worth nothing here. I couldn't have

kept her."

"Then what are you going to do, Billy?"

"I don't KNOW what I'm going to do, I tell you. I live for the moment. To-morrow we are going out into the country."

"I don't understand," said Benham with a gesture of resignation. "It seems to me that if a man and woman love each other--well, they insist upon each other. What is to happen to her if you leave her in Moscow?"

"Damnation! Is there any need to ask that?"

"Take her to Cambridge, man. And if Cambridge objects, teach Cambridge better manners."

Prothero's face was suddenly transfigured with rage.

"I tell you she won't come!" he said.

"Billy!" said Benham, "you should make her!"

"I can't."

"If a man loves a woman he can make her do anything--"

"But I don't love her like that," said Prothero, shrill with anger. "I tell you I don't love her like that."

Then he lunged into further deeps. "It's the other men," he said, "it's the things that have been. Don't you understand? Can't you understand? The memories--she must have memories--they come between us. It's something deeper than reason. It's in one's spine and under one's nails. One could do anything, I perceive, for one's

very own woman. . . ."

"MAKE her your very own woman, said the exponent of heroic love.

"I shirk deeds, Benham, but you shirk facts. How could any man make her his very own woman now? You--you don't seem to understand-- ANYTHING. She's nobody's woman--for ever. That--that might-have-been has gone for ever. . . . It's nerves--a passion of the nerves. There's a cruelty in life and-- She's KIND to me. She's so kind to me. . . ."

And then again Prothero was weeping like a vexed child.

15

The end of Prothero's first love affair came to Benham in broken fragments in letters. When he looked for Anna Alexievna in December--he never learnt her surname--he found she had left the Cosmopolis Bazaar soon after Prothero's departure and he could not find whither she had gone. He never found her again. Moscow and Russia had swallowed her up.

Of course she and Prothero parted; that was a foregone conclusion. But Prothero's manner of parting succeeded in being at every phase a shock to Benham's ideas. It was clear he went off almost callously; it would seem there was very little crying. Towards the end it was evident that the two had quarrelled. The tears only came at the very end of all. It was almost as if he had got through the passion and was glad to go. Then came regret, a regret that increased in geometrical proportion with every mile of distance.

In Warsaw it was that grief really came to Prothero. He had some

hours there and he prowled the crowded streets, seeing girls and women happy with their lovers, abroad upon bright expeditions and full of delicious secrets, girls and women who ever and again flashed out some instant resemblance to Anna. . . .

In Berlin he stopped a night and almost decided that he would go back. "But now I had the damned frontier," he wrote, "between us."

It was so entirely in the spirit of Prothero, Benham thought, to let the "damned frontier" tip the balance against him.

Then came a scrawl of passionate confession, so passionate that it seemed as if Prothero had been transfigured. "I can't stand this business," he wrote. "It has things in it, possibilities of emotional disturbance--you can have no idea! In the train--luckily I was alone in the compartment--I sat and thought, and suddenly, I could not help it, I was weeping--noisy weeping, an uproar! A beastly German came and stood in the corridor to stare. I had to get out of the train. It is disgraceful, it is monstrous we should be made like this. . . .

"Here I am stranded in Hanover with nothing to do but to write to you about my dismal feelings. . . ."

After that surely there was nothing before a broken-hearted Prothero but to go on with his trailing wing to Trinity and a life of inappeasable regrets; but again Benham reckoned without the invincible earthliness of his friend. Prothero stayed three nights in Paris.

"There is an extraordinary excitement about Paris," he wrote. "A levity. I suspect the gypsum in the subsoil--some as yet undescribed radiations. Suddenly the world looks brightly cynical. . . . None of those tear-compelling German emanations. . . .

"And, Benham, I have found a friend.

"A woman. Of course you will laugh, you will sneer. You do not understand these things. . . . Yet they are so simple. It was the strangest accident brought us together. There was something that drew us together. A sort of instinct. Near the Boulevard Poissoniere. . . ."

"Good heavens!" said Benham. "A sort of instinct!"

"I told her all about Anna!"

"Good Lord!" cried Benham.

"She understood. Perfectly. None of your so-called 'respectable' women could have understood. . . . At first I intended merely to talk to her. . . ."

Benham crumpled the letter in his hand.

"Little Anna Alexievna!" he said, "you were too clean for him."

16

Benham had a vision of Prothero returning from all this foreign travel meekly, pensively, a little sadly, and yet not without a kind of relief, to the grey mildness of Trinity. He saw him, capped and gowned, and restored to academic dignity again, nodding greetings, resuming friendships.

The little man merged again into his rare company of discreet Benedicts and restrained celibates at the high tables. They ate on

in their mature wisdom long after the undergraduates had fled. Presently they would withdraw processionally to the combination room. . . .

There would be much to talk about over the wine.

Benham speculated what account Prothero would give of Moscow. . . .

He laughed abruptly.

And with that laugh Prothero dropped out of Benham's world for a space of years. There may have been other letters, but if so they were lost in the heaving troubles of a revolution-strained post-office. Perhaps to this day they linger sere and yellow in some forgotten pigeon-hole in Kishinev or Ekaterinoslav. . . .

17

In November, after an adventure in the trader's quarter of Kieff which had brought him within an inch of death, and because an emotional wave had swept across him and across his correspondence with Amanda, Benham went back suddenly to England and her. He wanted very greatly to see her and also he wanted to make certain arrangements about his property. He returned by way of Hungary, and sent telegrams like shouts of excitement whenever the train stopped for a sufficient time. "Old Leopard, I am coming, I am coming," he telegraphed, announcing his coming for the fourth time. It was to be the briefest of visits, very passionate, the mutual refreshment of two noble lovers, and then he was returning to Russia again.

Amanda was at Chexington, and there he found her installed in the utmost dignity of expectant maternity. Like many other people he

had been a little disposed to regard the bearing of children as a common human experience; at Chexington he came to think of it as a rare and sacramental function. Amanda had become very beautiful in quiet, grey, dove-like tones; her sun-touched, boy's complexion had given way to a soft glow of the utmost loveliness, her brisk little neck that had always reminded him of the stalk of a flower was now softened and rounded; her eyes were tender, and she moved about the place in the manner of one who is vowed to a great sacrifice. She dominated the scene, and Lady Marayne, with a certain astonishment in her eyes and a smouldering disposition to irony, was the half-sympathetic, half-resentful priestess of her daughter-in-law's unparalleled immolation. The MOTIF of motherhood was everywhere, and at his bedside he found--it had been put there for him by Amanda--among much other exaltation of woman's mission, that most wonderful of all philoprogenitive stories, Hudson's CRYSTAL AGE.

Everybody at Chexington had an air of being grouped about the impending fact. An epidemic of internal troubles, it is true, kept Sir Godfrey in the depths of London society, but to make up for his absence Mrs. Morris had taken a little cottage down by the river and the Wilder girls were with her, both afire with fine and subtle feelings and both, it seemed, and more particularly Betty, prepared to be keenly critical of Benham's attitude.

He did a little miss his cue in these exaltations, because he had returned in a rather different vein of exaltation.

In missing it he was assisted by Amanda herself, who had at moments an effect upon him of a priestess confidentially disrobed. It was as if she put aside for him something official, something sincerely maintained, necessary, but at times a little irksome. It was as if she was glad to take him into her confidence and unbend. Within the pre-natal Amanda an impish Amanda still lingered.

There were aspects of Amanda that it was manifest dear Betty must

never know. . . .

But the real Amanda of that November visit even in her most unpontifical moods did not quite come up to the imagined Amanda who had drawn him home across Europe. At times she was extraordinarily jolly. They had two or three happy walks about the Chexington woods; that year the golden weather of October had flowed over into November, and except for a carpet of green and gold under the horse-chestnuts most of the leaves were still on the trees. Gleams of her old wanton humour shone on him. And then would come something else, something like a shadow across the world, something he had quite forgotten since his idea of heroic love had flooded him, something that reminded him of those long explanations with Mr. Rathbone-Sanders that had never been explained, and of the curate in the doorway of the cottage and his unaccountable tears.

On the afternoon of his arrival at Chexington he was a little surprised to find Sir Philip Easton coming through the house into the garden, with an accustomed familiarity. Sir Philip perceived him with a start that was instantly controlled, and greeted him with unnatural ease.

Sir Philip, it seemed, was fishing and reading and playing cricket in the neighbourhood, which struck Benham as a poor way of spending the summer, the sort of soft holiday a man learns to take from scholars and literary men. A man like Sir Philip, he thought, ought to have been aviating or travelling.

Moreover, when Sir Philip greeted Amanda it seemed to Benham that there was a flavour of established association in their manner. But then Sir Philip was also very assiduous with Lady Marayne. She called him "Pip," and afterwards Amanda called across the tennis-court to him, "Pip!" And then he called her "Amanda." When the Wilder girls came up to join the tennis he was just as brotherly. . . .

The next day he came to lunch.

During that meal Benham became more aware than he had ever been before of the peculiar deep expressiveness of this young man's eyes. They watched him and they watched Amanda with a solicitude that seemed at once pained and tender. And there was something about Amanda, a kind of hard brightness, an impartiality and an air of something undefinably suspended, that gave Benham an intuitive certitude that that afternoon Sir Philip would be spoken to privately, and that then he would pack up and go away in a state of illumination from Chexington. But before he could be spoken to he contrived to speak to Benham.

They were left to smoke after lunch, and then it was he took advantage of a pause to commit his little indiscretion.

"Mrs. Benham," he said, "looks amazingly well--extraordinarily well, don't you think?"

"Yes," said Benham, startled. "Yes. She certainly keeps very well."

"She misses you terribly," said Sir Philip; "it is a time when a woman misses her husband. But, of course, she does not want to hamper your work. . . ."

Benham felt it was very kind of him to take so intimate an interest in these matters, but on the spur of the moment he could find no better expression for this than a grunt.

"You don't mind," said the young man with a slight catch in the breath that might have been apprehensive, "that I sometimes bring her books and flowers and things? Do what little I can to keep life interesting down here? It's not very congenial. . . . She's so wonderful--I think she is the most wonderful woman in the world."

Benham perceived that so far from being a modern aristocrat he was really a primitive barbarian in these matters.

"I've no doubt," he said, "that my wife has every reason to be grateful for your attentions."

In the little pause that followed Benham had a feeling that Sir Philip was engendering something still more personal. If so, he might be constrained to invert very gently but very firmly the bowl of chrysanthemums over Sir Philip's head, or kick him in an improving manner. He had a ridiculous belief that Sir Philip would probably take anything of the sort very touchingly. He scrambled in his mind for some remark that would avert this possibility.

"Have you ever been in Russia?" he asked hastily. "It is the most wonderful country in Europe. I had an odd adventure near Kiev. During a pogrom."

And he drowned the developing situation in a flood of description. . . .

But it was not so easy to drown the little things that were presently thrown out by Lady Marayne. They were so much more in the air. . . .

18

Sir Philip suddenly got out of the picture even as Benham had foreseen.

"Easton has gone away," he remarked three days later to Amanda.

"I told him to go. He is a bore with you about. But otherwise he is rather a comfort, Cheetah." She meditated upon Sir Philip. "And he's an HONOURABLE man," she said. "He's safe. . . ."

19

After that visit it was that the notes upon love and sex began in earnest. The scattered memoranda upon the perfectness of heroic love for the modern aristocrat ended abruptly. Instead there came the first draft for a study of jealousy. The note was written in pencil on Chexington notepaper and manifestly that had been supported on the ribbed cover of a book. There was a little computation in the corner, converting forty-five degrees Reaumur into degrees Fahrenheit, which made White guess it had been written in the Red Sea. But, indeed, it had been written in a rather amateurishly stoked corridor-train on Benham's journey to the gathering revolt in Moscow. . . .

"I think I have been disposed to underrate the force of sexual jealousy. . . . I thought it was something essentially contemptible, something that one dismissed and put behind oneself in the mere effort to be aristocratic, but I begin to realize that it is not quite so easily settled with. . . .

"One likes to know. . . . Possibly one wants to know too much. . . . In phases of fatigue, and particularly in phases of sleeplessness, when one is leaving all that one cares for behind, it becomes an irrational torment. . . .

"And it is not only in oneself that I am astonished by the power of this base motive. I see, too, in the queer business of Prothero how strongly jealousy, how strongly the sense of proprietorship, weighs

with a man. . . .

"There is no clear reason why one should insist upon another human being being one's ownest own--utterly one's own. . . .

"There is, of course, no clear reason for most human motives. . . .

"One does. . . .

"There is something dishonouring in distrust--to both the distrusted and the one who distrusts. . . ."

After that, apparently, it had been too hot and stuffy to continue.

20

Benham did not see Amanda again until after the birth of their child. He spent his Christmas in Moscow, watching the outbreak, the fitful fighting and the subsequent break-up, of the revolution, and taking care of a lost and helpless English family whose father had gone astray temporarily on the way home from Baku. Then he went southward to Rostov and thence to Astrakhan. Here he really began his travels. He determined to get to India by way of Herat and for the first time in his life rode out into an altogether lawless wilderness. He went on obstinately because he found himself disposed to funk the journey, and because discouragements were put in his way. He was soon quite cut off from all the ways of living he had known. He learnt what it is to be flea-bitten, saddle-sore, hungry and, above all, thirsty. He was haunted by a dread of fever, and so contrived strange torments for himself with overdoses of quinine. He ceased to be traceable from Chexington in March, and he reappeared in the form of a telegram from Karachi demanding news in

May. He learnt he was the father of a man-child and that all was well with Amanda.

He had not expected to be so long away from any communication with the outer world, and something in the nature of a stricken conscience took him back to England. He found a second William Porphyry in the world, dominating Chexington, and Amanda tenderly triumphant and passionate, the Madonna enthroned. For William Porphyry he could feel no emotion. William Porphyry was very red and ugly and protesting, feeble and aggressive, a matter for a skilled nurse. To see him was to ignore him and dispel a dream. It was to Amanda Benham turned again.

For some days he was content to adore his Madonna and listen to the familiar flatteries of her love. He was a leaner, riper man, Amanda said, and wiser, so that she was afraid of him. . . .

And then he became aware that she was requiring him to stay at her side. "We have both had our adventures," she said, which struck him as an odd phrase.

It forced itself upon his obstinate incredulity that all those conceptions of heroic love and faithfulness he had supposed to be so clearly understood between them had vanished from her mind. She had absolutely forgotten that twilight moment at the window which had seemed to him the crowning instant, the real marriage of their lives. It had gone, it had left no recoverable trace in her. And upon his interpretations of that he had loved her passionately for a year. She was back at exactly the ideas and intentions that ruled her during their first settlement in London. She wanted a joint life in the social world of London, she demanded his presence, his attention, the daily practical evidences of love. It was all very well for him to be away when the child was coming, but now everything was different. Now he must stay by her.

This time he argued no case. These issues he had settled for ever. Even an indignant dissertation from Lady Marayne, a dissertation that began with appeals and ended in taunts, did not move him. Behind these things now was India. The huge problems of India had laid an unshakeable hold upon his imagination. He had seen Russia, and he wanted to balance that picture by a vision of the east. . . .

He saw Easton only once during a week-end at Chexington. The young man displayed no further disposition to be confidentially sentimental. But he seemed to have something on his mind. And Amanda said not a word about him. He was a young man above suspicion, Benham felt. . . .

And from his departure the quality of the correspondence of these two larger carnivores began to change. Except for the repetition of accustomed endearments, they ceased to be love letters in any sense of the word. They dealt chiefly with the "Cub," and even there Benham felt presently that the enthusiasm diminished. A new amazing quality for Amanda appeared--triteness. The very writing of her letters changed as though it had suddenly lost backbone. Her habitual liveliness of phrasing lost its point. Had she lost her animation? Was she ill unknowingly? Where had the light gone? It was as if her attention was distracted. . . . As if every day when she wrote her mind was busy about something else.

Abruptly at last he understood. A fact that had never been stated, never formulated, never in any way admitted, was suddenly pointed to convergently by a thousand indicating fingers, and beyond question perceived to be THERE. . . .

He left a record of that moment of realization.

"Suddenly one night I woke up and lay still, and it was as if I had never seen Amanda before. Now I saw her plainly, I saw her with that same dreadful clearness that sometimes comes at dawn, a

pitiless, a scientific distinctness that has neither light nor shadow. . . .

"Of course," I said, and then presently I got up very softly. . . .

"I wanted to get out of my intolerable, close, personal cabin. I wanted to feel the largeness of the sky. I went out upon the deck. We were off the coast of Madras, and when I think of that moment, there comes back to me also the faint flavour of spice in the air, the low line of the coast, the cool flooding abundance of the Indian moonlight, the swish of the black water against the side of the ship. And a perception of infinite loss, as if the limitless heavens above this earth and below to the very uttermost star were just one boundless cavity from which delight had fled. . . .

"Of course I had lost her. I knew it with absolute certainty. I knew it from her insecure temperament, her adventurousness, her needs. I knew it from every line she had written me in the last three months. I knew it intuitively. She had been unfaithful. She must have been unfaithful.

"What had I been dreaming about to think that it would not be so?"

21

"Now let me write down plainly what I think of these matters. Let me be at least honest with myself, whatever self-contradictions I may have been led into by force of my passions. Always I have despised jealousy. . . .

"Only by the conquest of four natural limitations is the aristocratic life to be achieved. They come in a certain order, and

in that order the spirit of man is armed against them less and less efficiently. Of fear and my struggle against fear I have told already. I am fearful. I am a physical coward until I can bring shame and anger to my assistance, but in overcoming fear I have been helped by the whole body of human tradition. Every one, the basest creatures, every Hottentot, every stunted creature that ever breathed poison in a slum, knows that the instinctive constitution of man is at fault here and that fear is shameful and must be subdued. The race is on one's side. And so there is a vast traditional support for a man against the Second Limitation, the limitation of physical indulgence. It is not so universal as the first, there is a grinning bawling humour on the side of grossness, but common pride is against it. And in this matter my temperament has been my help: I am fastidious, I eat little, drink little, and feel a shivering recoil from excess. It is no great virtue; it happens so; it is something in the nerves of my skin. I cannot endure myself unshaven or in any way unclean; I am tormented by dirty hands or dirty blood or dirty memories, and after I had once loved Amanda I could not--unless some irrational impulse to get equal with her had caught me--have broken my faith to her, whatever breach there was in her faith to me. . . .

"I see that in these matters I am cleaner than most men and more easily clean; and it may be that it is in the vein of just that distinctive virtue that I fell so readily into a passion of resentment and anger.

"I despised a jealous man. There is a traditional discredit of jealousy, not so strong as that against cowardice, but still very strong. But the general contempt of jealousy is curiously wrapped up with the supposition that there is no cause for jealousy, that it is unreasonable suspicion. Given a cause then tradition speaks with an uncertain voice. . . .

"I see now that I despised jealousy because I assumed that it was

impossible for Amanda to love any one but me; it was intolerable to imagine anything else, I insisted upon believing that she was as fastidious as myself and as faithful as myself, made indeed after my image, and I went on disregarding the most obvious intimations that she was not, until that still moment in the Indian Ocean, when silently, gently as a drowned body might rise out of the depths of a pool, that knowledge of love dead and honour gone for ever floated up into my consciousness.

"And then I felt that Amanda had cheated me! Outrageously. Abominably.

"Now, so far as my intelligence goes, there is not a cloud upon this question. My demand upon Amanda was outrageous and I had no right whatever to her love or loyalty. I must have that very clear. . . .

"This aristocratic life, as I conceive it, must be, except accidentally here and there, incompatible with the domestic life. It means going hither and thither in the universe of thought as much as in the universe of matter, it means adventure, it means movement and adventure that must needs be hopelessly encumbered by an inseparable associate, it means self-imposed responsibilities that will not fit into the welfare of a family. In all ages, directly society had risen above the level of a barbaric tribal village, this need of a release from the family for certain necessary types of people has been recognized. It was met sometimes informally, sometimes formally, by the growth and establishment of special classes and orders, of priests, monks, nuns, of pledged knights, of a great variety of non-family people, whose concern was the larger collective life that opens out beyond the simple necessities and duties and loyalties of the steading and of the craftsman's house. Sometimes, but not always, that release took the form of celibacy; but besides that there have been a hundred institutional variations of the common life to meet the need of the special man, the man who must go deep and the man who must go far. A vowed celibacy ceased

to be a tolerable rule for an aristocracy directly the eugenic idea entered the mind of man, because a celibate aristocracy means the abandonment of the racial future to a proletariat of base unleaderly men. That was plain to Plato. It was plain to Campanella. It was plain to the Protestant reformers. But the world has never yet gone on to the next step beyond that recognition, to the recognition of feminine aristocrats, rulers and the mates of rulers, as untrammelled by domestic servitudes and family relationships as the men of their kind. That I see has always been my idea since in my undergraduate days I came under the spell of Plato. It was a matter of course that my first gift to Amanda should be his REPUBLIC. I loved Amanda transfigured in that dream. . . .

"There are no such women. . . .

"It is no excuse for me that I thought she was like-minded with myself. I had no sound reason for supposing that. I did suppose that. I did not perceive that not only was she younger than myself, but that while I had been going through a mill of steely education, kept close, severely exercised, polished by discussion, she had but the weak training of a not very good school, some scrappy reading, the vague discussions of village artists, and the draped and decorated novelties of the 'advanced.' It all went to nothing on the impact of the world. . . . She showed herself the woman the world has always known, no miracle, and the alternative was for me to give myself to her in the ancient way, to serve her happiness, to control her and delight and companion her, or to let her go.

"The normal woman centres upon herself; her mission is her own charm and her own beauty and her own setting; her place is her home. She demands the concentration of a man. Not to be able to command that is her failure. Not to give her that is to shame her. As I had shamed Amanda. . . ."

"There are no such women." He had written this in and struck it out, and then at some later time written it in again. There it stayed now as his last persuasion, but it set White thinking and doubting. And, indeed, there was another sheet of pencilled broken stuff that seemed to glance at quite another type of womanhood.

"It is clear that the women aristocrats who must come to the remaking of the world will do so in spite of limitations at least as great as those from which the aristocratic spirit of man escapes. These women must become aristocratic through their own innate impulse, they must be self-called to their lives, exactly as men must be; there is no making an aristocrat without a predisposition for rule and nobility. And they have to discover and struggle against just exactly the limitations that we have to struggle against. They have to conquer not only fear but indulgence, indulgence of a softer, more insidious quality, and jealousy--proprietorship. . . .

"It is as natural to want a mate as to want bread, and a thousand times in my work and in my wanderings I have thought of a mate and desired a mate. A mate--not a possession. It is a need almost naively simple. If only one could have a woman who thought of one and with one! Though she were on the other side of the world and busied about a thousand things. . . .

"'WITH one,' I see it must be rather than 'OF one.' That 'of one'

is just the unexpurgated egotistical demand coming back again. . . .

"Man is a mating creature. It is not good to be alone. But mating means a mate. . . .

"We should be lovers, of course; that goes without saying. . . .

"And yet not specialized lovers, not devoted, ATTENDING lovers. 'Dancing attendance'--as they used to say. We should meet upon our ways as the great carnivores do. . . .

"That at any rate was a sound idea. Though we only played with it.

"But that mate desire is just a longing that can have no possible satisfaction now for me. What is the good of dreaming? Life and chance have played a trick upon my body and soul. I am mated, though I am mated to a phantom. I loved and I love Arnanda, not Easton's Amanda, but Amanda in armour, the Amanda of my dreams. Sense, and particularly the sense of beauty, lies deeper than reason in us. There can be no mate for me now unless she comes with Amanda's voice and Amanda's face and Amanda's quick movements and her clever hands. . . ."

24

"Why am I so ungrateful to her still for all the happiness she gave me?

"There were things between us two as lovers,--love, things more beautiful than anything else in the world, things that set the mind hunting among ineffectual images in a search for impossible expression, images of sunlight shining through blood-red petals,

images of moonlight in a scented garden, of marble gleaming in the shade, of far-off wonderful music heard at dusk in a great stillness, of fairies dancing softly, of floating happiness and stirring delights, of joys as keen and sudden as the knife of an assassin, assassin's knives made out of tears, tears that are happiness, wordless things; and surprises, expectations, gratitudes, sudden moments of contemplation, the sight of a soft eyelid closed in sleep, shadowy tones in the sound of a voice heard unexpectedly; sweet, dear magical things that I can find no words for. . . .

"If she was a goddess to me, should it be any affair of mine that she was not a goddess to herself; that she could hold all this that has been between us more cheaply than I did? It does not change one jot of it for me. At the time she did not hold it cheaply. She forgets where I do not forget. . . ."

25

Such were the things that Benham could think and set down.

Yet for whole days he was possessed by the thought of killing Amanda and himself.

He did not at once turn homeward. It was in Ceylon that he dropped his work and came home. At Colombo he found a heap of letters awaiting him, and there were two of these that had started at the same time. They had been posted in London on one eventful afternoon. Lady Marayne and Amanda had quarrelled violently. Two earnest, flushed, quick-breathing women, full of neat but belated repartee, separated to write their simultaneous letters. Each letter trailed the atmosphere of that truncated encounter. Lady Marayne told her story ruthlessly. Amanda, on the other hand,

generalized, and explained. Sir Philip's adoration of her was a love-friendship, it was beautiful, it was pure. Was there no trust nor courage in the world? She would defy all jealous scandal. She would not even banish him from her side. Surely the Cheetah could trust her. But the pitiless facts of Lady Marayne went beyond Amanda's explaining. The little lady's dignity had been stricken. "I have been used as a cloak," she wrote.

Her phrases were vivid. She quoted the very words of Amanda, words she had overheard at Chexington in the twilight. They were no invention. They were the very essence of Amanda, the lover. It was as sure as if Benham had heard the sound of her voice, as if he had peeped and seen, as if she had crept by him, stooping and rustling softly. It brought back the living sense of her, excited, flushed, reckless; his wild-haired Amanda of infinite delight. . . . All day those words of hers pursued him. All night they flared across the black universe. He buried his face in the pillows and they whispered softly in his ear.

He walked his room in the darkness longing to smash and tear.

He went out from the house and shook his ineffectual fists at the stirring quiet of the stars.

He sent no notice of his coming back. Nor did he come back with a definite plan. But he wanted to get at Amanda.

26

It was with Amanda he had to reckon. Towards Easton he felt scarcely any anger at all. Easton he felt only existed for him because Amanda willed to have it so.

Such anger as Easton did arouse in him was a contemptuous anger. His devotion filled Benham with scorn. His determination to serve Amanda at any price, to bear the grossest humiliations and slights for her, his humility, his service and tenderness, his care for her moods and happiness, seemed to Benham a treachery to human nobility. That rage against Easton was like the rage of a trade-unionist against a blackleg. Are all the women to fall to the men who will be their master-slaves and keepers? But it was not simply that Benham felt men must be freed from this incessant attendance; women too must free themselves from their almost instinctive demand for an attendant. . . .

His innate disposition was to treat women as responsible beings. Never in his life had he thought of a woman as a pretty thing to be fooled and won and competed for and fought over. So that it was Amanda he wanted to reach and reckon with now, Amanda who had mated and ruled his senses only to fling him into this intolerable pit of shame and jealous fury. But the forces that were driving him home now were the forces below the level of reason and ideas, organic forces compounded of hate and desire, profound aboriginal urgencies. He thought, indeed, very little as he lay in his berth or sulked on deck; his mind lay waste under a pitiless invasion of exasperating images that ever and again would so wring him that his muscles would tighten and his hands clench or he would find himself restraining a snarl, the threat of the beast, in his throat.

Amanda grew upon his imagination until she overshadowed the whole world. She filled the skies. She bent over him and mocked him. She became a mystery of passion and dark beauty. She was the sin of the world. One breathed her in the winds of the sea. She had taken to herself the greatness of elemental things. . . .

So that when at last he saw her he was amazed to see her, and see

that she was just a creature of common size and quality, a rather tired and very frightened-looking white-faced young woman, in an evening-dress of unfamiliar fashion, with little common trinkets of gold and colour about her wrists and neck.

In that instant's confrontation he forgot all that had brought him homeward. He stared at her as one stares at a stranger whom one has greeted in mistake for an intimate friend.

For he saw that she was no more the Amanda he hated and desired to kill than she had ever been the Amanda he had loved.

27

He took them by surprise. It had been his intention to take them by surprise. Such is the inelegance of the jealous state.

He reached London in the afternoon and put up at a hotel near Charing Cross. In the evening about ten he appeared at the house in Lancaster Gate. The butler was deferentially amazed. Mrs. Benham was, he said, at a theatre with Sir Philip Easton, and he thought some other people also. He did not know when she would be back. She might go on to supper. It was not the custom for the servants to wait up for her.

Benham went into the study that reduplicated his former rooms in Finacue Street and sat down before the fire the butler lit for him. He sent the man to bed, and fell into profound meditation.

It was nearly two o'clock when he heard the sound of her latchkey and went out at once upon the landing.

The half-door stood open and Easton's car was outside. She stood in the middle of the hall and relieved Easton of the gloves and fan he was carrying.

"Good-night," she said, "I am so tired."

"My wonderful goddess," he said.

She yielded herself to his accustomed embrace, then started, stared, and wrenched herself out of his arms.

Benham stood at the top of the stairs looking down upon them, white-faced and inexpressive. Easton dropped back a pace. For a moment no one moved nor spoke, and then very quietly Easton shut the half-door and shut out the noises of the road.

For some seconds Benham regarded them, and as he did so his spirit changed. . . .

Everything he had thought of saying and doing vanished out of his mind.

He stuck his hands into his pockets and descended the staircase. When he was five or six steps above them, he spoke. "Just sit down here," he said, with a gesture of one hand, and sat down himself upon the stairs. "DO sit down," he said with a sudden testiness as they continued standing. "I know all about this affair. Do please sit down and let us talk. . . . Everybody's gone to bed long ago."

"Cheetah!" she said. "Why have you come back like this?"

Then at his mute gesture she sat down at his feet.

"I wish you would sit down, Easton," he said in a voice of subdued savagery.

"Why have you come back?" Sir Philip Easton found his voice to ask.

"SIT down," Benham spat, and Easton obeyed unwillingly.

"I came back," Benham went on, "to see to all this. Why else? I don't--now I see you--feel very fierce about it. But it has distressed me. You look changed, Amanda, and fagged. And your hair is untidy. It's as if something had happened to you and made you a stranger. . . . You two people are lovers. Very natural and simple, but I want to get out of it. Yes, I want to get out of it. That wasn't quite my idea, but now I see it is. It's queer, but on the whole I feel sorry for you. All of us, poor humans--. There's reason to be sorry for all of us. We're full of lusts and uneasiness and resentments that we haven't the will to control. What do you two people want me to do to you? Would you like a divorce, Amanda? It's the clean, straight thing, isn't it? Or would the scandal hurt you?"

Amanda sat crouched together, with her eyes on Benham.

"Give us a divorce," said Easton, looking to her to confirm him.

Amanda shook her head.

"I don't want a divorce," she said.

"Then what do you want?" asked Benham with sudden asperity.

"I don't want a divorce," she repeated. "Why do you, after a long silence, come home like this, abruptly, with no notice?"

"It was the way it took me," said Benham, after a little interval.

"You have left me for long months."

"Yes. I was angry. And it was ridiculous to be angry. I thought I wanted to kill you, and now I see you I see that all I want to do is to help you out of this miserable mess--and then get away from you. You two would like to marry. You ought to be married."

"I would die to make Amanda happy," said Easton.

"Your business, it seems to me, is to live to make her happy. That you may find more of a strain. Less tragic and more tiresome. I, on the other hand, want neither to die nor live for her." Amanda moved sharply. "It's extraordinary what amazing vapours a lonely man may get into his head. If you don't want a divorce then I suppose things might go on as they are now."

"I hate things as they are now," said Easton. "I hate this falsehood and deception."

"You would hate the scandal just as much," said Amanda.

"I would not care what the scandal was unless it hurt you."

"It would be only a temporary inconvenience," said Benham. "Every one would sympathize with you. . . . The whole thing is so natural. . . . People would be glad to forget very soon. They did with my mother."

"No," said Amanda, "it isn't so easy as that."

She seemed to come to a decision.

"Pip," she said. "I want to talk to--HIM--alone."

Easton's brown eyes were filled with distress and perplexity. "But why?" he asked.

"I do," she said.

"But this is a thing for US."

"Pip, I want to talk to him alone. There is something--something I can't say before you. . . ."

Sir Philip rose slowly to his feet.

"Shall I wait outside?"

"No, Pip. Go home. Yes,--there are some things you must leave to me."

She stood up too and turned so that she and Benham both faced the younger man. The strangest uneasiness mingled with his resolve to be at any cost splendid. He felt--and it was a most unexpected and disconcerting feeling--that he was no longer confederated with Amanda; that prior, more fundamental and greater associations prevailed over his little new grip upon her mind and senses. He stared at husband and wife aghast in this realization. Then his resolute romanticism came to his help. "I would trust you--" he began. "If you tell me to go--"

Amanda seemed to measure her hold upon him.

She laid her hand upon his arm. "Go, my dear Pip," she said. "Go."

He had a moment of hesitation, of anguish, and it seemed to Benham as though he eked himself out with unreality, as though somewhere, somewhere, he had seen something of the sort in a play and filled in a gap that otherwise he could not have supplied.

Then the door had closed upon him, and Amanda, pale and darkly

dishevelled, faced her husband, silently and intensely.

"WELL?" said Benham.

She held out her arms to him.

"Why did you leave me, Cheetah? Why did you leave me?"

28

Benham affected to ignore those proffered arms. But they recalled in a swift rush the animal anger that had brought him back to England. To remind him of desire now was to revive an anger stronger than any desire. He spoke seeking to hurt her.

"I am wondering now," he said, "why the devil I came back."

"You had to come back to me."

"I could have written just as well about these things."

"CHEETAH," she said softly, and came towards him slowly, stooping forward and looking into his eyes, "you had to come back to see your old Leopard. Your wretched Leopard. Who has rolled in the dirt. And is still yours."

"Do you want a divorce? How are we to fix things, Amanda?"

"Cheetah, I will tell you how we will fix things."

She dropped upon the step below him. She laid her hands with a deliberate softness upon him, she gave a toss so that her disordered

hair was a little more disordered, and brought her soft chin down to touch his knees. Her eyes implored him.

"Cheetah," she said. "You are going to forgive."

He sat rigid, meeting her eyes.

"Amanda," he said at last, "you would be astonished if I kicked you away from me and trampled over you to the door. That is what I want to do."

"Do it," she said, and the grip of her hands tightened. "Cheetah, dear! I would love you to kill me."

"I don't want to kill you."

Her eyes dilated. "Beat me."

"And I haven't the remotest intention of making love to you," he said, and pushed her soft face and hands away from him as if he would stand up.

She caught hold of him again. "Stay with me," she said.

He made no effort to shake off her grip. He looked at the dark cloud of her hair that had ruled him so magically, and the memory of old delights made him grip a great handful almost inadvertently as he spoke. "Dear Leopard," he said, "we humans are the most streaky of conceivable things. I thought I hated you. I do. I hate you like poison. And also I do not hate you at all."

Then abruptly he was standing over her.

She rose to her knees.

"Stay here, old Cheetah!" she said. "This is your house. I am your wife."

He went towards the unfastened front door.

"Cheetah!" she cried with a note of despair.

He halted at the door.

"Amanda, I will come to-morrow. I will come in the morning, in the sober London daylight, and then we will settle things."

He stared at her, and to her amazement he smiled. He spoke as one who remarks upon a quite unexpected fact. . . .

"Never in my life, Amanda, have I seen a human being that I wanted so little to kill."

29

White found a fragment that might have been written within a week of those last encounters of Benham and Amanda.

"The thing that astonished me most in Amanda was the change in her mental quality.

"With me in the old days she had always been a sincere person; she had deceived me about facts, but she had never deceived me about herself. Her personal, stark frankness had been her essential strength. And it was gone. I came back to find Amanda an accomplished actress, a thing of poses and calculated effects. She was a surface, a sham, a Lorelei. Beneath that surface I could not

discover anything individual at all. Fear and a grasping quality, such as God gave us all when he gave us hands; but the individual I knew, the humorous wilful Spotless Leopard was gone. Whither, I cannot imagine. An amazing disappearance. Clean out of space and time like a soul lost for ever.

"When I went to see her in the morning, she was made up for a scene, she acted an intricate part, never for a moment was she there in reality. . . .

"I have got a remarkable persuasion that she lost herself in this way, by cheapening love, by making base love to a lover she despised. . . . There can be no inequality in love. Give and take must balance. One must be one's natural self or the whole business is an indecent trick, a vile use of life! To use inferiors in love one must needs talk down to them, interpret oneself in their insufficient phrases, pretend, sentimentalize. And it is clear that unless oneself is to be lost, one must be content to leave alone all those people that one can reach only by sentimentalizing. But Amanda--and yet somehow I love her for it still--could not leave any one alone. So she was always feverishly weaving nets of false relationship. Until her very self was forgotten. So she will go on until the end. With Easton it had been necessary for her to key herself to a simple exalted romanticism that was entirely insincere. She had so accustomed herself to these poses that her innate gestures were forgotten. She could not recover them; she could not even reinvent them. Between us there were momentary gleams as though presently we should be our frank former selves again. They were never more than momentary. . . ."

And that was all that this astonishing man had seen fit to tell of his last parting from his wife.

Perhaps he did Amanda injustice. Perhaps there was a stronger thread of reality in her desire to recover him than he supposed.

Clearly he believed that under the circumstances Amanda would have tried to recover anybody.

She had dressed for that morning's encounter in a very becoming and intimate wrap of soft mauve and white silk, and she had washed and dried her dark hair so that it was a vapour about her face. She set herself with a single mind to persuade herself and Benham that they were inseparable lovers, and she would not be deflected by his grim determination to discuss the conditions of their separation. When he asked her whether she wanted a divorce, she offered to throw over Sir Philip and banish him for ever as lightly as a great lady might sacrifice an objectionable poodle to her connubial peace.

Benham passed through perplexing phases, so that she herself began to feel that her practice with Easton had spoilt her hands. His initial grimness she could understand, and partially its breakdown into irritability. But she was puzzled by his laughter. For he laughed abruptly.

"You know, Amanda, I came home in a mood of tremendous tragedy. And really,--you are a Lark."

And then overriding her altogether, he told her what he meant to do about their future and the future of their little son.

"You don't want a divorce and a fuss. Then I'll leave things. I perceive I've no intention of marrying any more. But you'd better do the straight thing. People forget and forgive. Especially when there is no one about making a fuss against you.

"Perhaps, after all, there is something to be said for shirking it. We'll both be able to get at the boy then. You'll not hurt him, and I shall want to see him. It's better for the boy anyhow not to have a divorce.

"I'll not stand in your way. I'll get a little flat and I shan't come too much to London, and when I do, you can get out of town. You must be discreet about Easton, and if people say anything about him, send them to me. After all, this is our private affair.

"We'll go on about money matters as we have been going. I trust to you not to run me into overwhelming debts. And, of course, if at any time, you do want to marry--on account of children or anything--if nobody knows of this conversation we can be divorced then. . . ."

Benham threw out these decisions in little dry sentences while Amanda gathered her forces for her last appeal.

It was an unsuccessful appeal, and at the end she flung herself down before him and clung to his knees. He struggled ridiculously to get himself clear, and when at last he succeeded she dropped prostrate on the floor with her dishevelled hair about her.

She heard the door close behind him, and still she lay there, a dark Guinevere, until with a start she heard a step upon the thick carpet without. He had come back. The door reopened. There was a slight pause, and then she raised her face and met the blank stare of the second housemaid. There are moments, suspended fragments of time rather than links in its succession, when the human eye is more intelligible than any words.

The housemaid made a rapid apologetic noise and vanished with a click of the door.

"DAMN!" said Amanda.

Then slowly she rose to her knees.

She meditated through vast moments.

"It's a cursed thing to be a woman," said Amanda. She stood up. She put her hand on the telephone in the corner and then she forgot about it. After another long interval of thought she spoke.

"Cheetah!" she said, "Old Cheetah! . . ."

"I didn't THINK it of you. . . ."

Then presently with the even joyless movements of one who does a reasonable business, with something indeed of the manner of one who packs a trunk, she rang up Sir Philip Easton.

30

The head chambermaid on the first floor of the Westwood Hotel in Danebury Street had a curious and perplexing glimpse of Benham's private processes the morning after this affair.

Benham had taken Room 27 on the afternoon of his return to London. She had seen him twice or three times, and he had struck her as a coldly decorous person, tall, white-faced, slow speaking; the last man to behave violently or surprise a head chambermaid in any way. On the morning of his departure she was told by the first-floor waiter that the occupant of Room 26 had complained of an uproar in the night, and almost immediately she was summoned to see Benham.

He was standing facing the door and in a position which did a little obscure the condition of the room behind him. He was carefully dressed, and his manner was more cold and decorous than ever. But one of his hands was tied up in a white bandage.

"I am going this morning," he said, "I am going down now to breakfast. I have had a few little accidents with some of the things in the room and I have cut my hand. I want you to tell the manager and see that they are properly charged for on the bill. . . . Thank you."

The head chambermaid was left to consider the accidents.

Benham's things were all packed up and the room had an air of having been straightened up neatly and methodically after a destructive cataclysm. One or two items that the chambermaid might possibly have overlooked in the normal course of things were carefully exhibited. For example, the sheet had been torn into half a dozen strips and they were lying side by side on the bed. The clock on the mantelpiece had been knocked into the fireplace and then pounded to pieces. All the looking-glasses in the room were smashed, apparently the electric lamp that stood on the night table by the bedside had been wrenched off and flung or hammered about amidst the other breakables. And there was a considerable amount of blood splashed about the room. The head chambermaid felt unequal to the perplexities of the spectacle and summoned her most convenient friend, the head chambermaid on the third floor, to her aid. The first-floor waiter joined their deliberations and several housemaids displayed a respectful interest in the maful to Martindale House and the thing was rankling almost unendurably. It seemed to be a relief to him to show his son very fully the essentially illogical position of his assailant. He was entirely inattentive to Benham's carefully made conversational opportunities. He would be silent at times while Benham talked and then he would break out suddenly with: "What seems to me so unreasonable, so ridiculous, in the whole of that fellow's second argument--if one can call it an argument--. . . . A man who reasons as he does is bound to get laughed at. If people will only see it. . . ."

CHAPTER THE SIXTH

THE NEW HAROUN AL RASCHID

1

Benham corresponded with Amanda until the summer of 1913. Sometimes the two wrote coldly to one another, sometimes with warm affection, sometimes with great bitterness. When he met White in Johannesburg durtter. Finally they invoked the manager. He was still contemplating the scene of the disorder when the precipitate retreat of his subordinates warned him of Benham's return.

Benham was smoking a cigarette and his bearing was reassuringly tranquil.

"I had a kind of nightmare," he said. "I am fearfully sorry to have disarranged your room. You must charge me for the inconvenience as well as for the damage.

31

"An aristocrat cannot be a lover."

"One cannot serve at once the intricacies of the wider issues of life and the intricacies of another human being. I do not mean that

one may not love. One loves the more because one does not concentrate one's love. One loves nations, the people passing in the street, beasts hurt by the wayside, troubled scoundrels and university dons in tears. . . .

"But if one does not give one's whole love and life into a woman's hands I do not think one can expect to be loved.

"An aristocrat must do without close personal love. . . ."

This much was written at the top of a sheet of paper. The writing ended halfway down the page. Manifestly it was an abandoned beginning. And it was, it seemed to White, the last page of all this confusion of matter that dealt with the Second and Third Limitations. Its incompleteness made its expression perfect. . . .

There Benham's love experience ended. He turned to the great business of the world. Desire and Jealousy should deflect his life no more; like Fear they were to be dismissed as far as possible and subdued when they could not be altogether dismissed. Whatever stirrings of blood or imagination there were in him after that parting, whatever failures from this resolution, they left no trace on the rest of his research, which was concerned with the hates of peoples and classes and war and peace and the possibilities science unveils and starry speculations of what mankind may do.

32

But Benham did not leave England again until he had had an encounter with Lady Marayne.

The little lady came to her son in a state of extraordinary anger

and distress. Never had she seemed quite so resolute nor quite so hopelessly dispersed and mixed. And when for a moment it seemed to him that she was not as a matter of fact dispersed and mixed at all, then with an instant eagerness he dismissed that one elucidatory gleam. "What are you doing in England, Poff?" she demanded. "And what are you going to do?"

"Nothing! And you are going to leave her in your house, with your property and a lover. If that's it, Poff, why did you ever come back? And why did you ever marry her? You might have known; her father was a swindler. She's begotten of deceit. She'll tell her own story while you are away, and a pretty story she'll make of it."

"Do you want me to divorce her and make a scandal?"

"I never wanted you to go away from her. If you'd stayed and watched her as a man should, as I begged you and implored you to do. Didn't I tell you, Poff? Didn't I warn you?"

"But now what am I to do?"

"There you are! That's just a man's way. You get yourself into this trouble, you follow your passions and your fancies and fads and then you turn to me! How can I help you now, Poff? If you'd listened to me before!"

Her blue eyes were demonstratively round.

"Yes, but--"

"I warned you," she interrupted. "I warned you. I've done all I could for you. It isn't that I haven't seen through her. When she came to me at first with that made-up story of a baby! And all about loving me like her own mother. But I did what I could. I thought we might still make the best of a bad job. And then--. I

might have known she couldn't leave Pip alone. . . . But for weeks I didn't dream. I wouldn't dream. Right under my nose. The impudence of it!"

Her voice broke. "Such a horrid mess! Such a hopeless, horrid mess!"

She wiped away a bright little tear. . . .

"It's all alike. It's your way with us. All of you. There isn't a man in the world deserves to have a woman in the world. We do all we can for you. We do all we can to amuse you, we dress for you and we talk for you. All the sweet, warm little women there are! And then you go away from us! There never was a woman yet who pleased and satisfied a man, who did not lose him. Give you everything and off you must go! Lovers, mothers. . . ."

It dawned upon Benham dimly that his mother's troubles did not deal exclusively with himself.

"But Amanda," he began.

"If you'd looked after her properly, it would hing the strike period of 1913, he was on his way to see her in London and to settle their relationship upon a new and more definite footing. It was her suggestion that they should meet.

About her he felt an enormous, inexorable, dissatisfaction. He could not persuade himself that his treatmee evil between different kinds of men is due to uncultivated feeling, to natural bad feeling, but far more is it due to bad thinking." At times he seemed on the verge of the persuasion that most human trouble is really due to bad metaphysics. It was, one must remark, an extraordinary journey he had made; he had started from chivalry and arrived at metaphysics; every knight he held must be a logician, and ultimate bravery is

courage of the mind. One thinks of his coming to this conclusion with knit brows and balancing intentness above whole gulfs of bathos--very much as he had once walked the Leysin Bisse. . . .

"Men do not know how to think," he insisted--getting along the planks; "and they will not realize that they do not know how to think. Nine-tenths of the wars in the world have arisen out of misconceptions. . . . Misconception is the sin and dishonour of the mind, and muddled thinking as ignoble as dirty conduct. . . . Infinitely more disastrous."

And again he wrote: "Man, I see, is an over-practical creature, too eager to get into action. There is our deepest trouble. He takes conclusions ready-made, or he makes them have been right enough. Pip was as good as gold until she undermined him. . . . A woman can't wait about like an umbrella in a stand. . . . He was just a boy. . . . Only of course there she was--a novelty. It is perfectly easy to understand. She flattered him. . . . Men are such fools."

"Still--it's no good saying that now."

"But she'll spend all your money, Poff! She'll break your back with debts. What's to prevent her? With him living on her! For that's what it comes to practically."

"Well, what am I to do?"

"You aren't going back without tying her up, Poff? You ought to stop every farthing of her money--every farthing. It's your duty."

"I can't do things like that."

"But have you no Shame? To let that sort of thing go on!"

"If I don't feel the Shame of it-- And I don't."

"And that money--. I got you that money, Poff! It was my money."

Benham stared at her perplexed. "What am I to do?" he asked.

"Cut her off, you silly boy! Tie her up! Pay her through a solicitor. Say that if she sees him ONCE again--"

He reflected. "No," he said at last.

"Poff!" she cried, "every time I see you, you are more and more like your father. You're going off--just as he did. That baffled, MULISH look--priggish--solemn! Oh! it's strange the stuff a poor woman has to bring into the world. But you'll do nothing. I know you'll do nothing. You'll stand everything. You--you Cuckold! And she'll drive by me, she'll pass me in theatres with the money that ought to have been mine! Oh! Oh!"

She dabbed her handkerchief from one swimming eye to the other. But she went on talking. Faster and faster, less and less coherently; more and more wildly abusive. Presently in a brief pause of the storm Benham sighed profoundly. . . .

It brought the scene to a painful end. . . .

For weeks her distress pursued and perplexed him.

He had an extraordinary persuasion that in some obscure way he was in default, that he was to blame for her distress, that he owed her-- he could never define what he owed her.

And yet, what on earth was one to do?

And something his mother had said gave him the odd idea that he had

misjudged his father, that he had missed depths of perplexed and kindred goodwill. He went down to see him before he returned to India. But if there was a hidden well of feeling in Mr. Benham senior, it had been very carefully boarded over. The parental mind and attention were entirely engaged in a dispute in the SCHOOL WORLD about the heuristic method. Somebody had been disrespectful of her and that his

relations to her squared with any of his preconceptions of nobility, and yet at no precise point could he detect where he had definitely taken an ignoble step. Through Amanda he was coming to the full experience of life. Like all of us he had been prepared, he had prepared himself, to take life in a certain way, and life had taken him, as it takes all of us, in an entirely different and unexpected way. . . . He had been ready for noble deeds and villainies, for achievements and failures, and here as the dominant fact of his personal life was a perplexing riddle. He could not hate and condemn her for ten minutes at a time without a flow of exoneration; he could not think of her tolerantly or lovingly without immediate shame and resentment, and with the utmost will in the world he could not banish her from his mind.

During the intervening years he had never ceased to have her in his mind; he would not think of her it is true if he could help it, but often he could not help it, and as a negative presence, as a thing denied, she was almost more potent than she had been as a thing accepted. Meanwhile he worked. His nervous irritability increased, but it did not hinder the steady development of his Research.

Long before his final parting from Amanda he had worked out his idea and method for all the more personal problems in life; the problems he put together under his headings of the first three "Limitations." He had resolved to emancipate himself from fear, indulgence, and that instinctive preoccupation with the interests and dignity of self which he chose to term Jealousy, and with the one tremendous

exception of Amanda he had to a large extent succeeded. Amanda. Amanda. Amanda. He stuck the more grimly to his Research to drown that beating in his brain.

Emancipation from all these personal things he held now to be a mere prelude to the real work of a man's life, which was to serve this dream of a larger human purpose. The bulk of his work was to discover and define that purpose, that purpose which must be the directing and comprehending form of all the activities of the noble life. One cannot be noble, he had come to perceive, at large; one must be noble to an end. To make human life, collectively and in detail, a thing more comprehensive, more beautiful, more generous and coherent than it is to-day seemed to him the fundamental intention of all nobility. He believed more and more firmly that the impulses to make and help and subserve great purposes are abundantly present in the world, that they are inhibited by hasty thinking, limited thinking and bad thinking, and that the real ennoblement of human life was not so much a creation as a release. He lumped the preventive and destructive forces that keep men dispersed, unhappy, and ignoble under the heading of Prejudice, and he made this Prejudice his fourth and greatest and most difficult limitation. In one place he had written it, "Prejudice or Divisions." That being subdued in oneself and in the world, then in the measure of its subjugation, the new life of our race, the great age, the noble age, would begin.

So he set himself to examine his own mind and the mind of the world about him for prejudice, for hampering follies, disguised disloyalties and mischievous distrusts, and the great bulk of the papers that White struggled with at Westhaven Street were devoted to various aspects of this search for "Prejudice." It seemed to White to be at once the most magnificent and the most preposterous of enterprises. It was indeed no less than an enquiry into all the preventable sources of human failure and disorder. . . . And it was all too manifest to White also that the last place in which Benham

was capable of detecting a prejudice was at the back of his own head.

Under this Fourth Limitation he put the most remarkable array of influences, race-hatred, national suspicion, the evil side of patriotism, religious and social intolerance, every social consequence of muddle headedness, every dividing force indeed except the purely personal dissensions between man and man. And he developed a metaphysical interpretation of these troubles. "No doubt," he wrote in one place, "much of th in a hurry. Life is so short that he thinks it better to err than wait. He has no patience, no faith in anything but himself. He thinks he is a being when in reality he is only a link in a being, and so he is more anxious to be complete than right. The last devotion of which he is capable is that devotion of the mind which suffers partial performance, but insists upon exhaustive thought. He scamps his thought and finishes his performance, and before he is dead it is already being abandoned and begun all over again by some one else in the same egotistical haste. . . ."

It is, I suppose, a part of the general humour of life that these words should have been written by a man who walked the plank to fresh ideas with the dizziest difficulty unless he had Prothero to drag him forward, and who acted time after time with an altogether disastrous hastiness.

2

Yet there was a kind of necessity in this journey of Benham's from the cocked hat and wooden sword of Seagate and his early shame at cowardice and baseness to the spiritual megalomania of his complete Research Magnificent. You can no more resolve to live a life of

honour nowadays and abstain from social and political scheming on a world-wide scale, than you can profess religion and refuse to think about God. In the past it was possible to take all sorts of things for granted and be loyal to unexamined things. One could be loyal to unexamined things because they were unchallenged things. But now everything is challenged. By the time of his second visit to Russia, Benham's ideas of conscious and deliberate aristocracy reaching out to an idea of universal responsibility had already grown into the extraordinary fantasy that he was, as it were, an uncrowned king in the world. To be noble is to be aristocratic, that is to say, a ruler. Thence it follows that aristocracy is multiple kingship, and to be an aristocrat is to partake both of the nature of philosopher and king. . . .

Yet it is manifest that the powerful people of this world are by no means necessarily noble, and that most modern kings, poor in quality, petty in spirit, conventional in outlook, controlled and limited, fall far short of kingship. Nevertheless, there IS nobility, there IS kingship, or this earth is a dustbin and mankind but a kind of skin-disease upon a planet. From that it is an easy step to this idea, the idea whose first expression had already so touched the imagination of Amanda, of a sort of diffused and voluntary kingship scattered throughout mankind. The aristocrats are not at the high table, the kings are not enthroned, those who are enthroned are but pretenders and SIMULACRA, kings of the vulgar; the real king and ruler is every man who sets aside the naive passions and self-interest of the common life for the rule and service of the world.

This is an idea that is now to be found in much contemporary writing. It is one of those ideas that seem to appear simultaneously at many points in the world, and it is impossible to say now how far Benham was an originator of this idea, and how far he simply resonated to its expression by others. It was far more likely that Prothero, getting it heaven knows where, had spluttered

it out and forgotten it, leaving it to germinate in the mind of his friend. . . .

This lordly, this kingly dream became more and more essential to Benham as his life went on. When Benham walked the Bisse he was just a youngster resolved to be individually brave; when he prowled in the jungle by night he was there for all mankind. With every year he became more and more definitely to himself a consecrated man as kings are consecrated. Only that he was self-consecrated, and anointed only in his heart. At last he was, so to speak, Haroun al Raschid again, going unsuspected about the world, because the palace of his security would not tell him the secrets of men's disorders. He was no longer a creature of circumstances, he was kingly, unknown, Alfred in the Camp of the Danes. In the great later accumulations of his Research the personal matter, the introspection, the intimate discussion of motive, becomes less and less. He forgets himself in the exaltation of kingliness. He worries less and less over the particular rightness of his definite acts. In these later papers White found Benham abstracted, self-forgetful, trying to find out with an ever increased self-detachment, with an ever deepening regal solicitude, why there are massacres, wars, tyrannies and persecutions, why we let famine, disease and beasts assail us, and want dwarf and cripple vast multitudes in the midst of possible plenty. And when he foundrejudice. His examination of the social and political condition of Russiaty and swarming with naked black children, and yet all the time they seemed to be in a wilderness. They forded rivers, they had at times to force themselves through thickets, once or twice they lost their way, and always ahead of them, purple and sullen, the great mountain peak with La Ferriere upon its crest rose slowly out of the background until it domina out and as far as he found out, he meant quite simply and earnestly to apply his knowledge. . . .

The intellectualism of Benham intensified to the end. His definition of Prejudice impressed White as being the most bloodless and philosophical formula that ever dominated the mind of a man.

"Prejudice," Benham had written, "is that common incapacity of the human mind to understand that a difference in any respect is not a difference in all respects, reinforced and rendered malignant by an instinctive hostility to what is unlike ourselves. We exaggerate classification and then charge it with mischievous emotion by referring it to ourselves." And under this comprehensive formula he proceeded to study and attack Family Prejudice, National Prejudice, Race Prejudice, War, Class Prejudice, Professional Prejudice, Sex Prejudice, in the most industrious and elaborate manner. Whether one regards one's self or others he held that these prejudices are evil things. "From the point of view of human welfare they break men up into wars and conflicts, make them an easy prey to those who trade upon suspicion and hostility, prevent sane collective co-operations, cripple and embitter life. From the point of view of personal aristocracy they make men vulgar, violent, unjust and futile. All the conscious life of the aristocrat must be a constant struggle against false generalizations; it is as much his duty to free himself from that as from fear, indulgence, and jealousy; it is a larger and more elaborate task, but it is none the less cardinal and essential. Indeed it is more cardinal and essential. The true knight has to be not only no coward, no self-pamperer, no egotist. He has to be a philosopher. He has to be no hasty or foolish thinker. His judgment no more than his courage is to be taken by surprise.

"To subdue fear, desire and jealousy, is the aristocrat's personal affair, it is his ritual and discipline, like a knight watching his arms; but the destruction of division and prejudice and all their forms and establishments, is his real task, that is the common work of knighthood. It is a task to be done in a thousand ways; one man working by persuasion, another by example, this one overthrowing some crippling restraint upon the freedom of speech and the spread of knowledge, and that preparing himself for a war that will shatter a tyrannous presumption. Most imaginative literature, all scientific investigation, all sound criticism, all good building, all good manufacture, all sound politics, every honesty and every reasoned kindness contribute to this release of men from the heat and confusions of our present world."

It was clear to White that as Benham progressed with this major part of his research, he was more and more possessed by the idea that he was not making his own personal research alone, but, side by side with a vast, masked, hidden and once unsuspected multitude of others; that this great idea of his was under kindred forms the great idea of thousands, that it was breaking as the dawn breaks, simultaneously to great numbers of people, and that the time was not far off when the new aristocracy, the disguised rulers of the world, would begin to realize their common bent and effort. Into these latter papers there creeps more and more frequently a new phraseology, such expressions as the "Invisible King" and the "Spirit of Kingship," so that as Benham became personally more and more solitary, his thoughts became more and more public and social.

Benham was not content to define and denounce the prejudices of mankind. He set himself to study just exactly how these prejudices worked, to get at the nature and habits and strengths of each kind of prejudice, and to devise means for its treatment, destruction or neutralization. He had no great faith in the power of pure reasonableness; his psychological ideas were modern, and he had grasped the fact that the power of most of the great prejudices that

strain humanity lies deeper than the intellectual level. Consequently he sought to bring himself into the closest contact with prejudices in action and prejudices in conflict in order to discover their sub-rational springs.

A large proportion of that larger moiety of the material at Westhaven Street which White from his extensive experience of the public patience decided could not possibly "make a book," consisted of notes and discussions upon the first-hand observations Benham had made in this or that part of the world. He began in Russia during the revolutionary trouble of 1906, he went thence to Odessa, and from place to place in Bessarabia and Kieff, where during a pogrom he had his first really illuminating encounter with race and culture p seems to have left him much more hopeful than was the common feeling of liberal-minded people during the years of depression that followed the revolution of 1906, and it was upon the race question that his attention concentrated.

The Swadeshi outbreak drew him from Russia to India. Here in an entirely different environment was another discord of race and culture, and he found in his study of it much that illuminated and corrected his impressions of the Russian issue. A whole drawer was devoted to a comparatively finished and very thorough enquiry into human dissensions in lower Bengal. Here there were not only race but culture conflicts, and he could work particularly upon the differences between men of the same race who were Hindus, Christians and Mahometans respectively. He could compare the Bengali Mahometan not only with the Bengali Brahminist, but also with the Mahometan from the north-west. "If one could scrape off all the creed and training, would one find much the same thing at the bottom, or something fundamentally so different that no close homogeneous social life and not even perhaps a life of just compromise is possible between the different races of mankind?"

His answer to that was a confident one. "There are no such natural

and unalterable differences in character and quality between any two sorts of men whatever, as would make their peaceful and kindly co-operation in the world impossible," he wrote.

But he was not satisfied with his observations in India. He found the prevalence of caste ideas antipathetic and complicating. He went on after his last parting from Amanda into China, it was the first of several visits to China, and thence he crossed to America. White found a number of American press-cuttings of a vehemently anti-Japanese quality still awaiting digestion in a drawer, and it was clear to him that Benham had given a considerable amount of attention to the development of the "white" and "yellow" race hostility on the Pacific slope; but his chief interest at that time had been the negro. He went to Washington and thence south; he visited Tuskegee and Atlanta, and then went off at a tangent to Hayti. He was drawn to Hayti by Hesketh Pritchard's vivid book, **WHERE BLACK RULES WHITE**, and like Hesketh Pritchard he was able to visit that wonderful monument to kingship, the hidden fastness of La Ferriere, the citadel built a century ago by the "Black Napoleon," the Emperor Christophe. He went with a young American demonstrator from Harvard.

4

It was a memorable excursion. They rode from Cap Haytien for a day's journey along dusty uneven tracks through a steaming plain of luxurious vegetation, that presented the strangest mixture of unbridled jungle with populous country. They passed countless villages of thatched huts alive with curiosities of the landscape. Long after dark they blundered upon rather than came to the village at its foot where they were to

pass the night. They were interrogated under a flaring torch by peering ragged black soldiers, and passed through a firelit crowd into the presence of the local commandant to dispute volubly about their right to go further. They might have been in some remote corner of Nigeria. Their papers, laboriously got in order, were vitiated by the fact, which only became apparent by degrees, that the commandant could not read. They carried their point with difficulty.

But they carried their point, and, watched and guarded by a hungry half-naked negro in a kepi and the remains of a sky-blue pair of trousers, they explored one of the most exemplary memorials of imperialism that humanity has ever made. The roads and parks and prospects constructed by this vanished Emperor of Hayti, had long since disappeared, and the three men clambered for hours up ravines and precipitous jungle tracks, occasionally crossing the winding traces of a choked and ruined road that had once been the lordly approach to his fastness. Below they passed an abandoned palace of vast extent, a palace with great terraces and the still traceable outline of gardens, though there were green things pushing between the terrace steps, and trees thrust out of the empty windows. Here from a belvedere of which the skull-like vestige still remained, the negro Emperor Christophe, after fourteen years of absolute rule, had watched for a time the smoke of the burning of his cane-fields in the plain below, and then, learning that his bodyguard had deserted him, had gone in and blown out his brains.

He had christened the place after the best of examples, "Sans Souci."

But the citadel above, which was to have been his last defence, he never used. The defection of his guards made him abandon that. To build it, they say, cost Hayti thirty thousand lives. He had the true Imperial lavishness. So high it was, so lost in a wilderness of trees and bush, looking out over a land relapsed now altogether

to a barbarism of patch and hovel, so solitary and chill under the tropical sky--for even the guards who still watched over its suspected treasures feared to live in its ghostly galleries and had made hovels outside its walls--and at the same time so huge and grandiose--there were walls thirty feet thick, galleries with scores of rust-eaten cannon, circular dining-halls, king's apartments and queen's apartments, towering battlements and great arched doorways--that it seemed to Benham to embody the power and passing of that miracle of human history, tyranny, the helpless bowing of multitudes before one man and the transitoriness of such glories, more completely than anything he had ever seen or imagined in the world before. Beneath the battlements--they are choked above with jungle grass and tamarinds and many flowery weeds--the precipice fell away a sheer two thousand feet, and below spread a vast rich green plain populous and diversified, bounded at last by the blue sea, like an amethystine wall. Over this precipice Christophe was wont to fling his victims, and below this terrace were bottle-shaped dungeons where men, broken and torn, thrust in at the neck-like hole above, starved and died: it was his headquarters here, here he had his torture chambers and the means for nameless cruelties. . . .

"Not a hundred years ago," said Benham's companion, and told the story of the disgraced favourite, the youth who had offended.

"Leap," said his master, and the poor hypnotized wretch, after one questioning glance at the conceivable alternatives, made his last gesture of servility, and then stood out against the sky, swayed, and with a convulsion of resolve, leapt and shot headlong down through the shimmering air.

Came presently the little faint sound of his fall.

The Emperor satisfied turned away, unmindful of the fact that this projectile he had launched had caught among the bushes below, and presently struggled and found itself still a living man. It could

scramble down to the road and, what is more wonderful, hope for mercy. An hour and it stood before Christophe again, with an arm broken and bloody and a face torn, a battered thing now but with a faint flavour of pride in its bearing. "Your bidding has been done, Sire," it said.

"So," said the Emperor, unappeased. "And you live? Well-- Leap again. . . ."

And then came other stories. The young man told them as he had heard them, stories of ferocious wholesale butcheries, of men standing along the walls of the banqueting chamber to be shot one by one as the feast went on, of exquisite and terrifying cruelties, and his one note of wonder, his refrain was, "HERE! Not a hundred years ago. . . . It makes one almost believe that somewhere things of this sort are being done now."

They ate their lunch together amidst the weedy flowery ruins. The lizards which had fled their coming crept out again to bask in the sunshine. The soldier-guide and guard scrabbled about with his black fingers in the ruinous and rifled tomb of Christophe in a search for some saleable memento. . . .

Benham sat musing in silence. The thought of deliberate cruelty was always an actual physical distress to him. He sat bathed in the dreamy afternoon sunlight and struggled against the pictures that crowded into his mind, pictures of men aghast at death, and of fear-driven men toiling in agony, and of the shame of extorted obedience and of cringing and crawling black figures, and the defiance of righteous hate beaten down under blow and anguish. He saw eyes alight with terror and lips rolled back in agony, he saw weary hopeless flight before striding proud destruction, he saw the poor trampled mangled dead, and he shivered in his soul. . . .

He hated Christophe and all that made Christophe; he hated pride,

and then the idea came to him that it is not pride that makes Christophes but humility.

There is in the medley of man's composition, deeper far than his superficial working delusion that he is a separated self-seeking individual, an instinct for cooperation and obedience. Every natural sane man wants, though he may want it unwittingly, kingly guidance, a definite direction for his own partial life. At the bottom of his heart he feels, even if he does not know it definitely, that his life is partial. He is driven to join himself on. He obeys decision and the appearance of strength as a horse obeys its rider's voice. One thinks of the pride, the uncontrolled frantic will of this black ape of all Emperors, and one forgets the universal docility that made him possible. Usurpation is a crime to which men are tempted by human dirigibility. It is the orderly peoples who create tyrants, and it is not so much restraint above as stiff insubordination below that has to be taught to men. There are kings and tyrannies and imperialisms, simply because of the unkingliness of men.

And as he sat upon the battlements of La Ferriere, Benham cast off from his mind his last tolerance for earthly kings and existing States, and expounded to another human being for the first time this long-cherished doctrine of his of the Invisible King who is the lord of human destiny, the spirit of nobility, who will one day take the sceptre and rule the earth. . . . To the young American's naive American response to any simply felt emotion, he seemed with his white earnestness and his glowing eyes a veritable prophet. . . .

"This is the root idea of aristocracy," said Benham.

"I have never heard the underlying spirit of democracy, the real true Thing in democracy, so thoroughly expressed," said the young American.

Benham's notes on race and racial cultures gave White tantalizing glimpses of a number of picturesque experiences. The adventure in Kieff had first roused Benham to the reality of racial quality. He was caught in the wheels of a pogrom.

"Before that time I had been disposed to minimize and deny race. I still think it need not prevent men from the completest social co-operation, but I see now better than I did how difficult it is for any man to purge from his mind the idea that he is not primarily a Jew, a Teuton, or a Kelt, but a man. You can persuade any one in five minutes that he or she belongs to some special and blessed and privileged sort of human being; it takes a lifetime to destroy that persuasion. There are these confounded differences of colour, of eye and brow, of nose or hair, small differences in themselves except that they give a foothold and foundation for tremendous fortifications of prejudice and tradition, in which hostilities and hatreds may gather. When I think of a Jew's nose, a Chinaman's eyes or a negro's colour I am reminded of that fatal little pit which nature has left in the vermiform appendix, a thing no use in itself and of no significance, but a gathering-place for mischief. The extremest case of race-feeling is the Jewish case, and even here, I am convinced, it is the Bible and the Talmud and the exertions of those inevitable professional champions who live upon racial feeling, far more than their common distinction of blood, which holds this people together banded against mankind."

Between the lines of such general propositions as this White read little scraps of intimation that linked with the things Benham let fall in Johannesburg to reconstruct the Kieff adventure.

Benham had been visiting a friend in the country on the further side of the Dnieper. As they drove back along dusty stretches of road amidst fields of corn and sunflower and through bright little villages, they saw against the evening blue under the full moon a smoky red glare rising from amidst the white houses and dark trees of the town. "The pogrom's begun," said Benham's friend, and was surprised when Benham wanted to end a pleasant day by going to see what happens after the beginning of a pogrom.

He was to have several surprises before at last he left Benham in disgust and went home by himself.

For Benham, with that hastiness that so flouted his exalted theories, passed rapidly from an attitude of impartial enquiry to active intervention. The two men left their carriage and plunged into the network of unlovely dark streets in which the Jews and traders harboured. . . . Benham's first intervention was on behalf of a crouching and yelping bundle of humanity that was being dragged about and kicked at a street corner. The bundle resolved itself into a filthy little old man, and made off with extraordinary rapidity, while Benham remonstrated with the kickers. Benham's tallness, his very Gentile face, his good clothes, and an air of tense authority about him had its effect, and the kickers shuffled off with remarks that were partly apologies. But Benham's friend revolted. This was no business of theirs.

Benham went on unaccompanied towards the glare of the burning houses.

For a time he watched. Black figures moved between him and the glare, and he tried to find out the exact nature of the conflict by enquiries in clumsy Russian. He was told that the Jews had insulted a religious procession, that a Jew had spat at an ikon, that the shop of a cheating Jew trader had been set on fire, and that the blaze had spread to the adjacent group of houses. He gathered that

the Jews were running out of the burning block on the other side "like rats." The crowd was mostly composed of town roughs with a sprinkling of peasants. They were mischievous but undecided. Among them were a number of soldiers, and he was surprised to see a policeman, brightly lit from head to foot, watching the looting of a shop that was still untouched by the flames.

He held back some men who had discovered a couple of women's figures slinking along in the shadow beneath a wall. Behind his remonstrances the Jewesses escaped. His anger against disorder was growing upon him. . . .

Late that night Benham found himself the leading figure amidst a party of Jews who had made a counter attack upon a gang of roughs in a court that had become the refuge of a crowd of fugitives. Some of the young Jewish men had already been making a fight, rather a poor and hopeless fight, from the windows of the house near the entrance of the court, but it is doubtful if they would have made an effective resistance if it had not been for this tall excited stranger who was suddenly shouting directions to them in sympathetically murdered Russian. It was not that he brought powerful blows or subtle strategy to their assistance, but that he put heart into them and perplexity into his adversaries because he was so manifestly non-partizan. Nobody could ever have mistaken Benham for a Jew. When at last towards dawn a not too zealous governor called out the troops and began to clear the streets of rioters, Benham and a band of Jews were still keeping the gateway of that court behind a hasty but adequate barricade of furniture and handbarrows.

The ghetto could not understand him, nobody could understand him, but it was clear a rare and precious visitor had come to their rescue, and he was implored by a number of elderly, dirty, but very intelligent-looking old men to stay with them and preserve them until their safety was assured.

They could not understand him, but they did their utmost to entertain him and assure him of their gratitude. They seemed to consider him as a representative of the British Government, and foreign intervention on their behalf is one of those unfortunate fixed ideas that no persecuted Jews seem able to abandon.

Benham found himself, refreshed and tended, sitting beside a wood fire in an inner chamber richly flavoured by humanity and listening to a discourse in evil but understandable German. It was a discourse upon the wrongs and the greatness of the Jewish people-- and it was delivered by a compact middle-aged man with a big black beard and long-lashed but animated eyes. Beside him a very old man dozed and nodded approval. A number of other men crowded the apartment, including several who had helped to hold off the rioters from the court. Some could follow the talk and ever again endorsed the speaker in Yiddish or Russian; others listened with tantalized expressions, their brows knit, their lips moving.

It was a discourse Benham had provoked. For now he was at the very heart of the Jewish question, and he could get some light upon the mystery of this great hatred at first hand. He did not want to hear tales of outrages, of such things he knew, but he wanted to understand what was the irritation that caused these things.

So he listened. The Jew dilated at first on the harmlessness and usefulness of the Jews.

"But do you never take a certain advantage?" Benham threw out.

"The Jews are cleverer than the Russians. Must we suffer for that?"

The spokesman went on to the more positive virtues of his race. Benham suddenly had that uncomfortable feeling of the Gentile who finds a bill being made against him. Did the world owe Israel

nothing for Philo, Aron ben Asher, Solomon Gabriol, Halevy, Mendelssohn, Heine, Meyerbeer, Rubinstein, Joachim, Zangwill? Does Britain owe nothing to Lord Beaconsfield, Montefiore or the Rothschilds? Can France repudiate her debt to Fould, Gaudahaux, Oppert, or Germany to Furst, Steinschneider, Herxheimer, Lasker, Auerbach, Traube and Lazarus and Benfey? . . .

Benham admitted under the pressure of urgent tones and gestures that these names did undoubtedly include the cream of humanity, but was it not true that the Jews did press a little financially upon the inferior peoples whose lands they honoured in their exile?

The man with the black beard took up the challenge bravely.

"They are merciful creditors," he said. "And it is their genius to possess and control. What better stewards could you find for the wealth of nations than the Jews? And for the honours? That always had been the role of the Jews--stewardship. Since the days of Joseph in Egypt. . . ."

Then in a lower voice he went on to speak of the deficiencies of the Gentile population. He wished to be just and generous but the truth was the truth. The Christian Russians loved drink and laziness; they had no sense of property; were it not for unjust laws even now the Jews would possess all the land of South Russia. . . .

Benham listened with a kind of fascination. "But," he said.

It was so. And with a confidence that aroused a protest or so from the onlookers, the Jewish apologist suddenly rose up, opened a safe close beside the fire and produced an armful of documents.

"Look!" he said, "all over South Russia there are these!"

Benham was a little slow to understand, until half a dozen of these

papers had been thrust into his hand. Eager fingers pointed, and several voices spoke. These things were illegalities that might some day be legal; there were the records of loans and hidden transactions that might at any time put all the surrounding soil into the hands of the Jew. All South Russia was mortgaged. . . .

"But is it so?" asked Benham, and for a time ceased to listen and stared into the fire.

Then he held up the papers in his hand to secure silence and, feeling his way in unaccustomed German, began to speak and continued to speak in spite of a constant insurgent undertone of interruption from the Jewish spokesman.

All men, Benham said, were brothers. Did they not remember Nathan the Wise?

"I did not claim him," said the spokesman, misunderstanding. "He is a character in fiction."

But all men are brothers, Benham maintained. They had to be merciful to one another and give their gifts freely to one another. Also they had to consider each other's weaknesses. The Jews were probably justified in securing and administering the property of every community into which they came, they were no doubt right in claiming to be best fitted for that task, but also they had to consider, perhaps more than they did, the feelings and vanities of the host population into which they brought these beneficent activities. What was said of the ignorance, incapacity and vice of the Roumanians and Russians was very generally believed and accepted, but it did not alter the fact that the peasant, for all his incapacity, did like to imagine he owned his own patch and hovel and did have a curious irrational hatred of debt. . . .

The faces about Benham looked perplexed.

"THIS," said Benham, tapping the papers in his hand. "They will not understand the ultimate benefit of it. It will be a source of anger and fresh hostility. It does not follow because your race has supreme financial genius that you must always follow its dictates to the exclusion of other considerations. . . ."

The perplexity increased.

Benham felt he must be more general. He went on to emphasize the brotherhood of man, the right to equal opportunity, equal privilege, freedom to develop their idiosyncrasies as far as possible, unhindered by the idiosyncrasies of others. He could feel the sympathy and understanding of his hearers returning. "You see," said Benham, "you must have generosity. You must forget ancient scores. Do you not see the world must make a fresh beginning?"

He was entirely convinced he had them with him. The heads nodded assent, the bright eyes and lips followed the slow disentanglement of his bad German.

"Free yourselves and the world," he said.

Applause.

"And so," he said breaking unconsciously into English, "let us begin by burning these BEASTLY mortgages!"

And with a noble and dramatic gesture Benham cast his handful on the fire. The assenting faces became masks of horror. A score of hands clutched at those precious papers, and a yell of dismay and anger filled the room. Some one caught at his throat from behind. "Don't kill him!" cried some one. "He fought for us!"

6

An hour later Benham returned in an extraordinarily dishevelled and battered condition to his hotel. He found his friend in anxious consultation with the hotel proprietor.

"We were afraid that something had happened to you," said his friend.

"I got a little involved," said Benham.

"Hasn't some one clawed your cheek?"

"Very probably," said Benham.

"And torn your coat? And hit you rather heavily upon the neck?"

"It was a complicated misunderstanding," said Benham. "Oh! pardon! I'm rather badly bruised upon that arm you're holding."

7

Benham told the story to White as a jest against himself.

"I see now of course that they could not possibly understand my point of view," he said. . . .

"I'm not sure if they quite followed my German. . . .

"It's odd, too, that I remember saying, 'Let's burn these

mortgages,' and at the time I'm almost sure I didn't know the German for mortgage. . . ."

It was not the only occasion on which other people had failed to grasp the full intention behind Benham's proceedings. His aristocratic impulses were apt to run away with his conceptions of brotherhood, and time after time it was only too manifest to White that Benham's pallid flash of anger had astonished the subjects of his disinterested observations extremely. His explorations in Hayti had been terminated abruptly by an affair with a native policeman that had necessitated the intervention of the British Consul. It was begun with that suddenness that was too often characteristic of Benham, by his hitting the policeman. It was in the main street of Cap Haytit of representative men. I went about that Westphalian country after that, with the conviction that headless, soulless, blood-drinking metal monsters were breeding all about me. I felt that science was producing a poisonous swarm, a nest of black dragons. They were crouching here and away there in France and England, they were crouching like beasts that bide their time, mewed up in forts, kennelled in arsenals, hooded in tarpaulins as hawks are hooded. . . . And I had never thought very much about them before, and there they were, waiting until some human fool like that frock-coated thing of spite, and fools like him multiplied by a million, saw fit to call them out to action. Just out of hatred and nationalism and faction. . . ."

Then came a queer fancy.

"Great guns, mines, battleships, all that cruelty-apparatus; I see it more and more as the gathering revenge of dead joyless matter for the happiness of life. It is a conspiracy of the lifeless, an enormous plot of the rebel metals against sensation. That is why in particular half-living people seem to love these things. La Ferriere was a fastness of the kind of tyranny that passes out of human experience, the tyranny of the strong man over men. Essen

comes, the new thing, the tyranny of the strong machine. . . .

"Science is either slave or master. These people--I mean the German people and militarist people generally--have no real mastery over the scientific and economic forces on which they seem to rest, and the policeman had just clubbed an unfortunate youth over the head with the heavily loaded wooden club which is the normal instrument of Haytian discipline. His blow was a repartee, part of a triangular altercation in which a large, voluble, mahogany-coloured lady whose head was tied up in a blue handkerchief played a conspicuous part, but it seemed to Benham an entirely unjustifiable blow.

He allowed an indignation with negro policemen in general that had been gathering from the very moment of his arrival at Port-au-Prince to carry him away. He advanced with the kind of shout one would hurl at a dog, and smote the policeman to the earth with the stout stick that the peculiar social atmosphere of Hayti had disposed him to carry. By the local standard his blow was probably a trivial one, but the moral effect of his indignant pallor and a sort of rearing tallness about him on these occasions was always very considerable. Unhappily these characteristics could have no effect on a second negro policeman who was approaching the affray from behind, and he felled Benham by a blow on the shoulder that was meant for the head, and with the assistance of his colleague overpowered him, while the youth and the woman vanished.

The two officials dragged Benham in a state of vehement protest to the lock-up, and only there, in the light of a superior officer's superior knowledge, did they begin to realize the grave fact of his British citizenship.

The memory of the destruction of the Haytian fleet by a German gunboat was still vivid in Port-au-Prince, and to that Benham owed it that in spite of his blank refusal to compensate the man he had

knocked over, he was after two days of anger, two days of extreme insanitary experience, and much meditation upon his unphilosophical hastiness, released.

Quite a number of trivial incidents of a kindred sort diversified his enquiries into Indian conditions. They too turned for the most part on his facile exasperation at any defiance of his deep-felt desire for human brotherhood. At last indeed came an affair that refused ultimately to remain trivial, and tangled him up in a coil that invoked newspaper articles and heated controversies.

The effect of India upon Benham's mind was a peculiar mixture of attraction and irritation. He was attracted by the Hindu spirit of intellectualism and the Hindu repudiation of brutality, and he was infuriated by the spirit of caste that cuts the great world of India into a thousand futile little worlds, all aloof and hostile one to the other. "I came to see India," he wrote, "and there is no India. There is a great number of Indias, and each goes about with its chin in the air, quietly scorning everybody else."

His Indian adventures and his great public controversy on caste began with a tremendous row with an Indian civil servant who had turned an Indian gentleman out of his first-class compartment, and culminated in a disgraceful fracas with a squatting brown holiness at Benares, who had thrown aside his little brass bowlful of dinner because Benham's shadow had fallen upon it.

"You unendurable snob!" said Benham, and then lapsing into the forceful and inadvisable: "By Heaven, you SHALL eat it! . . ."

Benham's detestation of human divisions and hostilities was so deep in his character as to seem almost instinctive. But he had too a very clear reason for his hostility to all these amazing breaks in human continuity in his sense of the gathering dangers they now involve. They had always, he was convinced, meant conflict, hatred, misery and the destruction of human dignity, but the new conditions of life that have been brought about by modern science were making them far more dangerous than they had ever been before. He believed that the evil and horror of war was becoming more and more tremendous with every decade, and that the free play of national prejudice and that stupid filching ambitiousness that seems to be inseparable from monarchy, were bound to precipitate catastrophe, unless a real international aristocracy could be brought into being to prevent it.

In the drawer full of papers labelled "Politics," White found a paper called "The Metal Beast." It showed that for a time Benham had been greatly obsessed by the thought of the armaments that were in those days piling up in every country in Europe. He had gone to Essen, and at Essen he had met a German who had boasted of Zeppelins and the great guns that were presently to smash the effete British fleet and open the Imperial way to London.

"I could not sleep," he wrote, "on account of this man and his talk and the streak of hatred in his talk. He distressed me not because he seemed exceptional, but because he seemed ordinary. I realized that he was more human than I was, and that only killing and killing could come out of such humanity. I thought of the great ugly guns I had seen, and of the still greater guns he had talked about, and how gloatingly he thought of the destruction they could do. I felt as I used to feel about that infernal stallion that had killed a man with its teeth and feet, a despairing fear, a sense of monstrosity in life. And this creature who had so disturbed me was only a beastly snuffy little man in an ill-fitting frock-coat, who laid his knife and fork by their tips on the edge of his plate, and picked his

teeth with gusto and breathed into my face as he talked to me. The commoneside. The monster of steel and iron carries Kaiser and Germany and all Europe captive. It has persuaded them to mount upon its back and now they must follow the logic of its path. Whither? . . . Only kingship will ever master that beast of steel which has got loose into the world. Nothing but the sense of unconquerable kingship in us all will ever dare withstand it. . . . Men must be kingly aristocrats-- it isn't MAY be now, it is MUST be--or, these confederated metals, these things of chemistry and metallurgy, these explosives and mechanisms, will trample the blood and life out of our race into mere red-streaked froth and filth. . . ."

Then he turned to the question of this metallic beast's release. Would it ever be given blood?

"Men of my generation have been brought up in this threat of a great war that never comes; for forty years we have had it, so that it is with a note of incredulity that one tells oneself, "After all this war may happen. But can it happen?"

He proceeded to speculate upon the probability whether a great war would ever devastate western Europe again, and it was very evident to White that he wanted very much to persuade himself against that idea. It was too disagreeable for him to think it probable. The paper was dated 1910. It was in October, 1914, that White, who was still working upon the laborious uncertain account of Benham's life and thought he has recently published, read what Benham had written. Benham concluded that the common-sense of the world would hold up this danger until reason could get "to the head of things."

"There are already mighty forces in Germany," Benham wrote, "that will struggle very powerfully to avoid a war. And these forces increase. Behind the coarseness and the threatenings, the melodrama and the display of the vulgarer sort there arises a great and noble

people. . . . I have talked with Germans of the better kind. . . .
You cannot have a whole nation of Christophes. . . . There also the
true knighthood discovers itself. . . . I do not believe this war
will overtake us."

"WELL!" said White.

"I must go back to Germany and understand Germany better," the notes
went on.

But other things were to hold Benham back from that resolve. Other
things were to hold many men back from similar resolves until it was
too late for them. . . .

"It is preposterous that these monstrous dangers should lower over
Europe, because a certain threatening vanity has crept into the
blood of a people, because a few crude ideas go inadequately
controlled. . . . Does no one see what that metallic beast will do
if they once let it loose? It will trample cities; it will devour
nations. . . ."

White read this on the 9th of October, 1914. One crumpled evening
paper at his feet proclaimed in startled headlines: "Rain of
Incendiary Shells. Antwerp Ablaze." Another declared untruthfully
but impressively: "Six Zeppelins drop Bombs over the Doomed City."

He had bought all the evening papers, and had read and re-read them
and turned up maps and worried over strategic problems for which he
had no data at all--as every one did at that time--before he was
able to go on with Benham's manuscripts.

These pacific reassurances seemed to White's war-troubled mind like
finding a flattened and faded flower, a girl's love token, between
the pages of some torn and scorched and blood-stained book picked
out from a heap of loot after rapine and murder had had their

fill. . . .

"How can we ever begin over again?" said White, and sat for a long time staring gloomily into the fire, forgetting forgetting, forgetting too that men who are tired and weary die, and that new men are born to succeed them. . . .

"We have to begin over again," said White at last, and took up Benham's papers where he had laid them down. . . .

9

One considerable section of Benham's treatment of the Fourth Limitation was devoted to what he called the Prejudices of Social Position. This section alone was manifestly expanding into a large treatise upon the psychology of economic organization. . . .

It was only very slowly that he had come to realize the important part played by economic and class hostilities in the disordering of human affairs. This was a very natural result of his peculiar social circumstances. Most people born to wealth and ease take the established industrial system as the natural method in human affairs; it is only very reluctantly and by real feats of sympathy and disinterestedness that they can be brought to realize that it is natural only in the sense that it has grown up and come about, and necessary only because nobody is strong and clever enough to rearrange it. Their experience of it is a satisfactory experience. On the other hand, the better off one is, the wider is one's outlook and the more alert one is to see the risks and dangers of international dissensions. Travel and talk to foreigners open one's eyes to aggressive possibilities; history and its warnings become conceivable. It is in the nature of things that socialists and

labour parties should minimize international obligations and necessities, and equally so that autocracies and aristocracies and plutocracies should be negligent of and impatient about social reform.

But Benham did come to realize this broader conflict between worker and director, between poor man and possessor, between resentful humanity and enterprise, between unwilling toil and unearned opportunity. It is a far profounder and subtler conflict than any other in human affairs. "I can foresee a time," he wrote, "when the greater national and racial hatreds may all be so weakened as to be no longer a considerable source of human limitation and misery, when the suspicions of complexion and language and social habit are allayed, and when the element of hatred and aggression may be clean washed out of most religious cults, but I do not begin to imagine a time, because I cannot imagine a method, when there will not be great friction between those who employ, those who direct collective action, and those whose part it is to be the rank and file in industrialism. This, I know, is a limitation upon my confidence due very largely to the restricted nature of my knowledge of this sort of organization. Very probably resentment and suspicion in the mass and self-seeking and dishonesty in the fortunate few are not so deeply seated, so necessary as they seem to be, and if men can be cheerfully obedient and modestly directive in war time, there is no reason why ultimately they should not be so in the business of peace. But I do not understand the elements of the methods by which this state of affairs can be brought about.

"If I were to confess this much to an intelligent working man I know that at once he would answer 'Socialism,' but Socialism is no more a solution of this problem than eating is a solution when one is lost in the wilderness and hungry. Of course everybody with any intelligence wants Socialism, everybody, that is to say, wants to see all human efforts directed to the common good and a common end, but brought face to face with practical problems Socialism betrays a

vast insufficiency of practical suggestions. I do not say that Socialism would not work, but I do say that so far Socialists have failed to convince me that they could work it. The substitution of a stupid official for a greedy proprietor may mean a vanished dividend, a limited output and no other human advantage whatever. Socialism is in itself a mere eloquent gesture, inspiring, encouraging, perhaps, but beyond that not very helpful, towards the vast problem of moral and material adjustment before the race. That problem is incurably miscellaneous and intricate, and only by great multitudes of generous workers, one working at this point and one at that, secretly devoted knights of humanity, hidden and dispersed kings, unaware of one another, doubting each his right to count himself among those who do these kingly services, is this elaborate rightening of work and guidance to be done."

So from these most fundamental social difficulties he came back to his panacea. All paths and all enquiries led him back to his conception of aristocracy, conscious, self-disciplined, devoted, self-examining yet secret, making no personal nor class pretences, as the supreme need not only of the individual but the world.

10

It was the Labour trouble in the Transvaal which had brought the two schoolfellows together again. White had been on his way to Zimbabwe. An emotional disturbance of unusual intensity had driven him to seek consolations in strange scenery and mysterious desolations. It was as if Zimbabwe called to him. Benham had come to South Africa to see into the question of Indian immigration, and he was now on his way to meet Amanda in London. Neither man had given much heed to the gathering social conflict on the Rand until the storm burst about them. There had been a few paragraphs in the

papers about a dispute upon a point of labour etiquette, a question of the recognition of Trade Union officials, a thing that impressed them both as technical, and then suddenly a long incubated quarrel flared out in rioting and violence, the burning of houses and furniture, attacks on mines, attempts to dynamite trains. White stayed in Johannesburg because he did not want to be stranded up country by the railway strike that was among the possibilities of the situation. Benham stayed because he was going to London very reluctantly, and he was glad of this justification for a few days' delay. The two men found themselves occupying adjacent tables in the Sherborough Hotel, and White was the first to recognize the other. They came together with a warmth and readiness of intimacy that neither would have displayed in London.

White had not seen Benham since the social days of Amanda at Lancaster Gate, and he was astonished at the change a few years had made in him. The peculiar contrast of his pallor and his dark hair had become more marked, his skin was deader, his features seemed more prominent and his expression intenser. His eyes were very bright and more sunken under his brows. He had suffered from yellow fever in the West Indies, and these it seemed were the marks left by that illness. And he was much more detached from the people about him; less attentive to the small incidents of life, more occupied with inner things. He greeted White with a confidence that White was one day to remember as pathetic.

"It is good to meet an old friend," Benham said. "I have lost friends. And I do not make fresh ones. I go about too much by myself, and I do not follow the same tracks that other people are following. . . ."

What track was he following? It was now that White first heard of the Research Magnificent. He wanted to know what Benham was doing, and Benham after some partial and unsatisfactory explanation of his interest in insurgent Hindoos, embarked upon larger expositions.

"It is, of course, a part of something else," he amplified. He was writing a book, "an enormous sort of book." He laughed with a touch of shyness. It was about "everything," about how to live and how not to live. And "aristocracy, and all sorts of things." White was always curious about other people's books. Benham became earnest and more explicit under encouragement, and to talk about his book was soon to talk about himself. In various ways, intentionally and inadvertently, he told White much. These chance encounters, these intimacies of the train and hotel, will lead men at times to a stark frankness of statement they would never permit themselves with habitual friends.

About the Johannesburg labour trouble they talked very little, considering how insistent it was becoming. But the wide propositions of the Research Magnificent, with its large indifference to immediate occurrences, its vast patience, its tremendous expectations, contrasted very sharply in White's memory with the bitterness, narrowness and resentment of the events about them. For him the thought of that first discussion of this vast inchoate book into which Benham's life was flowering, and which he was ultimately to summarize, trailed with it a fringe of vivid little pictures; pictures of crowds of men hurrying on bicycles and afoot under a lowering twilight sky towards murmuring centres of disorder, of startling flares seen suddenly afar off, of the muffled galloping of troops through the broad dusty street in the night, of groups of men standing and watching down straight broad roads, roads that ended in groups of chimneys and squat buildings of corrugated iron. And once there was a marching body of white men in the foreground and a complicated wire fence, and a clustering mass of Kaffirs watching them over this fence and talking eagerly amongst themselves.

"All this affair here is little more than a hitch in the machinery," said Benham, and went back to his large preoccupation. . . .

But White, who had not seen so much human disorder as Benham, felt that it was more than that. Always he kept the tail of his eye upon that eventful background while Benham talked to him.

When the firearms went off he may for the moment have even given the background the greater share of his attention. . . .

11

It was only as White burrowed through his legacy of documents that the full values came to very many things that Benham said during these last conversations. The papers fitted in with his memories of their long talks like text with commentary; so much of Benham's talk had repeated the private writings in which he had first digested his ideas that it was presently almost impossible to disentangle what had been said and understood at Johannesburg from the fuller statement of those patched and corrected manuscripts. The two things merged in White's mind as he read. The written text took upon itself a resonance of Benham's voice; it eked out the hints and broken sentences of his remembered conversation.

But some things that Benham did not talk about at all, left by their mere marked absence an impression on White's mind. And occasionally after Benham had been talking for a long time there would be an occasional aphasia, such as is often apparent in the speech of men who restrain themselves from betraying a preoccupation. He would say nothing about Amanda or about women in general, he was reluctant to speak of Prothero, and another peculiarity was that he referred perhaps half a dozen times or more to the idea that he was a "prig." He seemed to be defending himself against some inner accusation, some unconquerable doubt of the entire adventure of his life. These half hints and hints by omission exercised the quick intuitions of

White's mind very keenly, and he drew far closer to an understanding of Benham's reserves than Benham ever suspected. . . .

At first after his parting from Amanda in London Benham had felt completely justified in his treatment of her. She had betrayed him and he had behaved, he felt, with dignity and self-control. He had no doubt that he had punished her very effectively, and it was only after he had been travelling in China with Prothero for some time and in the light of one or two chance phrases in her letters that he began to have doubts whether he ought to have punished her at all. And one night at Shanghai he had a dream in which she stood before him, dishevelled and tearful, his Amanda, very intensely his Amanda, and said that she was dirty and shameful and spoilt for ever, because he had gone away from her. Afterwards the dream became absurd: she showed him the black leopard's fur as though it was a rug, and it was now moth-eaten and mangey, the leopard skin that had been so bright and wonderful such a little time ago, and he awoke before he could answer her, and for a long time he was full of unspoken answers explaining that in view of her deliberate unfaithfulness the position she took up was absurd. She had spoilt her own fur. But what was more penetrating and distressing in this dream was not so much the case Amanda stated as the atmosphere of unconquerable intimacy between them, as though they still belonged to each other, soul to soul, as though nothing that had happened afterwards could have destroyed their common responsibility and the common interest of their first unstinted union. She was hurt, and of course he was hurt. He began to see that his marriage to Amanda was still infinitely more than a technical bond.

And having perceived that much he presently began to doubt whether she realized anything of the sort. Her letters fluctuated very much in tone, but at times they were as detached and guarded as a schoolgirl writing to a cousin. Then it seemed to Benham an extraordinary fraud on her part that she should presume to come into his dream with an entirely deceptive closeness and confidence. She

began to sound him in these latter letters upon the possibility of divorce. This, which he had been quite disposed to concede in London, now struck him as an outrageous suggestion. He wrote to ask her why, and she responded exasperatingly that she thought it was "better." But, again, why better? It is remarkable that although his mind had habituated itself to the idea that Easton was her lover in London, her thought of being divorced, no doubt to marry again, filled him with jealous rage. She asked him to take the blame in the divorce proceedings. There, again, he found himself ungenerous. He did not want to do that. Why should he do that? As a matter of fact he was by no means reconciled to the price he had paid for his Research Magnificent; he regretted his Amanda acutely. He was regretting her with a regret that grew when by all the rules of life it ought to be diminishing.

It was in consequence of that regret and his controversies with Prothero while they travelled together in China that his concern about what he called priggishness arose. It is a concern that one may suppose has a little afflicted every reasonably self-conscious man who has turned from the natural passionate personal life to religion or to public service or any abstract devotion. These things that are at least more extensive than the interests of flesh and blood have a trick of becoming unsubstantial, they shine gloriously and inspiringly upon the imagination, they capture one and isolate one and then they vanish out of sight. It is far easier to be entirely faithful to friend or lover than it is to be faithful to a cause or to one's country or to a religion. In the glow of one's first service that larger idea may be as closely spontaneous as a handclasp, but in the darkness that comes as the glow dies away there is a fearful sense of unreality. It was in such dark moments that Benham was most persecuted by his memories of Amanda and most distressed by this suspicion that the Research Magnificent was a priggishness, a pretentious logomachy. Prothero could indeed hint as much so skilfully that at times the dream of nobility seemed an insult to the sunshine, to the careless laughter of children, to the

good light in wine and all the warm happiness of existence. And then Amanda would peep out of the dusk and whisper, "Of course if you could leave me--! Was I not LIFE? Even now if you cared to come back to me-- For I loved you best and loved you still, old Cheetah, long after you had left me to follow your dreams. . . . Even now I am drifting further into lies and the last shreds of dignity drop from me; a dirty, lost, and shameful leopard I am now, who was once clean and bright. . . . You could come back, Cheetah, and you could save me yet. If you would love me. . . ."

In certain moods she could wring his heart by such imagined speeches, the very quality of her voice was in them, a softness that his ear had loved, and not only could she distress him, but when Benham was in this heartache mood, when once she had set him going, then his little mother also would rise against him, touchingly indignant, with her blue eyes bright with tears; and his frowsty father would back towards him and sit down complaining that he was neglected, and even little Mrs. Skelmersdale would reappear, bravely tearful on her chair looking after him as he slunk away from her through Kensington Gardens; indeed every personal link he had ever had to life could in certain moods pull him back through the door of self-reproach Amanda opened and set him aching and accusing himself of harshness and self-concentration. The very kittens of his childhood revived forgotten moments of long-repenting hardness. For a year before Prothero was killed there were these heartaches. That tragedy gave them their crowning justification. All these people said in this form or that, "You owed a debt to us, you evaded it, you betrayed us, you owed us life out of yourself, love and services, and you have gone off from us all with this life that was ours, to live by yourself in dreams about the rule of the world, and with empty phantoms of power and destiny. All this was intellectualization. You sacrificed us to the thin things of the mind. There is no rule of the world at all, or none that a man like you may lay hold upon. The rule of the world is a fortuitous result of incalculably multitudinous forces. But all of us you could have

made happier. You could have spared us distresses. Prothero died because of you. Presently it will be the turn of your father, your mother--Amanda perhaps. . . ."

He made no written note of his heartaches, but he made several memoranda about priggishness that White read and came near to understanding. In spite of the tugging at his heart-strings, Benham was making up his mind to be a prig. He weighed the cold uningratiating virtues of priggishness against his smouldering passion for Amanda, and against his obstinate sympathy for Prothero's grossness and his mother's personal pride, and he made his choice. But it was a reluctant choice.

One fragment began in the air. "Of course I had made myself responsible for her life. But it was, you see, such a confoundedly energetic life, as vigorous and as slippery as an eel. . . . Only by giving all my strength to her could I have held Amanda. . . . So what was the good of trying to hold Amanda? . . .

"All one's people have this sort of claim upon one. Claims made by their pride and their self-respect, and their weaknesses and dependences. You've no right to hurt them, to kick about and demand freedom when it means snapping and tearing the silly suffering tendrils they have wrapped about you. The true aristocrat I think will have enough grasp, enough steadiness, to be kind and right to every human being and still do the work that ought to be his essential life. I see that now. It's one of the things this last year or so of loneliness has made me realize; that in so far as I have set out to live the aristocratic life I have failed. Instead I've discovered it--and found myself out. I'm an overstrung man. I go harshly and continuously for one idea. I live as I ride. I blunder through my fences, I take off too soon. I've no natural ease of mind or conduct or body. I am straining to keep hold of a thing too big for me and do a thing beyond my ability. Only after Prothero's death was it possible for me to realize the prig I have

always been, first as regards him and then as regards Amanda and my mother and every one. A necessary unavoidable priggishness. . . ."I do not see how certain things can be done without prigs, people, that is to say, so concentrated and specialized in interest as to be a trifle inhuman, so resolved as to be rather rhetorical and forced. . . . All things must begin with clumsiness, there is no assurance about pioneers. . . .

"Some one has to talk about aristocracy, some one has to explain aristocracy. . . . But the very essence of aristocracy, as I conceive it, is that it does not explain nor talk about itself. . . .

"After all it doesn't matter what I am. . . . It's just a private vexation that I haven't got where I meant to get. That does not affect the truth I have to tell. . . .

"If one has to speak the truth with the voice of a prig, still one must speak the truth. I have worked out some very considerable things in my research, and the time has come when I must set them out clearly and plainly. That is my job anyhow. My journey to London to release Amanda will be just the end of my adolescence and the beginning of my real life. It will release me from my last entanglement with the fellow creatures I have always failed to make happy. . . . It's a detail in the work. . . . And I shall go on.

But I shall feel very like a man who goes back for a surgical operation.

"It's very like that. A surgical operation, and when it is over perhaps I shall think no more about it.

"And beyond these things there are great masses of work to be done. So far I have but cleared up for myself a project and outline of living. I must begin upon these masses now, I must do what I can upon the details, and, presently, I shall see more clearly where

other men are working to the same ends. . . ."

12

Benham's expedition to China with Prothero was essentially a wrestle between his high resolve to work out his conception of the noble life to the utmost limit and his curiously invincible affection and sympathy for the earthliness of that inglorious little don. Although Benham insisted upon the dominance of life by noble imaginations and relentless reasonableness, he would never altogether abandon the materialism of life. Prothero had once said to him, "You are the advocate of the brain and I of the belly. Only, only we respect each other." And at another time, "You fear emotions and distrust sensations. I invite them. You do not drink gin because you think it would make you weep. But if I could not weep in any other way I would drink gin." And it was under the influence of Prothero that Benham turned from the haughty intellectualism, the systematized superiorities and refinements, the caste marks and defensive dignities of India to China, that great teeming stinking tank of humorous yellow humanity.

Benham had gone to Prothero again after a bout of elevated idealism. It was only very slowly that he reconciled his mind to the idea of an entirely solitary pursuit of his aristocratic dream. For some time as he went about the world he was trying to bring himself into relationship with the advanced thinkers, the liberal-minded people who seemed to promise at least a mental and moral co-operation. Yet it is difficult to see what co-operation was possible unless it was some sort of agreement that presently they should all shout together. And it was after a certain pursuit of Rabindranath Tagore, whom he met in Hampstead, that a horror of perfect manners and perfect finish came upon him, and he fled from that starry calm

to the rich uncleanness of the most undignified fellow of Trinity. And as an advocate and exponent of the richness of the lower levels of life, as the declared antagonist of caste and of the uttermost refinements of pride, Prothero went with Benham by way of Siberia to the Chinese scene.

Their controversy was perceptible at every dinner-table in their choice of food and drink. Benham was always wary and Prothero always appreciative. It peeped out in the distribution of their time, in the direction of their glances. Whenever women walked about, Prothero gave way to a sort of ethnological excitement. "That girl--a wonderful racial type." But in Moscow he was sentimental. He insisted on going again to the Cosmopolis Bazaar, and when he had ascertained that Anna Alexievna had vanished and left no trace he prowled the streets until the small hours.

In the eastward train he talked intermittently of her. "I should have defied Cambridge," he said.

But at every stopping station he got out upon the platform ethnologically alert. . . .

Theoretically Benham was disgusted with Prothero. Really he was not disgusted at all. There was something about Prothero like a sparrow, like a starling, like a Scotch terrier. . . . These, too, are morally objectionable creatures that do not disgust. . . .

Prothero discoursed much upon the essential goodness of Russians. He said they were a people of genius, that they showed it in their faults and failures just as much as in their virtues and achievements. He extolled the "germinating disorder" of Moscow far above the "implacable discipline" of Berlin. Only a people of inferior imagination, a base materialist people, could so maintain its attention upon precision and cleanliness. Benham was roused to defence against this paradox. "But all exaltation neglects," said

Prothero. "No religion has ever boasted that its saints were spick and span." This controversy raged between them in the streets of Irkutsk. It was still burning while they picked their way through the indescribable filth of Peking.

"You say that all this is a fine disdain for material things," said Benham. "But look out there!"

Apart to their argument a couple of sturdy young women came shuffling along, cleaving the crowd in the narrow street by virtue of a single word and two brace of pails of human ordure.

"That is not a fine disdain for material things," said Benham. "That is merely individualism and unsystematic living."

"A mere phase of frankness. Only frankness is left to them now. The Manchus crippled them, spoilt their roads and broke their waterways. European intervention paralyses every attempt they make to establish order on their own lines. In the Ming days China did not reek. . . . And, anyhow, Benham, it's better than the silly waste of London. . . ."

And in a little while Prothero discovered that China had tried Benham and found him wanting, centuries and dynasties ago.

What was this new-fangled aristocratic man, he asked, but the ideal of Confucius, the superior person, "the son of the King"? There you had the very essence of Benham, the idea of self-examination, self-preparation under a vague Theocracy. ("Vaguer," said Benham, "for the Confucian Heaven could punish and reward.") Even the elaborate sham modesty of the two dreams was the same. Benham interrupted and protested with heat. And this Confucian idea of the son of the King, Prothero insisted, had been the cause of China's paralysis. "My idea of nobility is not traditional but expectant," said Benham. "After all, Confucianism has held together a great pacific state far

longer than any other polity has ever lasted. I'll accept your Confucianism. I've not the slightest objection to finding China nearer salvation than any other land. Do but turn it round so that it looks to the future and not to the past, and it will be the best social and political culture in the world. That, indeed, is what is happening. Mix Chinese culture with American enterprise and you will have made a new lead for mankind."

From that Benham drove on to discoveries. "When a man thinks of the past he concentrates on self; when he thinks of the future he radiates from self. Call me a neo-Confucian; with the cone opening forward away from me, instead of focussing on me. . . ."

"You make me think of an extinguisher," said Prothero.

"You know I am thinking of a focus," said Benham. "But all your thought now has become caricature. . . . You have stopped thinking. You are fighting after making up your mind. . . ."

Prothero was a little disconcerted by Benham's prompt endorsement of his Chinese identification. He had hoped it would be exasperating. He tried to barb his offence. He amplified the indictment. All cultures must be judged by their reaction and fatigue products, and Confucianism had produced formalism, priggishness, humbug. . . . No doubt its ideals had had their successes; they had unified China, stamped the idea of universal peace and good manners upon the greatest mass of population in the world, paved the way for much beautiful art and literature and living. "But in the end, all your stern orderliness, Benham," said Prothero, "only leads to me. The human spirit rebels against this everlasting armour on the soul. After Han came T'ang. Have you never read Ling Po? There's scraps of him in English in that little book you have--what is it?--the LUTE OF JADE? He was the inevitable Epicurean; the Omar Khayyam after the Prophet. Life must relax at last. . . ."

"No!" cried Benham. "If it is traditional, I admit, yes; but if it is creative, no. . . ."

Under the stimulation of their undying controversy Benham was driven to closer enquiries into Chinese thought. He tried particularly to get to mental grips with English-speaking Chinese. "We still know nothing of China," said Prothero. "Most of the stuff we have been told about this country is mere middle-class tourists' twaddle. We send merchants from Brixton and missionaries from Glasgow, and what doesn't remind them of these delectable standards seems either funny to them or wicked. I admit the thing is slightly pot-bound, so to speak, in the ancient characters and the ancient traditions, but for all that, they KNOW, they HAVE, what all the rest of the world has still to find and get. When they begin to speak and write in a modern way and handle modern things and break into the soil they have scarcely touched, the rest of the world will find just how much it is behind. . . . Oh! not soldiering; the Chinese are not such fools as that, but LIFE. . . ."

Benham was won to a half belief in these assertions.

He came to realize more and more clearly that while India dreams or wrestles weakly in its sleep, while Europe is still hopelessly and foolishly given over to militant monarchies, racial vanities, delirious religious feuds and an altogether imbecile fumbling with loaded guns, China, even more than America, develops steadily into a massive possibility of ordered and aristocratic liberalism. . . .

The two men followed their associated and disconnected paths. Through Benham's chance speeches and notes, White caught glimpses, as one might catch glimpses through a moving trellis, of that bilateral adventure. He saw Benham in conversation with liberal-minded mandarins, grave-faced, bald-browed persons with disciplined movements, who sat with their hands thrust into their sleeves talking excellent English; while Prothero pursued enquiries of an

intenser, more recondite sort with gentlemen of a more confidential type. And, presently, Prothero began to discover and discuss the merits of opium.

For if one is to disavow all pride and priggishness, if one is to find the solution of life's problem in the rational enjoyment of one's sensations, why should one not use opium? It is art materialized. It gives tremendous experiences with a minimum of exertion, and if presently its gifts diminish one need but increase the quantity. Moreover, it quickens the garrulous mind, and steadies the happiness of love. Across the varied adventures of Benham's journey in China fell the shadow first of a suspicion and then of a certainty. . . .

The perfected and ancient vices of China wrapped about Prothero like some tainted but scented robe, and all too late Benham sought to drag him away. And then in a passion of disgust turned from him.

"To this," cried Benham, "one comes! Save for pride and fierceness!"

"Better this than cruelty," said Prothero talking quickly and clearly because of the evil thing in his veins. "You think that you are the only explorer of life, Benham, but while you toil up the mountains I board the house-boat and float down the stream. For you the stars, for me the music and the lanterns. You are the son of a mountaineering don, and I am a Chinese philosopher of the riper school. You force yourself beyond fear of pain, and I force myself beyond fear of consequences. What are we either of us but children groping under the black cloak of our Maker?--who will not blind us with his light. Did he not give us also these lusts, the keen knife and the sweetness, these sensations that are like pineapple smeared with saltpetre, like salted olives from heaven, like being flayed with delight. . . . And did he not give us dreams fantastic beyond any lust whatever? What is the good of talking? Speak to your own

kind. I have gone, Benham. I am lost already. There is no resisting any more, since I have drugged away resistance. Why then should I come back? I know now the symphonies of the exalted nerves; I can judge; and I say better lie and hear them to the end than come back again to my old life, to my little tin-whistle solo, my--effort! My EFFORT! . . . I ruin my body. I know. But what of that? . . . I shall soon be thin and filthy. What of the grape-skin when one has had the pulp?"

"But," said Benham, "the cleanness of life!"

"While I perish," said Prothero still more wickedly, "I say good things. . . ."

13

White had a vision of a great city with narrow crowded streets, hung with lank banners and gay with vertical vermilion labels, and of a pleasant large low house that stood in a garden on a hillside, a garden set with artificial stones and with beasts and men and lanterns of white porcelain, a garden which overlooked this city. Here it was that Benham stayed and talked with his host, a man robed in marvellous silks and subtle of speech even in the European languages he used, and meanwhile Prothero, it seemed, had gone down into the wickedness of the town below. It was a very great town indeed, spreading for miles along the banks of a huge river, a river that divided itself indolently into three shining branches so as to make islands of the central portion of the place. And on this river swarmed for ever a vast flotilla of ships and boats, boats in which people lived, boats in which they sought pleasure, moored places of assembly, high-pooped junks, steamboats, passenger sampans, cargo craft, such a water town in streets and lanes, endless miles of it,

as no other part of the world save China can display. In the daylight it was gay with countless sunlit colours embroidered upon a fabric of yellow and brown, at night it glittered with a hundred thousand lights that swayed and quivered and were reflected quiveringly upon the black flowing waters.

And while Benham sat and talked in the garden above came a messenger who was for some reason very vividly realized by White's imagination. He was a tall man with lack-lustre eyes and sunken cheeks that made his cheek bones very prominent, and gave his thin-lipped mouth something of the geniality of a skull, and the arm he thrust out of his yellow robe to hand Prothero's message to Benham was lean as a pole. So he stood out in White's imagination, against the warm afternoon sky and the brown roofs and blue haze of the great town below, and was with one exception the distinctest thing in the story. The message he bore was scribbled by Prothero himself in a nerveless scrawl: "Send a hundred dollars by this man. I am in a frightful fix."

Now Benham's host had been twitting him with the European patronage of opium, and something in this message stirred his facile indignation. Twice before he had had similar demands. And on the whole they had seemed to him to be unreasonable demands. He was astonished that while he was sitting and talking of the great world-republic of the future and the secret self-directed aristocracy that would make it possible, his own friend, his chosen companion, should thus, by this inglorious request and this ungainly messenger, disavow him. He felt a wave of intense irritation.

"No," he said, "I will not."

And he was too angry to express himself in any language understandable by his messenger.

His host intervened and explained after a few questions that the

occasion was serious. Prothero, it seemed, had been gambling.

"No," said Benham. "He is shameless. Let him do what he can."

The messenger was still reluctant to go.

And scarcely had he gone before misgivings seized Benham.

"Where IS your friend?" asked the mandarin.

"I don't know," said Benham.

"But they will keep him! They may do all sorts of things when they find he is lying to them."

"Lying to them?"

"About your help."

"Stop that man," cried Benham suddenly realizing his mistake. But when the servants went to stop the messenger their intentions were misunderstood, and the man dashed through the open gate of the f pulling down and trying again. Hope and disappointments and much need for philosophy. . . . I see myself now for the little workman I am upon this tremendous undertaking. And all my life hereafter goes to serve it. . . ."

He turned his sombre eyes upon his friend. He spoke with a grim enthusiasm. "I'm a prig. I'm a fanatic, White. But I have something clear, something better worth going on with than any adventure of personal relationship could possibly be. . . ."

And suddenly he began to tell White as plainly as he could of the faith that had grown up in his mind. He spoke with a touch of defiance, with the tense force of a man who shrinks but overcomes

his shame. "I will tell you what I believe."

He told of his early dread of fear and baseness, and of the slow development, expansion and complication of his idea of self-respect until he saw that garden and made off down the winding road.

"Stop him!" cried Benham, and started in pursuit, suddenly afraid for Prothero.

The Chinese are a people of great curiosity, and a small pebble sometimes starts an avalanche. . . .

White pieced together his conception of the circles of disturbance that spread out from Benham's pursuit of Prothero's flying messenger.

For weeks and months the great town had been uneasy in all its ways because of the insurgent spirits from the south and the disorder from the north, because of endless rumours and incessant intrigue. The stupid manoeuvres of one European "power" against another, the tactlessness of missionaries, the growing Chinese disposition to meet violence and force with violence and force, had fermented and brewed the possibility of an outbreak. The sudden resolve of Benham to get at once to Prothero was like the firing of a mine. This tall, pale-faced, incomprehensible stranger charging through the narrow streets that led to the pleasure-boats in the south river seemed to many a blue-clad citizen like the White Peril embodied. Behind him came the attendants of the rich man up the hill; but they surely were traitors to help this stranger.

Before Benham could at all realize what was happening he found his way to the river-boat on which he supposed Prothero to be detained, barred by a vigorous street fight. Explanations were impossible; he joined in the fight.

For three days that fight developed round the mystery of Prothero's disappearance.

It was a complicated struggle into which the local foreign traders on the river-front and a detachment of modern drilled troops from the up-river barracks were presently drawn. It was a struggle that was never clearly explained, and at the end of it they found Prothero's body flung out upon a waste place near a little temple on the river bank, stabbed while he was asleep. . . .

And from the broken fragments of description that Benham let fall, White had an impression of him hunting for all those three days through the strange places of a Chinese city, along narrow passages, over queer Venetian-like bridges, through the vast spaces of empty warehouses, in the incense-scented darkness of temple yards, along planks that passed to the dark hulls of secret barges, in quick-flying boats that slipped noiselessly among the larger craft, and sometimes he hunted alone, sometimes in company, sometimes black figures struggled in the darkness against dim-lit backgrounds and sometimes a swarm of shining yellow faces screamed and shouted through the torn paper windows. . . . And then at the end of this confused effect of struggle, this Chinese cinematograph film, one last picture jerked into place and stopped and stood still, a white wall in the sunshine come upon suddenly round a corner, a dirty flagged passage and a stiff crumpled body that had for the first time an inexpressive face. . . .

14

Benham sat at a table in the smoking-room of the Sherborough Hotel at Johannesburg and told of these things. White watched him from an armchair. And as he listened he noted again the intensification of

Benham's face, the darkness under his brows, the pallor of his skin, the touch of red in his eyes. For there was still that red gleam in Benham's eyes; it shone when he looked out of a darkness into a light. And he sat forward with his arms folded under him, or moved his long lean hand about over the things on the table.

"You see," he said, "this is a sort of horror in my mind. Things like this stick in my mind. I am always seeing Prothero now, and it will take years to get this scar off my memory again. Once before--about a horse, I had the same kind of distress. And it makes me tender, sore-minded about everything. It will go, of course, in the long run, and it's just like any other ache that lays hold of one. One can't cure it. One has to get along with it. . . .

"I know, White, I ought to have sent that money, but how was I to know then that it was so imperative to send that money? . . .

"At the time it seemed just pandering to his vices. . . .

"I was angry. I shall never subdue that kind of hastiness altogether. It takes me by surprise. Before the messenger was out of sight I had repented. . . .

"I failed him. I have gone about in the world dreaming of tremendous things and failing most people. My wife too. . . ."

He stopped talking for a little time and folded his arms tight and stared hard in front of himself, his lips compressed.

"You see, White," he said, with a kind of setting of the teeth, "this is the sort of thing one has to stand. Life is imperfect. Nothing can be done perfectly. And on the whole--" He spoke still more slowly, "I would go through again with the very same things that have hurt my people. If I had to live over again. I would try to do the things without hurting the people, but I would do the

things anyhow. Because I'm raw with remorse, it does not follow that on the whole I am not doing right. Right doing isn't balm. If I could have contrived not to hurt these people as I have done, it would have been better, just as it would be better to win a battle without any killed or wounded. I was clumsy with them and they suffered, I suffer for their suffering, but still I have to stick to the way I have taken. One's blunders are accidents. If one thing is clearer than another it is that the world isn't accident-proof. . . .

But I wish I had sent those dollars to Prothero. . . . God! White, but I lie awake at night thinking of that messenger as he turned away. . . . Trying to stop him. . . .

"I didn't send those dollars. So fifty or sixty people were killed and many wounded. . . . There for all practical purposes the thing ends. Perhaps it will serve to give me a little charity for some other fool's haste and blundering. . . .

"I couldn't help it, White. I couldn't help it. . . .

"The main thing, the impersonal thing, goes on. One thinks, one learns, one adds one's contribution of experience and understanding. The spirit of the race goes on to light and comprehension. In spite of accidents. In spite of individual blundering.

"It would be absurd anyhow to suppose that nobility is so easy as to come slick and true on every occasion. . . .

"If one gives oneself to any long aim one must reckon with minor disasters. This Research I undertook grows and grows. I believe in it more and more. The more it asks from me the more I give to it. When I was a youngster I thought the thing I wanted was just round the corner. I fancied I would find out the noble life in a year or two, just what it was, just where it took one, and for the rest of my life I would live it. Finely. But I am just one of a multitude

of men, each one going a little wrong, each one achieving a little right. And the noble life is a long, long way ahead. . . . We are working out a new way of life there is no honour nor pride for a man until he refers his life to ends and purposes beyond himself. An aht rise instantly out of all

this squalor and evil temper. . . . What does all this struggle here amount to? On one side unintelligent greed, unintelligent resentment on the other; suspicion everywhere. . . .

"And you know, White, at bottom THEY ALL WANT TO BE DECENT!"

"If only they had light enough in their brains to show them how." It's such a plain job they have here too, a new city, the simplest industries, freedom from war, everything to make a good life for men, prosperity, glorious sunshine, a kind of happiness in the air. And mismanagement, fear, indulgence, jealousy, prejudice, stupidity, poison it all. A squabble about working on a Saturday afternoon, a squabble embittered by this universal shadow of miner's phthving for mankind, a new rule, a new conscience. It's no small job for all of us. There must be lifetimes of building up and lifetimes oristocrat must be loyal. So it has ever been, but a modern aristocrat must also be lucid; there it is that one has at once the demand for kingship and the repudiation of all existing states and kings. In this manner he had come to his idea of a great world republic that must replace the little warring kingdoms of the present, to the conception of an unseen kingship ruling the whole globe, to his King Invisible, who is the Lord of Truth and all sane loyalty. "There," he said, "is the link of our order, the new knighthood, the new aristocracy, that must at last rule the earth. There is our Prince. He is in me, he is in you; he is latent in all mankind. I have worked this out and tried it and lived it, and I know that outwardly and inwardly this is the way a man must live, or else be a poor thing and a base one. On great occasions and small occasions I have failed myself a thousand times, but no failure lasts if your faith

lasts. What I have learnt, what I have thought out and made sure, I want now to tell the world. Somehow I will tell it, as a book I suppose, though I do not know if I shall ever be able to make a book. But I have away there in London or with me here all the masses of notes I have made in my search for the life that is worth while living. . . . We who are self-appointed aristocrats, who are not ashamed of kingship, must speak to one another. . . .

"We can have no organization because organizations corrupt. . . .

"No recognition. . . .

"But we can speak plainly. . . ."

(As he talked his voice was for a space drowned by the jingle and voices of mounted police riding past the hotel.)

"But on one side your aristocracy means revolution," said White. "It becomes a political conspiracy."

"Manifestly. An open conspiracy. It denies the king upon the stamps and the flag upon the wall. It is the continual proclamation of the Republic of Mankind."

15

The earlier phases of violence in the Rand outbreak in 1913 were manifest rather in the outskirts of Johannesburg than at the centre. "Pulling out" was going on first at this mine and then that, there were riots in Benoni, attacks on strike breakers and the smashing up of a number of houses. It was not until July the 4th that, with the suppression of a public meeting in the market-place, Johannesburg

itself became the storm centre.

Benham and White were present at this marketplace affair, a confused crowded occasion, in which a little leaven of active men stirred throisis that the masters were too incapable and too mean to prevent.

"Oh, God!" cried Benham, "when will men be princes and take hugh a large uncertain multitude of decently dressed onlookers.

The whole big square was astir, a swaying crowd of men. A ramshackle platform improvised upon a trolley struggled through the swarming straw hats to a street corner, and there was some speaking. At first it seemed as though military men were using this platform, and then it was manifestly in possession of an excited knot of labour leaders with red rosettes. The military men had said their say and got down. They came close by Benham, pushing their way across the square. "We've warned them," said one. A red flag, like some misunderstood remark at a tea-party, was fitfully visible and incomprehensible behind the platform. Somebody was either pitched or fell off the platform. One could hear nothing from the speakers except a minute bleating. . . .

Then there were shouts that the police were charging. A number of mounted men trotted into the square. The crowd began a series of short rushes that opened lanes for the passage of the mounted police as they rode to and fro. These men trotted through the crowd, scattering knots of people. They carried pick-handles, but they did not seem to be hitting with them. It became clear that they aimed at the capture of the trolley. There was only a feeble struggle for the trolley; it was captured and hauled through the scattered spectators in the square to the protection of a small impassive body of regular cavalry at the opposite corner. Then quite a number of people seemed to be getting excited and fighting. They appeared to be vaguely fighting the foot-police, and the police seemed to be

vaguely pushing through them and dispersing them. The roof of a little one-story shop became prominent as a centre of vigorous stone-throwing.

It was no sort of battle. Merely the normal inconsecutiveness of human affairs had become exaggerated and pugnacious. A meeting was being prevented, and the police engaged in the operation were being pelted or obstructed. Mostly people were just looking on.

"It amounts to nothing," said Benham. "Even if they held a meeting, what could happen? Why does the Government try to stop it?"

The drifting and charging and a little booing went on for some time. Every now and then some one clambered to a point of vantage, began a speech and was pulled down by policemen. And at last across the confusion came an idea, like a wind across a pond.

The strikers were to go to the Power Station.

That had the effect of a distinct move in the game. The Power Station was the centre of Johannesburg's light and energy. There if anywhere it would be possible to express one's disapproval of the administration, one's desire to embarrass and confute it. One could stop all sorts of things from the Power Station. At any rate it was a repartee to the suppression of the meeting. Everything will be soon--when one comes to death then everything is at one's fingertips--I can feel that greater wback of a number of Everybody seemed gladdened by a definite project.

Benham and White went with the crowd.

At the intersection of two streets they were held up for a time; the scattered drift of people became congested. Gliding slowly across the mass came an electric tram, an entirely unbattered tram with even its glass undamaged, and then another and another. Strikers,

with the happy expression of men who have found something expressive to do, were escorting the trams off the street. They were being meticulously careful with them. Never was there less mob violence in a riot. They walked by the captured cars almost deferentially, like rough men honoured by a real lady's company. And when White and Benham reached the Power House the marvel grew. The rioters were already in possession and going freely over the whole place, and they had injured nothing. They had stopped the engines, but they had not even disabled them. Here too manifestly a majority of the people were, like White and Benham, merely lookers-on.

"But this is the most civilized rioting," said Benham. "It isn't rioting; it's drifting. Just as things drifted in Moscow. Because nobody has the rudder. . . ."

"What maddens me," he said, "is the democracy of the whole thing. White! I HATE this modern democracy. Democracy and inequality! Was there ever an absurder combination? What is the good of a social order in which the men at the top are commoner, meaner stuff than the men underneath, the same stuff, just spoilt, spoilt by prosperity and opportunity and the conceit that comes with advantage? This trouble wants so little, just a touch of aristocracy, just a little cultivated magnanimity, just an inkling of responsibility, and the place migold of life? When will the kingship in us wake up and come to its own? . . . Look at this place! Look at this place! . . . The easy, accessible happiness! The manifest prosperity. The newness and the sunshine. And the silly bitterness, the rage, the mischief and miseries! . . ."

And then: "It's not our quarrel. . . ."

"It's amazing how every human quarrel draws one in to take sides. Life is one long struggle against the incidental. I can feel my anger gathering against the Government here in spite of my reason.

I want to go and expostulate. I have a ridiculous idea that I ought to go off to Lord Glindividuals into the roadway and then a derisive shouting. Nobody had been hit. The soldiers had fired in the air.

"But thiadstone or Botha and expostulate. . . . What good would it do? They move in the magic circles of their own limitations, an official, a politician--how would they put it?-- 'with many things to consider. . . .'

"It's my weakness to be drawn into quarrels. It's a thing I have to guard against. . . .

"What does it all amount to? It is like a fight between navvies in a tunnel to settle the position of the Pole star. It doesn't concern us. . . . Oh! it doesn't indeed concern us. It's a scuffle in the darkness, and our business, the business of all brains, the only permanent good work is to light up the world. . . . There will be mischief and hatred here and suppression and then forgetfulness, and then things will go on again, a little better or a little worse. . . ."

"I'm tired of this place, White, and of all such places. I'm tired of the shouting and running, the beating and shooting. I'm sick of all the confusions of life's experience, which tells only of one need amidst an endless multitude of distresses. I've seen my fill of wars and disputes and struggles. I see now how a man may grow weary at last of life and its disorders, its unreal exacting disorders, its blunders and its remorse. No! I want to begin upon the realities I have made for myself. For they are the realities. I want to go now to some quiet corner where I can polish what I have learnt, sort out my accumulations, be undisturbed by these transitory symptomatic things. . . .

"What was that boy saying? They are burning the STAR office. . . .

Well, let them. . . ."

And as if to emphasize his detachment, his aversion, from the things that hurried through the night about them, from the red flare in the sky and the distant shouts and revolver shots and scuffling flights down side streets, he began to talk again of aristocracy and the making of greatness and a new great spirit in men. All the rest of his life, he said, must be given to that. He would say his thing plainly and honestly and afterwards other men would say it clearly and beautifully; here it would touch a man and there it would touch a man; the Invisible King in us all would find himself and know himself a little in this and a little in that, and at last a day would come, when fair things and fine things would rule the world and such squalor as this about them would be red and strange to his face with both hands; above them his eyes were round and anxious. Blood came out between his fingers. He shouted out something about "Foolery!"

Haroun al Raschid was flinging aside all this sublime indifference to current things. . . .

But the carbines spoke again.

Benham seemed to run unexpectedly against something invisible. He spun right round and fell down into a sitting position. He sat looking surprised.

After one moment of blank funk White drew out his pocket handkerchief, held it arm high by way of a white flag, and ran out from the piazza of the hotel.

"Are you hit?" cried White dropping to his knees and making himself as compact as possible. "Benham!"

Benham, after a moment of perplexed thought answered in a strange voice, a whisper into which a whistling note had been mixed.

"It was stupid of me to come out here. Not my quarrel. Faults on both sides. And now I can't go as impossible any more for men as a Stone Age Corroboree. . . .

Late or soon?

Benham sought for some loose large measure of time.

"Before those constellations above us have changed their shapes. . . .

"Does it matter if we work at something that will take a hundred years or ten thousand years? It will never come in our lives, White. Not soon enough for that. But after that evorld I shall never see as one feels the dawn coming through the last darkness. . . ."

16

The attack on the Rand Club began while Benham and White were at lunch in the dining-room at the Sherborough on the day following the burning of the STAR office. The Sherborough dining-room was on the first floor, and the Venetian window beside their table opened on to a verandah above a piazza. As they talked they became aware of an excitement in the street below, shouting and running and then a sound of wheels and the tramp of a body of soldiers marching

quickly. White stood up and looked. "They're seizing the stuff in the gunshops," he said, sitting down again. "It's amazing they haven't done it before."

They went on eating and discussing the work of a medical mission at Mukden that had won Benham's admiration. . . .

A revolver cracked in the street and there was a sound of glass smashing. Then more revolver shots. "That's at the big club at the corner, I think," said Benham and went out upon the verandah.

Up and down the street mischief was afoot. Outside the Rand Club in the cross street a considerable mass of people had accumulated, and was being hustled by a handful of khaki-clad soldiers. Down the street people were looking in the direction of the market-place and then suddenly a rush of figures flooded round the corner, first a froth of scattered individuals and then a mass, a column, marching with an appearance of order and waving a flag. It was a poorly disciplined body, it fringed out into a swarm of sympathizers and spectators upon the side walk, and at the head of it two men disputed. They seemed to be differing about the direction of the whole crowd. Suddenly one smote the other with his fist, a blow that hurled him sideways, and then turned with a triumphant gesture to the following ranks, waving his arms in the air. He was a tall lean man, hatless and collarless, greyhaired and wild-eyed. On he came, gesticulating gauntly, past the hotel.

And then up the street something happened. Benham's attention was turned round to it by a checking, by a kind of catch in the breath, on the part of the advancing procession under the verandah.

The roadway beyond the club had suddenly become clear. Across it a dozen soldiers had appeared and dismounted methodically and lined out, with their carbines in readiness. The mounted men at the club corner had vanished, and the people there had swayed about towards

this new threat. Quite abruptly the miscellaneous noises of the crowd ceased. Understanding seized upon every one.

These soldiers were going to fire. . . .

The brown uniformed figures moved like automata; the rifle shots rang out almost in one report. . . .

There was a rush in the crowd towards doorways and side streets, an enquiring pause, the darting s is a stupid game," said Benham. "Why did they fire at all?"

The tall man who had led the mob had run out into the middle of the road. His commando was a little disposed to assume a marginal position, and it had to be reassured. He was near enough for Benham to see his face. For a time it looked anxious and thoughtful. Then he seemed to jump to his decision. He unbuttoned and opened his coat wide as if defying the soldiers. "Shoot," he bawled, "Shoot, if you dare!"

A little uniform movement of the soldiers answered him. The small figure of the officer away there was inaudible. The coat of the man below flapped like the wings of a crowing cock before a breast of dirty shirt, the hoarse voice cracked with excitement, "Shoot, if you dare. Shoot, if you dare! See!"

Came the metallic bang of the carbines again, and in the instant the leader collapsed in the road, a sprawl of clothes, hit by half a dozen bullets. It was an extraordinary effect. As though the figure had been deflated. It was incredible that a moment before this thing had been a man, an individual, a hesitating complicated purpose.

"Good God!" cried Benham, "but--this is horrible!"

The heap of garments lay still. The red hand that stretched out towards the soldiers never twitched.

The spectacular silence broke into a confusion of sounds, women shrieked, men cursed, some fled, some sought a corner from which they might still see, others pressed forward. "Go for the swine!" bawled a voice, a third volley rattled over the heads of the people, and in the road below a man with a rifle halted, took aim, and answered the soldiers' fire. "Look out!" cried White who was watching the soldiers, and ducked. "This isn't in the air!"

Came a straggling volley again, like a man running a metal hammer very rapidly along iron corrugations, and this time people were dropping all over the road. One white-faced man not a score of yards away fell with a curse and a sob, struggled up, staggered for some yards with blood running abundantly from his neck, and fell and never stirred again. Another went down upon his back clumsily in the roadway and lay wringing his hands faster and faster until suddenly with a movement like a sigh they dropped inert by his side. A straw-hatted youth in a flannel suit ran and stopped and ran again. He seemed to be holding something in his fingers. He went right past
the hotel

and stumbled and suddenly sprawled headlong at the opposite corner. The majority of the crowd had already vanished into doorways and side streets. But there was still shouting and there was still a remnant of amazed and angry men in the roadway--and one or two angry women. They were not fighting. Indeed they were unarmed, but if they had had weapons now they would certainly have used them.

"But this is preposterous!" cried Benham. "Preposterous. Those soldiers are never going to shoot again! This must stop."

He stood hesitating for a moment and then turned about and dashed for the staircase. "Good Heaven!" cried White. "What are you going to do?"

Benham was going to stop that conflict very much as a man might go to stop a clock that is striking unwarrantably and amazingly. He was going to stop it because it annoyed his sense of human dignity.

White hesitated for a moment and then followed, crying "Benham!"

But there was no arresting this last outbreak of Benham's all too impatient kingship. He pushed aside a ducking German waiter who was peeping through the glass doors, and rushed out of the hotel. With a gesture of authority he ran forward into the middle of the street, holding up his hand, in which he still held his dinner napkin clenched like a bomb. White believes firmly that Benham thought he would be able to dominate everytt up. I will sit here a moment and pull myself together. Perhaps I'm--I must be shot. But it seemed to come--inside me. . . . If I should be hurt. Am I hurt? . . . Will you see to that book of mine, White? It's odd. A kind of faintness. . . . What?"

"I will see after your book," said White and glanced at his hand because it felt wet, and was astonished to discover it bright red. He forgot about himself then, and the fresh flight of bullets down the street.

The immediate effect of this blood was that he said something more about the book, a promise, a definite promise. He could never recall his exact words, but their intention was binding. He conveyed his absolute acquiescence with Benham's wishes whatever they were. His life for that moment was unreservedly at his friend's disposal. . . .

White never knew if his promise was heard. Benham had stopped

speaking quite abruptly with that "What?"

He stared in front of him with a doubtful expression, like a man who is going to be sick, and then, in an instant, every muscle seemed to give way, he shuddered, his head flopped, and White held a dead man in his arms.

THE ENVOY

PREFACE

This book sets out as forcibly and exactly as possible the religious belief of the writer. That belief is not orthodox Christianity; it is not, indeed, Christianity at all; its core nevertheless is a profound belief in a personal and intimate God. There is nothing in its statements that need shock or offend anyone who is prepared for the expression of a faith different from and perhaps in several particulars opposed to his own. The writer will be found to be sympathetic with all sincere religious feeling. Nevertheless it is well to prepare the prospective reader for statements that may jar harshly against deeply rooted mental habits. It is well to warn him at the outset that the departure from accepted beliefs is here no vague scepticism, but a quite sharply defined objection to dogmas very widely revered. Let the writer state the most probable occasion of trouble forthwith. An issue upon which this book will be found particularly uncompromising is the dogma of the Trinity. The writer is of opinion that the Council of Nicaea, which forcibly crystallised the controversies of two centuries and formulated the creed upon which all the existing Christian churches are based, was one of the most disastrous and one of the least venerable of all religious gatherings, and he holds that the Alexandrine speculations which were then conclusively imposed upon Christianity merit only disrespectful attention at the present time. There you have a chief possibility of offence. He is quite unable to pretend any awe for what he considers the spiritual monstrosities established by that undignified gathering. He makes no attempt to be obscure or propitiatory in this connection. He criticises the creeds explicitly and frankly, because he believes it is particularly necessary to clear them out of the way of those who are seeking religious consolation at this present time of exceptional religious need. He does little to conceal his indignation at the role played by these dogmas in obscuring, perverting, and preventing the religious life of mankind. After this warning such readers from

among the various Christian churches and sects as are accessible to storms of theological fear or passion to whom the Trinity is an ineffable mystery and the name of God almost unspeakably awful, read on at their own risk. This is a religious book written by a believer, but so far as their beliefs and religion go it may seem to them more sceptical and more antagonistic than blank atheism. That the writer cannot tell. He is not simply denying their God. He is declaring that there is a living God, different altogether from that Triune God and nearer to the heart of man. The spirit of this book is like that of a missionary who would only too gladly overthrow and smash some Polynesian divinity of shark's teeth and painted wood and mother-of-pearl. To the writer such elaborations as "begotten of the Father before all worlds" are no better than intellectual shark's teeth and oyster shells. His purpose, like the purpose of that missionary, is not primarily to shock and insult; but he is zealous to liberate, and he is impatient with a reverence that stands between man and God. He gives this fair warning and proceeds with his matter.

His matter is modern religion as he sees it. It is only incidentally and because it is unavoidable that he attacks doctrinal Christianity.

In a previous book, "First and Last Things" (Constable and Co.), he has stated his convictions upon certain general ideas of life and thought as clearly as he could. All of philosophy, all of metaphysics that is, seems to him to be a discussion of the relations of class and individual. The antagonism of the Nominalist and the Realist, the opposition of the One and the Many, the contrast of the Ideal and the Actual, all these oppositions express a certain structural and essential duality in the activity of the human mind. From an imperfect recognition of that duality ensue great masses of misconception. That was the substance of "First and Last Things." In this present book there is no further attack on philosophical or metaphysical questions. Here we work at a less

fundamental level and deal with religious feeling and religious ideas. But just as the writer was inclined to attribute a whole world of disputation and inexactitudes to confused thinking about the exact value of classes and terms, so here he is disposed to think that interminable controversies and conflicts arise out of a confusion of intention due to a double meaning of the word "God"; that the word "God" conveys not one idea or set of ideas, but several essentially different ideas, incompatible one with another, and falling mainly into one or other of two divergent groups; and that people slip carelessly from one to the other of these groups of ideas and so get into ultimately inextricable confusions.

The writer believes that the centuries of fluid religious thought that preceded the violent ultimate crystallisation of Nicaea, was essentially a struggle--obscured, of course, by many complexities--to reconcile and get into a relationship these two separate main series of God-ideas.

Putting the leading id a part against evil.

The writer believes that these dogmas of relationship are not merely extraneous to religion, but an impediment to religion. His aim in this book is to give a statement of religion which is no longer entangled in such speculations and disputes.

Let him add only one other note of explanation in this preface, and that is to remark that except for one incidental passage (in Chapter IV., 1), nowhere does he discuss the question of personal immortality. [It is discussed in "First and Last Things," Book IV, 4.] He omits this question because he does not consider that it has any more bearing upon the essentials of religion, than have the theories we may hold about the relation of God and the moral law to the starry universe. The latter is a question for the theologian,

the former for the psychologist. Whether we are mortal or immortal of this book very roughly, these two antagonistic typical conceptions of God may be best contrasted by speaking of one of them as God-as-Nature or the Creator, and of the other as God-as-Christ or the Redeemer. One is the great Outward God; the other is the Inmost God. The first idea was perhaps developed most highly and completely in the God of Spinoza. It is a conception of God tending to pantheism, to an idea of a comprehensive God as ruling with justice rather than affection, to a conception of aloofness and awe-striking worshipfulness. The second idea, which is opposed to this idea of an absolute God, is the God of the human heart. The writer would suggest that the great outline of the theological struggles of that phase of civilisation and world unity which produced Christianity, was a persistent but unsuccessful attempt to get these two different ideas of God into one focus. It was an attempt to make the God of Nature accessible and the God of the Heart invincible, to bring the former into a conception of love and to vest the latter with the beauty of stars and flowers and the dignity of inexorable justice. There could be no finer metaphor for such a correlation than Fatherhood and Sonship. But the trouble is that it seems impossible to most people to continue to regard the relations of the Father to the Son as being simply a mystical metaphor. Presently some materialistic bias swings them in a moment of intellectual carelessness back to the idea of sexual filiation.

And it may further be suggested that the extreme aloofness and inhumanity, which is logically necessary in the idea of a Creator God, of an Infinite God, was the reason, so to speak, for the invention of a Holy Spirit, as something proceeding from him, as something bridging the great gulf, a Comforter, a mediator descending into the sphere of the human understanding. That, and the suggestive influence of the Egyptian Trinity that was then being worshipped at the Serapeum, and which had saturated the thought of Alexandria with the conception of a trinity in unity, are probably the realities that account for the Third Person of the Christian

Trinity. At any rate the present writer believes that the discussions that shaped the Christian theology we know were dominated by such natural and fundamental thoughts. These discussions were, of course, complicated from the outset; and particularly were they complicated by the identification of the man Jesus with the theological Christ, by materialistic expectations of his second coming, by materialistic inventions about his "miraculous" begetting, and by the morbid speculations about virginity and the like that arose out of such grossness. They were still further complicated by the idea of the textual inspiration of the scriptures, which presently swamped thought in textual interpretation. That swamping came very early in the development of Christianity. The writer of St. John's gospel appears still to be thinking with a considerable freedom, but Origen is already hopelessly in the net of the texts. The writer of St. John's gospel was a free man, but Origen was a superstitious man. He was emasculated mentally as well as bodily through his bibliolatry. He quotes; his predecessor thinks.

But the writer throws out these guesses at the probable intentions of early Christian thought in passing. His business here is the definition of a position. The writer's position here in this book is, firstly, complete Agnosticism in the matter of God the Creator, and secondly, entire faith in the matter of God the Redeemer. That, so to speak, is the key of his book. He cannot bring the two ideas under the same term God. He uses the word God therefore for the God in our hearts only, and he uses the term the Veiled Being for the ultimate mysteries of the universe, and he declares that we do not know and perhaps cannot know in any comprehensible terms the relation of the Veiled Being to that living reality in our lives who is, in his terminology, the true God. Speaking from the point of view of practical religion, he is restricting and defining the word God, as meaning only the personal God of mankind, he is restricting it so as to exclude all cosmogony and ideas of providence from our religious thought and leave nothing but the essentials of the

religious life.

Many people, whom one would class as rather liberal Christians of an Arian or Arminian complexion, may find the larger part of this book acceptable to them if they will read "the Christ God" where the writer has written "God." They will then differ from him upon little more than the question whether there is an essential identity in aim and quality between the Christ God and the Veiled Being, who answer to their Creator God. This the orthodox post Nicaean Christians assert, and many pre-Nicaeans and many heretics (as the Cathars) contradicted with its exact contrary. The Cathars, Paulicians, Albigenses and so on held, with the Manichaeans, that the God of Nature, God the Father, was evil. The Christ God was his antagonist. This was the idea of the poet Shelley. And passing beyond Christian theology altogether a clue can still be found to many problems in comparative theology in this distinction between the Being of Nature (cf. Kant's "starry vault above") and the God of the heart (Kant's "moral law within"). The idea of an antagonism seems to have been cardinal in the thought of the Essenes and the Orphic cult and in the Persian dualism. So, too, Buddhism seems to be "antagonistic." On the other hand, the Moslem teaching and modern Judaism seem absolutely to combine and identify the two; God the creator is altogether and without distinction also God the King of Mankind. Christianity stands somewhere between such complete identification and complete antagonism. It admits a difference in attitude between Father and Son in its distinction between the Old Dispensation (of the Old Testament) and the New. Every possible change is rung in the great religions of the world between identification, complete separation, equality, and disproportion of these Beings; but it will be found that these two ideas are, so to speak, the basal elements of all theology in the world. The writer is chary of assertion or denial in these matters. He believes that they are speculations not at all necessary to salvation. He believes that men may differ profoundly in their opinions upon these points and still be in perfect agreement upon the essentials of

religion. The reality of religion he believes deals wholly and exclusively with the God of the Heart. He declares as his own opinion, and as the opinion which seems most expressive of modern thought, that there is no reason to suppose the Veiled Being either benevolent or malignant towards men. But if the reader believes that God is Almighty and in every way Infinite the practical outcome is not very different. For the purposes of human relationship it is impossible to deny that God PRESENTS HIMSELF AS FINITE, as struggling and takingl, whether the God in our hearts is the Son of or a rebel against the Universe, the reality of religion, the fact of salvation, is still our self-identification with God, irrespective of consequences, and the achievement of his kingdom, in our hearts and in the world. Whether we live forever or die tomorrow does not affect righteousness. Many people seem to find the prospect of a final personal death unendurable. This impresses me as egotism. I have no such appetite for a separate immortality. God is my immortality; what, of me, is identified with God, is God; what is not is of no more permanent value than the snows of yester-year.

May, 1917.

GOD THE INVISIBLE KING

CHAPTER THE FIRST

THE COSMOGONY OF MODERN RELIGION

1. MODERN RELIGION HAS NO FOUNDER

Perhaps all religions, unless the flaming onset of Mohammedanism be an exception, have dawned imperceptibly upon the world. A little while ago and the thing was not; and then suddenly it has been found in existence, and already in a state of diffusion. People have begun to hear of the new belief first here and then there. It is interesting, for example, to trace how Christianity drifted into the consciousness of the Roman world. But when a religion has been interrogated it has always had hitherto a tale of beginnings, the name and story of a founder. The renascent religion that is now taking shape, it seems, had no founder; it points to no origins. It is the Truth, its believers declare; it has always been here; it has always been visible to those who had eyes to see. It is perhaps plainer than it was and to more people--that is all.

It is as if it still did not realise its own difference. Many of those who hold it still think of it as if it were a kind of Christianity. Some, catching at a phrase of Huxley's, speak of it as Christianity without Theology. They do not know the creed they are carrying. It has, as a matter of fact, a very fine and subtle theology, flatly opposed to any belief that could, except by great stretching of charity and the imagination, be called Christianity. One might find, perhaps, a parallelism with the system ascribed to some Gnostics, but that is far more probably an accidental rather than a sympathetic coincidence. Of that the reader shall presently

have an opportunity of judging.

This indefiniteness of statement and relationship is probably only the opening phase of the new faith. Christianity also began with an extreme neglect of definition. It was not at first anything more than a sect of Judaism. It was only after three centuries, amidst the uproar and emotions of the council of Nicaea, when the more enthusiastic Trinitarians stuffed their fingers in their ears in affected horror at the arguments of old Arius, that the cardinal mystery of the Trinity was established as the essential fact of Christianity. Throughout those three centuries, the centuries of its greatest achievements and noblest martyrdoms, Christianity had not defined its God. And even to-day it has to be noted that a large majority of those who possess and repeat the Christian creeds have come into the practice so insensibly from unthinking childhood, that only in the slightest way do they realise the nature of the statements to which they subscribe. They will speak and think of both Christ and God in ways flatly incompatible with the doctrine of the Triune deity upon which, theoretically, the entire fabric of all the churches rests. They will show themselves as frankly Arians as though that damnable heresy had not been washed out of the world forever after centuries of persecution in torrents of blood. But whatever the present state of Christendom in these matters may be, there can be no doubt of the enormous pains taken in the past to give Christian beliefs the exactest, least ambiguous statement possible. Christianity knew itself clearly for what it was in its maturity, whatever the indecisions of its childhood or the confusions of its decay. The renascent religion that one finds now, a thing active and sufficient in many minds, has still scarcely come to self-consciousness. But it is so coming, and this present book is very largely an attempt to state the shape it is assuming and to compare it with the beliefs and imperatives and usages of the various Christian, pseudo-Christian, philosophical, and agnostic cults amidst which it has appeared.

The writer's sympathies and convictions are entirely with this that he speaks of as renascent or modern religion; he is neither atheist nor Buddhist nor Mohammedan nor Christian. He will make no pretence, therefore, to impartiality and detachment. He will do his best to be as fair as possible and as candid as possible, but the reader must reckon with this bias. He has found this faith growing up in himself; he has found it, or something very difficult to distinguish from it, growing independently in the minds of men and women he has met. They have been people of very various origins; English, Americans, Bengalis, Russians, French, people brought up in a "Catholic atmosphere," Positivists, Baptists, Sikhs, Mohammedans. Their diversity of source is as remarkable as their convergence of tendency. A miscellany of minds thinking upon parallel lines has come out to the same light. The new teaching is also traceable in many professedly Christian religious books and it is to be heard from Christian pulpits. The phase of definition is manifestly at hand.

2. MODERN RELIGION HAS A FINITE GOD

Perhaps the most fundamental difference between this new faith and any recognised form of Christianity is that, knowingly or unknowingly, it worships A FINITE GOD. Directly the believer is fairly confronted with the plain questions of the case, the vague identifications that are still carelessly made with one or all of the persons of the Trinity dissolve away. He will admit that his God is neither all-wise, nor all-powerful, nor omnipresent; that he is neither the maker of heaven nor earth, and that he has little to identify him with that hereditary God of the Jews who became the "Father" in the Christian system. On the other hand he will assert that his God is a god of salvation, that he is a spirit, a person, a strongly marked and knowable personality, loving, inspiring, and lovable, who exists or strives to exist in every human soul. He will be much less certain in his denials that his God has a close resemblance to the Pauline (as distinguished from the Trinitarian) "Christ." . . .

The modern religious man will almost certainly profess a kind of universalism; he will assert that whensoever men have called upon any God and have found fellowship and comfort and courage and that sense of God within them, that inner light which is the quintessence of the religious experience, it was the True God that answered them. For the True God is a generous God, not a jealous God; the very antithesis of that bickering monopolist who "will have none other gods but Me"; and when a human heart cries out--to what name it matters not--for a larger spirit and a stronger help than the visible things of life can give, straightway the nameless Helper is with it and the God of Man answers to the call. The True God has no scorn nor hate for those who have accepted the many-handed symbols of the Hindu or the lacquered idols of China. Where there is faith, where there is need, there is the True God ready to clasp the hands that stretch out seeking for him into the darkness behind the ivory

and gold.

The fact that God is FINITE is one upon which those who think clearly among the new believers are very insistent. He is, above everything else, a personality, and to be a personality is to have characteristics, to be limited by characteristics; he is a Being, not us but dealing with us and through us, he has an aim and that means he has a past and future; he is within time and not outside it. And they point out that this is really what everyone who prays sincerely to God or gets help from God, feels and believes. Our practice with God is better than our theory. None of us really pray to that fantastic, unqualified *danse a trois*, the Trinity, which the wranglings and disputes of the worthies of Alexandria and Syria declared to be God. We pray to one single understanding person. But so far the tactics of those Trinitarians at Nicaea, who stuck their fingers in their ears, have prevailed in this world; this was no matter for discussion, they declared, it was a Holy Mystery full of magical terror, and few religious people have thought it worth while to revive these terrors by a definite contradiction. The truly religious have been content to lapse quietly into the comparative sanity of an unformulated Arianism, they have left it to the scoffing Atheist to mock at the patent absurdities of the official creed. But one magnificent protest against this theological fantasy must have been the work of a sincerely religious man, the cold superb humour of that burlesque creed, ascribed, at first no doubt facetiously and then quite seriously, to Saint Athanasius the Great, which, by an irony far beyond its original intention, has become at last the accepted creed of the church.

The long truce in the criticism of Trinitarian theology is drawing to its end. It is when men most urgently need God that they become least patient with foolish presentations and dogmas. The new believers are very definitely set upon a thorough analysis of the nature and growth of the Christian creeds and ideas. There has grown up a practice of assuming that, when God is spoken of, the

Hebrew-Christian God of Nicaea is meant. But that God trails with him a thousand misconceptions and bad associations; his alleged infinite nature, his jealousy, his strange preferences, his vindictive Old Testament past. These things do not even make a caricature of the True God; they compose an altogether different and antagonistic figure.

It is a very childish and unphilosophical set of impulses that has led the theologians of nearly every faith to claim infinite qualities for their deity. One has to remember the poorness of the mental and moral quality of the churchmen of the third, fourth, and fifth centuries who saddled Christendom with its characteristic dogmas, and the extreme poverty and confusion of the circle of ideas within which they thought. Many of these makers of Christianity, like Saint Ambrose of Milan (who had even to be baptised after his election to his bishopric), had been pitchforked into the church from civil life; they lived in a time of pitiless factions and personal feuds; they had to conduct their disputations amidst the struggles of would-be emperors; court eunuchs and favourites swayed their counsels, and popular rioting clinched their decisions. There was less freedom of discussion then in the Christian world than there is at present (1916) in Belgium, and the whole audience of educated opinion by which a theory could be judged did not equal, either in numbers or accuracy of information, the present population of Constantinople. To these conditions we owe the claim that the Christian God is a magic god, very great medicine in battle, "in hoc signo vinces," and the argument so natural to the minds of those days and so absurd to ours, that since he had ALL power, all knowledge, and existed for ever and ever, it was no use whatever to set up any other god against him. . . .

By the fifth century Christianity had adopted as its fundamental belief, without which everyone was to be "damned everlastingly," a conception of God and of Christ's relation to God, of which even by the Christian account of his teaching, Jesus was either totally

unaware or so negligent and careless of the future comfort of his disciples as scarcely to make mention. The doctrine of the Trinity, so far as the relationship of the Third Person goes, hangs almost entirely upon one ambiguous and disputed utterance in St. John's gospel (XV. 26). Most of the teachings of Christian orthodoxy resolve themselves to the attentive student into assertions of the nature of contradiction and repartee. Someone floats an opinion in some matter that has been hitherto vague, in regard, for example, to the sonship of Christ or to the method of his birth. The new opinion arouses the hostility and alarm of minds unaccustomed to so definite a statement, and in the zeal of their recoil they fly to a contrary proposition. The Christians would neither admit that they worshipped more gods than one because of the Greeks, nor deny the divinity of Christ because of the Jews. They dreaded to be polytheistic; equally did they dread the least apparent detraction from the power and importance of their Saviour. They were forced into the theory of the Trinity by the necessity of those contrary assertions, and they had to make it a mystery protected by curses to save it from a *reductio ad absurdum*. The entire history of the growth of the Christian doctrine in those disordered early centuries is a history of theology by committee; a history of furious wrangling, of hasty compromises, and still more hasty attempts to clinch matters by anathema. When the muddle was at its very worst, the church was confronted by enormous political opportunities. In order that it should seize these one chief thing appeared imperative: doctrinal uniformity. The emperor himself, albeit unbaptised and very ignorant of Greek, came and seated himself in the midst of Christian thought upon a golden throne. At the end of it all Eusebius, that supreme Trimmer, was prepared to damn everlastingly all those who doubted that consubstantiality he himself had doubted at the beginning of the conference. It is quite clear that Constantine did not care who was damned or for what period, so long as the Christians ceased to wrangle among themselves. The practical unanimity of Nicaea was secured by threats, and then, turning upon the victors, he sought by threats to

restore Arius to communion. The imperial aim was a common faith to unite the empire. The crushing out of the Arians and of the Paulicians and suchlike heretics, and more particularly the systematic destruction by the orthodox of all heretical writings, had about it none of that quality of honest conviction which comes to those who have a real knowledge of God; it was a bawling down of dissensions that, left to work themselves out, would have spoilt good business; it was the fist of Nicolas of Myra over again, except that after the days of Ambrose the sword of the executioner and the fires of the book-burner were added to the weapon of the human voice. Priscillian was the first human sacrifice formally offered up under these improved conditions to the greater glory of the reinforced Trinity. Thereafter the blood of the heretics was the cement of Christian unity.

It is with these things in mind that those who profess the new faith are becoming so markedly anxious to distinguish God from the Trinitarian's deity. At present if anyone who has left the Christian communion declares himself a believer in God, priest and parson swell with self-complacency. There is no reason why they should do so. That many of us have gone from them and found God is no concern of theirs. It is not that we who went out into the wilderness which we thought to be a desert, away from their creeds and dogmas, have turned back and are returning. It is that we have gone on still further, and are beyond that desolation. Never more shall we return to those who gather under the cross. By faith we disbelieved and denied. By faith we said of that stuffed scarecrow of divinity, that incoherent accumulation of antique theological notions, the Nicene deity, "This is certainly no God." And by faith we have found God. . . .

3. THE INFINITE BEING IS NOT GOD

There has always been a demand upon the theological teacher that he should supply a cosmogony. It has always been an effective propagandist thing to say: "OUR God made the whole universe. Don't you think that it would be wise to abandon YOUR deity, who did not, as you admit, do anything of the sort?"

The attentive reader of the lives of the Saints will find that this style of argument did in the past bring many tribes and nations into the Christian fold. It was second only to the claim of magic advantages, demonstrated by a free use of miracles. Only one great religious system, the Buddhist, seems to have resisted the temptation to secure for its divinity the honour and title of Creator. Modern religion is like Buddhism in that respect. It offers no theory whatever about the origin of the universe. It does not reach behind the appearances of space and time. It sees only a featureless presumption in that playing with superlatives which has entertained so many minds from Plotinus to the Hegelians with the delusion that such negative terms as the Absolute or the Unconditioned, can assert anything at all. At the back of all known things there is an impenetrable curtain; the ultimate of existence is a Veiled Being, which seems to know nothing of life or death or good or ill. Of that Being, whether it is simple or complex or divine, we know nothing; to us it is no more than the limit of understanding, the unknown beyond. It may be of practically limitless intricacy and possibility. The new religion does not pretend that the God of its life is that Being, or that he has any relation of control or association with that Being. It does not even assert that God knows all or much more than we do about that ultimate Being.

For us life is a matter of our personalities in space and time. Human analysis probing with philosophy and science towards the

Veiled Being reveals nothing of God, reveals space and time only as necessary forms of consciousness, glimpses a dance of atoms, of whirls in the ether. Some day in the endless future there may be a knowledge, an understanding of relationship, a power and courage that will pierce into those black wrappings. To that it may be our God, the Captain of Mankind will take us.

That now is a mere speculation. The veil of the unknown is set with the stars; its outer texture is ether and atom and crystal. The Veiled Being, enigmatical and incomprehensible, broods over the mirror upon which the busy shapes of life are moving. It is as if it waited in a great stillness. Our lives do not deal with it, and cannot deal with it. It may be that they may never be able to deal with it.

4. THE LIFE FORCE IS NOT GOD

So it is that comprehensive setting of the universe presents itself to the modern mind. It is altogether outside good and evil and love and hate. It is outside God, who is love and goodness. And coming out of this veiled being, proceeding out of it in a manner altogether inconceivable, is another lesser being, an impulse thrusting through matter and clothing itself in continually changing material forms, the maker of our world, Life, the Will to Be. It comes out of that inscrutable being as a wave comes rolling to us from beyond the horizon. It is as it were a great wave rushing through matter and possessed by a spirit. It is a breeding, fighting thing; it pants through the jungle track as the tiger and lifts itself towards heaven as the tree; it is the rabbit bolting for its life and the dove calling to her mate; it crawls, it flies, it dives, it lusts and devours, it pursues and eats itself in order to live still more eagerly and hastily; it is every living thing, of it are our passions and desires and fears. And it is aware of itself not as a whole, but dispersedly as individual self-consciousness, starting out dispersedly from every one of the sentient creatures it has called into being. They look out for their little moments, red-eyed and fierce, full of greed, full of the passions of acquisition and assimilation and reproduction, submitting only to brief fellowships of defence or aggression. They are beings of strain and conflict and competition. They are living substance still mingled painfully with the dust. The forms in which this being clothes itself bear thorns and fangs and claws, are soaked with poison and bright with threats or allurements, prey slyly or openly on one another, hold their own for a little while, breed savagely and resentfully, and pass. . . .

This second Being men have called the Life Force, the Will to Live, the Struggle for Existence. They have figured it too as Mother Nature. We may speculate whether it is not what the wiser among the

Gnostics meant by the Demiurge, but since the Christians destroyed all the Gnostic books that must remain a mere curious guess. We may speculate whether this heat and haste and wrath of life about us is the Dark God of the Manichees, the evil spirit of the sun worshippers. But in contemporary thought there is no conviction apparent that this Demiurge is either good or evil; it is conceived of as both good and evil. If it gives all the pain and conflict of life, it gives also the joy of the sunshine, the delight and hope of youth, the pleasures. If it has elaborated a hundred thousand sorts of parasite, it has also moulded the beautiful limbs of man and woman; it has shaped the slug and the flower. And in it, as part of it, taking its rewards, responding to its goads, struggling against the final abandonment to death, do we all live, as the beasts live, glad, angry, sorry, revengeful, hopeful, weary, disgusted, forgetful, lustful, happy, excited, bored, in pain, mood after mood but always fearing death, with no certainty and no coherence within us, until we find God. And God comes to us neither out of the stars nor out of the pride of life, but as a still small voice within.

5. GOD IS WITHIN

God comes we know not whence, into the conflict of life. He works in men and through men. He is a spirit, a single spirit and a single person; he has begun and he will never end. He is the immortal part and leader of mankind. He has motives, he has characteristics, he has an aim. He is by our poor scales of measurement boundless love, boundless courage, boundless generosity. He is thought and a steadfast will. He is our friend and brother and the light of the world. That briefly is the belief of the modern mind with regard to God. There is no very novel idea about this God, unless it be the idea that he had a beginning. This is the God that men have sought and found in all ages, as God or as the Messiah or the Saviour. The finding of him is salvation from the purposelessness of life. The new religion has but disentangled the idea of him from the absolutes and infinities and mysteries of the Christian theologians; from mythological virgin births and the cosmogonies and intellectual pretentiousness of a vanished age.

Modern religion appeals to no revelation, no authoritative teaching, no mystery. The statement it makes is, it declares, a mere statement of what we may all perceive and experience. We all live in the storm of life, we all find our understandings limited by the Veiled Being; if we seek salvation and search within for God, presently we find him. All this is in the nature of things. If every one who perceives and states it were to be instantly killed and blotted out, presently other people would find their way to the same conclusions; and so on again and again. To this all true religion, casting aside its hulls of misconception, must ultimately come. To it indeed much religion is already coming. Christian thought struggles towards it, with the millstones of Syrian theology and an outrageous mythology of incarnation and resurrection about its neck. When at last our present bench of bishops join the early fathers of the church in heaven there will be, I fear, a note of

reproach in their greeting of the ingenious person who saddled them with OMNIPOTENS. Still more disastrous for them has been the virgin birth, with the terrible fascination of its detail for unpoetic minds. How rich is the literature of authoritative Christianity with decisions upon the continuing virginity of Mary and the virginity of Joseph--ideas that first arose in Arabia as a Moslem gloss upon Christianity--and how little have these peepings and prying to do with the needs of the heart and the finding of God!

Within the last few years there have been a score or so of such volumes as that recently compiled by Dr. Foakes Jackson, entitled "The Faith and the War," a volume in which the curious reader may contemplate deans and canons, divines and church dignitaries, men intelligent and enquiring and religiously disposed, all lying like overladen camels, panting under this load of obsolete theological responsibility, groaning great articles, outside the needle's eye that leads to God.

6. THE COMING OF GOD

Modern religion bases its knowledge of God and its account of God entirely upon experience. It has encountered God. It does not argue about God; it relates. It relates without any of those wrappings of awe and reverence that fold so necessarily about imposture, it relates as one tells of a friend and his assistance, of a happy adventure, of a beautiful thing found and picked up by the wayside.

So far as its psychological phases go the new account of personal salvation tallies very closely with the account of "conversion" as it is given by other religions. It has little to tell that is not already familiar to the reader of William James's "Varieties of Religious Experience." It describes an initial state of distress with the aimlessness and cruelties of life, and particularly with the futility of the individual life, a state of helpless self-disgust, of inability to form any satisfactory plan of living. This is the common prelude known to many sorts of Christian as "conviction of sin"; it is, at any rate, a conviction of hopeless confusion. . . . Then in some way the idea of God comes into the distressed mind, at first simply as an idea, without substance or belief. It is read about or it is remembered; it is expounded by some teacher or some happy convert. In the case of all those of the new faith with whose personal experience I have any intimacy, the idea of God has remained for some time simply as an idea floating about in a mind still dissatisfied. God is not believed in, but it is realised that if there were such a being he would supply the needed consolation and direction, his continuing purpose would knit together the scattered effort of life, his immortality would take the sting from death. Under this realisation the idea is pursued and elaborated. For a time there is a curious resistance to the suggestion that God is truly a person; he is spoken of preferably by such phrases as the Purpose in Things, as the Racial Consciousness,

as the Collective Mind.

I believe that this resistance in so many contemporary minds to the idea of God as a person is due very largely to the enormous prejudice against divine personality created by the absurdities of the Christian teaching and the habitual monopoly of the Christian idea. The picture of Christ as the Good Shepherd thrusts itself before minds unaccustomed to the idea that they are lambs. The cross in the twilight bars the way. It is a novelty and an enormous relief to such people to realise that one may think of God without being committed to think of either the Father, the Son, or the Holy Ghost, or of all of them at once. That freedom had not seemed possible to them. They had been hypnotised and obsessed by the idea that the Christian God is the only thinkable God. They had heard so much about that God and so little of any other. With that release their minds become, as it were, nascent and ready for the coming of God.

Then suddenly, in a little while, in his own time, God comes. This cardinal experience is an undoubting, immediate sense of God. It is the attainment of an absolute certainty that one is not alone in oneself. It is as if one was touched at every point by a being akin to oneself, sympathetic, beyond measure wiser, steadfast and pure in aim. It is completer and more intimate, but it is like standing side by side with and touching someone that we love very dearly and trust completely. It is as if this being bridged a thousand misunderstandings and brought us into fellowship with a great multitude of other people. . . .

"Closer he is than breathing, and nearer than hands and feet."

The moment may come while we are alone in the darkness, under the stars, or while we walk by ourselves or in a crowd, or while we sit and muse. It may come upon the sinking ship or in the tumult of the battle. There is no saying when it may not come to us. . . . But

after it has come our lives are changed, God is with us and there is no more doubt of God. Thereafter one goes about the world like one who was lonely and has found a lover, like one who was perplexed and has found a solution. One is assured that there is a Power that fights with us against the confusion and evil within us and without. There comes into the heart an essential and enduring happiness and courage.

There is but one God, there is but one true religious experience, but under a multitude of names, under veils and darkneses, God has in this manner come into countless lives. There is scarcely a faith, however mean and preposterous, that has not been a way to holiness. God who is himself finite, who himself struggles in his great effort from strength to strength, has no spite against error. Far beyond halfway he hastens to meet the purblind. But God is against the darkness in their eyes. The faith which is returning to men girds at veils and shadows, and would see God plainly. It has little respect for mysteries. It rends the veil of the temple in rags and tatters. It has no superstitious fear of this huge friendliness, of this great brother and leader of our little beings. To find God is but the beginning of wisdom, because then for all our days we have to learn his purpose with us and to live our lives with him.

CHAPTER THE SECOND

HERESIES; OR THE THINGS THAT GOD IS NOT

1. HERESIES ARE MISCONCEPTIONS OF GOD

Religion is not a plant that has grown from one seed; it is like a lake that has been fed by countless springs. It is a great pool of living water, mingled from many sources and tainted with much impurity. It is synthetic in its nature; it becomes simpler from original complexities; the sediment subsides.

A life perfectly adjusted to its surroundings is a life without mentality; no judgment is called for, no inhibition, no disturbance of the instinctive flow of perfect reactions. Such a life is bliss, or nirvana. It is unconsciousness below dreaming. Consciousness is discord evoking the will to adjust; it is inseparable from need. At every need consciousness breaks into being. Imperfect adjustments, needs, are the rents and tatters in the smooth dark veil of being through which the light of consciousness shines--the light of consciousness and will of which God is the sun.

So that every need of human life, every disappointment and dissatisfaction and call for help and effort, is a means whereby men may and do come to the realisation of God.

There is no cardinal need, there is no sort of experience in human life from which there does not come or has not come a contribution to men's religious ideas. At every challenge men have to put forth effort, feel doubt of adequacy, be thwarted, perceive the chill shadow of their mortality. At every challenge comes the possibility of help from without, the idea of eluding frustration, the aspiration towards immortality. It is possible to classify the

appeals men make for God under the headings of their chief system of effort, their efforts to understand, their fear and their struggles for safety and happiness, the craving of their restlessness for peace, their angers against disorder and their desire for the avenger; their sexual passions and perplexities. . . .

Each of these great systems of needs and efforts brings its own sort of sediment into religion. Each, that is to say, has its own kind of heresy, its distinctive misapprehension of God. It is only in the synthesis and mutual correction of many divergent ideas that the idea of God grows clear. The effort to understand completely, for example, leads to the endless Heresies of Theory. Men trip over the inherent infirmities of the human mind. But in these days one does not argue greatly about dogma. Almost every conceivable error about unity, about personality, about time and quantity and genus and species, about begetting and beginning and limitation and similarity and every kink in the difficult mind of man, has been thrust forward in some form of dogma. Beside the errors of thought are the errors of emotion. Fear and feebleness go straight to the Heresies that God is Magic or that God is Providence; restless egotism at leisure and unchallenged by urgent elementary realities breeds the Heresies of Mysticism, anger and hate call for God's Judgments, and the stormy emotions of sex gave mankind the Phallic God. Those who find themselves possessed by the new spirit in religion, realise very speedily the necessity of clearing the mind of all these exaggerations, transferences, and overflows of feeling. The search for divine truth is like gold washing; nothing is of any value until most has been swept away.

2. HERESIES OF SPECULATION

One sort of heresies stands apart from the rest. It is infinitely the most various sort. It includes all those heresies which result from wrong-headed mental elaboration, as distinguished from those which are the result of hasty and imperfect apprehension, the heresies of the clever rather than the heresies of the obtuse. The former are of endless variety and complexity; the latter are in comparison natural, simple confusions. The former are the errors of the study, the latter the superstitions that spring by the wayside, or are brought down to us in our social structure out of a barbaric past.

To the heresies of thought and speculation belong the elaborate doctrine of the Trinity, dogmas about God's absolute qualities, such odd deductions as the accepted Christian teachings about the virginity of Mary and Joseph, and the like. All these things are parts of orthodox Christianity. Yet none of them did Christ, even by the Christian account, expound or recommend. He treated them as negligible. It was left for the Alexandrians, for Alexander, for little, red-haired, busy, wire-pulling Athanasius to find out exactly what their Master was driving at, three centuries after their Master was dead. . . .

Men still sit at little desks remote from God or life, and rack their inadequate brains to meet fancied difficulties and state unnecessary perfections. They seek God by logic, ignoring the marginal error that creeps into every syllogism. Their conceit blinds them to the limitations upon their thinking. They weave spider-like webs of muddle and disputation across the path by which men come to God. It would not matter very much if it were not that simpler souls are caught in these webs. Every great religious system in the world is choked by such webs; each system has its own. Of all the blood-stained tangled heresies which make up doctrinal

Christianity and imprison the mind of the western world to-day, not one seems to have been known to the nominal founder of Christianity. Jesus Christ never certainly claimed to be the Messiah; never spoke clearly of the Trinity; was vague upon the scheme of salvation and the significance of his martyrdom. We are asked to suppose that he left his apostles without instructions, that were necessary to their eternal happiness, that he could give them the Lord's Prayer but leave them to guess at the all-important Creed,* and that the Church staggered along blindly, putting its foot in and out of damnation, until the "experts" of Nicaea, that "garland of priests," marshalled by Constantine's officials, came to its rescue. . . . From the conversion of Paul onward, the heresies of the intellect multiplied about Christ's memory and hid him from the sight of men. We are no longer clear about the doctrine he taught nor about the things he said and did. . . .

* Even the "Apostles' Creed" is not traceable earlier than the fourth century. It is manifestly an old, patched formulary. Rutinius explains that it was not written down for a long time, but transmitted orally, kept secret, and used as a sort of password among the elect.

We are all so weary of this theology of the Christians, we are all at heart so sceptical about their Triune God, that it is needless here to spend any time or space upon the twenty thousand different formulae in which the orthodox have attempted to believe in something of the sort. There are several useful encyclopaedias of sects and heresies, compact, but still bulky, to which the curious may go. There are ten thousand different expositions of orthodoxy. No one who really seeks God thinks of the Trinity, either the Trinity of the Trinitarian or the Trinity of the Sabellian or the Trinity of the Arian, any more than one thinks of those theories made stone, those gods with three heads and seven hands, who sit on lotus leaves and flourish lingams and what not, in the temples of India. Let us leave, therefore, these morbid elaborations of the

human intelligence to drift to limbo, and come rather to the natural heresies that spring from fundamental weaknesses of the human character, and which are common to all religions. Against these it is necessary to keep constant watch. They return very insidiously.

3. GOD IS NOT MAGIC

One of the most universal of these natural misconceptions of God is to consider him as something magic serving the ends of men.

It is not easy for us to grasp at first the full meaning of giving our souls to God. The missionary and teacher of any creed is all too apt to hawk God for what he will fetch; he is greedy for the poor triumph of acquiescence; and so it comes about that many people who have been led to believe themselves religious, are in reality still keeping back their own souls and trying to use God for their own purposes. God is nothing more for them as yet than a magnificent Fetish. They did not really want him, but they have heard that he is potent stuff; their unripe souls think to make use of him. They call upon his name, they do certain things that are supposed to be peculiarly influential with him, such as saying prayers and repeating gross praises of him, or reading in a blind, industrious way that strange miscellany of Jewish and early Christian literature, the Bible, and suchlike mental mortification, or making the Sabbath dull and uncomfortable. In return for these fetishistic propitiations God is supposed to interfere with the normal course of causation in their favour. He becomes a celestial log-roller. He remedies unfavourable accidents, cures petty ailments, contrives unexpected gifts of medicine, money, or the like, he averts bankruptcies, arranges profitable transactions, and does a thousand such services for his little clique of faithful people. The pious are represented as being constantly delighted by these little surprises, these bouquets and chocolate boxes from the divinity. Or contrawise he contrives spiteful turns for those who fail in their religious attentions. He murders Sabbath-breaking children, or disorganises the careful business schemes of the ungodly. He is represented as going Sabbath-breaking on Sunday morning as a Staffordshire worker goes ratting. Ordinary everyday Christianity is saturated with this fetishistic conception of God.

It may be disowned in THE HIBBERT JOURNAL, but it is unblushingly advocated in the parish magazine. It is an idea taken over by Christianity with the rest of the qualities of the Hebrew God. It is natural enough in minds so self-centred that their recognition of weakness and need brings with it no real self-surrender, but it is entirely inconsistent with the modern conception of the true God.

There has dropped upon the table as I write a modest periodical called THE NORTHERN BRITISH ISRAEL REVIEW, illustrated with portraits of various clergymen of the Church of England, and of ladies and gentlemen who belong to the little school of thought which this magazine represents; it is, I should judge, a sub-sect entirely within the Established Church of England, that is to say within the Anglican communion of the Trinitarian Christians. It contains among other papers a very entertaining summary by a gentleman entitled--I cite the unusual title-page of the periodical--"Landseer Mackenzie, Esq.," of the views of Isaiah, Ezekiel, and Obadiah upon the Kaiser William. They are distinctly hostile views. Mr. Landseer Mackenzie discourses not only upon these anticipatory condemnations but also upon the relations of the weather to this war. He is convinced quite simply and honestly that God has been persistently rigging the weather against the Germans. He points out that the absence of mist on the North Sea was of great help to the British in the autumn of 1914, and declares that it was the wet state of the country that really held up the Germans in Flanders in the winter of 1914-15. He ignores the part played by the weather in delaying the relief of Kut-el-Amara, and he has not thought of the difficult question why the Deity, having once decided upon intervention, did not, instead of this comparatively trivial meteorological assistance, adopt the more effective course of, for example, exploding or spoiling the German stores of ammunition by some simple atomic miracle, or misdirecting their gunfire by a sudden local modification of the laws of refraction or gravitation.

Since these views of God come from Anglican vicarages I can only

conclude that this kind of belief is quite orthodox and permissible in the established church, and that I am charging orthodox Christianity here with nothing that has ever been officially repudiated. I find indeed the essential assumptions of Mr. Landseer Mackenzie repeated in endless official Christian utterances on the part of German and British and Russian divines. The Bishop of Chelmsford, for example, has recently ascribed our difficulties in the war to our impatience with long sermons--among other similar causes. Such Christians are manifestly convinced that God can be invoked by ritual--for example by special days of national prayer or an increased observance of Sunday--or made malignant by neglect or levity. It is almost fundamental in their idea of him. The ordinary Mohammedan seems as confident of this magic pettiness of God, and the belief of China in the magic propitiations and resentments of "Heaven" is at least equally strong.

But the true God as those of the new religion know him is no such God of luck and intervention. He is not to serve men's ends or the ends of nations or associations of men; he is careless of our ceremonies and invocations. He does not lose his temper with our follies and weaknesses. It is for us to serve Him. He captains us, he does not coddle us. He has his own ends for which he needs us. . . .

4. GOD IS NOT PROVIDENCE

Closely related to this heresy that God is magic, is the heresy that calls him Providence, that declares the apparent adequacy of cause and effect to be a sham, and that all the time, incalculably, he is pulling about the order of events for our personal advantages.

The idea of Providence was very gaily travestied by Daudet in "Tartarin in the Alps." You will remember how Tartarin's friend assured him that all Switzerland was one great Trust, intent upon attracting tourists and far too wise and kind to permit them to venture into real danger, that all the precipices were netted invisibly, and all the loose rocks guarded against falling, that avalanches were prearranged spectacles and the crevasses at their worst slippery ways down into kindly catchment bags. If the mountaineer tried to get into real danger he was turned back by specious excuses. Inspired by this persuasion Tartarin behaved with incredible daring. . . . That is exactly the Providence theory of the whole world. There can be no doubt that it does enable many a timid soul to get through life with a certain recklessness. And provided there is no slip into a crevasse, the Providence theory works well. It would work altogether well if there were no crevasses.

Tartarin was reckless because of his faith in Providence, and escaped. But what would have happened to him if he had fallen into a crevasse?

There exists a very touching and remarkable book by Sir Francis Younghusband called "Within." [Williams and Norgate, 1912.] It is the confession of a man who lived with a complete confidence in Providence until he was already well advanced in years. He went through battles and campaigns, he filled positions of great honour and responsibility, he saw much of the life of men, without

altogether losing his faith. The loss of a child, an Indian famine, could shake it but not overthrow it. Then coming back one day from some races in France, he was knocked down by an automobile and hurt very cruelly. He suffered terribly in body and mind. His sufferings caused much suffering to others. He did his utmost to see the hand of a loving Providence in his and their disaster and the torment it inflicted, and being a man of sterling honesty and a fine essential simplicity of mind, he confessed at last that he could not do so. His confidence in the benevolent intervention of God was altogether destroyed. His book tells of this shattering, and how labouriously he reconstructed his religion upon less confident lines. It is a book typical of an age and of a very English sort of mind, a book well worth reading.

That he came to a full sense of the true God cannot be asserted, but how near he came to God, let one quotation witness.

"The existence of an outside Providence," he writes, "who created us, who watches over us, and who guides our lives like a Merciful Father, we have found impossible longer to believe in. But of the existence of a Holy Spirit radiating upward through all animate beings, and finding its fullest expression, in man in love, and in the flowers in beauty, we can be as certain as of anything in the world. This fiery spiritual impulsion at the centre and the source of things, ever burning in us, is the supremely important factor in our existence. It does not always attain to light. In many directions it fails; the conditions are too hard and it is utterly blocked. In others it only partially succeeds. But in a few it bursts forth into radiant light. There are few who in some heavenly moment of their lives have not been conscious of its presence. We may not be able to give it outward expression, but we know that it is there." . . .

God does not guide our feet. He is no sedulous governess restraining and correcting the wayward steps of men. If you would fly into the air, there is no God to bank your aeroplane correctly for you or keep an ill-tended engine going; if you would cross a glacier, no God nor angel guides your steps amidst the slippery places. He will not even mind your innocent children for you if you leave them before an unguarded fire. Cherish no delusions; for yourself and others you challenge danger and chance on your own strength; no talisman, no God, can help you or those you care for. Nothing of such things will God do; it is an idle dream. But God will be with you nevertheless. In the reeling aeroplane or the dark ice-cave God will be your courage. Though you suffer or are killed, it is not an end. He will be with you as you face death; he will die with you as he has died already countless myriads of brave deaths. He will come so close to you that at the last you will not know whether it is you or he who dies, and the present death will be swallowed up in his victory.

5. THE HERESY OF QUIETISM

God comes to us within and takes us for his own. He releases us from ourselves; he incorporates us with his own undying experience and adventure; he receives us and gives himself. He is a stimulant; he makes us live immortally and more abundantly. I have compared him to the sensation of a dear, strong friend who comes and stands quietly beside one, shoulder to shoulder.

The finding of God is the beginning of service. It is not an escape from life and action; it is the release of life and action from the prison of the mortal self. Not to realise that, is the heresy of Quietism, of many mystics. Commonly such people are people of some wealth, able to command services for all their everyday needs. They make religion a method of indolence. They turn their backs on the toil and stresses of existence and give themselves up to a delicious reverie in which they flirt with the divinity. They will recount their privileges and ecstasies, and how ingeniously and wonderfully God has tried and proved them. But indeed the true God was not the lover of Madame Guyon. The true God is not a spiritual troubadour wooing the hearts of men and women to no purpose. The true God goes through the world like fifes and drums and flags, calling for recruits along the street. We must go out to him. We must accept his discipline and fight his battle. The peace of God comes not by thinking about it but by forgetting oneself in him.

6. GOD DOES NOT PUNISH

Man is a social animal, and there is in him a great faculty for moral indignation. Many of the early Gods were mainly Gods of Fear. They were more often "wrath" than not. Such was the temperament of the Semitic deity who, as the Hebrew Jehovah, proliferated, perhaps under the influence of the Alexandrian Serapeum, into the Christian Trinity and who became also the Moslem God.* The natural hatred of unregenerate men against everything that is unlike themselves, against strange people and cheerful people, against unfamiliar usages and things they do not understand, embodied itself in this conception of a malignant and partisan Deity, perpetually "upset" by the little things people did, and contriving murder and vengeance. Now this God would be drowning everybody in the world, now he would be burning Sodom and Gomorrah, now he would be inciting his congenial Israelites to the most terrific pogroms. This divine "frightfulness" is of course the natural human dislike and distrust for queer practices or for too sunny a carelessness, a dislike reinforced by the latent fierceness of the ape in us, liberating the latent fierceness of the ape in us, giving it an excuse and pressing permission upon it, handing the thing hated and feared over to its secular arm. . . .

* It is not so generally understood as it should be among English and American readers that a very large proportion of early Christians before the creeds established and regularised the doctrine of the Trinity, denied absolutely that Jehovah was God; they regarded Christ as a rebel against Jehovah and a rescuer of humanity from him, just as Prometheus was a rebel against Jove. These beliefs survived for a thousand years throughout Christendom: they were held by a great multitude of persecuted sects, from the Albigenses and Cathars to the eastern Paulicians. The catholic church found it necessary to prohibit the circulation of the Old Testament among laymen very largely on account of the polemics of

the Cathars against the Hebrew God. But in this book, be it noted, the word Christian, when it is not otherwise defined, is used to indicate only the Trinitarians who accept the official creeds.

It is a human paradox that the desire for seemliness, the instinct for restraints and fair disciplines, and the impulse to cherish sweet familiar things, that these things of the True God should so readily liberate cruelty and tyranny. It is like a woman going with a light to tend and protect her sleeping child, and setting the house on fire. None the less, right down to to-day, the heresy of God the Revengeful, God the Persecutor and Avenger, haunts religion. It is only in quite recent years that the growing gentleness of everyday life has begun to make men a little ashamed of a Deity less tolerant and gentle than themselves. The recent literature of the Anglicans abounds in the evidence of this trouble.

Bishop Colenso of Natal was prosecuted and condemned in 1863 for denying the irascibility of his God and teaching "the Kaffirs of Natal" the dangerous heresy that God is all mercy. "We cannot allow it to be said," the Dean of Cape Town insisted, "that God was not angry and was not appeased by punishment." He was angry "on account of Sin, which is a great evil and a great insult to His Majesty." The case of the Rev. Charles Voysey, which occurred in 1870, was a second assertion of the Church's insistence upon the fierceness of her God. This case is not to be found in the ordinary church histories nor is it even mentioned in the latest edition of the *ENCYCLOPAEDIA BRITANNICA*; nevertheless it appears to have been a very illuminating case. It is doubtful if the church would prosecute or condemn either Bishop Colenso or Mr. Voysey to-day.

7. GOD AND THE NURSERY-MAID

Closely related to the Heresy of God the Avenger, is that kind of miniature God the Avenger, to whom the nursery-maid and the overtaxed parent are so apt to appeal. You stab your children with such a God and he poisons all their lives. For many of us the word "God" first came into our lives to denote a wanton, irrational restraint, as Bogey, as the All-Seeing and quite ungenerous Eye. God Bogey is a great convenience to the nursery-maid who wants to leave Fear to mind her charges and enforce her disciplines, while she goes off upon her own aims. But indeed, the teaching of God Bogey is an outrage upon the soul of a child scarcely less dreadful than an indecent assault. The reason rebels and is crushed under this horrible and pursuing suggestion. Many minds never rise again from their injury. They remain for the rest of life spiritually crippled and debased, haunted by a fear, stained with a persuasion of relentless cruelty in the ultimate cause of all things.

I, who write, was so set against God, thus rendered. He and his Hell were the nightmare of my childhood; I hated him while I still believed in him, and who could help but hate? I thought of him as a fantastic monster, perpetually spying, perpetually listening, perpetually waiting to condemn and to "strike me dead"; his flames as ready as a grill-room fire. He was over me and about my feebleness and silliness and forgetfulness as the sky and sea would be about a child drowning in mid-Atlantic. When I was still only a child of thirteen, by the grace of the true God in me, I flung this Lie out of my mind, and for many years, until I came to see that God himself had done this thing for me, the name of God meant nothing to me but the hideous scar in my heart where a fearful demon had been.

I see about me to-day many dreadful moral and mental cripples with this bogey God of the nursery-maid, with his black, insane revenges, still living like a horrible parasite in their hearts in the place

where God should be. They are afraid, afraid, afraid; they dare not be kindly to formal sinners, they dare not abandon a hundred foolish observances; they dare not look at the causes of things. They are afraid of sunshine, of nakedness, of health, of adventure, of science, lest that old watching spider take offence. The voice of the true God whispers in their hearts, echoes in speech and writing, but they avert themselves, fear-driven. For the true God has no lash of fear. And how the foul-minded bigot, with his ill-shaven face, his greasy skin, his thick, gesticulating hands, his bellowings and threatenings, loves to reap this harvest of fear the ignorant cunning of the nursery girl has sown for him! How he loves the importance of denunciation, and, himself a malignant cripple, to rally the company of these crippled souls to persecute and destroy the happy children of God! . . .

Christian priestcraft turns a dreadful face to children. There is a real wickedness of the priest that is different from other wickedness, and that affects a reasonable mind just as cruelty and strange perversions of instinct affect it. Let a former Archbishop of Canterbury speak for me. This that follows is the account given by Archbishop Tait in a debate in the Upper House of Convocation (July 3rd, 1877) of one of the publications of a certain SOCIETY OF THE HOLY CROSS:

"I take this book, as its contents show, to be meant for the instruction of very young children. I find, in one of the pages of it, the statement that between the ages of six and six and a half years would be the proper time for the inculcation of the teaching which is to be found in the book. Now, six to six and a half is certainly a very tender age, and to these children I find these statements addressed in the book:

"It is to the priest, and to the priest only, that the child must

acknowledge his sins, if he desires that God should forgive him.'

"I hope and trust the person, the three clergymen, or however many there were, did not exactly realise what they were writing; that they did not mean to say that a child was not to confess its sins to God direct; that it was not to confess its sins, at the age of six, to its mother, or to its father, but was only to have recourse to the priest. But the words, to say the least of them, are rash. Then comes the very obvious question:

"Do you know why? It is because God, when he was on earth, gave to his priests, and to them alone, the Divine Power of forgiving men their sins. It was to priests alone that Jesus said: "Receive ye the Holy Ghost." . . . Those who will not confess will not be cured. Sin is a terrible sickness, and casts souls into hell.'

"That is addressed to a child six years of age.

"I have known,' the book continues, 'poor children who concealed their sins in confession for years; they were very unhappy, were tormented with remorse, and if they had died in that state they would certainly have gone to the everlasting fires of hell.'" . . .

Now here is something against nature, something that I have seen time after time in the faces and bearing of priests and heard in their preaching. It is a distinct lust. Much nobility and devotion there are among priests, saintly lives and kindly lives, lives of real worship, lives no man may better; this that I write is not of all, perhaps not of many priests. But there has been in all ages that have known sacerdotalism this terrible type of the priest;

priestcraft and priestly power release an aggressive and narrow disposition to a recklessness of suffering and a hatred of liberty that surely exceeds the badness of any other sort of men.

8. THE CHILDREN'S GOD

Children do not naturally love God. They have no great capacity for an idea so subtle and mature as the idea of God. While they are still children in a home and cared for, life is too kind and easy for them to feel any great need of God. All things are still something God-like. . . .

The true God, our modern minds insist upon believing, can have no appetite for unnatural praise and adoration. He does not clamour for the attention of children. He is not like one of those senile uncles who dream of glory in the nursery, who love to hear it said, "The children adore him." If children are loved and trained to truth, justice, and mutual forbearance, they will be ready for the true God as their needs bring them within his scope. They should be left to their innocence, and to their trust in the innocence of the world, as long as they can be. They should be told only of God as a Great Friend whom some day they will need more and understand and know better. That is as much as most children need. The phrases of religion put too early into their mouths may become a cant, something worse than blasphemy.

Yet children are sometimes very near to God. Creative passion stirs in their play. At times they display a divine simplicity. But it does not follow that therefore they should be afflicted with theological formulae or inducted into ceremonies and rites that they may dislike or misinterpret. If by any accident, by the death of a friend or a distressing story, the thought of death afflicts a child, then he may begin to hear of God, who takes those that serve him out of their slain bodies into his shining immortality. Or if by some menial treachery, through some prowling priest, the whisper of Old Bogey reaches our children, then we may set their minds at ease by the assurance of his limitless charity. . . .

With adolescence comes the desire for God and to know more of God, and that is the most suitable time for religious talk and teaching.

9. GOD IS NOT SEXUAL

In the last two or three hundred years there has been a very considerable disentanglement of the idea of God from the complex of sexual thought and feeling. But in the early days of religion the two things were inseparably bound together; the fury of the Hebrew prophets, for example, is continually proclaiming the extraordinary "wrath" of their God at this or that little dirtiness or irregularity or breach of the sexual tabus. The ceremony of circumcision is clearly indicative of the original nature of the Semitic deity who developed into the Trinitarian God. So far as Christianity dropped this rite, so far Christianity disavowed the old associations. But to this day the representative Christian churches still make marriage into a mystical sacrament, and, with some exceptions, the Roman communion exacts the sacrifice of celibacy from its priesthood, regardless of the mischievousness and maliciousness that so often ensue. Nearly every Christian church inflicts as much discredit and injustice as it can contrive upon the illegitimate child. They do not treat illegitimate children as unfortunate children, but as children with a mystical and an incurable taint of SIN. Kindly easy-going Christians may resent this statement because it does not tally with their own attitudes, but let them consult their orthodox authorities.

One must distinguish clearly here between what is held to be sacred or sinful in itself and what is held to be one's duty or a nation's duty because it is in itself the wisest, cleanest, clearest, best thing to do. By the latter tests and reasonable arguments most or all of our institutions regulating the relations of the sexes may be justifiable. But my case is not whether they can be justified by these tests but that it is not by these tests that they are judged even to-day, by the professors of the chief religions of the world. It is the temper and not the conclusions of the religious bodies that I would criticise. These sexual questions are guarded by a

holy irascibility, and the most violent efforts are made--with a sense of complete righteousness--to prohibit their discussion. That fury about sexual things is only to be explained on the hypothesis that the Christian God remains a sex God in the minds of great numbers of his exponents. His disentanglement from that plexus is incomplete. Sexual things are still to the orthodox Christian, sacred things.

Now the God whom those of the new faith are finding is only mediately concerned with the relations of men and women. He is no more sexual essentially than he is essentially dietetic or hygienic. The God of Leviticus was all these things. He is represented as prescribing the most petty and intimate of observances--many of which are now habitually disregarded by the Christians who profess him. . . . It is part of the evolution of the idea of God that we have now so largely disentangled our conception of him from the dietary and regimen and meticulous sexual rules that were once inseparably bound up with his majesty. Christ himself was one of the chief forces in this disentanglement, there is the clearest evidence in several instances of his disregard of the rule and his insistence that his disciples should seek for the spirit underlying and often masked by the rule. His Church, being made of baser matter, has followed him as reluctantly as possible and no further than it was obliged. But it has followed him far enough to admit his principle that in all these matters there is no need for superstitious fear, that the interpretation of the divine purpose is left to the unembarrassed intelligence of men. The church has followed him far enough to make the harsh threatenings of priests and ecclesiastics against what they are pleased to consider impurity or sexual impiety, a profound inconsistency. One seems to hear their distant protests when one reads of Christ and the Magdalen, or of Christ eating with publicans and sinners. The clergy of our own days play the part of the New Testament Pharisees with the utmost exactness and complete unconsciousness. One cannot imagine a modern ecclesiastic conversing with a Magdalen in terms of ordinary

civility, unless she was in a very high social position indeed, or blending with disreputable characters without a dramatic sense of condescension and much explanatory by-play. Those who profess modern religion do but follow in these matters a course entirely compatible with what has survived of the authentic teachings of Christ, when they declare that God is not sexual, and that religious passion and insult and persecution upon the score of sexual things are a barbaric inheritance.

But lest anyone should fling off here with some hasty assumption that those who profess the religion of the true God are sexually anarchistic, let stress be laid at once upon the opening sentence of the preceding paragraph, and let me a little anticipate a section which follows. We would free men and women from exact and superstitious rules and observances, not to make them less the instruments of God but more wholly his. The claim of modern religion is that one should give oneself unreservedly to God, that there is no other salvation. The believer owes all his being and every moment of his life to God, to keep mind and body as clean, fine, wholesome, active and completely at God's service as he can. There is no scope for indulgence or dissipation in such a consecrated life. It is a matter between the individual and his conscience or his doctor or his social understanding what exactly he may do or not do, what he may eat or drink or so forth, upon any occasion. Nothing can exonerate him from doing his utmost to determine and perform the right act. Nothing can excuse his failure to do so. But what is here being insisted upon is that none of these things has immediately to do with God or religious emotion, except only the general will to do right in God's service. The detailed interpretation of that "right" is for the dispassionate consideration of the human intelligence.

All this is set down here as distinctly as possible. Because of the emotional reservoirs of sex, sexual dogmas are among the most obstinately recurrent of all heresies, and sexual excitement is

always tending to leak back into religious feeling. Amongst the sex-tormented priesthood of the Roman communion in particular, ignorant of the extreme practices of the Essenes and of the Orphic cult and suchlike predecessors of Christianity, there seems to be an extraordinary belief that chastity was not invented until Christianity came, and that the religious life is largely the propitiation of God by feats of sexual abstinence. But a superstitious abstinence that scars and embitters the mind, distorts the imagination, makes the body gross and keeps it unclean, is just as offensive to God as any positive depravity.

CHAPTER THE THIRD

THE LIKENESS OF GOD

1. GOD IS COURAGE

Now having set down what those who profess the new religion regard as the chief misconceptions of God, having put these systems of ideas aside from our explanations, the path is cleared for the statement of what God is. Since language springs entirely from material, spatial things, there is always an element of metaphor in theological statement. So that I have not called this chapter the Nature of God, but the Likeness of God.

And firstly, GOD IS COURAGE.

2. GOD IS A PERSON

And next GOD IS A PERSON.

Upon this point those who are beginning to profess modern religion are very insistent. It is, they declare, the central article, the axis, of their religion. God is a person who can be known as one knows a friend, who can be served and who receives service, who partakes of our nature; who is, like us, a being in conflict with the unknown and the limitless and the forces of death; who values much that we value and is against much that we are pitted against. He is our king to whom we must be loyal; he is our captain, and to know him is to have a direction in our lives. He feels us and knows us; he is helped and gladdened by us. He hopes and attempts. . . . God is no abstraction nor trick of words, no Infinite. He is as real as a bayonet thrust or an embrace.

Now this is where those who have left the old creeds and come asking about the new realisations find their chief difficulty. They say, Show us this person; let us hear him. (If they listen to the silences within, presently they will hear him.) But when one argues, one finds oneself suddenly in the net of those ancient controversies between species and individual, between the one and the many, which arise out of the necessarily imperfect methods of the human mind. Upon these matters there has been much pregnant writing during the last half century. Such ideas as this writer has to offer are to be found in a previous little book of his, "First and Last Things," in which, writing as one without authority or specialisation in logic and philosophy, as an ordinary man vividly interested, for others in a like case, he was at some pains to elucidate the imperfections of this instrument of ours, this mind, by which we must seek and explain and reach up to God. Suffice it here to say that theological discussion may very easily become like the vision of a man with cataract, a mere projection of inherent

imperfections. If we do not use our phraseology with a certain courage, and take that of those who are trying to convey their ideas to us with a certain politeness and charity, there is no end possible to any discussion in so subtle and intimate a matter as theology but assertions, denials, and wranglings. And about this word "person" it is necessary to be as clear and explicit as possible, though perfect clearness, a definition of mathematical sharpness, is by the very nature of the case impossible.

Now when we speak of a person or an individual we think typically of a man, and we forget that he was once an embryo and will presently decay; we forget that he came of two people and may beget many, that he has forgotten much and will forget more, that he can be confused, divided against himself, delirious, drunken, drugged, or asleep. On the contrary we are, in our hasty way of thinking of him, apt to suppose him continuous, definite, acting consistently and never forgetting. But only abstract and theoretical persons are like that. We couple with him the idea of a body. Indeed, in the common use of the word "person" there is more thought of body than of mind. We speak of a lover possessing the person of his mistress. We speak of offences against the person as opposed to insults, libels, or offences against property. And the gods of primitive men and the earlier civilisations were quite of that quality of person. They were thought of as living in very splendid bodies and as acting consistently. If they were invisible in the ordinary world it was because they were aloof or because their "persons" were too splendid for weak human eyes. Moses was permitted a mitigated view of the person of the Hebrew God on Mount Horeb; and Semele, who insisted upon seeing Zeus in the glories that were sacred to Juno, was utterly consumed. The early Islamic conception of God, like the conception of most honest, simple Christians to-day, was clearly, in spite of the theologians, of a very exalted anthropomorphic personality away somewhere in Heaven. The personal appearance of the Christian God is described in The Revelation, and however much that description may be explained away by commentators as

symbolical, it is certainly taken by most straightforward believers as a statement of concrete reality. Now if we are going to insist upon this primary meaning of person and individual, then certainly God as he is now conceived is not a person and not an individual. The true God will never promenade an Eden or a Heaven, nor sit upon a throne.

But current Christianity, modern developments of Islam, much Indian theological thought--that, for instance, which has found such delicate and attractive expression in the devotional poetry of Rabindranath Tagore--has long since abandoned this anthropomorphic insistence upon a body. From the earliest ages man's mind has found little or no difficulty in the idea of something essential to the personality, a soul or a spirit or both, existing apart from the body and continuing after the destruction of the body, and being still a person and an individual. From this it is a small step to the thought of a person existing independently of any existing or pre-existing body. That is the idea of theological Christianity, as distinguished from the Christianity of simple faith. The Triune Persons--omnipresent, omniscient, and omnipotent--exist for all time, superior to and independent of matter. They are supremely disembodied. One became incarnate--as a wind eddy might take up a whirl of dust. . . . Those who profess modern religion conceive that this is an excessive abstraction of the idea of spirituality, a disembodiment of the idea of personality beyond the limits of the conceivable; nevertheless they accept the conception that a person, a spiritual individual, may be without an ordinary mortal body. . . . They declare that God is without any specific body, that he is immaterial, that he can affect the material universe--and that means that he can only reach our sight, our hearing, our touch--through the bodies of those who believe in him and serve him.

His nature is of the nature of thought and will. Not only has he, in his essence, nothing to do with matter, but nothing to do with space. He is not of matter nor of space. He comes into them.

Since the period when all the great theologies that prevail to-day were developed, there have been great changes in the ideas of men towards the dimensions of time and space. We owe to Kant the release from the rule of these ideas as essential ideas. Our modern psychology is alive to the possibility of Being that has no extension in space at all, even as our speculative geometry can entertain the possibility of dimensions--fourth, fifth, Nth dimensions--outside the three-dimensional universe of our experience. And God being non-spatial is not thereby banished to an infinite remoteness, but brought nearer to us; he is everywhere immediately at hand, even as a fourth dimension would be everywhere immediately at hand. He is a Being of the minds and in the minds of men. He is in immediate contact with all who apprehend him. . . .

But modern religion declares that though he does not exist in matter or space, he exists in time just as a current of thought may do; that he changes and becomes more even as a man's purpose gathers itself together; that somewhere in the dawning of mankind he had a beginning, an awakening, and that as mankind grows he grows. With our eyes he looks out upon the universe he invades; with our hands, he lays hands upon it. All our truth, all our intentions and achievements, he gathers to himself. He is the undying human memory, the increasing human will.

But this, you may object, is no more than saying that God is the collective mind and purpose of the human race. You may declare that this is no God, but merely the sum of mankind. But those who believe in the new ideas very steadfastly deny that. God is, they say, not an aggregate but a synthesis. He is not merely the best of all of us, but a Being in himself, composed of that but more than that, as a temple is more than a gathering of stones, or a regiment is more than an accumulation of men. They point out that a man is made up of a great multitude of cells, each equivalent to a unicellular organism. Not one of those cells is he, nor is he simply just the addition of all of them. He is more than all of

them. You can take away these and these and these, and he still remains. And he can detach part of himself and treat it as if it were not himself, just as a man may beat his breast or, as Cranmer the martyr did, thrust his hand into the flames. A man is none the less himself because his hair is cut or his appendix removed or his leg amputated.

And take another image. . . . Who bears affection for this or that spadeful of mud in my garden? Who cares a throb of the heart for all the tons of chalk in Kent or all the lumps of limestone in Yorkshire? But men love England, which is made up of such things.

And so we think of God as a synthetic reality, though he has neither body nor material parts. And so too we may obey him and listen to him, though we think but lightly of the men whose hands or voices he sometimes uses. And we may think of him as having moods and aspects--as a man has--and a consistency we call his character.

These are theorisings about God. These are statements to convey this modern idea of God. This, we say, is the nature of the person whose will and thoughts we serve. No one, however, who understands the religious life seeks conversion by argument. First one must feel the need of God, then one must form or receive an acceptable idea of God. That much is no more than turning one's face to the east to see the coming of the sun. One may still doubt if that direction is the east or whether the sun will rise. The real coming of God is not that. It is a change, an irradiation of the mind. Everything is there as it was before, only now it is aflame. Suddenly the light fills one's eyes, and one knows that God has risen and that doubt has fled for ever.

3. GOD IS YOUTH

The third thing to be told of the true God is that GOD IS YOUTH.

God, we hold, began and is always beginning. He looks forever into the future.

Most of the old religions derive from a patriarchal phase. God is in those systems the Ancient of Days. I know of no Christian attempt to represent or symbolise God the Father which is not a bearded, aged man. White hair, beard, bearing, wrinkles, a hundred such symptoms of senile decay are there. These marks of senility do not astonish our modern minds in the picture of God, only because tradition and usage have blinded our eyes to the absurdity of a time-worn immortal. Jove too and Wotan are figures far past the prime of their vigour. These are gods after the ancient habit of the human mind, that turned perpetually backward for causes and reasons and saw all things to come as no more than the working out of Fate,--

"Of Man's first disobedience and the fruit
Of that forbidden tree, whose mortal taste
Brought death into the world and all our woe."

But the God of this new age, we repeat, looks not to our past but our future, and if a figure may represent him it must be the figure of a beautiful youth, already brave and wise, but hardly come to his strength. He should stand lightly on his feet in the morning time, eager to go forward, as though he had but newly arisen to a day that was still but a promise; he should bear a sword, that clean, discriminating weapon, his eyes should be as bright as swords; his lips should fall apart with eagerness for the great adventure before him, and he should be in very fresh and golden harness, reflecting the rising sun. Death should still hang like mists and cloud banks

and shadows in the valleys of the wide landscape about him. There should be dew upon the threads of gossamer and little leaves and blades of the turf at his feet. . . .

4. WHEN WE SAY GOD IS LOVE

One of the sayings about God that have grown at the same time most trite and most sacred, is that God is Love. This is a saying that deserves careful examination. Love is a word very loosely used; there are people who will say they love new potatoes; there are a multitude of loves of different colours and values. There is the love of a mother for her child, there is the love of brothers, there is the love of youth and maiden, and the love of husband and wife, there is illicit love and the love one bears one's home or one's country, there are dog-lovers and the loves of the Olympians, and love which is a passion of jealousy. Love is frequently a mere blend of appetite and preference; it may be almost pure greed; it may have scarcely any devotion nor be a whit self-forgetful nor generous. It is possible so to phrase things that the furtive craving of a man for another man's wife may be made out to be a light from God. Yet about all the better sorts of love, the sorts of love that people will call "true love," there is something of that same exaltation out of the narrow self that is the essential quality of the knowledge of God.

Only while the exaltation of the love passion comes and goes, the exaltation of religious passion comes to remain. Lovers are the windows by which we may look out of the prison of self, but God is the open door by which we freely go. And God never dies, nor disappoints, nor betrays.

The love of a woman and a man has usually, and particularly in its earlier phases of excitement, far too much desire, far too much possessiveness and exclusiveness, far too much distrust or forced trust, and far too great a kindred with jealousy to be like the love of God. The former is a dramatic relationship that drifts to a climax, and then again seeks presently a climax, and that may be satiated or fatigued. But the latter is far more like the love of

comrades, or like the love of a man and a woman who have loved and been through much trouble together, who have hurt one another and forgiven, and come to a complete and generous fellowship. There is a strange and beautiful love that men tell of that will spring up on battlefields between sorely wounded men, and often they are men who have fought together, so that they will do almost incredibly brave and tender things for one another, though but recently they have been trying to kill each other. There is often a pure exaltation of feeling between those who stand side by side manfully in any great stress. These are the forms of love that perhaps come nearest to what we mean when we speak of the love of God.

That is man's love of God, but there is also something else; there is the love God bears for man in the individual believer. Now this is not an indulgent, instinctive, and sacrificing love like the love of a woman for her baby. It is the love of the captain for his men; God must love his followers as a great captain loves his men, who are so foolish, so helpless in themselves, so confiding, and yet whose faith alone makes him possible. It is an austere love. The spirit of God will not hesitate to send us to torment and bodily death. . . .

And God waits for us, for all of us who have the quality to reach him. He has need of us as we of him. He desires us and desires to make himself known to us. When at last the individual breaks through the limiting darkneses to him, the irradiation of that moment, the smile and soul clasp, is in God as well as in man. He has won us from his enemy. We come staggering through into the golden light of his kingdom, to fight for his kingdom henceforth, until at last we are altogether taken up into his being.

CHAPTER THE FOURTH

THE RELIGION OF ATHEISTS

1. THE SCIENTIFIC ATHEIST

It is a curious thing that while most organised religions seem to drape about and conceal and smother the statement of the true God, the honest Atheist, with his passionate impulse to strip the truth bare, is constantly and unwittingly reproducing the divine likeness. It will be interesting here to call a witness or so to the extreme instability of absolute negation.

Here, for example, is a deliverance from Professor Metchnikoff, who was a very typical antagonist of all religion. He died only the other day. He was a very great physiologist indeed; he was a man almost of the rank and quality of Pasteur or Charles Darwin. A decade or more ago he wrote a book called "The Nature of Man," in which he set out very plainly a number of illuminating facts about life. They are facts so illuminating that presently, in our discussion of sin, they will be referred to again. But it is not Professor Metchnikoff's intention to provide material for a religious discussion. He sets out his facts in order to overthrow theology as he conceives it. The remarkable thing about his book, the thing upon which I would now lay stress, is that he betrays no inkling of the fact that he has no longer the right to conceive theology as he conceives it. The development of his science has destroyed that right.

He does not realise how profoundly modern biology has affected our ideas of individuality and species, and how the import of theology is modified through these changes. When he comes from his own world

of modern biology to religion and philosophy he goes back in time. He attacks religion as he understood it when first he fell out with it fifty years or more ago.

Let us state as compactly as possible the nature of these changes that biological science has wrought almost imperceptibly in the general scheme and method of our thinking.

The influence of biology upon thought in general consists essentially in diminishing the importance of the individual and developing the realisation of the species, as if it were a kind of super-individual, a modifying and immortal super-individual, maintaining itself against the outer universe by the birth and death of its constituent individuals. Natural History, which began by putting individuals into species as if the latter were mere classificatory divisions, has come to see that the species has its adventures, its history and drama, far exceeding in interest and importance the individual adventure. "The Origin of Species" was for countless minds the discovery of a new romance in life.

The contrast of the individual life and this specific life may be stated plainly and compactly as follows. A little while ago we current individuals, we who are alive now, were each of us distributed between two parents, then between four grandparents, and so on backward, we are temporarily assembled, as it were, out of an ancestral diffusion; we stand our trial, and presently our individuality is dispersed and mixed again with other individualities in an uncertain multitude of descendants. But the species is not like this; it goes on steadily from newness to newness, remaining still a unity. The drama of the individual life is a mere episode, beneficial or abandoned, in this continuing adventure of the species. And Metchnikoff finds most of the trouble of life and the distresses of life in the fact that the species is still very painfully adjusting itself to the fluctuating conditions under which it lives. The conflict of life is a continual pursuit

of adjustment, and the "ills of life," of the individual life that is, are due to its "disharmonies." Man, acutely aware of himself as an individual adventure and unawakened to himself as a species, finds life jangling and distressful, finds death frustration. He fails and falls as a person in what may be the success and triumph of his kind. He does not apprehend the struggle or the nature of victory, but only his own gravitation to death and personal extinction.

Now Professor Metchnikoff is anti-religious, and he is anti-religious because to him as to so many Europeans religion is confused with priest-craft and dogmas, is associated with disagreeable early impressions of irrational repression and misguidance. How completely he misconceives the quality of religion, how completely he sees it as an individual's affair, his own words may witness:

"Religion is still occupied with the problem of death. The solutions which as yet it has offered cannot be regarded as satisfactory. A future life has no single argument to support it, and the non-existence of life after death is in consonance with the whole range of human knowledge. On the other hand, resignation as preached by Buddha will fail to satisfy humanity, which has a longing for life, and is overcome by the thought of the inevitability of death."

Now here it is clear that by death he means the individual death, and by a future life the prolongation of individuality. But Buddhism does not in truth appear ever to have been concerned with that, and modern religious developments are certainly not under that preoccupation with the narrower self. Buddhism indeed so far from "preaching resignation" to death, seeks as its greater good a death so complete as to be absolute release from the individual's burthen

of KARMA. Buddhism seeks an ESCAPE FROM INDIVIDUAL IMMORTALITY.

The deeper one pursues religious thought the more nearly it approximates to a search for escape from the self-centred life and over-individuation, and the more it diverges from Professor Metchnikoff's assertion of its aims. Salvation is indeed to lose one's self. But Professor Metchnikoff having roundly denied that this is so, is then left free to take the very essentials of the religious life as they are here conceived and present them as if they were the antithesis of the religious life. His book, when it is analysed, resolves itself into just that research for an escape from the painful accidents and chagrins of individuation, which is the ultimate of religion.

At times, indeed, he seems almost wilfully blind to the true solution round and about which his writing goes. He suggests as his most hopeful satisfaction for the cravings of the human heart, such a scientific prolongation of life that the instinct for self-preservation will be at last extinct. If that is not the very "resignation" he imputes to the Buddhist I do not know what it is. He believes that an individual which has lived fully and completely may at last welcome death with the same instinctive readiness as, in the days of its strength, it shows for the embraces of its mate. We are to be glutted by living to six score and ten. We are to rise from the table at last as gladly as we sat down. We shall go to death as unresistingly as tired children go to bed. Men are to have a life far beyond the range of what is now considered their prime, and their last period (won by scientific self-control) will be a period of ripe wisdom (from seventy to eighty to a hundred and twenty or thereabouts) and public service!

(But why, one asks, public service? Why not book-collecting or the simple pleasure of reminiscence so dear to aged egotists? Metchnikoff never faces that question. And again, what of the man who is challenged to die for right at the age of thirty? What does

the prolongation of life do for him? And where are the consolations for accidental misfortune, for the tormenting disease or the lost limb?)

But in his peroration Professor Metchnikoff lapses into pure religiosity. The prolongation of life gives place to sheer self-sacrifice as the fundamental "remedy." And indeed what other remedy has ever been conceived for the general evil of life?

"On the other hand," he writes, "the knowledge that the goal of human life can be attained only by the development of a high degree of solidarity amongst men will restrain actual egotism. The mere fact that the enjoyment of life according to the precepts of Solomon (Ecclesiastes ix. 7-10)* is opposed to the goal of human life, will lessen luxury and the evil that comes from luxury. Conviction that science alone is able to redress the disharmonies of the human constitution will lead directly to the improvement of education and to the solidarity of mankind.

* Go thy way, eat thy bread with joy, and drink thy wine with a merry heart; for God now accepteth thy works. Let thy garments be always white; and let thy head lack no ointment. Live joyfully with the wife whom thou lovest all the days of the life of thy vanity, which he hath given thee under the sun, all the days of thy vanity for that is thy portion in this life, and in thy labour which thou takest under the sun. whatsoever thy hand findeth to do, do it with thy might; for there is no work, nor device, nor knowledge, nor wisdom, in the grave, whither thou goest.

"In progress towards the goal, nature will have to be consulted continuously. Already, in the case of the ephemerids, nature has produced a complete cycle of normal life ending in natural death. In the problem of his own fate, man must not be content with the gifts of nature; he must direct them by his own efforts. Just as he

has been able to modify the nature of animals and plants, man must attempt to modify his own constitution, so as to readjust its disharmonies. . . .

"To modify the human constitution, it will be necessary first, to frame the ideal, and thereafter to set to work with all the resources of science.

"If there can be formed an ideal able to unite men in a kind of religion of the future, this ideal must be founded on scientific principles. And if it be true, as has been asserted so often, that man can live by faith alone, the faith must be in the power of science."

Now this, after all the flat repudiations that have preceded it of "religion" and "philosophy" as remedies for human ills, is nothing less than the fundamental proposition of the religious life translated into terms of materialistic science, the proposition that damnation is really over-individuation and that salvation is escape from self into the larger being of life. . . .

What can this "religion of the future" be but that devotion to the racial adventure under the captaincy of God which we have already found, like gold in the bottom of the vessel, when we have washed away the confusions and impurities of dogmatic religion? By an inquiry setting out from a purely religious starting-point we have already reached conclusions identical with this ultimate refuge of an extreme materialist.

This altar to the Future of his, we can claim as an altar to our God--an altar rather indistinctly inscribed.

2. SACRIFICE IMPLIES GOD

Almost all Agnostic and Atheistical writings that show any fineness and generosity of spirit, have this tendency to become as it were the statement of an anonymous God. Everything is said that a religious writer would say--except that God is not named. Religious metaphors abound. It is as if they accepted the living body of religion but denied the bones that held it together--as they might deny the bones of a friend. It is true, they would admit, the body moves in a way that implies bones in its every movement, but --WE HAVE NEVER SEEN THOSE BONES.

The disputes in theory--I do not say the difference in reality--between the modern believer and the atheist or agnostic--becomes at times almost as impalpable as that subtle discussion dear to students of physics, whether the scientific "ether" is real or a formula. Every material phenomenon is consonant with and helps to define this ether, which permeates and sustains and is all things, which nevertheless is perceptible to no sense, which is reached only by an intellectual process. Most minds are disposed to treat this ether as a reality. But the acutely critical mind insists that what is only so attainable by inference is not real; it is no more than "a formula that satisfies all phenomena."

But if it comes to that, am I anything more than the formula that satisfies all my forms of consciousness?

Intellectually there is hardly anything more than a certain will to believe, to divide the religious man who knows God to be utterly real, from the man who says that God is merely a formula to satisfy moral and spiritual phenomena. The former has encountered him, the other has as yet felt only unassigned impulses. One says God's will is so; the other that Right is so. One says God moves me to do this

or that; the other the Good Will in me which I share with you and all well-disposed men, moves me to do this or that. But the former makes an exterior reference and escapes a risk of self-righteousness.

I have recently been reading a book by Mr. Joseph McCabe called "The Tyranny of Shams," in which he displays very typically this curious tendency to a sort of religion with God "blacked out." His is an extremely interesting case. He is a writer who was formerly a Roman Catholic priest, and in his reaction from Catholicism he displays a resolution even sterner than Professor Metchnikoff's, to deny that anything religious or divine can exist, that there can be any aim in life except happiness, or any guide but "science." But--and here immediately he turns east again--he is careful not to say "individual happiness." And he says "Pleasure is, as Epicureans insisted, only a part of a large ideal of happiness." So he lets the happiness of devotion and sacrifice creep in. So he opens indefinite possibilities of getting away from any merely materialistic rule of life. And he writes:

"In every civilised nation the mass of the people are inert and indifferent. Some even make a pretence of justifying their inertness. Why, they ask, should we stir at all? Is there such a thing as a duty to improve the earth? What is the meaning or purpose of life? Or has it a purpose?"

"One generally finds that this kind of reasoning is merely a piece of controversial athletics or a thin excuse for idleness. People tell you that the conflict of science and religion--it would be better to say, the conflict of modern culture and ancient traditions--has robbed life of its plain significance. The men who, like Tolstoi, seriously urge this point fail to appreciate the modern outlook on life. Certainly modern culture--science, history, philosophy, and art--finds no purpose in life: that is to say, no

purpose eternally fixed and to be discovered by man. A great chemist said a few years ago that he could imagine 'a series of lucky accidents'--the chance blowing by the wind of certain chemicals into pools on the primitive earth--accounting for the first appearance of life; and one might not unjustly sum up the influences which have lifted those early germs to the level of conscious beings as a similar series of lucky accidents.

"But it is sheer affectation to say that this demoralises us. If there is no purpose impressed on the universe, or prefixed to the development of humanity, it follows only that humanity may choose its own purpose and set up its own goal; and the most elementary sense of order will teach us that this choice must be social, not merely individual. In whatever measure ill-controlled individuals may yield to personal impulses or attractions, the aim of the race must be a collective aim. I do not mean an austere demand of self-sacrifice from the individual, but an adjustment--as genial and generous as possible--of individual variations for common good. Otherwise life becomes discordant and futile, and the pain and waste react on each individual. So we raise again, in the twentieth century, the old question of 'the greatest good,' which men discussed in the Stoa Poikile and the suburban groves of Athens, in the cool atria of patrician mansions on the Palatine and the Pincian, in the Museum at Alexandria, and the schools which Omar Khayyam frequented, in the straw-strewn schools of the Middle Ages and the opulent chambers of Cosimo dei Medici."

And again:

"The old dream of a co-operative effort to improve life, to bring happiness to as many minds of mortals as we can reach, shines above all the mists of the day. Through the ruins of creeds and philosophies, which have for ages disdained it, we are retracing our

steps toward that height--just as the Athenians did two thousand years ago. It rests on no metaphysic, no sacred legend, no disputable tradition--nothing that scepticism can corrode or advancing knowledge undermine. Its foundations are the fundamental and unchanging impulses of our nature."

And again:

"The revolt which burns in so much of the abler literature of our time is an unselfish revolt, or non-selfish revolt: it is an outcome of that larger spirit which conceives the self to be a part of the general social organism, and it is therefore neither egoistic nor altruistic. It finds a sanction in the new intelligence, and an inspiration in the finer sentiments of our generation, but the glow which chiefly illumines it is the glow of the great vision of a happier earth. It speaks of the claims of truth and justice, and assails untruth and injustice, for these are elemental principles of social life; but it appeals more confidently to the warmer sympathy which is linking the scattered children of the race, and it urges all to co-operate in the restriction of suffering and the creation of happiness. The advance guard of the race, the men and women in whom mental alertness is associated with fine feeling, cry that they have reached Pisgah's slope and in increasing numbers men and women are pressing on to see if it be really the Promised Land."

"Pisgah--the Promised Land!" Mr. McCabe in that passage sounds as if he were half-way to "Oh! Beulah Land!" and the tambourine.

That "larger spirit," we maintain, is God; those "impulses" are the power of God, and Mr. McCabe serves a Master he denies. He has but to realise fully that God is not necessarily the Triune God of the Catholic Church, and banish his intense suspicion that he may yet be

lured back to that altar he abandoned, he has but to look up from that preoccupation, and immediately he will begin to realise the presence of Divinity.

3. GOD IS AN EXTERNAL REALITY

It may be argued that if atheists and agnostics when they set themselves to express the good will that is in them, do shape out God, that if their conception of right living falls in so completely with the conception of God's service as to be broadly identical, then indeed God, like the ether of scientific speculation, is no more than a theory, no more than an imaginative externalisation of man's inherent good will. Why trouble about God then? Is not the declaration of a good disposition a sufficient evidence of salvation? What is the difference between such benevolent unbelievers as Professor Metchnikoff or Mr. McCabe and those who have found God?

The difference is this, that the benevolent atheist stands alone upon his own good will, without a reference, without a standard, trusting to his own impulse to goodness, relying upon his own moral strength. A certain immodesty, a certain self-righteousness, hangs like a precipice above him; incalculable temptations open like gulfs beneath his feet. He has not really given himself or got away from himself. He has no one to whom he can give himself. He is still a masterless man. His exaltation is self-centred, is priggishness, his fall is unrestrained by any exterior obligation. His devotion is only the good will in himself, a disposition; it is a mood that may change. At any moment it may change. He may have pledged himself to his own pride and honour, but who will hold him to his bargain? He has no source of strength beyond his own amiable sentiments, his conscience speaks with an unsupported voice, and no one watches while he sleeps. He cannot pray; he can but ejaculate. He has no real and living link with other men of good will.

And those whose acquiescence in the idea of God is merely intellectual are in no better case than those who deny God altogether. They may have all the forms of truth and not divinity.

The religion of the atheist with a God-shaped blank at its heart and the persuasion of the unconverted theologian, are both like lamps unlit. The lit lamp has no difference in form from the lamp unlit. But the lit lamp is alive and the lamp unlit is asleep or dead.

The difference between the unconverted and the unbeliever and the servant of the true God is this; it is that the latter has experienced a complete turning away from self. This only difference is all the difference in the world. It is the realisation that this goodness that I thought was within me and of myself and upon which I rather prided myself, is without me and above myself, and infinitely greater and stronger than I. It is the immortal and I am mortal. It is invincible and steadfast in its purpose, and I am weak and insecure. It is no longer that I, out of my inherent and remarkable goodness, out of the excellence of my quality and the benevolence of my heart, give a considerable amount of time and attention to the happiness and welfare of others--because I choose to do so. On the contrary I have come under a divine imperative, I am obeying an irresistible call, I am a humble and willing servant of the righteousness of God. That altruism which Professor Metchnikoff and Mr. McCabe would have us regard as the goal and refuge of a broad and free intelligence, is really the first simple commandment in the religious life.

4. ANOTHER RELIGIOUS MATERIALIST

Now here is a passage from a book, "Evolution and the War," by Professor Metchnikoff's translator, Dr. Chalmers Mitchell, which comes even closer to our conception of God as an immortal being arising out of man, and external to the individual man. He has been discussing that well-known passage of Kant's: "Two things fill my mind with ever-renewed wonder and awe the more often and deeper I dwell on them--the starry vault above me, and the moral law within me."

From that discussion, Dr. Chalmers Mitchell presently comes to this most definite and interesting statement:

"Writing as a hard-shell Darwinian evolutionist, a lover of the scalpel and microscope, and of patient, empirical observation, as one who dislikes all forms of supernaturalism, and who does not shrink from the implications even of the phrase that thought is a secretion of the brain as bile is a secretion of the liver, I assert as a biological fact that the moral law is as real and as external to man as the starry vault. It has no secure seat in any single man or in any single nation. It is the work of the blood and tears of long generations of men. It is not in man, inborn or innate, but is enshrined in his traditions, in his customs, in his literature and his religion. Its creation and sustenance are the crowning glory of man, and his consciousness of it puts him in a high place above the animal world. Men live and die; nations rise and fall, but the struggle of individual lives and of individual nations must be measured not by their immediate needs, but as they tend to the debasement or perfection of man's great achievement."

This is the same reality. This is the same Link and Captain that

this book asserts. It seems to me a secondary matter whether we call Him "Man's Great Achievement" or "The Son of Man" or the "God of Mankind" or "God." So far as the practical and moral ends of life are concerned, it does not matter how we explain or refuse to explain His presence in our lives.

There is but one possible gap left between the position of Dr. Chalmers Mitchell and the position of this book. In this book it is asserted that GOD RESPONDS, that he GIVES courage and the power of self-suppression to our weakness.

5. A NOTE ON A LECTURE BY PROFESSOR GILBERT MURRAY

Let me now quote and discuss a very beautiful passage from a lecture upon Stoicism by Professor Gilbert Murray, which also displays the same characteristic of an involuntary shaping out of God in the forms of denial. It is a passage remarkable for its conscientious and resolute Agnosticism. And it is remarkable too for its blindness to the possibility of separating quite completely the idea of the Infinite Being from the idea of God. It is another striking instance of that obsession of modern minds by merely Christian theology of which I have already complained. Professor Murray has quoted Mr. Bevan's phrase for God, "the Friend behind phenomena," and he does not seem to realise that that phrase carries with it no obligation whatever to believe that this Friend is in control of the phenomena. He assumes that he is supposed to be in control as if it were a matter of course:

"We do seem to find," Professor Murray writes, "not only in all religions, but in practically all philosophies, some belief that man is not quite alone in the universe, but is met in his endeavours towards the good by some external help or sympathy. We find it everywhere in the unsophisticated man. We find it in the unguarded self-revelations of the most severe and conscientious Atheists. Now, the Stoics, like many other schools of thought, drew an argument from this consensus of all mankind. It was not an absolute proof of the existence of the Gods or Providence, but it was a strong indication. The existence of a common instinctive belief in the mind of man gives at least a presumption that there must be a good cause for that belief.

"This is a reasonable position. There must be some such cause. But it does not follow that the only valid cause is the truth of the content of the belief. I cannot help suspecting that this is

precisely one of those points on which Stoicism, in company with almost all philosophy up to the present time, has gone astray through not sufficiently realising its dependence on the human mind as a natural biological product. For it is very important in this matter to realise that the so-called belief is not really an intellectual judgment so much as a craving of the whole nature.

"It is only of very late years that psychologists have begun to realise the enormous dominion of those forces in man of which he is normally unconscious. We cannot escape as easily as these brave men dreamed from the grip of the blind powers beneath the threshold. Indeed, as I see philosophy after philosophy falling into this unproven belief in the Friend behind phenomena, as I find that I myself cannot, except for a moment and by an effort, refrain from making the same assumption, it seems to me that perhaps here too we are under the spell of a very old ineradicable instinct. We are gregarious animals; our ancestors have been such for countless ages. We cannot help looking out on the world as gregarious animals do; we see it in terms of humanity and of fellowship. Students of animals under domestication have shown us how the habits of a gregarious creature, taken away from his kind, are shaped in a thousand details by reference to the lost pack which is no longer there--the pack which a dog tries to smell his way back to all the time he is out walking, the pack he calls to for help when danger threatens. It is a strange and touching thing, this eternal hunger of the gregarious animal for the herd of friends who are not there. And it may be, it may very possibly be, that, in the matter of this Friend behind phenomena our own yearning and our own almost ineradicable instinctive conviction, since they are certainly not founded on either reason or observation, are in origin the groping of a lonely-souled gregarious animal to find its herd or its herd-leader in the great spaces between the stars.

"At any rate, it is a belief very difficult to get rid of."

There the passage and the lecture end.

I would urge that here again is an inadvertent witness to the reality of God.

Professor Murray writes of gregarious animals as though there existed solitary animals that are not gregarious, pure individualists, "atheists" so to speak, and as though this appeal to a life beyond one's own was not the universal disposition of living things. His classical training disposes him to a realistic exaggeration of individual difference. But nearly every animal, and certainly every mentally considerable animal, begins under parental care, in a nest or a litter, mates to breed, and is associated for much of its life. Even the great carnivores do not go alone except when they are old and have done with the most of life. Every pack, every herd, begins at some point in a couple, it is the equivalent of the tiger's litter if that were to remain undispersed. And it is within the memory of men still living that in many districts the African lion has with a change of game and conditions lapsed from a "solitary" to a gregarious, that is to say a prolonged family habit of life.

Man too, if in his ape-like phase he resembled the other higher apes, is an animal becoming more gregarious and not less. He has passed within the historical period from a tribal gregariousness to a nearly cosmopolitan tolerance. And he has his tribe about him. He is not, as Professor Murray seems to suggest, a solitary LOST gregarious beast. Why should his desire for God be regarded as the overflow of an unsatisfied gregarious instinct, when he has home, town, society, companionship, trade union, state, INCREASINGLY at hand to glut it? Why should gregariousness drive a man to God rather than to the third-class carriage and the public-house? Why should gregariousness drive men out of crowded Egyptian cities into the cells of the Thebaid? Schopenhauer in a memorable passage

(about the hedgehogs who assembled for warmth) is flatly opposed to Professor Murray, and seems far more plausible when he declares that the nature of man is insufficiently gregarious. The parallel with the dog is not a valid one.

Does not the truth lie rather in the supposition that it is not the Friend that is the instinctive delusion but the isolation? Is not the real deception, our belief that we are completely individualised, and is it not possible that this that Professor Murray calls "instinct" is really not a vestige but a new thing arising out of our increasing understanding, an intellectual penetration to that greater being of the species, that vine, of which we are the branches? Why should not the soul of the species, many faceted indeed, be nevertheless a soul like our own?

Here, as in the case of Professor Metchnikoff, and in many other cases of atheism, it seems to me that nothing but an inadequate understanding of individuation bars the way to at least the intellectual recognition of the true God.

6. RELIGION AS ETHICS

And while I am dealing with rationalists, let me note certain recent interesting utterances of Sir Harry Johnston's. You will note that while in this book we use the word "God" to indicate the God of the Heart, Sir Harry uses "God" for that idea of God-of-the-Universe, which we have spoken of as the Infinite Being. This use of the word "God" is of late theological origin; the original identity of the words "good" and "god" and all the stories of the gods are against him. But Sir Harry takes up God only to define him away into incomprehensible necessity. Thus:

"We know absolutely nothing concerning the Force we call God; and, assuming such an intelligent ruling force to be in existence, permeating this universe of millions of stars and (no doubt) tens of millions of planets, we do not know under what conditions and limitations It works. We are quite entitled to assume that the end of such an influence is intended to be order out of chaos, happiness and perfection out of incompleteness and misery; and we are entitled to identify the reactionary forces of brute Nature with the anthropomorphic Devil of primitive religions, the power of darkness resisting the power of light. But in these conjectures we must surely come to the conclusion that the theoretical potency we call 'God' makes endless experiments, and scrap-heaps the failures. Think of the Dinosaurs and the expenditure of creative energy that went to their differentiation and their wellnigh incredible physical development. . . .

"To such a Divine Force as we postulate, the whole development and perfecting of life on this planet, the whole production of man, may seem little more than to any one of us would be the chipping out, the cutting, the carving, and the polishing of a gem; and we should feel as little remorse or pity for the scattered dust and fragments

as must the Creative Force of the immeasurably vast universe feel for the DISJECTA MEMBRA of perfected life on this planet. . . ."

But thence he goes on to a curiously imperfect treatment of the God of man as if he consisted in nothing more than some vague sort of humanitarianism. Sir Harry's ideas are much less thoroughly thought out than those of any other of these sceptical writers I have quoted. On that account they are perhaps more typical. He speaks as though Christ were simply an eminent but illreported and abominably served teacher of ethics--and yet of the only right ideal and ethics. He speaks as though religions were nothing more than ethical movements, and as though Christianity were merely someone remarking with a bright impulsiveness that everything was simply horrid, and so, "Let us instal loving kindness as a cardinal axiom. He ignores altogether the fundamental essential of religion, which is THE DEVELOPMENT AND SYNTHESIS OF THE DIVERGENT AND CONFLICTING MOTIVES OF THE UNCONVERTED LIFE, AND THE IDENTIFICATION OF THE INDIVIDUAL LIFE WITH THE IMMORTAL PURPOSE OF GOD. He presents a conception of religion relieved of its "nonsense" as the cheerful self-determination of a number of bright little individuals (much stirred but by no means overcome by Cosmic Pity) to the Service of Man. As he seems to present it, it is as outward a thing, it goes as little into the intimacy of their lives, as though they had after proper consideration agreed to send a subscription to a Red Cross Ambulance or take part in a public demonstration against the Armenian Massacres, or do any other rather nice-spirited exterior thing. This is what he says:

"I hope that the religion of the future will devote itself wholly to the Service of Man. It can do so without departing from the

Christian ideal and Christian ethics. It need only drop all that is silly and disputable, and 'mattering not neither here nor there,' of Christian theology--a theology virtually absent from the direct teaching of Christ--and all of Judaistic literature or prescriptions not made immortal in their application by unassailable truth and by the confirmation of science. An excellent remedy for the nonsense which still clings about religion may be found in two books: Cotter Monson's 'Service of Man,' which was published as long ago as 1887, and has since been re-issued by the Rationalist Press Association in its well-known sixpenny series, and J. Allanson Picton's 'Man and the Bible.' Similarly, those who wish to acquire a sane view of the relations between man and God would do well to read Winwood Reade's 'Martyrdom of Man.'"

Sir Harry in fact clears the ground for God very ably, and then makes a well-meaning gesture in the vacant space. There is no help nor strength in his gesture unless God is there. Without God, the "Service of Man" is no better than a hobby or a sentimentality or an hypocrisy in the undisciplined prison of the mortal life.

CHAPTER THE FIFTH

THE INVISIBLE KING

1. MODERN RELIGION A POLITICAL RELIGION

The conception of a young and energetic God, an Invisible Prince growing in strength and wisdom, who calls men and women to his service and who gives salvation from self and mortality only through self-abandonment to his service, necessarily involves a demand for a complete revision and fresh orientation of the life of the convert.

God faces the blackness of the Unknown and the blind joys and confusions and cruelties of Life, as one who leads mankind through a dark jungle to a great conquest. He brings mankind not rest but a sword. It is plain that he can admit no divided control of the world he claims. He concedes nothing to Caesar. In our philosophy there are no human things that are God's and others that are Caesar's. Those of the new thought cannot render unto God the things that are God's, and to Caesar the things that are Caesar's. Whatever claim Caesar may make to rule men's lives and direct their destinies outside the will of God, is a usurpation. No king nor Caesar has any right to tax or to service or to tolerance, except he claim as one who holds for and under God. And he must make good his claim. The steps of the altar of the God of Youth are no safe place for the sacrilegious figure of a king. Who claims "divine right" plays with the lightning.

The new conceptions do not tolerate either kings or aristocracies or democracies. Its implicit command to all its adherents is to make plain the way to the world theocracy. Its rule of life is the discovery and service of the will of God, which dwells in the hearts of men, and the performance of that will, not only in the private

life of the believer but in the acts and order of the state and nation of which he is a part. I give myself to God not only because I am so and so but because I am mankind. I become in a measure responsible for every evil in the world of men. I become a knight in God's service. I become my brother's keeper. I become a responsible minister of my King. I take sides against injustice, disorder, and against all those temporal kings, emperors, princes, landlords, and owners, who set themselves up against God's rule and worship. Kings, owners, and all who claim rule and decisions in the world's affairs, must either show themselves clearly the fellow-servants of the believer or become the objects of his steadfast antagonism.

2. THE WILL OF GOD

It is here that those who explain this modern religiosity will seem most arbitrary to the inquirer. For they relate of God, as men will relate of a close friend, his dispositions, his apparent intentions, the aims of his kingship. And just as they advance no proof whatever of the existence of God but their realisation of him, so with regard to these qualities and dispositions they have little argument but profound conviction. What they say is this; that if you do not feel God then there is no persuading you of him; we cannot win over the incredulous. And what they say of his qualities is this; that if you feel God then you will know, you will realise more and more clearly, that thus and thus and no other is his method and intention.

It comes as no great shock to those who have grasped the full implications of the statement that God is Finite, to hear it asserted that the first purpose of God is the attainment of clear knowledge, of knowledge as a means to more knowledge, and of knowledge as a means to power. For that he must use human eyes and hands and brains.

And as God gathers power he uses it to an end that he is only beginning to apprehend, and that he will apprehend more fully as time goes on. But it is possible to define the broad outlines of the attainment he seeks. It is the conquest of death.

It is the conquest of death; first the overcoming of death in the individual by the incorporation of the motives of his life into an undying purpose, and then the defeat of that death that seems to threaten our species upon a cooling planet beneath a cooling sun. God fights against death in every form, against the great death of the race, against the petty death of indolence, insufficiency, baseness, misconception, and perversion. He it is and no other who

can deliver us "from the body of this death." This is the battle that grows plainer; this is the purpose to which he calls us out of the animal's round of eating, drinking, lusting, quarrelling and laughing and weeping, fearing and failing, and presently of wearying and dying, which is the whole life that living without God can give us. And from these great propositions there follow many very definite maxims and rules of life for those who serve God. These we will immediately consider.

3. THE CRUCIFIX

But first let me write a few words here about those who hold a kind of intermediate faith between the worship of the God of Youth and the vaguer sort of Christianity. There are a number of people closely in touch with those who have found the new religion who, biased probably by a dread of too complete a break with Christianity, have adopted a theogony which is very reminiscent of Gnosticism and of the Paulician, Catharist, and kindred sects to which allusion has already been made. He, who is called in this book God, they would call God-the-Son or Christ, or the Logos; and what is here called the Darkness or the Veiled Being, they would call God-the-Father. And what we speak of here as Life, they would call, with a certain disregard of the poor brutes that perish, Man. And they would assert, what we of the new belief, pleading our profound ignorance, would neither assert nor deny, that that Darkness, out of which came Life and God, since it produced them must be ultimately sympathetic and of like nature with them. And that ultimately Man, being redeemed and led by Christ and saved from death by him, would be reconciled with God the Father.* And this great adventurer out of the hearts of man that we here call God, they would present as the same with that teacher from Galilee who was crucified at Jerusalem.

* This probably was the conception of Spinoza. Christ for him is the wisdom of God manifested in all things, and chiefly in the mind of man. Through him we reach the blessedness of an intuitive knowledge of God. Salvation is an escape from the "inadequate" ideas of the mortal human personality to the "adequate" and timeless ideas of God.

Now we of the modern way would offer the following criticisms upon this apparent compromise between our faith and the current religion. Firstly, we do not presume to theorise about the nature of the

veiled being nor about that being's relations to God and to Life. We do not recognise any consistent sympathetic possibilities between these outer beings and our God. Our God is, we feel, like Prometheus, a rebel. He is unfilial. And the accepted figure of Jesus, instinct with meek submission, is not in the tone of our worship. It is not by suffering that God conquers death, but by fighting. Incidentally our God dies a million deaths, but the thing that matters is not the deaths but the immortality. It may be he cannot escape in this person or that person being nailed to a cross or chained to be torn by vultures on a rock. These may be necessary sufferings, like hunger and thirst in a campaign; they do not in themselves bring victory. They may be necessary, but they are not glorious. The symbol of the crucifixion, the drooping, pain-drenched figure of Christ, the sorrowful cry to his Father, "My God, my God, why hast thou forsaken me?" these things jar with our spirit. We little men may well fail and repent, but it is our faith that our God does not fail us nor himself. We cannot accept the Christian's crucifix, or pray to a pitiful God. We cannot accept the Resurrection as though it were an after-thought to a bitterly felt death. Our crucifix, if you must have a crucifix, would show God with a hand or a foot already torn away from its nail, and with eyes not downcast but resolute against the sky; a face without pain, pain lost and forgotten in the surpassing glory of the struggle and the inflexible will to live and prevail. . . .

But we do not care how long the thorns are drawn, nor how terrible the wounds, so long as he does not droop. God is courage. God is courage beyond any conceivable suffering.

But when all this has been said, it is well to add that it concerns the figure of Christ only in so far as that professes to be the figure of God, and the crucifix only so far as that stands for divine action. The figure of Christ crucified, so soon as we think of it as being no more than the tragic memorial of Jesus, of the man who proclaimed the loving-kindness of God and the supremacy of God's

kingdom over the individual life, and who, in the extreme agony of his pain and exhaustion, cried out that he was deserted, becomes something altogether distinct from a theological symbol.

Immediately that we cease to worship, we can begin to love and pity. Here was a being of extreme gentleness and delicacy and of great courage, of the utmost tolerance and the subtlest sympathy, a saint of non-resistance. . . .

We of the new faith repudiate the teaching of non-resistance. We are the militant followers of and participators in a militant God. We can appreciate and admire the greatness of Christ, this gentle being upon whose nobility the theologians trade. But submission is the remotest quality of all from our God, and a moribund figure is the completest inversion of his likeness as we know him. A Christianity which shows, for its daily symbol, Christ risen and trampling victoriously upon a broken cross, would be far more in the spirit of our worship.*

* It is curious, after writing the above, to find in a letter written by Foss Westcott, Bishop of Durham, to that pertinacious correspondent, the late Lady Victoria Welby, almost exactly the same sentiments I have here expressed. "If I could fill the Crucifix with life as you do," he says, "I would gladly look on it, but the fallen Head and the closed Eye exclude from my thought the idea of glorified humanity. The Christ to whom we are led is One who 'hath been crucified,' who hath passed the trial victoriously and borne the fruits to heaven. I dare not then rest on this side of the glory."

I find, too, a still more remarkable expression of the modern spirit in a tract, "The Call of the Kingdom," by that very able and subtle, Anglican theologian, the Rev. W. Temple, who declares that under the vitalising stresses of the war we are winning "faith in Christ as an heroic leader. We have thought of Him so much as meek and gentle that there is no ground in our picture of Him, for the vision which

His disciple had of Him: 'His head and His hair were white, as white wool, white as snow; and His eyes were as a flame of fire: and His feet like unto burnished brass, as if it had been refined in a furnace; and His voice was as the voice of many waters. And He had in His right hand seven stars; and out of His mouth proceeded a sharp two-edged sword; and His countenance was as the sun shineth in its strength.'

These are both exceptional utterances, interesting as showing how clearly parallel are the tendencies within and without Christianity.

4. THE PRIMARY DUTIES

Now it follows very directly from the conception of God as a finite intelligence of boundless courage and limitless possibilities of growth and victory, who has pitted himself against death, who stands close to our inmost beings ready to receive us and use us, to rescue us from the chagrins of egotism and take us into his immortal adventure, that we who have realised him and given ourselves joyfully to him, must needs be equally ready and willing to give our energies to the task we share with him, to do our utmost to increase knowledge, to increase order and clearness, to fight against indolence, waste, disorder, cruelty, vice, and every form of his and our enemy, death, first and chiefest in ourselves but also in all mankind, and to bring about the establishment of his real and visible kingdom throughout the world.

And that idea of God as the Invisible King of the whole world means not merely that God is to be made and declared the head of the world, but that the kingdom of God is to be present throughout the whole fabric of the world, that the Kingdom of God is to be in the teaching at the village school, in the planning of the railway siding of the market town, in the mixing of the mortar at the building of the workman's house. It means that ultimately no effigy of intrusive king or emperor is to disfigure our coins and stamps any more; God himself and no delegate is to be represented wherever men buy or sell, on our letters and our receipts, a perpetual witness, a perpetual reminder. There is no act altogether without significance, no power so humble that it may not be used for or against God, no life but can orient itself to him. To realise God in one's heart is to be filled with the desire to serve him, and the way of his service is neither to pull up one's life by the roots nor to continue it in all its essentials unchanged, but to turn it about, to turn everything that there is in it round into his way.

The outward duty of those who serve God must vary greatly with the abilities they possess and the positions in which they find themselves, but for all there are certain fundamental duties; a constant attempt to be utterly truthful with oneself, a constant sedulousness to keep oneself fit and bright for God's service, and to increase one's knowledge and powers, and a hidden persistent watchfulness of one's baser motives, a watch against fear and indolence, against vanity, against greed and lust, against envy, malice, and uncharitableness. To have found God truly does in itself make God's service one's essential motive, but these evils lurk in the shadows, in the lassitudes and unwary moments. No one escapes them altogether, there is no need for tragic moods on account of imperfections. We can no more serve God without blunders and set-backs than we can win battles without losing men. But the less of such loss the better. The servant of God must keep his mind as wide and sound and his motives as clean as he can, just as an operating surgeon must keep his nerves and muscles as fit and his hands as clean as he can. Neither may righteously evade exercise and regular washing--of mind as of hands. An incessant watchfulness of one's self and one's thoughts and the soundness of one's thoughts; cleanliness, clearness, a wariness against indolence and prejudice, careful truth, habitual frankness, fitness and steadfast work; these are the daily fundamental duties that every one who truly comes to God will, as a matter of course, set before himself.

5. THE INCREASING KINGDOM

Now of the more intimate and personal life of the believer it will be more convenient to write a little later. Let us for the present pursue the idea of this world-kingdom of God, to whose establishment he calls us. This kingdom is to be a peaceful and co-ordinated activity of all mankind upon certain divine ends. These, we conceive, are first, the maintenance of the racial life; secondly, the exploration of the external being of nature as it is and as it has been, that is to say history and science; thirdly, that exploration of inherent human possibility which is art; fourthly, that clarification of thought and knowledge which is philosophy; and finally, the progressive enlargement and development of the racial life under these lights, so that God may work through a continually better body of humanity and through better and better equipped minds, that he and our race may increase for ever, working unendingly upon the development of the powers of life and the mastery of the blind forces of matter throughout the deeps of space. He sets out with us, we are persuaded, to conquer ourselves and our world and the stars. And beyond the stars our eyes can as yet see nothing, our imaginations reach and fail. Beyond the limits of our understanding is the veiled Being of Fate, whose face is hidden from us. . . .

It may be that minds will presently appear among us of such a quality that the face of that Unknown will not be altogether hidden. . . .

But the business of such ordinary lives as ours is the setting up of this earthly kingdom of God. That is the form into which our lives must fall and our consciences adapt themselves.

Belief in God as the Invisible King brings with it almost necessarily a conception of this coming kingdom of God on earth.

Each believer as he grasps this natural and immediate consequence of the faith that has come into his life will form at the same time a Utopian conception of this world changed in the direction of God's purpose. The vision will follow the realisation of God's true nature and purpose as a necessary second step. And he will begin to develop the latent citizen of this world-state in himself. He will fall in with the idea of the world-wide sanities of this new order being drawn over the warring outlines of the present, and of men falling out of relationship with the old order and into relationship with the new. Many men and women are already working to-day at tasks that belong essentially to God's kingdom, tasks that would be of the same essential nature if the world were now a theocracy; for example, they are doing or sustaining scientific research or education or creative art; they are making roads to bring men together, they are doctors working for the world's health, they are building homes, they are constructing machinery to save and increase the powers of men. . . .

Such men and women need only to change their orientation as men will change about at a work-table when the light that was coming in a little while ago from the southern windows, begins presently to come in chiefly from the west, to become open and confessed servants of God. This work that they were doing for ambition, or the love of men or the love of knowledge or what seemed the inherent impulse to the work itself, or for money or honour or country or king, they will realise they are doing for God and by the power of God. Self-transformation into a citizen of God's kingdom and a new realisation of all earthly politics as no more than the struggle to define and achieve the kingdom of God in the earth, follow on, without any need for a fresh spiritual impulse, from the moment when God and the believer meet and clasp one another.

This transfiguration of the world into a theocracy may seem a merely fantastic idea to anyone who comes to it freshly without such general theological preparation as the preceding pages have made.

But to anyone who has been at the pains to clear his mind even a little from the obsession of existing but transitory things, it ceases to be a mere suggestion and becomes more and more manifestly the real future of mankind. From the phase of "so things should be," the mind will pass very rapidly to the realisation that "so things will be." Towards this the directive wills among men have been drifting more and more steadily and perceptibly and with fewer eddyings and retardations, for many centuries. The purpose of mankind will not be always thus confused and fragmentary. This dissemination of will-power is a phase. The age of the warring tribes and kingdoms and empires that began a hundred centuries or so ago, draws to its close. The kingdom of God on earth is not a metaphor, not a mere spiritual state, not a dream, not an uncertain project; it is the thing before us, it is the close and inevitable destiny of mankind.

In a few score years the faith of the true God will be spreading about the world. The few halting confessions of God that one hears here and there to-day, like that little twittering of birds which comes before the dawn, will have swollen to a choral unanimity. In but a few centuries the whole world will be openly, confessedly, preparing for the kingdom. In but a few centuries God will have led us out of the dark forest of these present wars and confusions into the open brotherhood of his rule.

6. WHAT IS MY PLACE IN THE KINGDOM?

This conception of the general life of mankind as a transformation at thousands of points of the confused, egotistical, proprietary, partisan, nationalist, life-wasting chaos of human life to-day into the coherent development of the world kingdom of God, provides the form into which everyone who comes to the knowledge of God will naturally seek to fit his every thought and activity. The material greeds, the avarice, fear, rivalries, and ignoble ambitions of a disordered world will be challenged and examined under one general question: "What am I in the kingdom of God?"

It has already been suggested that there is a great and growing number of occupations that belong already to God's kingdom, research, teaching, creative art, creative administration, cultivation, construction, maintenance, and the honest satisfaction of honest practical human needs. For such people conversion to the intimacy of God means at most a change in the spirit of their work, a refreshed energy, a clearer understanding, a new zeal, a completer disregard of gains and praises and promotion. Pay, honours, and the like cease to be the inducement of effort. Service, and service alone, is the criterion that the quickened conscience will recognise.

Most of such people will find themselves in positions in which service is mingled with activities of a baser sort, in which service is a little warped and deflected by old traditions and usage, by mercenary and commercial considerations, by some inherent or special degradation of purpose. The spirit of God will not let the believer rest until his life is readjusted and as far as possible freed from the waste of these base diversions. For example a scientific investigator, lit and inspired by great inquiries, may be hampered by the conditions of his professorship or research fellowship, which exact an appearance of "practical" results. Or he may be obliged to

lecture or conduct classes. He may be able to give but half his possible gift to the work of his real aptitude, and that at a sacrifice of money and reputation among short-sighted but influential contemporaries. Well, if he is by nature an investigator he will know that the research is what God needs of him. He cannot continue it at all if he leaves his position, and so he must needs waste something of his gift to save the rest. But should a poorer or a humbler post offer him better opportunity, there lies his work for God. There one has a very common and simple type of the problems that will arise in the lives of men when they are lit by sudden realisation of the immediacy of God.

Akin to that case is the perplexity of any successful physician between the increase of knowledge and the public welfare on the one hand, and the lucrative possibilities of his practice among wealthy people on the other. He belongs to a profession that is crippled by a mediaeval code, a profession which was blind to the common interest of the Public Health and regarded its members merely as skilled practitioners employed to "cure" individual ailments. Very slowly and tortuously do the methods of the profession adapt themselves to the modern conception of an army of devoted men working as a whole under God for the health of mankind as a whole, broadening out from the frowsy den of the "leech," with its crocodile and bottles and hieroglyphic prescriptions, to a skilled and illuminating co-operation with those who deal with the food and housing and economic life of the community.

And again quite parallel with these personal problems is the trouble of the artist between the market and vulgar fame on the one hand and his divine impulse on the other.

The presence of God will be a continual light and help in every decision that must be made by men and women in these more or less vitiated, but still fundamentally useful and righteous, positions.

The trouble becomes more marked and more difficult in the case of a man who is a manufacturer or a trader, the financier of business enterprise or the proprietor of great estates. The world is in need of manufactures and that goods should be distributed; land must be administered and new economic possibilities developed. The drift of things is in the direction of state ownership and control, but in a great number of cases the state is not ripe for such undertakings, it commands neither sufficient integrity nor sufficient ability, and the proprietor of factory, store, credit or land, must continue in possession, holding as a trustee for God and, so far as lies in his power, preparing for his supersession by some more public administration. Modern religion admits of no facile flights from responsibility. It permits no headlong resort to the wilderness and sterile virtue. It counts the recluse who fasts among scorpions in a cave as no better than a deserter in hiding. It unhesitatingly forbids any rich young man to sell all that he has and give to the poor. Himself and all that he has must be alike dedicated to God.

The plain duty that will be understood by the proprietor of land and of every sort of general need and service, so soon as he becomes aware of God, is so to administer his possessions as to achieve the maximum of possible efficiency, the most generous output, and the least private profit. He may set aside a salary for his maintenance; the rest he must deal with like a zealous public official. And if he perceives that the affair could be better administered by other hands than his own, then it is his business to get it into those hands with the smallest delay and the least profit to himself. . . .

The rights and wrongs of human equity are very different from right and wrong in the sight of God. In the sight of God no landlord has a **RIGHT** to his rent, no usurer has a **RIGHT** to his interest. A man is not justified in drawing the profits from an advantageous agreement nor free to spend the profits of a speculation as he will. God takes no heed of savings nor of abstinence. He recognises no

right to the "rewards of abstinence," no right to any rewards. Those profits and comforts and consolations are the inducements that dangle before the eyes of the spiritually blind. Wealth is an embarrassment to the religious, for God calls them to account for it. The servant of God has no business with wealth or power except to use them immediately in the service of God. Finding these things in his hands he is bound to administer them in the service of God.

The tendency of modern religion goes far beyond the alleged communism of the early Christians, and far beyond the tithes of the scribes and Pharisees. God takes all. He takes you, blood and bones and house and acres, he takes skill and influence and expectations. For all the rest of your life you are nothing but God's agent. If you are not prepared for so complete a surrender, then you are infinitely remote from God. You must go your way. Here you are merely a curious interloper. Perhaps you have been desiring God as an experience, or coveting him as a possession. You have not begun to understand. This that we are discussing in this book is as yet nothing for you.

7. ADJUSTING LIFE

This picturing of a human world more to the mind of God than this present world and the discovery and realisation of one's own place and work in and for that kingdom of God, is the natural next phase in the development of the believer. He will set about revising and adjusting his scheme of life, his ways of living, his habits and his relationships in the light of his new convictions.

Most men and women who come to God will have already a certain righteousness in their lives; these things happen like a thunderclap only in strange exceptional cases, and the same movements of the mind that have brought them to God will already have brought their lives into a certain rightness of direction and conduct. Yet occasionally there will be someone to whom the self-examination that follows conversion will reveal an entirely wrong and evil way of living. It may be that the light has come to some rich idler doing nothing but follow a pleasurable routine. Or to someone following some highly profitable and amusing, but socially useless or socially mischievous occupation. One may be an advocate at the disposal of any man's purpose, or an actor or actress ready to fall in with any theatrical enterprise. Or a woman may find herself a prostitute or a pet wife, a mere kept instrument of indulgence. These are lives of prey, these are lives of futility; the light of God will not tolerate such lives. Here religion can bring nothing but a severance from the old way of life altogether, a break and a struggle towards use and service and dignity.

But even here it does not follow that because a life has been wrong the new life that begins must be far as the poles asunder from the old. Every sort of experience that has ever come to a human being is in the self that he brings to God, and there is no reason why a knowledge of evil ways should not determine the path of duty. No one can better devise protections against vices than those who have

practised them; none know temptations better than those who have fallen. If a man has followed an evil trade, it becomes him to use his knowledge of the tricks of that trade to help end it. He knows the charities it may claim and the remedies it needs. . . .

A very interesting case to discuss in relation to this question of adjustment is that of the barrister. A practising barrister under contemporary conditions does indeed give most typically the opportunity for examining the relation of an ordinary self-respecting wordly life, to life under the dispensation of God discovered. A barrister is usually a man of some energy and ambition, his honour is moulded by the traditions of an ancient and antiquated profession, instinctively self-preserving and yet with a real desire for consistency and respect. As a profession it has been greedy and defensively conservative, but it has never been shameless nor has it ever broken faith with its own large and selfish, but quite definite, propositions. It has never for instance had the shamelessness of such a traditionless and undisciplined class as the early factory organisers. It has never had the dull incoherent wickedness of the sort of men who exploit drunkenness and the turf. It offends within limits. Barristers can be, and are, disbarred. But it is now a profession extraordinarily out of date; its code of honour derives from a time of cruder and lower conceptions of human relationship. It apprehends the State as a mere "ring" kept about private disputations; it has not begun to move towards the modern conception of the collective enterprise as the determining criterion of human conduct. It sees its business as a mere play upon the rules of a game between man and man, or between men and men. They haggle, they dispute, they inflict and suffer wrongs, they evade dues, and are liable or entitled to penalties and compensations. The primary business of the law is held to be decision in these wrangles, and as wrangling is subject to artistic elaboration, the business of the barrister is the business of a professional wrangler; he is a bravo in wig and gown who fights the duels of ordinary men because they are incapable, very largely on

account of the complexities of legal procedure, of fighting for themselves. His business is never to explore any fundamental right in the matter. His business is to say all that can be said for his client, and to conceal or minimise whatever can be said against his client. The successful promoted advocate, who in Britain and the United States of America is the judge, and whose habits and interests all incline him to disregard the realities of the case in favour of the points in the forensic game, then adjudicates upon the contest. . . .

Now this condition of things is clearly incompatible with the modern conception of the world as becoming a divine kingdom. When the world is openly and confessedly the kingdom of God, the law court will exist only to adjust the differing views of men as to the manner of their service to God; the only right of action one man will have against another will be that he has been prevented or hampered or distressed by the other in serving God. The idea of the law court will have changed entirely from a place of dispute, exaction and vengeance, to a place of adjustment. The individual or some state organisation will plead **ON BEHALF OF THE COMMON GOOD**

either against some state official or state regulation, or against the actions or inaction of another individual. This is the only sort of legal proceedings compatible with the broad beliefs of the new faith. . . . Every religion that becomes ascendant, in so far as it is not otherworldly, must necessarily set its stamp upon the methods and administration of the law. That this was not the case with Christianity is one of the many contributory aspects that lead one to the conviction that it was not Christianity that took possession of the Roman empire, but an imperial adventurer who took possession of an all too complaisant Christianity.

Reverting now from these generalisations to the problem of the religious from which they arose, it will have become evident that the essential work of anyone who is conversant with the existing

practice and literature of the law and whose natural abilities are forensic, will lie in the direction of reconstructing the theory and practice of the law in harmony with modern conceptions, of making that theory and practice clear and plain to ordinary men, of reforming the abuses of the profession by working for the separation of bar and judiciary, for the amalgamation of the solicitors and the barristers, and the like needed reforms. These are matters that will probably only be properly set right by a quickening of conscience among lawyers themselves. Of no class of men is the help and service so necessary to the practical establishment of God's kingdom, as of men learned and experienced in the law. And there is no reason why for the present an advocate should not continue to plead in the courts, provided he does his utmost only to handle cases in which he believes he can serve the right. Few righteous cases are ill-served by a frank disposition on the part of lawyer and client to put everything before the court. Thereby of course there arises a difficult case of conscience. What if a lawyer, believing his client to be in the right, discovers him to be in the wrong? He cannot throw up the case unless he has been scandalously deceived, because so he would betray the confidence his client has put in him to "see him through." He has a right to "give himself away," but not to "give away" his client in this fashion. If he has a chance of a private consultation I think he ought to do his best to make his client admit the truth of the case and give in, but failing this he has no right to be virtuous on behalf of another. No man may play God to another; he may remonstrate, but that is the limit of his right. He must respect a confidence, even if it is purely implicit and involuntary. I admit that here the barrister is in a cleft stick, and that he must see the business through according to the confidence his client has put in him--and afterwards be as sorry as he may be if an injustice ensues. And also I would suggest a lawyer may with a fairly good conscience defend a guilty man as if he were innocent, to save him from unjustly heavy penalties. . . .

This comparatively full discussion of the barrister's problem has been embarked upon because it does bring in, in a very typical fashion, just those uncertainties and imperfections that abound in real life. Religious conviction gives us a general direction, but it stands aside from many of these entangled struggles in the jungle of conscience. Practice is often easier than a rule. In practice a lawyer will know far more accurately than a hypothetical case can indicate, how far he is bound to see his client through, and how far he may play the keeper of his client's conscience. And nearly every day there happens instances where the most subtle casuistry will fail and the finger of conscience point unhesitatingly. One may have worried long in the preparation and preliminaries of the issue, one may bring the case at last into the final court of conscience in an apparently hopeless tangle. Then suddenly comes decision.

The procedure of that silent, lit, and empty court in which a man states his case to God, is very simple and perfect. The excuses and the special pleading shrivel and vanish. In a little while the case lies bare and plain.

8. THE OATH OF ALLEGIANCE

The question of oaths of allegiance, acts of acquiescence in existing governments, and the like, is one that arises at once with the acceptance of God as the supreme and real King of the Earth. At the worst Caesar is a usurper, a satrap claiming to be sovereign; at the best he is provisional. Modern casuistry makes no great trouble for the believing public official. The chief business of any believer is to do the work for which he is best fitted, and since all state affairs are to become the affairs of God's kingdom it is of primary importance that they should come into the hands of God's servants. It is scarcely less necessary to a believing man with administrative gifts that he should be in the public administration, than that he should breathe and eat. And whatever oath or the like to usurper church or usurper king has been set up to bar access to service, is an oath imposed under duress. If it cannot be avoided it must be taken rather than that a man should become unserviceable. All such oaths are unfair and foolish things. They exclude no scoundrels; they are appeals to superstition. Whenever an opportunity occurs for the abolition of an oath, the servant of God will seize it, but where the oath is unavoidable he will take it.

The service of God is not to achieve a delicate consistency of statement; it is to do as much as one can of God's work.

9. THE PRIEST AND THE CREED

It may be doubted if this line of reasoning regarding the official and his oath can be extended to excuse the priest or pledged minister of religion who finds that faith in the true God has ousted his formal beliefs.

This has been a frequent and subtle moral problem in the intellectual life of the last hundred years. It has been increasingly difficult for any class of reading, talking, and discussing people such as are the bulk of the priesthoods of the Christian churches to escape hearing and reading the accumulated criticism of the Trinitarian theology and of the popularly accepted story of man's fall and salvation. Some have no doubt defeated this universal and insidious critical attack entirely, and honestly established themselves in a right-down acceptance of the articles and disciplines to which they have subscribed and of the creeds they profess and repeat. Some have recanted and abandoned their positions in the priesthood. But a great number have neither resisted the bacillus of criticism nor left the churches to which they are attached. They have adopted compromises, they have qualified their creeds with modifying footnotes of essential repudiation; they have decided that plain statements are metaphors and have undercut, transposed, and inverted the most vital points of the vulgarly accepted beliefs. One may find within the Anglican communion, Arians, Unitarians, Atheists, disbelievers in immortality, attenuators of miracles; there is scarcely a doubt or a cavil that has not found a lodgment within the ample charity of the English Establishment. I have been interested to hear one distinguished Canon deplore that "they" did not identify the Logos with the third instead of the second Person of the Trinity, and another distinguished Catholic apologist declare his indifference to the "historical Jesus." Within most of the Christian communions one may believe anything or nothing, provided only that one does not

call too public an attention to one's eccentricity. The late Rev. Charles Voysey, for example, preached plainly in his church at Healaugh against the divinity of Christ, unhindered. It was only when he published his sermons under the provocative title of "The Sling and the Stone," and caused an outcry beyond the limits of his congregation, that he was indicted and deprived.

Now the reasons why these men do not leave the ministry or priesthood in which they find themselves are often very plausible. It is probable that in very few cases is the retention of stipend or incumbency a conscious dishonesty. At the worst it is mitigated by thought for wife or child. It has only been during very exceptional phases of religious development and controversy that beliefs have been really sharp. A creed, like a coin, it may be argued, loses little in practical value because it is worn, or bears the image of a vanished king. The religious life is a reality that has clothed itself in many garments, and the concern of the priest or minister is with the religious life and not with the poor symbols that may indeed pretend to express, but do as a matter of fact no more than indicate, its direction. It is quite possible to maintain that the church and not the creed is the real and valuable instrument of religion, that the religious life is sustained not by its propositions but by its routines. Anyone who seeks the intimate discussion of spiritual things with professional divines, will find this is the substance of the case for the ecclesiastical sceptic. His church, he will admit, mumbles its statement of truth, but where else is truth? What better formulae are to be found for ineffable things? And meanwhile--he does good.

That may be a valid defence before a man finds God. But we who profess the worship and fellowship of the living God deny that religion is a matter of ineffable things. The way of God is plain and simple and easy to understand.

Therewith the whole position of the conforming sceptic is changed.

If a professional religious has any justification at all for his professionalism it is surely that he proclaims the nearness and greatness of God. And these creeds and articles and orthodoxies are not proclamations but curtains, they are a darkening and confusion of what should be crystal clear. What compensatory good can a priest pretend to do when his primary business is the truth and his method a lie? The oaths and incidental conformities of men who wish to serve God in the state are on a different footing altogether from the falsehood and mischief of one who knows the true God and yet recites to a trustful congregation, foists upon a trustful congregation, a misleading and ill-phrased Levantine creed.

Such is the line of thought which will impose the renunciation of his temporalities and a complete cessation of services upon every ordained priest and minister as his first act of faith. Once that he has truly realised God, it becomes impossible for him ever to repeat his creed again. His course seems plain and clear. It becomes him to stand up before the flock he has led in error, and to proclaim the being and nature of the one true God. He must be explicit to the utmost of his powers. Then he may await his expulsion. It may be doubted whether it is sufficient for him to go away silently, making false excuses or none at all for his retreat. He has to atone for the implicit acquiescences of his conforming years.

10. THE UNIVERSALISM OF GOD

Are any sorts of people shut off as if by inherent necessity from God?

This is, so to speak, one of the standing questions of theology; it reappears with slight changes of form at every period of religious interest, it is for example the chief issue between the Arminian and the Calvinist. From its very opening proposition modern religion sweeps past and far ahead of the old Arminian teachings of Wesleyans and Methodists, in its insistence upon the entirely finite nature of God. Arminians seem merely to have insisted that God has conditioned himself, and by his own free act left men free to accept or reject salvation. To the realist type of mind--here as always I use "realist" in its proper sense as the opposite of nominalist--to the old-fashioned, over-exact and over-accentuating type of mind, such ways of thinking seem vague and unsatisfying. Just as it distresses the more downright kind of intelligence with a feeling of disloyalty to admit that God is not Almighty, so it troubles the same sort of intelligence to hear that there is no clear line to be drawn between the saved and the lost. Realists like an exclusive flavour in their faith. Moreover, it is a natural weakness of humanity to be forced into extreme positions by argument. It is probable, as I have already suggested, that the absolute attributes of God were forced upon Christianity under the stresses of propaganda, and it is probable that the theory of a super-human obstinacy beyond salvation arose out of the irritations natural to theological debate. It is but a step from the realisation that there are people absolutely unable or absolutely unwilling to see God as we see him, to the conviction that they are therefore shut off from God by an invincible soul blindness.

It is very easy to believe that other people are essentially damned.

Beyond the little world of our sympathies and comprehension there are those who seem inaccessible to God by any means within our experience. They are people answering to the "hard-hearted," to the "stiff-necked generation" of the Hebrew prophets. They betray and even confess to standards that seem hopelessly base to us. They show themselves incapable of any disinterested enthusiasm for beauty or truth or goodness. They are altogether remote from intelligent sacrifice. To every test they betray vileness of texture; they are mean, cold, wicked. There are people who seem to cheat with a private self-approval, who are ever ready to do harsh and cruel things, whose use for social feeling is the malignant boycott, and for prosperity, monopolisation and humiliating display; who seize upon religion and turn it into persecution, and upon beauty to torment it on the altars of some joyless vice. We cannot do with such souls; we have no use for them, and it is very easy indeed to step from that persuasion to the belief that God has no use for them.

And besides these base people there are the stupid people and the people with minds so poor in texture that they cannot even grasp the few broad and simple ideas that seem necessary to the salvation we experience, who lapse helplessly into fetishistic and fearful conceptions of God, and are apparently quite incapable of distinguishing between what is practically and what is spiritually good.

It is an easy thing to conclude that the only way to God is our way to God, that he is the privilege of a finer and better sort to which we of course belong; that he is no more the God of the card-sharper or the pickpocket or the "smart" woman or the loan-monger or the village oaf than he is of the swine in the sty. But are we justified in thus limiting God to the measure of our moral and intellectual understandings? Because some people seem to me steadfastly and consistently base or hopelessly and incurably dull and confused, does it follow that there are not phases, albeit I

have never chanced to see them, of exaltation in the one case and illumination in the other? And may I not be a little restricting my perception of Good? While I have been ready enough to pronounce this or that person as being, so far as I was concerned, thoroughly damnable or utterly dull, I find a curious reluctance to admit the general proposition which is necessary for these instances. It is possible that the difference between Arminian and Calvinist is a difference of essential intellectual temperament rather than of theoretical conviction. I am temperamentally Arminian as I am temperamentally Nominalist. I feel that it must be in the nature of God to attempt all souls. There must be accessibilities I can only suspect, and accessibilities of which I know nothing.

Yet here is a consideration pointing rather the other way. If you think, as you must think, that you yourself can be lost to God and damned, then I cannot see how you can avoid thinking that other people can be damned. But that is not to believe that there are people damned at the outset by their moral and intellectual insufficiency; that is not to make out that there is a class of essential and incurable spiritual defectives. The religious life preceded clear religious understanding and extends far beyond its range.

In my own case I perceive that in spite of the value I attach to true belief, the reality of religion is not an intellectual thing. The essential religious fact is in another than the mental sphere. I am passionately anxious to have the idea of God clear in my own mind, and to make my beliefs plain and clear to other people, and particularly to other people who may seem to be feeling with me; I do perceive that error is evil if only because a faith based on confused conceptions and partial understandings may suffer irreparable injury through the collapse of its substratum of ideas. I doubt if faith can be complete and enduring if it is not secured by the definite knowledge of the true God. Yet I have also to admit that I find the form of my own religious emotion paralleled by

people with whom I have no intellectual sympathy and no agreement in phrase or formula at all.

There is for example this practical identity of religious feeling and this discrepancy of interpretation between such an inquirer as myself and a convert of the Salvation Army. Here, clothing itself in phrases and images of barbaric sacrifice, of slaughtered lambs and fountains of precious blood, a most repulsive and incomprehensible idiom to me, and expressing itself by shouts, clangour, trumpeting, gesticulations, and rhythmic pacings that stun and dismay my nerves, I find, the same object sought, release from self, and the same end, the end of identification with the immortal, successfully if perhaps rather insecurely achieved. I see God indubitably present in these excitements, and I see personalities I could easily have misjudged as too base or too dense for spiritual understandings, lit by the manifest reflection of divinity. One may be led into the absurdest underestimates of religious possibilities if one estimates people only coldly and in the light of everyday life. There is a sub-intellectual religious life which, very conceivably, when its utmost range can be examined, excludes nothing human from religious cooperation, which will use any words to its tune, which takes its phrasing ready-made from the world about it, as it takes the street for its temple, and yet which may be at its inner point in the directest contact with God. Religion may suffer from aphasia and still be religion; it may utter misleading or nonsensical words and yet intend and convey the truth. The methods of the Salvation Army are older than doctrinal Christianity, and may long survive it. Men and women may still chant of Beulah Land and cry out in the ecstasy of salvation; the tambourine, that modern revival of the thrilling Alexandrine sistrum, may still stir dull nerves to a first apprehension of powers and a call beyond the immediate material compulsion of life, when the creeds of Christianity are as dead as the lore of the Druids.

The emancipation of mankind from obsolete theories and formularies

may be accompanied by great tides of moral and emotional release among types and strata that by the standards of a trained and explicit intellectual, may seem spiritually hopeless. It is not necessary to imagine the whole world critical and lucid in order to imagine the whole world unified in religious sentiment, comprehending the same phrases and coming together regardless of class and race and quality, in the worship and service of the true God. The coming kingship of God if it is to be more than hieratic tyranny must have this universality of appeal. As the head grows clear the body will turn in the right direction. To the mass of men modern religion says, "This is the God it has always been in your nature to apprehend."

11. GOD AND THE LOVE AND STATUS OF WOMEN

Now that we are discussing the general question of individual conduct, it will be convenient to take up again and restate in that relationship, propositions already made very plainly in the second and third chapters. Here there are several excellent reasons for a certain amount of deliberate repetition. . . .

All the mystical relations of chastity, virginity, and the like with religion, those questions of physical status that play so large a part in most contemporary religions, have disappeared from modern faith. Let us be as clear as possible upon this. God is concerned by the health and fitness and vigour of his servants; we owe him our best and utmost; but he has no special concern and no special preferences or commandments regarding sexual things.

Christ, it is manifest, was of the modern faith in these matters, he welcomed the Magdalen, neither would he condemn the woman taken in adultery. Manifestly corruption and disease were not to stand between him and those who sought God in him. But the Christianity of the creeds, in this as in so many respects, does not rise to the level of its founder, and it is as necessary to repeat to-day as though the name of Christ had not been ascendant for nineteen centuries, that sex is a secondary thing to religion, and sexual status of no account in the presence of God. It follows quite logically that God does not discriminate between man and woman in any essential things. We leave our individuality behind us when we come into the presence of God. Sex is not disavowed but forgotten. Just as one's last meal is forgotten--which also is a difference between the religious moment of modern faith and certain Christian sacraments. You are a believer and God is at hand to you; heed not your state; reach out to him and he is there. In the moment of religion you are human; it matters not what else you are, male or female, clean or unclean, Hebrew or Gentile, bond or free. It is

AFTER the moment of religion that we become concerned about our state and the manner in which we use ourselves.

We have to follow our reason as our sole guide in our individual treatment of all such things as food and health and sex. God is the king of the whole world, he is the owner of our souls and bodies and all things. He is not particularly concerned about any aspect, because he is concerned about every aspect. We have to make the best use of ourselves for his kingdom; that is our rule of life.

That rule means neither painful nor frantic abstinences nor any forced way of living. Purity, cleanliness, health, none of these things are for themselves, they are for use; none are magic, all are means. The sword must be sharp and clean. That does not mean that we are perpetually to sharpen and clean it--which would weaken and waste the blade. The sword must neither be drawn constantly nor always rusting in its sheath. Those who have had the wits and soul to come to God, will have the wits and soul to find out and know what is waste, what is vanity, what is the happiness that begets strength of body and spirit, what is error, where vice begins, and to avoid and repent and recoil from all those things that degrade. These are matters not of the rule of life but of the application of life. They must neither be neglected nor made disproportionately important.

To the believer, relationship with God is the supreme relationship. It is difficult to imagine how the association of lovers and friends can be very fine and close and good unless the two who love are each also linked to God, so that through their moods and fluctuations and the changes of years they can be held steadfast by his undying steadfastness. But it has been felt by many deep-feeling people that there is so much kindred between the love and trust of husband and wife and the feeling we have for God, that it is reasonable to consider the former also as a sacred thing. They do so value that close love of mated man and woman, they are so intent upon its permanence and completeness and to lift the dear relationship out of

the ruck of casual and transitory things, that they want to bring it, as it were, into the very presence and assent of God. There are many who dream and desire that they are as deeply and completely mated as this, many more who would fain be so, and some who are. And from this comes the earnest desire to make marriage sacramental and the attempt to impose upon all the world the outward appearance, the restrictions, the pretence at least of such a sacramental union.

There may be such a quasi-sacramental union in many cases, but only after years can one be sure of it; it is not to be brought about by vows and promises but by an essential kindred and cleaving of body and spirit; and it concerns only the two who can dare to say they have it, and God. And the divine thing in marriage, the thing that is most like the love of God, is, even then, not the relationship of the man and woman as man and woman but the comradeship and trust and mutual help and pity that joins them. No doubt that from the mutual necessities of bodily love and the common adventure, the necessary honesties and helps of a joint life, there springs the stoutest, nearest, most enduring and best of human companionship; perhaps only upon that root can the best of mortal comradeship be got; but it does not follow that the mere ordinary coming together and pairing off of men and women is in itself divine or sacramental or anything of the sort. Being in love is a condition that may have its moments of sublime exaltation, but it is for the most part an experience far down the scale below divine experience; it is often love only in so far as it shares the name with better things; it is greed, it is admiration, it is desire, it is the itch for excitement, it is the instinct for competition, it is lust, it is curiosity, it is adventure, it is jealousy, it is hate. On a hundred scores 'lovers' meet and part. Thereby some few find true love and the spirit of God in themselves or others.

Lovers may love God in one another; I do not deny it. That is no reason why the imitation and outward form of this great happiness should be made an obligation upon all men and women who are

attracted by one another, nor why it should be woven into the essentials of religion. For women much more than for men is this confusion dangerous, lest a personal love should shape and dominate their lives instead of God. "He for God only; she for God in him," phrases the idea of Milton and of ancient Islam; it is the formula of sexual infatuation, a formula quite easily inverted, as the end of Goethe's Faust ("The woman soul leadeth us upward and on") may witness. The whole drift of modern religious feeling is against this exaggeration of sexual feeling, these moods of sexual slavishness, in spiritual things. Between the healthy love of ordinary mortal lovers in love and the love of God, there is an essential contrast and opposition in this, that preference, exclusiveness, and jealousy seem to be in the very nature of the former and are absolutely incompatible with the latter. The former is the intensest realisation of which our individualities are capable; the latter is the way of escape from the limitations of individuality. It may be true that a few men and more women do achieve the completest unselfishness and self-abandonment in earthly love. So the poets and romancers tell us. If so, it is that by an imaginative perversion they have given to some attractive person a worship that should be reserved for God and a devotion that is normally evoked only by little children in their mother's heart. It is not the way between most of the men and women one meets in this world.

But between God and the believer there is no other way, there is nothing else, but self-surrender and the ending of self.

CHAPTER THE SIXTH

MODERN IDEAS OF SIN AND DAMNATION

1. THE BIOLOGICAL EQUIVALENT OF SIN

If the reader who is unfamiliar with scientific things will obtain and read Metchnikoff's "Nature of Man," he will find there an interesting summary of the biological facts that bear upon and destroy the delusion that there is such a thing as individual perfection, that there is even ideal perfection for humanity. With an abundance of convincing instances Professor Metchnikoff demonstrates that life is a system of "disharmonies," capable of no perfect way, that there is no "perfect" dieting, no "perfect" sexual life, no "perfect" happiness, no "perfect" conduct. He releases one from the arbitrary but all too easy assumption that there is even an ideal "perfection" in organic life. He sweeps out of the mind with all the confidence and conviction of a physiological specialist, any idea that there is a perfect man or a conceivable perfect man. It is in the nature of every man to fall short at every point from perfection. From the biological point of view we are as individuals a series of involuntary "tries" on the part of an imperfect species towards an unknown end.

Our spiritual nature follows our bodily as a glove follows a hand. We are disharmonious beings and salvation no more makes an end to the defects of our souls than it makes an end to the decay of our teeth or to those vestigial structures of our body that endanger our physical welfare. Salvation leaves us still disharmonious, and adds not an inch to our spiritual and moral stature.

2. WHAT IS DAMNATION?

Let us now take up the question of what is Sin? and what we mean by the term "damnation," in the light of this view of human reality.

Most of the great world religions are as clear as Professor Metchnikoff that life in the world is a tangle of disharmonies, and in most cases they supply a more or less myth-like explanation, they declare that evil is one side of the conflict between Ahriman and Ormazd, or that it is the punishment of an act of disobedience, of the fall of man and world alike from a state of harmony. Their case, like his, is that THIS world is damned.

We do not find the belief that superposed upon the miseries of this world there are the still bitterer miseries of punishments after death, so nearly universal. The endless punishments of hell appear to be an exploit of theory; they have a superadded appearance even in the Christian system; the same common tendency to superlatives and absolutes that makes men ashamed to admit that God is finite, makes them seek to enhance the merits of their Saviour by the device of everlasting fire. Conquest over the sorrow of life and the fear of death do not seem to them sufficient for Christ's glory.

Now the turning round of the modern mind from a conception of the universe as something derived deductively from the past to a conception of it as something gathering itself adventurously towards the future, involves a release from the supposed necessity to tell a story and explain why. Instead comes the inquiry, "To what end?" We can say without mental discomfort, these disharmonies are here, this damnation is here--inexplicably. We can, without any distressful inquiry into ultimate origins, bring our minds to the conception of a spontaneous and developing God arising out of those stresses in our hearts and in the universe, and arising to overcome them. Salvation for the individual is escape from the individual

distress at disharmony and the individual defeat by death, into the Kingdom of God. And damnation can be nothing more and nothing less than the failure or inability or disinclination to make that escape.

Something of that idea of damnation as a lack of the will for salvation has crept at a number of points into contemporary religious thought. It was the fine fancy of Swedenborg that the damned go to their own hells of their own accord. It underlies a queer poem, "Simpson," by that interesting essayist upon modern Christianity, Mr. Clutton Brock, which I have recently read. Simpson dies and goes to hell--it is rather like the Cromwell Road--and approves of it very highly, and then and then only is he completely damned. Not to realise that one can be damned is certainly to be damned; such is Mr. Brock's idea. It is his definition of damnation. Satisfaction with existing things is damnation. It is surrender to limitation; it is acquiescence in "disharmony"; it is making peace with that enemy against whom God fights for ever.

(But whether there are indeed Simpsons who acquiesce always and for ever remains for me, as I have already confessed in the previous chapter, a quite open question. My Arminian temperament turns me from the Calvinistic conclusion of Mr. Brock's satire.)

3. SIN IS NOT DAMNATION

Now the question of sin will hardly concern those damned and lost by nature, if such there be. Sin is not the same thing as damnation, as we have just defined damnation. Damnation is a state, but sin is an incident. One is an essential and the other an incidental separation from God. It is possible to sin without being damned; and to be damned is to be in a state when sin scarcely matters, like ink upon a blackamoor. You cannot have questions of more or less among absolute things.

It is the amazing and distressful discovery of every believer so soon as the first exaltation of belief is past, that one does not remain always in touch with God. At first it seems incredible that one should ever have any motive again that is not also God's motive. Then one finds oneself caught unawares by a base impulse. We discover that discontinuousness of our apparently homogeneous selves, the unincorporated and warring elements that seemed at first altogether absent from the synthesis of conversion. We are tripped up by forgetfulness, by distraction, by old habits, by tricks of appearance. There come dull patches of existence; those mysterious obliterations of one's finer sense that are due at times to the little minor poisons one eats or drinks, to phases of fatigue, ill-health and bodily disorder, or one is betrayed by some unanticipated storm of emotion, brewed deep in the animal being and released by any trifling accident, such as personal jealousy or lust, or one is relaxed by contentment into vanity. All these rebel forces of our ill-coordinated selves, all these "disharmonies," of the inner being, snatch us away from our devotion to God's service, carry us off to follies, offences, unkindness, waste, and leave us compromised, involved, and regretful, perplexed by a hundred difficulties we have put in our own way back to God.

This is the personal problem of Sin. Here prayer avails; here God

can help us. From God comes the strength to repent and make such reparation as we can, to begin the battle again further back and lower down. From God comes the power to anticipate the struggle with one's rebel self, and to resist and prevail over it.

4. THE SINS OF THE INSANE

An extreme case is very serviceable in such a discussion as this.

It happens that the author carries on a correspondence with several lunatics in asylums. There is a considerable freedom of notepaper in these institutions; the outgoing letters are no doubt censored or selected in some way, but a proportion at any rate are allowed to go out to their addresses. As a journalist who signs his articles and as the author of various books of fiction, as a frequent NAME, that is, to any one much forced back upon reading, the writer is particularly accessible to this type of correspondent. The letters come, some manifesting a hopeless disorder that permits of no reply, but some being the expression of minds overlaid not at all offensively by a web of fantasy, and some (and these are the more touching ones and the ones that most concern us now) as sanely conceived and expressed as any letters could be. They are written by people living lives very like the lives of us who are called "sane," except that they lift to a higher excitement and fall to a lower depression, and that these extremer phases of mania or melancholia slip the leash of mental consistency altogether and take abnormal forms. They tap deep founts of impulse, such as we of the safer ways of mediocrity do but glimpse under the influence of drugs, or in dreams and rare moments of controllable extravagance. Then the insane become "glorious," or they become murderous, or they become suicidal. All these letter-writers in confinement have convinced their fellow-creatures by some extravagance that they are a danger to themselves or others.

The letters that come from such types written during their sane intervals, are entirely sane. Some, who are probably unaware--I think they should know--of the offences or possibilities that justify their incarceration, write with a certain resentment at their position; others are entirely acquiescent, but one or two

complain of the neglect of friends and relations. But all are as manifestly capable of religion and of the religious life as any other intelligent persons during the lucid interludes that make up nine-tenths perhaps of their lives. . . . Suppose now one of these cases, and suppose that the infirmity takes the form of some cruel, disgusting, or destructive disposition that may become at times overwhelming, and you have our universal trouble with sinful tendency, as it were magnified for examination. It is clear that the mania which defines his position must be the primary if not the cardinal business in the life of a lunatic, but his problem with that is different not in kind but merely in degree from the problem of lusts, vanities, and weaknesses in what we call normal lives. It is an unconquered tract, a great rebel province in his being, which refuses to serve God and tries to prevent him serving God, and succeeds at times in wresting his capital out of his control. But his relationship to that is the same relationship as ours to the backward and insubordinate parishes, criminal slums, and disorderly houses in our own private texture.

It is clear that the believer who is a lunatic is, as it were, only the better part of himself. He serves God with this unconquered disposition in him, like a man who, whatever else he is and does, is obliged to be the keeper of an untrustworthy and wicked animal. His beast gets loose. His only resort is to warn those about him when he feels that jangling or excitement of the nerves which precedes its escapes, to limit its range, to place weapons beyond its reach. And there are plenty of human beings very much in his case, whose beasts have never got loose or have got caught back before their essential insanity was apparent. And there are those uncertifiable lunatics we call men and women of "impulse" and "strong passions." If perhaps they have more self-control than the really mad, yet it happens oftener with them that the whole intelligent being falls under the dominion of evil. The passion scarcely less than the obsession may darken the whole moral sky. Repentance and atonement; nothing less will avail them after the storm has passed, and the

sedulous preparation of defences and palliatives against the return of the storm.

This discussion of the lunatic's case gives us indeed, usefully coarse and large, the lines for the treatment of every human weakness by the servants of God. A "weakness," just like the lunatic's mania, becomes a particular charge under God, a special duty for the person it affects. He has to minimise it, to isolate it, to keep it out of mischief. If he can he must adopt preventive measures. . . .

These passions and weaknesses that get control of us hamper our usefulness to God, they are an incessant anxiety and distress to us, they wound our self-respect and make us incomprehensible to many who would trust us, they discredit the faith we profess. If they break through and break through again it is natural and proper that men and women should cease to believe in our faith, cease to work with us or to meet us frankly. . . . Our sins do everything evil to us and through us except separate us from God.

Yet let there be no mistake about one thing. Here prayer is a power. Here God can indeed work miracles. A man with the light of God in his heart can defeat vicious habits, rise again combative and undaunted after a hundred falls, escape from the grip of lusts and revenges, make head against despair, thrust back the very onset of madness. He is still the same man he was before he came to God, still with his libidinous, vindictive, boastful, or indolent vein; but now his will to prevail over those qualities can refer to an exterior standard and an external interest, he can draw upon a strength, almost boundless, beyond his own.

5. BELIEVE, AND YOU ARE SAVED

But be a sin great or small, it cannot damn a man once he has found God. You may kill and hang for it, you may rob or rape; the moment you truly repent and set yourself to such atonement and reparation as is possible there remains no barrier between you and God.

Directly you cease to hide or deny or escape, and turn manfully towards the consequences and the setting of things right, you take hold again of the hand of God. Though you sin seventy times seven times, God will still forgive the poor rest of you. Nothing but utter blindness of the spirit can shut a man off from God.

There is nothing one can suffer, no situation so unfortunate, that it can shut off one who has the thought of God, from God. If you but lift up your head for a moment out of a stormy chaos of madness and cry to him, God is there, God will not fail you. A convicted criminal, frankly penitent, and neither obdurate nor abject, whatever the evil of his yesterdays, may still die well and bravely on the gallows to the glory of God. He may step straight from that death into the immortal being of God.

This persuasion is the very essence of the religion of the true God. There is no sin, no state that, being regretted and repented of, can stand between God and man.

CHAPTER THE SEVENTH

THE IDEA OF A CHURCH

1. THE WORLD DAWN

As yet those who may be counted as belonging definitely to the new religion are few and scattered and unconfessed, their realisations are still uncertain and incomplete. But that is no augury for the continuance of this state of affairs even for the next few decades. There are many signs that the revival is coming very swiftly, it may be coming as swiftly as the morning comes after a tropical night. It may seem at present as though nothing very much were happening, except for the fact that the old familiar constellations of theology have become a little pallid and lost something of their multitude of points. But nothing fades of itself. The deep stillness of the late night is broken by a stirring, and the morning star of creedless faith, the last and brightest of the stars, the star that owes its light to the coming sun is in the sky.

There is a stirring and a movement. There is a stir, like the stir before a breeze. Men are beginning to speak of religion without the bluster of the Christian formulae; they have begun to speak of God without any reference to Omnipresence, Omniscience, Omnipotence. The Deists and Theists of an older generation, be it noted, never did that. Their "Supreme Being" repudiated nothing. He was merely the whittled stump of the Trinity. It is in the last few decades that the western mind has slipped loose from this absolutist conception of God that has dominated the intelligence of Christendom at least, for many centuries. Almost unconsciously the new thought is taking a course that will lead it far away from the moorings of Omnipotence. It is like a ship that has slipped its anchors and

drifts, still sleeping, under the pale and vanishing stars, out to
the open sea. . . .

2. CONVERGENT RELIGIOUS MOVEMENTS

In quite a little while the whole world may be alive with this renascent faith.

For emancipation from the Trinitarian formularies and from a belief in an infinite God means not merely a great revivification of minds trained under the decadence of orthodox Christianity, minds which have hitherto been hopelessly embarrassed by the choice between pseudo-Christian religion or denial, but also it opens the way towards the completest understanding and sympathy and participation with the kindred movements for release and for an intensification of the religious life, that are going on outside the sphere of the Christian tradition and influence altogether. Allusion has already been made to the sympathetic devotional poetry of Rabindranath Tagore; he stands for a movement in Brahminism parallel with and assimilable to the worship of the true God of mankind.

It is too often supposed that the religious tendency of the East is entirely towards other-worldness, to a treatment of this life as an evil entanglement and of death as a release and a blessing. It is too easily assumed that Eastern teaching is wholly concerned with renunciation, not merely of self but of being, with the escape from all effort of any sort into an exalted vacuity. This is indeed neither the spirit of China nor of Islam nor of the every-day life of any people in the world. It is not the spirit of the Sikh nor of these newer developments of Hindu thought. It has never been the spirit of Japan. To-day less than ever does Asia seem disposed to give up life and the effort of life. Just as readily as Europeans, do the Asiatics reach out their arms to that fuller life we can live, that greater intensity of existence, to which we can attain by escaping from ourselves. All mankind is seeking God. There is not a nation nor a city in the globe where men are not being urged at this moment by the spirit of God in them towards the discovery of

God. This is not an age of despair but an age of hope in Asia as in all the world besides.

Islam is undergoing a process of revision closely parallel to that which ransacks Christianity. Tradition and mediaeval doctrines are being thrust aside in a similar way. There is much probing into the spirit and intention of the Founder. The time is almost ripe for a heart-searching Dialogue of the Dead, "How we settled our religions for ever and ever," between, let us say, Eusebius of Caesarea and one of Nizam-al-Mulk's tame theologians. They would be drawn together by the same tribulations; they would be in the closest sympathy against the temerity of the moderns; they would have a common courtliness. The Quran is but little read by Europeans; it is ignorantly supposed to contain many things that it does not contain; there is much confusion in people's minds between its text and the ancient Semitic traditions and usages retained by its followers; in places it may seem formless and barbaric; but what it has chiefly to tell of is the leadership of one individualised militant God who claims the rule of the whole world, who favours neither rank nor race, who would lead men to righteousness. It is much more free from sacramentalism, from vestiges of the ancient blood sacrifice, and its associated sacerdotalism, than Christianity. The religion that will presently sway mankind can be reached more easily from that starting-point than from the confused mysteries of Trinitarian theology. Islam was never saddled with a creed. With the very name "Islam" (submission to God) there is no quarrel for those who hold the new faith. . . .

All the world over there is this stirring in the dry bones of the old beliefs. There is scarcely a religion that has not its Bahaim, its Modernists, its Brahma Somaj, its "religion without theology," its attempts to escape from old forms and hampering associations to that living and world-wide spiritual reality upon which the human mind almost instinctively insists. . . .

It is the same God we all seek; he becomes more and more plainly the same God.

So that all this religious stir, which seems so multifold and incidental and disconnected and confused and entirely ineffective to-day, may be and most probably will be, in quite a few years a great flood of religious unanimity pouring over and changing all human affairs, sweeping away the old priesthoods and tabernacles and symbols and shrines, the last crumb of the Orphic victim and the last rag of the Serapeum, and turning all men about into one direction, as the ships and houseboats swing round together in some great river with the uprush of the tide. . . .

3. CAN THERE BE A TRUE CHURCH?

Among those who are beginning to realise the differences and identities of the revived religion that has returned to them, certain questions of organisation and assembly are being discussed. Every new religious development is haunted by the precedents of the religion it replaces, and it was only to be expected that among those who have recovered their faith there should be a search for apostles and disciples, an attempt to determine sources and to form original congregations, especially among people with European traditions.

These dispositions mark a relapse from understanding. They are imitative. This time there has been no revelation here or there; there is no claim to a revelation but simply that God has become visible. Men have thought and sought until insensibly the fog of obsolete theology has cleared away. There seems no need therefore for special teachers or a special propaganda, or any ritual or observances that will seem to insist upon differences. The Christian precedent of a church is particularly misleading. The church with its sacraments and its sacerdotalism is the disease of Christianity. Save for a few doubtful interpolations there is no evidence that Christ tolerated either blood sacrifices or the mysteries of priesthood. All these antique grossnesses were superadded after his martyrdom. He preached not a cult but a gospel; he sent out not medicine men but apostles.

No doubt all who believe owe an apostolic service to God. They become naturally apostolic. As men perceive and realise God, each will be disposed in his own fashion to call his neighbour's attention to what he sees. The necessary elements of religion could be written on a post card; this book, small as it is, bulks large not by what it tells positively but because it deals with misconceptions. We may (little doubt have I that we do) need

special propagandas and organisations to discuss errors and keep back the jungle of false ideas, to maintain free speech and restrain the enterprise of the persecutor, but we do not want a church to keep our faith for us. We want our faith spread, but for that there is no need for orthodoxies and controlling organisations of statement. It is for each man to follow his own impulse, and to speak to his like in his own fashion.

Whatever religious congregations men may form henceforth in the name of the true God must be for their own sakes and not to take charge of religion.

The history of Christianity, with its encrustation and suffocation in dogmas and usages, its dire persecutions of the faithful by the unfaithful, its desiccation and its unlovely decay, its invasion by robes and rites and all the tricks and vices of the Pharisees whom Christ detested and denounced, is full of warning against the dangers of a church. Organisation is an excellent thing for the material needs of men, for the draining of towns, the marshalling of traffic, the collecting of eggs, and the carrying of letters, the distribution of bread, the notification of measles, for hygiene and economics and suchlike affairs. The better we organise such things, the freer and better equipped we leave men's minds for nobler purposes, for those adventures and experiments towards God's purpose which are the reality of life. But all organisations must be watched, for whatever is organised can be "captured" and misused. Repentance, moreover, is the beginning and essential of the religious life, and organisations (acting through their secretaries and officials) never repent. God deals only with the individual for the individual's surrender. He takes no cognisance of committees.

Those who are most alive to the realities of living religion are most mistrustful of this congregating tendency. To gather together is to purchase a benefit at the price of a greater loss, to strengthen one's sense of brotherhood by excluding the majority of

mankind. Before you know where you are you will have exchanged the spirit of God for ESPRIT DE CORPS. You will have reinvented the SYMBOL; you will have begun to keep anniversaries and establish sacramental ceremonies. The disposition to form cliques and exclude and conspire against unlike people is all too strong in humanity, to permit of its formal encouragement. Even such organisation as is implied by a creed is to be avoided, for all living faith coagulates as you phrase it. In this book I have not given so much as a definite name to the faith of the true God. Organisation for worship and collective exaltation also, it may be urged, is of little manifest good. You cannot appoint beforehand a time and place for God to irradiate your soul.

All these are very valid objections to the church-forming disposition.

4. ORGANISATIONS UNDER GOD

Yet still this leaves many dissatisfied. They want to shout out about God. They want to share this great thing with all mankind.

Why should they not shout and share?

Let them express all that they desire to express in their own fashion by themselves or grouped with their friends as they will. Let them shout chorally if they are so disposed. Let them work in a gang if so they can work the better. But let them guard themselves against the idea that they can have God particularly or exclusively with them in any such undertaking. Or that so they can express God rather than themselves.

That I think states the attitude of the modern spirit towards the idea of a church. Mankind passes for ever out of the idolatry of altars, away from the obscene rites of circumcision and symbolical cannibalism, beyond the sway of the ceremonial priest. But if the modern spirit holds that religion cannot be organised or any intermediary thrust between God and man, that does not preclude infinite possibilities of organisation and collective action UNDER God and within the compass of religion. There is no reason why religious men should not band themselves the better to attain specific ends. To borrow a term from British politics, there is no objection to AD HOC organisations. The objection lies not against subsidiary organisations for service but against organisations that may claim to be comprehensive.

For example there is no reason why one should not--and in many cases there are good reasons why one should--organise or join associations for the criticism of religious ideas, an employment that may pass very readily into propaganda.

Many people feel the need of prayer to resist the evil in themselves and to keep them in mind of divine emotion. And many want not merely prayer but formal prayer and the support of others, praying in unison. The writer does not understand this desire or need for collective prayer very well, but there are people who appear to do so and there is no reason why they should not assemble for that purpose. And there is no doubt that divine poetry, divine maxims, religious thought finely expressed, may be heard, rehearsed, collected, published, and distributed by associations. The desire for expression implies a sort of assembly, a hearer at least as well as a speaker. And expression has many forms. People with a strong artistic impulse will necessarily want to express themselves by art when religion touches them, and many arts, architecture and the drama for example, are collective undertakings. I do not see why there should not be, under God, associations for building cathedrals and suchlike great still places urgent with beauty, into which men and women may go to rest from the clamour of the day's confusions; I do not see why men should not make great shrines and pictures expressing their sense of divine things, and why they should not combine in such enterprises rather than work to fill heterogeneous and chaotic art galleries. A wave of religious revival and religious clarification, such as I foresee, will most certainly bring with it a great revival of art, religious art, music, songs, and writings of all sorts, drama, the making of shrines, praying places, tempies and retreats, the creation of pictures and sculptures. It is not necessary to have priestcraft and an organised church for such ends. Such enrichments of feeling and thought are part of the service of God.

And again, under God, there may be associations and fraternities for research in pure science; associations for the teaching and simplification of languages; associations for promoting and watching education; associations for the discussion of political problems and the determination of right policies. In all these ways men may multiply their use by union. Only when associations seek to control

things of belief, to dictate formulae, restrict religious activities or the freedom of religious thought and teaching, when they tend to subdivide those who believe and to set up jealousies or exclusions, do they become antagonistic to the spirit of modern religion.

5. THE STATE IS GOD'S INSTRUMENT

Because religion cannot be organised, because God is everywhere and immediately accessible to every human being, it does not follow that religion cannot organise every other human affair. It is indeed essential to the idea that God is the Invisible King of this round world and all mankind, that we should see in every government, great and small, from the council of the world-state that is presently coming, down to the village assembly, the instrument of God's practical control. Religion which is free, speaking freely through whom it will, subject to a perpetual unlimited criticism, will be the life and driving power of the whole organised world. So that if you prefer not to say that there will be no church, if you choose rather to declare that the world-state is God's church, you may have it so if you will. Provided that you leave conscience and speech and writing and teaching about divine things absolutely free, and that you try to set no nets about God.

The world is God's and he takes it. But he himself remains freedom, and we find our freedom in him.

THE ENVOY

So I end this compact statement of the renascent religion which I believe to be crystallising out of the intellectual, social, and spiritual confusions of this time. It is an account rendered. It is a statement and record; not a theory. There is nothing in all this that has been invented or constructed by the writer; I have been but scribe to the spirit of my generation; I have at most assembled and put together things and thoughts that I have come upon, have transferred the statements of "science" into religious terminology, rejected obsolescent definitions, and re-coordinated propositions that had drifted into opposition. Thus, I see, ideas are developing, and thus have I written them down. It is a secondary matter that I am convinced that this trend of intelligent opinion is a discovery of truth. The reader is told of my own belief merely to avoid an affectation of impartiality and aloofness.

The theogony here set forth is ancient; one can trace it appearing and disappearing and recurring in the mutilated records of many different schools of speculation; the conception of God as finite is one that has been discussed very illuminatingly in recent years in the work of one I am happy to write of as my friend and master, that very great American, the late William James. It was an idea that became increasingly important to him towards the end of his life. And it is the most releasing idea in the system.

Only in the most general terms can I trace the other origins of these present views. I do not think modern religion owes much to what is called Deism or Theism. The rather abstract and futile Deism of the eighteenth century, of "votre Etre supreme" who bored the friends of Robespierre, was a sterile thing, it has little relation to these modern developments, it conceived of God as an infinite Being of no particular character whereas God is a finite being of a very especial character. On the other hand men and women

who have set themselves, with unavoidable theological preconceptions, it is true, to speculate upon the actual teachings and quality of Christ, have produced interpretations that have interwoven insensibly with thoughts more apparently new. There is a curious modernity about very many of Christ's recorded sayings. Revived religion has also, no doubt, been the receiver of many religious bankruptcies, of Positivism for example, which failed through its bleak abstraction and an unspiritual texture. Religion, thus restated, must, I think, presently incorporate great sections of thought that are still attached to formal Christianity. The time is at hand when many of the organised Christian churches will be forced to define their positions, either in terms that will identify them with this renaissance, or that will lead to the release of their more liberal adherents. Its probable obligations to Eastern thought are less readily estimated by a European writer.

Modern religion has no revelation and no founder; it is the privilege and possession of no coterie of disciples or exponents; it is appearing simultaneously round and about the world exactly as a crystallising substance appears here and there in a super-saturated solution. It is a process of truth, guided by the divinity in men. It needs no other guidance, and no protection. It needs nothing but freedom, free speech, and honest statement. Out of the most mixed and impure solutions a growing crystal is infallibly able to select its substance. The diamond arises bright, definite, and pure out of a dark matrix of structureless confusion.

This metaphor of crystallisation is perhaps the best symbol of the advent and growth of the new understanding. It has no church, no authorities, no teachers, no orthodoxy. It does not even thrust and struggle among the other things; simply it grows clear. There will be no putting an end to it. It arrives inevitably, and it will continue to separate itself out from confusing ideas. It becomes, as it were the Koh-i-noor; it is a Mountain of Light, growing and increasing. It is an all-pervading lucidity, a brightness and

clearness. It has no head to smite, no body you can destroy; it overleaps all barriers; it breaks out in despite of every enclosure. It will compel all things to orient themselves to it.

It comes as the dawn comes, through whatever clouds and mists may be here or whatever smoke and curtains may be there. It comes as the day comes to the ships that put to sea.

It is the Kingdom of God at hand.

CHAPTER THE FIRST - THE DREAM

(1)

IT was a scene of bitter disputation. A hawk-nosed young man with a pointing finger was prominent. His face worked violently, his lips moved very rapidly, but what he said was inaudible.

Behind him the little rufous man with the big eyes twitched at his robe and offered suggestions.

And behind these two clustered a great multitude of heated, excited, swarthy faces....

The emperor sat on his golden throne in the midst of the gathering, commanding silence by gestures, speaking inaudibly to them in a tongue the majority did not use, and then prevailing. They ceased their interruptions, and the old man, Arius, took up the debate. For a time all those impassioned faces were intent upon him; they listened as though they sought occasion, and suddenly as if by a preconcerted arrangement they were all thrusting their fingers into their ears and knitting their brows in assumed horror; some were crying aloud and making as if to fly. Some indeed tucked up their garments and fled. They spread out into a pattern. They were like the little monks who run from St. Jerome's lion in the picture by Carpaccio. Then one zealot rushed forward and smote the old man heavily upon the mouth....

The hall seemed to grow vaster and vaster, the disputing, infuriated figures multiplied to an innumerable assembly, they drove about like snowflakes in a gale, they whirled in argumentative couples, they spun in eddies of contradiction, they

made extraordinary patterns, and then amidst the cloudy darkness of the unfathomable dome above them there appeared and increased a radiant triangle in which shone an eye. The eye and the triangle filled the heavens, sent out flickering rays, glowed to a blinding incandescence, seemed to be speaking words of thunder that were nevertheless inaudible. It was as if that thunder filled the heavens, it was as if it were nothing but the beating artery in the sleeper's ear. The attention strained to hear and comprehend, and on the very verge of comprehension snapped like a fiddle-string.

"Nicoea!"

The word remained like a little ash after a flare.

The sleeper had awakened and lay very still, oppressed by a sense of intellectual effort that had survived the dream in which it had arisen. Was it so that things had happened? The slumber-shadowed mind, moving obscurely, could not determine whether it was so or not. Had they indeed behaved in this manner when the great mystery was established? Who said they stopped their ears with their fingers and fled, shouting with horror? Shouting? Was it Eusebius or Athanasius? Or Sozomen.... Some letter or apology by Athanasius?... And surely it was impossible that the Trinity could have appeared visibly as a triangle and an eye. Above such an assembly.

That was mere dreaming, of course. Was it dreaming after Raphael? After Raphael? The drowsy mind wandered into a side issue. Was the picture that had suggested this dream the one in the Vatican where all the Fathers of the Church are shown disputing together? But there surely God and the Son themselves were painted with a symbol--some symbol--also? But was that disputation about the Trinity at all? Wasn't it rather about a chalice and a dove? Of course it was a chalice and a dove! Then

where did one see the triangle and the eye? And men disputing?
Some such picture there was....

What a lot of disputing there had been! What endless disputing!
Which had gone on. Until last night. When this very disagreeable
young man with the hawk nose and the pointing finger had tackled
one when one was sorely fagged, and disputed; disputed. Rebuked
and disputed. "Answer me this," he had said.... And still one's
poor brains disputed and would not rest.... About the Trinity....

The brain upon the pillow was now wearily awake. It was at once
hopelessly awake and active and hopelessly unprogressive. It was
like some floating stick that had got caught in an eddy in a
river, going round and round and round. And round. Eternally--
eternally--eternally begotten.

"But what possible meaning do you attach then to such a phrase
as eternally begotten?"

The brain upon the pillow stared hopelessly at this question,
without an answer, without an escape. The three repetitions spun
round and round, became a swiftly revolving triangle, like some
electric sign that had got beyond control, in the midst of which
stared an unwinking and resentful eye.

(2)

Every one knows that expedient of the sleepless, the counting
of sheep.

You lie quite still, you breathe regularly, you imagine sheep
jumping over a gate, one after another, you count them quietly
and slowly until you count yourself off through a fading string
of phantom numbers to number Nod....

But sheep, alas! suggest an episcopal crook.

And presently a black sheep had got into the succession and was struggling violently with the crook about its leg, a hawk-nosed black sheep full of reproof, with disordered hair and a pointing finger. A young man with a most disagreeable voice.

At which the other sheep took heart and, deserting the numbered succession, came and sat about the fire in a big drawing-room and argued also. In particular there was Lady Sunderbund, a pretty fragile tall woman in the corner, richly jewelled, who sat with her pretty eyes watching and her lips compressed. What had she thought of it? She had said very little.

It is an unusual thing for a mixed gathering of this sort to argue about the Trinity. Simply because a tired bishop had fallen into their party. It was not fair to him to pretend that the atmosphere was a liberal and inquiring one, when the young man who had sat still and dormant by the table was in reality a keen and bitter Irish Roman Catholic. Then the question, a question-begging question, was put quite suddenly, without preparation or prelude, by surprise. "Why, Bishop, was the Spermaticos Logos identified with the Second and not the Third Person of the Trinity?"

It was indiscreet, it was silly, to turn upon the speaker and affect an air of disengagement and modernity and to say: "Ah, that indeed is the unfortunate aspect of the whole affair."

Whereupon the fierce young man had exploded with:
"To that, is it, that you Anglicans have come?"

The whole gathering had given itself up to the disputation, Lady Sunderbund, an actress, a dancer--though she, it is true,

did not say very much--a novelist, a mechanical expert of some sort, a railway peer, geniuses, hairy and Celtic, people of no clearly definable position, but all quite unequal to the task of maintaining that air of reverent vagueness, that tenderness of touch, which is by all Anglican standards imperative in so deep, so mysterious, and, nowadays, in mixed society at least, so infrequent a discussion.

It was like animals breaking down a fence about some sacred spot. Within a couple of minutes the affair had become highly improper. They had raised their voices, they had spoken with the utmost familiarity of almost unspeakable things. There had been even attempts at epigram. Athanasian epigrams. Bent the novelist had doubted if originally there had been a Third Person in the Trinity at all. He suggested a reaction from a too-Manichaeian dualism at some date after the time of St. John's Gospel. He maintained obstinately that that Gospel was dualistic.

The unpleasant quality of the talk was far more manifest in the retrospect than it had been at the time. It had seemed then bold and strange, but not impossible; now in the cold darkness it seemed sacrilegious. And the bishop's share, which was indeed only the weak yielding of a tired man to an atmosphere he had misjudged, became a disgraceful display of levity and bad faith. They had baited him. Some one had said that nowadays every one was an Arian, knowingly or unknowingly. They had not concealed their conviction that the bishop did not really believe in the Creeds he uttered.

And that unfortunate first admission stuck terribly in his throat.

Oh! Why had he made it?

(3)

Sleep had gone.

The awakened sleeper groaned, sat up in the darkness, and felt gropingly in this unaccustomed bed and bedroom first for the edge of the bed and then for the electric light that was possibly on the little bedside table.

The searching hand touched something. A water-bottle. The hand resumed its exploration. Here was something metallic and smooth, a stem. Either above or below there must be a switch....

The switch was found, grasped, and turned.

The darkness fled.

In a mirror the sleeper saw the reflection of his face and a corner of the bed in which he lay. The lamp had a tilted shade that threw a slanting bar of shadow across the field of reflection, lighting a right-angled triangle very brightly and leaving the rest obscure. The bed was a very great one, a bed for the Anakim. It had a canopy with yellow silk curtains, surmounted by a gilded crown of carved wood. Between the curtains was a man's face, clean-shaven, pale, with disordered brown hair and weary, pale-blue eyes. He was clad in purple pyjamas, and the hand that now ran its fingers through the brown hair was long and lean and shapely.

Beside the bed was a convenient little table bearing the light, a water-bottle and glass, a bunch of keys, a congested pocket-book, a gold-banded fountain pen, and a gold watch that indicated a quarter past three. On the lower edge of the picture in the mirror appeared the back of a gilt chair, over which a garment of peculiar construction had been carelessly thrown. It was in the

form of that sleeveless cassock of purple, opening at the side, whose lower flap is called a bishop's apron; the corner of the frogged coat showed behind the chair-back, and the sash lay crumpled on the floor. Black doeskin breeches, still warmly lined with their pants, lay where they had been thrust off at the corner of the bed, partly covering black hose and silver-buckled shoes.

For a moment the tired gaze of the man in the bed rested upon these evidences of his episcopal dignity. Then he turned from them to the watch at the bedside.

He groaned helplessly.

(4)

These country doctors were no good. There wasn't a physician in the diocese. He must go to London.

He looked into the weary eyes of his reflection and said, as one makes a reassuring promise, "London."

He was being worried. He was being intolerably worried, and he was ill and unable to sustain his positions. This doubt, this sudden discovery of controversial unsoundness, was only one aspect of his general neurasthenia. It had been creeping into his mind since the "Light Under the Altar" controversy. Now suddenly it had leapt upon him from his own unwary lips.

The immediate trouble arose from his loyalty. He had followed the King's example; he had become a total abstainer and, in addition, on his own account he had ceased to smoke. And his digestion, which Princhester had first made sensitive, was deranged. He was suffering chemically, suffering one of those

nameless sequences of maladjustments that still defy our ordinary medical science. It was afflicting him with a general malaise, it was affecting his energy, his temper, all the balance and comfort of his nerves. All day he was weary; all night he was wakeful. He was estranged from his body. He was distressed by a sense of detachment from the things about him, by a curious intimation of unreality in everything he experienced. And with that went this levity of conscience, a heaviness of soul and a levity of conscience, that could make him talk as though the Creeds did not matter--as though nothing mattered....

If only he could smoke!

He was persuaded that a couple of Egyptian cigarettes, or three at the outside, a day, would do wonders in restoring his nervous calm. That, and just a weak whisky and soda at lunch and dinner. Suppose now--!

His conscience, his sense of honour, deserted him. Latterly he had had several of these conscience-blanks; it was only when they were over that he realized that they had occurred.

One might smoke up the chimney, he reflected. But he had no cigarettes! Perhaps if he were to slip downstairs....

Why had he given up smoking?

He groaned aloud. He and his reflection eyed one another in mutual despair.

There came before his memory the image of a boy's face, a swarthy little boy, grinning, grinning with a horrible knowingness and pointing his finger--an accusing finger. It had been the most exasperating, humiliating, and shameful incident in the bishop's career. It was the afternoon for his fortnightly

address to the Shop-girls' Church Association, and he had been seized with a panic fear, entirely irrational and unjustifiable, that he would not be able to deliver the address. The fear had arisen after lunch, had gripped his mind, and then as now had come the thought, "If only I could smoke!" And he had smoked. It seemed better to break a vow than fail the Association. He had fallen to the temptation with a completeness that now filled him with shame and horror. He had stalked Dunk, his valet-butler, out of the dining-room, had affected to need a book from the book-case

beyond the sideboard, had gone insincerely to the sideboard humming "From Greenland's icy mountains," and then, glancing over his shoulder, had stolen one of his own cigarettes, one of the fatter sort. With this and his bedroom matches he had gone off to the bottom of the garden among the laurels, looked everywhere except above the wall to be sure that he was alone, and at last lit up, only as he raised his eyes in gratitude for the first blissful inhalation to discover that dreadful little boy peeping at him from the crotch in the yew-tree in the next garden. As though God had sent him to be a witness!

Their eyes had met. The bishop recalled with an agonized distinctness every moment, every error, of that shameful encounter. He had been too surprised to conceal the state of affairs from the pitiless scrutiny of those youthful eyes. He had instantly made as if to put the cigarette behind his back, and then as frankly dropped it....

His soul would not be more naked at the resurrection. The little boy had stared, realized the state of affairs slowly but surely, pointed his finger....

Never had two human beings understood each other more completely.

A dirty little boy! Capable no doubt of a thousand kindred scoundrelisms.

It seemed ages before the conscience-stricken bishop could tear himself from the spot and walk back, with such a pretence of dignity as he could muster, to the house.

And instead of the discourse he had prepared for the Shop-girls' Church Association, he had preached on temptation and falling, and how he knew they had all fallen, and how he understood and could sympathize with the bitterness of a secret shame, a moving but unsuitable discourse that had already been subjected to misconstruction and severe reproof in the local press of Princhester.

But the haunting thing in the bishop's memory was the face and gesture of the little boy. That grubby little finger stabbed him to the heart.

"Oh, God!" he groaned. "The meanness of it! How did I bring myself--?"

He turned out the light convulsively, and rolled over in the bed, making a sort of cocoon of himself. He bored his head into the pillow and groaned, and then struggled impatiently to throw the bed-clothes off himself. Then he sat up and talked aloud.

"I must go to Brighton-Pomfrey," he said. "And get a medical dispensation. If I do not smoke--"

He paused for a long time.

Then his voice sounded again in the darkness, speaking quietly, speaking with a note almost of satisfaction.

"I shall go mad. I must smoke or I shall go mad."

For a long time he sat up in the great bed with his arms about his knees.

(5)

Fearful things came to him; things at once dreadfully blasphemous and entirely weak-minded.

The triangle and the eye became almost visible upon the black background of night. They were very angry. They were spinning round and round faster and faster. Because he was a bishop and because really he did not believe fully and completely in the Trinity. At one and the same time he did not believe in the Trinity and was terrified by the anger of the Trinity at his unbelief.... He was afraid. He was aghast.... And oh! he was weary....

He rubbed his eyes.

"If I could have a cup of tea!" he said.

Then he perceived with surprise that he had not thought of praying. What should he say? To what could he pray?

He tried not to think of that whizzing Triangle, that seemed now to be nailed like a Catherine wheel to the very centre of his forehead, and yet at the same time to be at the apex of the universe. Against that--for protection against that--he was praying. It was by a great effort that at last he pronounced the words:

"Lighten our darkness, we beseech Thee, O Lord"

Presently he had turned up his light, and was prowling about the room. The clear inky dinginess that comes before the raw dawn of a spring morning, found his white face at the window, looking out upon the great terrace and the park.

CHAPTER THE SECOND - THE WEAR AND TEAR OF EPISCOPACY

(1)

IT was only in the last few years that the bishop had experienced these nervous and mental crises. He was a belated doubter. Whatever questionings had marked his intellectual adolescence had either been very slight or had been too adequately answered to leave any serious scars upon his convictions.

And even now he felt that he was afflicted physically rather than mentally, that some protective padding of nerve-sheath or brain-case had worn thin and weak, and left him a prey to strange disturbances, rather than that any new process of thought was eating into his mind. These doubts in his mind were still not really doubts; they were rather alien and, for the first time, uncontrolled movements of his intelligence. He had had a sheltered upbringing; he was the well-connected son of a comfortable rectory, the only son and sole survivor of a family of three; he had been carefully instructed and he had been a willing learner; it had been easy and natural to take many things for granted. It had been very easy and pleasant for him to take the world as he found it and God as he found Him. Indeed for all his years up to manhood he had been able to take life exactly as in his infancy he took his carefully warmed and prepared bottle --unquestioningly and beneficially.

And indeed that has been the way with most bishops since bishops began.

It is a busy continuous process that turns boys into bishops, and it will stand few jars or discords. The student of

ecclesiastical biography will find that an early vocation has in every age been almost universal among them; few are there among these lives that do not display the incipient bishop from the tenderest years. Bishop How of Wakefield composed hymns before he was eleven, and Archbishop Benson when scarcely older possessed a little oratory in which he conducted services and--a pleasant touch of the more secular boy--which he protected from a too inquisitive sister by means of a booby trap. It is rare that those marked for episcopal dignities go so far into the outer world as Archbishop Lang of York, who began as a barrister. This early predestination has always been the common episcopal experience. Archbishop Benson's early attempts at religious services remind one both of St. Thomas a Becket, the "boy bishop," and those early ceremonies of St. Athanasius which were observed and inquired upon by the good bishop Alexander. (For though still a tender infant, St. Athanasius with perfect correctness and validity was baptizing a number of his innocent playmates, and the bishop who "had paused to contemplate the sports of the child remained to confirm the zeal of the missionary.") And as with the bishop of the past, so with the bishop of the future; the Rev. H. J. Campbell, in his story of his soul's pilgrimage, has given us a pleasant picture of himself as a child stealing out into the woods to build himself a little altar.

Such minds as these, settled as it were from the outset, are either incapable of real scepticism or become sceptical only after catastrophic changes. They understand the sceptical mind with difficulty, and their beliefs are regarded by the sceptical mind with incredulity. They have determined their forms of belief before their years of discretion, and once those forms are determined they are not very easily changed. Within the shell it has adopted the intelligence may be active and lively enough, may indeed be extraordinarily active and lively, but only within the shell.

There is an entire difference in the mental quality of those who are converts to a faith and those who are brought up in it. The former know it from outside as well as from within. They know not only that it is, but also that it is not. The latter have a confidence in their creed that is one with their apprehension of sky or air or gravitation. It is a primary mental structure, and they not only do not doubt but they doubt the good faith of those who do. They think that the Atheist and Agnostic really believe but are impelled by a mysterious obstinacy to deny. So it had been with the Bishop of Princhester; not of cunning or design but in simple good faith he had accepted all the inherited assurances of his native rectory, and held by Church, Crown, Empire, decorum, respectability, solvency--and compulsory Greek at the Little Go--as his father had done before him. If in his undergraduate days he had said a thing or two in the modern vein, affected the socialism of William Morris and learnt some Swinburne by heart, it was out of a conscious wildness. He did not wish to be a prig. He had taken a far more genuine interest in the artistry of ritual.

Through all the time of his incumbency of the church of the Holy Innocents, St. John's Wood, and of his career as the bishop suffragan of Pinner, he had never faltered from his profound confidence in those standards of his home. He had been kind, popular, and endlessly active. His undergraduate socialism had expanded simply and sincerely into a theory of administrative philanthropy. He knew the Webbs. He was as successful with working-class audiences as with fashionable congregations. His home life with Lady Ella (she was the daughter of the fifth Earl of Birkenholme) and his five little girls was simple, beautiful, and happy as few homes are in these days of confusion. Until he became Bishop of Princhester--he followed Hood, the first bishop, as the reign of his Majesty King Edward the Peacemaker drew to its close--no anticipation of his coming distress fell

across his path.

(2)

He came to Princhester an innocent and trustful man. The home life at the old rectory of Otteringham was still his standard of truth and reality. London had not disillusioned him. It was a strange waste of people, it made him feel like a missionary in infidel parts, but it was a kindly waste. It was neither antagonistic nor malicious. He had always felt there that if he searched his Londoner to the bottom, he would find the completest recognition of the old rectory and all its data and implications.

But Princhester was different.

Princhester made one think that recently there had been a second and much more serious Fall.

Princhester was industrial and unashamed. It was a countryside savagely invaded by forges and mine shafts and gaunt black things. It was scarred and impeded and discoloured. Even before that invasion, when the heather was not in flower it must have been a black country. Its people were dour uncandid individuals, who slanted their heads and knitted their brows to look at you. Occasionally one saw woods brown and blistered by the gases from chemical works. Here and there remained old rectories, closely reminiscent of the dear old home at Otteringham, jostled and elbowed and overshadowed by horrible iron cylinders belching smoke and flame. The fine old abbey church of Princhester, which was the cathedral of the new diocese, looked when first he saw it like a lady Abbess who had taken to drink and slept in a coal truck. She minced apologetically upon the market-place; the parvenu Town Hall patronized and protected her as if she were a poor relation....

The old aristocracy of the countryside was unpicturesquely decayed. The branch of the Walshinghams, Lady Ella's cousins, who lived near Pringle, was poor, proud and ignoble. And extremely unpopular. The rich people of the country were self-made and inclined to nonconformity, the working-people were not strictly speaking a "poor," they were highly paid, badly housed, and deeply resentful. They went in vast droves to football matches, and did not care a rap if it rained. The prevailing wind was sarcastic. To come here from London was to come from atmospheric blue-greys to ashen-greys, from smoke and soft smut to grime and black grimness.

The bishop had been charmed by the historical associations of Princhester when first the see was put before his mind. His realization of his diocese was a profound shock.

Only one hint had he had of what was coming. He had met during his season of congratulations Lord Gatling dining unusually at the Athenaeum. Lord Gatling and he did not talk frequently, but on this occasion the great racing peer came over to him. "You will feel like a cherub in a stokehole," Lord Gatling had said....

"They used to heave lumps of slag at old Hood's gaiters," said Lord Gatling.

"In London a bishop's a lord and a lark and nobody minds him," said Lord Gatling, "but Princhester is different. It isn't used to bishops.... Well,--I hope you'll get to like 'em."

(3)

Trouble began with a fearful row about the position of the

bishop's palace. Hood had always evaded this question, and a number of strong-willed self-made men of wealth and influence, full of local patriotism and that competitive spirit which has made England what it is, already intensely irritated by Hood's prevarications, were resolved to pin his successor to an immediate decision. Of this the new bishop was unaware. Mindful of a bishop's constant need to travel, he was disposed to seek a home within easy reach of Pringle Junction, from which nearly every point in the diocese could be simply and easily reached. This fell in with Lady Ella's liking for the rare rural quiet of the Kibe valley and the neighbourhood of her cousins the Walshinghams. Unhappily it did not fall in with the inflexible resolution of each and every one of the six leading towns of the see to put up, own, obtrude, boast, and swagger about the biggest and showiest thing in episcopal palaces in all industrial England, and the new bishop had already taken a short lease and gone some way towards the acquisition of Ganford House, two miles from Pringle, before he realized the strength and fury of these local ambitions.

At first the magnates and influences seemed to be fighting only among themselves, and he was so ill-advised as to broach the Ganford House project as a compromise that would glorify no one unfairly, and leave the erection of an episcopal palace for some future date when he perhaps would have the good fortune to have passed to "where beyond these voices there is peace," forgetting altogether among other oversights the importance of architects and builders in local affairs. His proposal seemed for a time to concentrate the rich passions of the whole countryside upon himself and his wife.

Because they did not leave Lady Ella alone. The Walshinghams were already unpopular in their county on account of a poverty and shyness that made them seem "stuck up" to successful captains of industry only too ready with the hand of friendship, the iron

grip indeed of friendship, consciously hospitable and eager for admission and endorsements. And Princhester in particular was under the sway of that enterprising weekly, *The White Blackbird*, which was illustrated by, which indeed monopolized the gifts of, that brilliant young caricaturist "The Snicker."

It had seemed natural for Lady Ella to acquiesce in the proposals of the leading Princhester photographer. She had always helped where she could in her husband's public work, and she had been popular upon her own merits in Wealdstone. The portrait was abominable enough in itself; it dwelt on her chin, doubled her age, and denied her gentleness, but it was a mere starting-point for the subtle extravagance of *The Snicker's* poisonous gift.... The thing came upon the bishop suddenly from the book-stall at Pringle Junction.

He kept it carefully from Lady Ella.... It was only later that he found that a copy of *The White Blackbird* had been sent to her, and that she was keeping the horror from him. It was in her vein that she should reproach herself for being a vulnerable side to him.

Even when the bishop capitulated in favour of Princhester, that decision only opened a fresh trouble for him. Princhester wanted the palace to be a palace; it wanted to combine all the best points of Lambeth and Fulham with the marble splendours of a good modern bank. The bishop's architectural tastes, on the other hand, were rationalistic. He was all for building a useful palace in undertones, with a green slate roof and long horizontal lines. What he wanted more than anything else was a quite remote wing with a lot of bright little bedrooms and a sitting-room and so on, complete in itself, examination hall and everything, with a long intricate connecting passage and several doors, to prevent the ordination candidates straying all over the place and getting into the talk and the tea. But the diocese wanted a proud archway

--and turrets, and did not care a rap if the ordination candidates slept about on the carpets in the bishop's bedroom. Ordination candidates were quite outside the sphere of its imagination.

And he disappointed Princhester with his equipage. Princhester had a feeling that it deserved more for coming over to the church from nonconformity as it was doing. It wanted a bishop in a mitre and a gilt coach. It wanted a pastoral crook. It wanted something to go with its mace and its mayor. And (obsessed by The Snicker) it wanted less of Lady Ella. The cruelty and unreason of these attacks upon his wife distressed the bishop beyond measure, and baffled him hopelessly. He could not see any means of checking them nor of defending or justifying her against them.

The palace was awaiting its tenant, but the controversies and bitternesses were still swinging and swaying and developing when King George was being crowned. Close upon that event came a wave of social discontent, the great railway strike, a curious sense of social and political instability, and the first beginnings of the bishop's ill health.

(4)

There came a day of exceptional fatigue and significance.

The industrial trouble was a very real distress to the bishop. He had a firm belief that it is a function of the church to act as mediator between employer and employed. It was a common saying of his that the aim of socialism--the right sort of socialism --was to Christianize employment. Regardless of suspicion on either hand, regardless of very distinct hints that he should "mind his own business," he exerted himself in a search for methods of reconciliation. He sought out every one who seemed

likely to be influential on either side, and did his utmost to discover the conditions of a settlement. As far as possible and with the help of a not very efficient chaplain he tried to combine such interviews with his more normal visiting.

At times, and this was particularly the case on this day, he seemed to be discovering nothing but the incurable perversity and militancy of human nature. It was a day under an east wind, when a steely-blue sky full of colourless light filled a stiff-necked world with whitish high lights and inky shadows. These bright harsh days of barometric high pressure in England rouse and thwart every expectation of the happiness of spring. And as the bishop drove through the afternoon in a hired fly along a rutted road of slag between fields that were bitterly wired against the Sunday trespasser, he fell into a despondent meditation upon the political and social outlook.

His thoughts were of a sort not uncommon in those days. The world was strangely restless. Since the passing of Victoria the Great there had been an accumulating uneasiness in the national life. It was as if some compact and dignified paper-weight had been lifted from people's ideas, and as if at once they had begun to blow about anyhow. Not that Queen Victoria had really been a paper-weight or any weight at all, but it happened that she died as an epoch closed, an epoch of tremendous stabilities. Her son, already elderly, had followed as the selvedge follows the piece, he had passed and left the new age stripped bare. In nearly every department of economic and social life now there was upheaval, and it was an upheaval very different in character from the radicalism and liberalism of the Victorian days. There were not only doubt and denial, but now there were also impatience and unreason. People argued less and acted quicker. There was a pride in rebellion for its own sake, an indiscipline and disposition to sporadic violence that made it extremely hard to negotiate any reconciliations or compromises. Behind every extremist it seemed

stood a further extremist prepared to go one better....

The bishop had spent most of the morning with one of the big employers, a tall dark man, lean and nervous, and obviously tired and worried by the struggle. He did not conceal his opinion that the church was meddling with matters quite outside its sphere. Never had it been conveyed to the bishop before how remote a rich and established Englishman could consider the church from reality.

"You've got no hold on them," he said. "It isn't your sphere."

And again: "They'll listen to you--if you speak well. But they don't believe you know anything about it, and they don't trust your good intentions. They won't mind a bit what you say unless you drop something they can use against us."

The bishop tried a few phrases. He thought there might be something in co-operation, in profit-sharing, in some more permanent relationship between the business and the employee.

"There isn't," said the employer compactly. "It's just the malice of being inferior against the man in control. It's just the spirit of insubordination and boredom with duty. This trouble's as old as the Devil."

"But that is exactly the business of the church," said the bishop brightly, "to reconcile men to their duty."

"By chanting the Athanasian creed at 'em, I suppose," said the big employer, betraying the sneer he had been hiding hitherto.

"This thing is a fight," said the big employer, carrying on before the bishop could reply. "Religion had better get out of the streets until this thing is over. The men won't listen to

reason. They don't mean to. They're bit by Syndicalism. They're setting out, I tell you, to be unreasonable and impossible. It isn't an argument; it's a fight. They don't want to make friends with the employer. They want to make an end to the employer. Whatever we give them they'll take and press us for more. Directly we make terms with the leaders the men go behind it... It's a raid on the whole system. They don't mean to work the system--anyhow. I'm the capitalist, and the capitalist has to go. I'm to be bundled out of my works, and some--some "--he seemed to be rejecting unsuitable words--" confounded politician put in. Much good it would do them. But before that happens I'm going to fight. You would."

The bishop walked to the window and stood staring at the brilliant spring bulbs in the big employer's garden, and at a long vista of newly-mown lawn under great shapely trees just budding into green.

"I can't admit," he said, "that these troubles lie outside the sphere of the church."

The employer came and stood beside him. He felt he was being a little hard on the bishop, but he could not see any way of making things easier.

"One doesn't want Sacred Things," he tried, "in a scrap like this.

"We've got to mend things or end things," continued the big employer. "Nothing goes on for ever. Things can't last as they are going on now...."

Then he went on abruptly to something that for a time he had been keeping back.

"Of course just at present the church may do a confounded lot of harm. Some of you clerical gentlemen are rather too fond of talking socialism and even preaching socialism. Don't think I want to be overcritical. I admit there's no end of things to be said for a proper sort of socialism, Ruskin, and all that. We're all Socialists nowadays. Ideals--excellent. But--it gets misunderstood. It gives the men a sense of moral support. It makes them fancy that they are It. Encourages them to forget duties and set up preposterous claims. Class war and all that sort of thing. You gentlemen of the clergy don't quite realize that socialism may begin with Ruskin and end with Karl Marx. And that from the Class War to the Commune is just one step."

(5)

From this conversation the bishop had made his way to the vicarage of Mogham Banks. The vicar of Mogham Banks was a sacerdotal socialist of the most advanced type, with the reputation of being closely in touch with the labour extremists. He was a man addicted to banners, prohibited ornaments, special services at unusual hours, and processions in the streets. His taste in chasubles was loud, he gardened in a cassock and, it was said, he slept in his biretta; he certainly slept in a hair shirt, and he littered his church with flowers, candles, side altars, confessional boxes, requests for prayers for the departed, and the like. There had already been two Kensitite demonstrations at his services, and altogether he was a source of considerable anxiety to the bishop. The bishop did his best not to know too exactly what was going on at Mogham Banks. Sooner or later he felt he would be forced to do something--and the longer he could put that off the better. But the Rev. Morrice Deans had promised to get together three or four prominent labour leaders for tea and a frank talk, and the opportunity was one not to be missed. So the bishop, after a hasty and not too digestible

lunch in the refreshment room at Pringle, was now in a fly that smelt of straw and suggested infectious hospital patients, on his way through the industry-scarred countryside to this second conversation.

The countryside had never seemed so scarred to him as it did that day.

It was probably the bright hard spring sunshine that emphasized the contrast between that dear England of hedges and homes and the south-west wind in which his imagination lived, and the crude presences of a mechanical age. Never before had the cuttings and heapings, the smashing down of trees, the obtrusion of corrugated iron and tar, the belchings of smoke and the haste, seemed so harsh and disregarding of all the bishop's world. Across the fields a line of gaunt iron standards, abominably designed, carried an electric cable to some unknown end. The curve of the hill made them seem a little out of the straight, as if they hurried and bent forward furtively.

"Where are they going?" asked the bishop, leaning forward to look out of the window of the fly, and then: "Where is it all going?"

And presently the road was under repair, and was being done at a great pace with a huge steam-roller, mechanically smashed granite, and kettles of stinking stuff, asphalt or something of that sort, that looked and smelt like Milton's hell. Beyond, a gaunt hoarding advertised extensively the Princhester Music Hall, a mean beastly place that corrupted boys and girls; and also it clamoured of tyres and potted meats....

The afternoon's conference gave him no reassuring answer to his question, "Where is it all going?"

The afternoon's conference did no more than intensify the new and strange sense of alienation from the world that the morning's talk had evoked.

The three labour extremists that Morrice Deans had assembled obviously liked the bishop and found him picturesque, and were not above a certain snobbish gratification at the purple-trimmed company they were in, but it was clear that they regarded his intervention in the great dispute as if it were a feeble waving from the bank across the waters of a great river.

"There's an incurable misunderstanding between the modern employer and the modern employed," the chief labour spokesman said, speaking in a broad accent that completely hid from him and the bishop and every one the fact that he was by far the best-read man of the party. "Disraeli called them the Two Nations, but that was long ago. Now it's a case of two species. Machinery has made them into different species. The employer lives away from his work-people, marries a wife foreign, out of a county family or suchlike, trains his children from their very birth in a different manner. Why, the growth curve is different for the two species. They haven't even a common speech between them. One looks east and the other looks west. How can you expect them to agree? Of course they won't agree. We've got to fight it out. They say we're their slaves for ever. Have you ever read Lady Bell's 'At the Works'? A well-intentioned woman, but she gives the whole thing away. We say, No! It's our sort and not your sort. We'll do without you. We'll get a little more education and then we'll do without you. We're pressing for all we can get, and when we've got that we'll take breath and press for more. We're the Morlocks. Coming up. It isn't our fault that we've differentiated."

"But you haven't understood the drift of Christianity," said the bishop. "It's just to assert that men are One community and

not two."

"There's not much of that in the Creeds," said a second labour leader who was a rationalist. "There's not much of that in the services of the church."

The vicar spoke before his bishop, and indeed he had plenty of time to speak before his bishop. "Because you will not set yourselves to understand the symbolism of her ritual," he said.

"If the church chooses to speak in riddles," said the rationalist.

"Symbols," said Morrice Deans, "need not be riddles," and for a time the talk eddied about this minor issue and the chief labour spokesman and the bishop looked at one another. The vicar instanced and explained certain apparently insignificant observances, his antagonist was contemptuously polite to these explanations. "That's all very pratty," he said....

The bishop wished that fine points of ceremonial might have been left out of the discussion.

Something much bigger than that was laying hold of his intelligence, the realization of a world extravagantly out of hand. The sky, the wind, the telegraph poles, had been jabbing in the harsh lesson of these men's voices, that the church, as people say, "wasn't in it." And that at the same time the church held the one remedy for all this ugliness and contention in its teaching of the universal fatherhood of God and the universal brotherhood of men. Only for some reason he hadn't the phrases and he hadn't the voice to assert this over their wrangling and their stiff resolution. He wanted to think the whole business out thoroughly, for the moment he had nothing to say, and there was the labour leader opposite waiting smilingly to hear what he had

to say so soon as the bout between the vicar and the rationalist was over.

(6)

That morning in the long galleries of the bishop's imagination a fresh painting had been added. It was a big wall painting rather in the manner of Puvis de Chavannes. And the central figure had been the bishop of Princhester himself. He had been standing upon the steps of the great door of the cathedral that looks upon the marketplace where the tram-lines meet, and he had been dressed very magnificently and rather after the older use. He had been wearing a tunic and dalmatic under a chasuble, a pectoral cross, purple gloves, sandals and buskins, a mitre and his presentation ring. In his hand he had borne his pastoral staff. And the clustering pillars and arches of the great doorway were painted with a loving flat particularity that omitted nothing but the sooty tinge of the later discolourations.

On his right hand had stood a group of employers very richly dressed in the fashion of the fifteenth century, and on the left a rather more numerous group of less decorative artisans. With them their wives and children had been shown, all greatly impressed by the canonicals. Every one had been extremely respectful.

He had been reconciling the people and blessing them and calling them his "sheep" and his "little children."

But all this was so different.

Neither party resembled sheep or little children in the least degree. .

The labour leader became impatient with the ritualistic controversy; he set his tea-cup aside out of danger and leant across the corner of the table to the bishop and spoke in a sawing undertone. "You see," he said, "the church does not talk our language. I doubt if it understands our language. I doubt if we understand clearly where we are ourselves. These things have to be fought out and hammered out. It's a big dusty dirty noisy job. It may be a bloody job before it's through. You can't suddenly call a halt in the middle of the scrap and have a sort of millennium just because you want it...."

"Of course if the church had a plan," he said, "if it had a proposal to make, if it had anything more than a few pious palliatives to suggest, that might be different. But has it?"

The bishop had a bankrupt feeling. On the spur of the moment he could say no more than: "It offers its mediation."

(7)

Full as he was with the preoccupation of these things and so a little slow and inattentive in his movements, the bishop had his usual luck at Pringle Junction and just missed the 7.27 for Princhester. He might perhaps have got it by running through the subway and pushing past people, but bishops must not run through subways and push past people. His mind swore at the mischance, even if his lips refrained.

He was hungry and, tired; he would not get to the palace now until long after nine; dinner would be over and Lady Ella would naturally suppose he had dined early with the Rev. Morrice Deans. Very probably there would be nothing ready for him at all.

He tried to think he was exercising self-control, but indeed

all his sub-conscious self was busy in a manner that would not have disgraced Tertullian with the eternal welfare of those city fathers whose obstinacy had fixed the palace at Princhester. He walked up and down the platform, gripping his hands very tightly behind him, and maintaining a serene upcast countenance by a steadfast effort. It seemed a small matter to him that the placards of the local evening papers should proclaim "Lloyd George's Reconciliation Meeting at Wombash Broken up by Suffragettes." For a year now he had observed a strict rule against buying the products of the local press, and he saw no reason for varying this protective regulation.

His mind was full of angry helplessness.

Was he to blame, was the church to blame, for its powerlessness in these social disputes? Could an abler man with a readier eloquence have done more?

He envied the cleverness of Cardinal Manning. Manning would have got right into the front of this affair. He would have accumulated credit for his church and himself...

But would he have done much?...

The bishop wandered along the platform to its end, and stood contemplating the convergent ways that gather together beyond the station and plunge into the hillside and the wilderness of sidings and trucks, signal-boxes, huts, coal-pits, electric standards, goods sheds, turntables, and engine-houses, that ends in a bluish bricked-up cliff against the hill. A train rushed with a roar and clatter into the throat of the great tunnel and was immediately silenced; its rear lights twinkled and vanished, and then out of that huge black throat came wisps of white steam and curled slowly upward like lazy snakes until they caught the slanting sunshine. For the first time the day betrayed a softness

and touched this scene of black energy to gold. All late afternoons are beautiful, whatever the day has been--if only there is a gleam of sun. And now a kind of mechanical greatness took the place of mere black disorder in the bishop's perception of his see. It was harsh, it was vast and strong, it was no lamb he had to rule but a dragon. Would it ever be given to him to overcome his dragon, to lead it home, and bless it?

He stood at the very end of the platform, with his gaitered legs wide apart and his hands folded behind him, staring beyond all visible things.

Should he do something very bold and striking? Should he invite both men and masters to the cathedral, and preach tremendous sermons to them upon these living issues?

Short sermons, of course.

But stating the church's attitude with a new and convincing vigour.

He had a vision of the great aisle strangely full and alive and astir. The organ notes still echoed in the fretted vaulting, as the preacher made his way from the chancel to the pulpit. The congregation was tense with expectation, and for some reason his mind dwelt for a long time upon the figure of the preacher ascending the steps of the pulpit. Outside the day was dark and stormy, so that the stained-glass windows looked absolutely dead. For a little while the preacher prayed. Then in the attentive silence the tenor of the preacher would begin, a thin jet of sound, a ray of light in the darkness, speaking to all these men as they had never been spoken to before....

Surely so one might call a halt to all these harsh conflicts. So one might lay hands afresh upon these stubborn minds, one

might win them round to look at Christ the Master and Servant....

That, he thought, would be a good phrase: "Christ the Master and Servant."

"Members of one Body," that should be his text... At last it was finished. The big congregation, which had kept so still, sighed and stirred. The task of reconciliation was as good as done. "And now to God the Father, God the Son, and God the Holy Ghost...."

Outside the day had become suddenly bright, the threatening storm had drifted away, and great shafts of coloured light from the pictured windows were smiting like arrows amidst his hearers....

This idea of a great sermon upon capital and labour did so powerfully grip the bishop's imagination that he came near to losing the 8.27 train also.

He discovered it when it was already in the station. He had to walk down the platform very quickly. He did not run, but his gaiters, he felt, twinkled more than a bishop's should.

(8)

Directly he met his wife he realized that he had to hear something important and unpleasant.

She stood waiting for him in the inner hall, looking very grave and still. The light fell upon her pale face and her dark hair and her long white silken dress, making her seem more delicate and unworldly than usual and making the bishop feel grimy and sordid.

"I must have a wash," he said, though before he had thought of nothing but food. "I have had nothing to eat since tea-time-- and that was mostly talk."

Lady Ella considered. "There are cold things.... You shall have a tray in the study. Not in the dining-room. Eleanor is there. I want to tell you something. But go upstairs first and wash your poor tired face."

"Nothing serious, I hope?" he asked, struck by an unusual quality in her voice.

"I will tell you," she evaded, and after a moment of mutual scrutiny he went past her upstairs.

Since they had come to Princhester Lady Ella had changed very markedly. She seemed to her husband to have gained in dignity; she was stiller and more restrained; a certain faint arrogance, a touch of the "ruling class" manner had dwindled almost to the vanishing point. There had been a time when she had inclined to an authoritative hauteur, when she had seemed likely to develop into one of those aggressive and interfering old ladies who play so overwhelming a part in British public affairs. She had been known to initiate adverse judgments, to exercise the snub, to cut and humiliate. Princhester had done much to purge her of such tendencies. Princhester had made her think abundantly, and had put a new and subtler quality into her beauty. It had taken away the least little disposition to rustle as she moved, and it had softened her voice.

Now, when presently she stood in the study, she showed a new circumspection in her treatment of her husband. She surveyed the tray before him.

"You ought not to drink that Burgundy," she said. "I can see you are dog-tired. It was uncorked yesterday, and anyhow it is not very digestible. This cold meat is bad enough. You ought to have one of those quarter bottles of champagne you got for my last convalescence. There's more than a dozen left over."

The bishop felt that this was a pretty return of his own kindly thoughts "after many days," and soon Dunk, his valet-butler, was pouring out the precious and refreshing glassful....

"And now, dear?" said the bishop, feeling already much better.

Lady Ella had come round to the marble fireplace. The mantel-piece was a handsome work by a Princhester artist in the Gill style--with contemplative ascetics as supporters.

"I am worried about Eleanor," said Lady Ella.

"She is in the dining-room now," she said, "having some dinner. She came in about a quarter past eight, half way through dinner."

"Where had she been?" asked the bishop.

"Her dress was torn--in two places. Her wrist had been twisted and a little sprained."

"My dear!"

"Her face--Grubby! And she had been crying."

"But, my dear, what had happened to her? You don't mean--?"

Husband and wife stared at one another aghast. Neither of them said the horrid word that flamed between them.

"Merciful heaven!" said the bishop, and assumed an attitude of despair.

"I didn't know she knew any of them. But it seems it is the second Walshingham girl--Phoebe. It's impossible to trace a girl's thoughts and friends. She persuaded her to go."

"But did she understand?"

"That's the serious thing," said Lady Ella.

She seemed to consider whether he could bear the blow.

"She understands all sorts of things. She argues... I am quite unable to argue with her."

"About this vote business?"

"About all sorts of things. Things I didn't imagine she had heard of. I knew she had been reading books. But I never imagined that she could have understood...."

The bishop laid down his knife and fork.

"One may read in books, one may even talk of things, without fully understanding," he said.

Lady Ella tried to entertain this comforting thought. "It isn't like that," she said at last. "She talks like a grown-up person. This--this escapade is just an accident. But things have gone further than that. She seems to think--that she is not being educated properly here, that she ought to go to a College. As if we were keeping things from her...."

The bishop reconsidered his plate.

"But what things?" he said.

"She says we get all round her," said Lady Ella, and left the implications of that phrase to unfold.

(9)

For a time the bishop said very little.

Lady Ella had found it necessary to make her first announcement standing behind him upon the hearthrug, but now she sat upon the arm of the great armchair as close to him as possible, and spoke in a more familiar tone.

The thing, she said, had come to her as a complete surprise. Everything had seemed so safe. Eleanor had been thoughtful, it was true, but it had never occurred to her mother that she had really been thinking--about such things as she had been thinking about. She had ranged in the library, and displayed a disposition to read the weekly papers and the monthly reviews. But never a sign of discontent.

"But I don't understand," said the bishop. "Why is she discontented? What is there that she wants different?"

"Exactly," said Lady Ella.

"She has got this idea that life here is secluded in some way," she expanded. "She used words like 'secluded' and 'artificial' and--what was it?--'cloistered.' And she said--"

Lady Ella paused with an effect of exact retrospection.

"'Out there,' she said, 'things are alive. Real things are happening.' It is almost as if she did not fully believe--"

Lady Ella paused again.

The bishop sat with his arm over the back of his chair, and his face downcast.

"The ferment of youth," he said at last. "The ferment of youth. Who has given her these ideas?"

Lady Ella did not know. She could have thought a school like St. Aubyns would have been safe, but nowadays nothing was safe. It was clear the girls who went there talked as girls a generation ago did not talk. Their people at home encouraged them to talk and profess opinions about everything. It seemed that Phoebe Walshingham and Lady Kitty Kingdom were the leaders in these premature mental excursions. Phoebe aired religious doubts.

"But little Phoebe!" said the bishop.

"Kitty," said Lady Ella, "has written a novel."

"Already! "

"With elopements in it--and all sorts of things. She's had it typed. You'd think Mary Crosshampton would know better than to let her daughter go flourishing the family imagination about in that way."

"Eleanor told you?"

"By way of showing that they think of--things in general."

The bishop reflected. "She wants to go to College."

"They want to go in a set."

"I wonder if college can be much worse than school.... She's eighteen--? But I will talk to her...."

(10)

All our children are changelings. They are perpetually fresh strangers. Every day they vanish and a new person masquerades as yesterday's child until some unexpected development betrays the cheat.

The bishop had still to learn this perennial newness of the young. He learnt it in half an hour at the end of a fatiguing day.

He went into the dining-room. He went in as carelessly as possible and smoking a cigarette. He had an honourable dread of being portentous in his family; almost ostentatiously he laid the bishop aside. Eleanor had finished her meal, and was sitting in the arm-chair by the fire with one hand holding her sprained wrist.

"Well," he said, and strolled to the hearthrug. He had had an odd idea that he would find her still dirty, torn, and tearful, as her mother had described her, a little girl in a scrape. But she had changed into her best white evening frock and put up her hair, and became in the firelight more of a lady, a very young lady but still a lady, than she had ever been to him before. She was dark like her mother, but not of the same willowy type; she had more of her father's sturdy build, and she had developed her shoulders at hockey and tennis. The firelight brought out the gracious reposeful lines of a body that ripened in adolescence.

And though there was a vibration of resolution in her voice she spoke like one who is under her own control.

"Mother has told you that I have disgraced myself," she began.

"No," said the bishop, weighing it. "No. But you seem to have been indiscreet, little Norah."

"I got excited," she said. "They began turning out the other women--roughly. I was indignant."

"You didn't go to interrupt?" he asked.

She considered. "No," she said. "But I went."

He liked her disposition to get it right. "On that side," he assisted.

"It isn't the same thing as really meaning, Daddy," she said.

"And then things happened?"

"Yes," she said to the fire.

A pause followed. If they had been in a law-court, her barrister would have said, "That is my case, my lord." The bishop prepared to open the next stage in the proceedings.

"I think, Norah, you shouldn't have been there at all," he said.

"Mother says that."

"A man in my position is apt to be judged by his family. You commit more than yourself when you commit an indiscretion. Apart

from that, it wasn't the place for a girl to be at. You are not a child now. We give you freedom--more freedom than most girls get--because we think you will use it wisely. You knew--enough to know that there was likely to be trouble."

The girl looked into the fire and spoke very carefully. "I don't think that I oughtn't to know the things that are going on."

The bishop studied her face for an instant. It struck him that they had reached something very fundamental as between parent and child. His modernity showed itself in the temperance of his reply.

"Don't you think, my dear, that on the whole your mother and I, who have lived longer and know more, are more likely to know when it is best that you should begin to know--this or that?"

The girl knitted her brows and seemed to be reading her answer out of the depths of the coals. She was on the verge of speaking, altered her mind and tried a different beginning.

"I think that every one must do their thinking--his thinking --for--oneself," she said awkwardly.

"You mean you can't trust--?"

"It isn't trusting. But one knows best for oneself when one is hungry."

"And you find yourself hungry?"

"I want to find out for myself what all this trouble about votes and things means."

"And we starve you--intellectually?"

"You know I don't think that. But you are busy...."

"Aren't you being perhaps a little impatient, Eleanor? After all--you are barely eighteen.... We have given you all sorts of liberties."

Her silence admitted it. "But still," she said after a long pause, "there are other girls, younger than I am, in these things. They talk about--oh, all sorts of things. Freely...."

"You've been awfully good to me," she said irrelevantly. "And of course this meeting was all pure accident."

Father and daughter remained silent for awhile, seeking a better grip.

"What exactly do you want, Eleanor?" he asked.

She looked up at him. "Generally?" she asked.

"Your mother has the impression that you are discontented."

"Discontented is a horrid word."

"Well--unsatisfied."

She remained still for a time. She felt the moment had come to make her demand.

"I would like to go to Newnham or Somerville--and work. I feel--so horribly ignorant. Of all sorts of things. If I were a son I should go--"

"Ye--es," said the bishop and reflected.

He had gone rather far in the direction of the Woman Suffrage people; he had advocated equality of standard in all sorts of matters, and the memory of these utterances hampered him.

"You could read here," he tried.

"If I were a son, you wouldn't say that."

His reply was vague. "But in this home," he said, "we have a certain atmosphere. .

He left her to imply her differences in sensibility and response from the hardier male.

Her hesitation marked the full gravity of her reply. "It's just that," she said. "One feels--" She considered it further. "As if we were living in a kind of magic world--not really real. Out there--" she glanced over her shoulder at the drawn blind that hid the night. "One meets with different sorts of minds and different--atmospheres. All this is very beautiful. I've had the most wonderful home. But there's a sort of feeling as though it couldn't really go on, as though all these strikes and doubts and questionings--"

She stopped short at questionings, for the thing was said.

The bishop took her meaning gallantly and honestly.

"The church of Christ, little Norah, is built upon a rock."

She made no answer. She moved her head very slightly so that he could not see her face, and remained sitting rather stiffly and awkwardly with her eyes upon the fire.

Her silence was the third and greatest blow the bishop received that day....

It seemed very long indeed before either of them spoke. At last he said: "We must talk about these things again, Norah, when we are less tired and have more time.... You have been reading books.... When Caxton set up his printing-press he thrust a new power between church and disciple and father and child.... And I am tired. We must talk it over a little later."

The girl stood up. She took her father's hands. "Dear, dear Daddy," she said, "I am so sorry to be a bother. I am so sorry I went to that meeting.... You look tired out."

"We must talk--properly," said the bishop, patting one hand, then discovering from her wincing face that it was the sprained one. "Your poor wrist," he said.

"It's so hard to talk, but I want to talk to you, Daddy. It isn't that I have hidden things...."

She kissed him, and the bishop had the odd fancy that she kissed him as though she was sorry for him....

It occurred to him that really there could be no time like the present for discussing these "questionings" of hers, and then his fatigue and shyness had the better of him again.

(11)

The papers got hold of Eleanor's share in the suffragette disturbance. The White Blackbird said things about her.

It did not attack her. It did worse. It admired her
...impudently.

It spoke of her once as "Norah," and once as "the Scrope
Flapper."

Its headline proclaimed: "Plucky Flappers Hold Up L. G."

CHAPTER THE THIRD - INSOMNIA

(1)

THE night after his conversation with Eleanor was the first night of the bishop's insomnia. It was the definite beginning of a new phase in his life.

Doctors explain to us that the immediate cause of insomnia is always some poisoned or depleted state of the body, and no doubt the fatigues and hasty meals of the day had left the bishop in a state of unprecedented chemical disorder, with his nerves irritated by strange compounds and unsoothed by familiar lubricants. But chemical disorders follow mental disturbances, and the core and essence of his trouble was an intellectual distress. For the first time in his life he was really in doubt, about himself, about his way of living, about all his persuasions. It was a general doubt. It was not a specific suspicion upon this point or that. It was a feeling of detachment and unreality at once extraordinarily vague and extraordinarily oppressive. It was as if he discovered himself flimsy and transparent in a world of minatory solidity and opacity. It was as if he found himself made not of flesh and blood but of tissue paper.

But this intellectual insecurity extended into his physical sensations. It affected his feeling in his skin, as if it were not absolutely his own skin.

And as he lay there, a weak phantom mentally and bodily, an endless succession and recurrence of anxieties for which he could find no reassurance besieged him.

Chief of this was his distress for Eleanor.

She was the central figure in this new sense of illusion in familiar and trusted things. It was not only that the world of his existence which had seemed to be the whole universe had become diaphanous and betrayed vast and uncontrollable realities beyond it, but his daughter had as it were suddenly opened a door in this glassy sphere of insecurity that had been his abiding refuge, a door upon the stormy rebel outer world, and she stood there, young, ignorant, confident, adventurous, ready to step out.

"Could it be possible that she did not believe?"

He saw her very vividly as he had seen her in the dining-room, slender and upright, half child, half woman, so fragile and so fearless. And the door she opened thus carelessly gave upon a stormy background like one of the stormy backgrounds that were popular behind portrait Dianas in eighteenth century paintings. Did she believe that all he had taught her, all the life he led was--what was her phrase?--a kind of magic world, not really real?

He groaned and turned over and repeated the words:
"A kind of magic world--not really real!"

The wind blew through the door she opened, and scattered everything in the room. And still she held the door open.

He was astonished at himself. He started up in swift indignation. Had he not taught the child? Had he not brought her up in an atmosphere of faith? What right had she to turn upon him in this matter? It was--indeed it was--a sort of insolence, a lack of reverence....

It was strange he had not perceived this at the time.

But indeed at the first mention of "questionings" he ought to have thundered. He saw that quite clearly now. He ought to have cried out and said, "On your knees, my Norah, and ask pardon of God!"

Because after all faith is an emotional thing....

He began to think very rapidly and copiously of things he ought to have said to Eleanor. And now the eloquence of reverie was upon him. In a little time he was also addressing the tea-party at Morrice Deans'. Upon them too he ought to have thundered. And he knew now also all that he should have said to the recalcitrant employer. Thunder also. Thunder is surely the privilege of the higher clergy--under Jove.

But why hadn't he thundered?

He gesticulated in the darkness, thrust out a clutching hand.

There are situations that must be gripped--gripped firmly. And without delay. In the middle ages there had been grip enough in a purple glove.

(2)

From these belated seizures of the day's lost opportunities the bishop passed to such a pessimistic estimate of the church as had never entered his mind before.

It was as if he had fallen suddenly out of a spiritual balloon into a world of bleak realism. He found himself asking unprecedented and devastating questions, questions that implied the most fundamental shiftings of opinion. Why was the church

such a failure? Why had it no grip upon either masters or men amidst this vigorous life of modern industrialism, and why had it no grip upon the questioning young? It was a tolerated thing, he felt, just as sometimes he had felt that the Crown was a tolerated thing. He too was a tolerated thing; a curious survival....

This was not as things should be. He struggled to recover a proper attitude. But he remained enormously dissatisfied....

The church was no Levite to pass by on the other side away from the struggles and wrongs of the social conflict. It had no right when the children asked for the bread of life to offer them Gothic stone....

He began to make interminable weak plans for fulfilling his duty to his diocese and his daughter.

What could he do to revivify his clergy? He wished he had more personal magnetism, he wished he had a darker and a larger presence. He wished he had not been saddled with Whippham's rather futile son as his chaplain. He wished he had a dean instead of being his own dean. With an unsympathetic rector. He wished he had it in him to make some resounding appeal. He might of course preach a series of thumping addresses and sermons, rather on the lines of "Fors Clavigera," to masters and men, in the Cathedral. Only it was so difficult to get either masters or men into the Cathedral.

Well, if the people will not come to the bishop the bishop must go out to the people. Should he go outside the Cathedral--to the place where the trains met?

Interweaving with such thoughts the problem of Eleanor rose again into his consciousness.

Weren't there books she ought to read? Weren't there books she ought to be made to read? And books--and friends--that ought to be imperatively forbidden? Imperatively!

But how to define the forbidden?

He began to compose an address on Modern Literature (so-called).

It became acrimonious.

Before dawn the birds began to sing.

His mind had seemed to be a little tranquillized, there had been a distinct feeling of subsidence sleepwards, when first one and then another little creature roused itself and the bishop to greet the gathering daylight.

It became a little clamour, a misty sea of sound in which individuality appeared and disappeared. For a time a distant cuckoo was very perceptible, like a landmark looming up over a fog, like the cuckoo in the Pastoral Symphony.

The bishop tried not to heed these sounds, but they were by their very nature insistent sounds. He lay disregarding them acutely.

Presently he pulled the coverlet over his ears.

A little later he sat up in bed.

Again in a slight detail he marked his strange and novel detachment from the world of his upbringing. His hallucination of disillusionment had spread from himself and his church and his

faith to the whole animate creation. He knew that these were the voices of "our feathered songsters," that this was "a joyous chorus" greeting the day. He knew that a wakeful bishop ought to bless these happy creatures, and join with them by reciting Ken's morning hymn. He made an effort that was more than half habit, to repeat and he repeated with a scowling face and the voice of a schoolmaster:

"Awake my soul, and with the sun

Thy daily stage of duty run...."

He got no further. He stopped short, sat still, thinking what utterly detestable things singing birds were. A blackbird had gripped his attention. Never had he heard such vain repetitions. He struggled against the dark mood of criticism. "He prayeth best who loveth best--"

No, he did not love the birds. It was useless to pretend. Whatever one may say about other birds a cuckoo is a low detestable cad of a bird.

Then the bishop began to be particularly tormented by a bird that made a short, insistent, wheezing sound at regular intervals of perhaps twenty seconds. If a bird could have whooping-cough, that, he thought, was the sort of whoop it would have. But even if it had whooping-cough he could not pity it. He hung in its intervals waiting for the return of the wheeze.

And then that blackbird reasserted itself. It had a rich boastful note; it seemed proud of its noisy reiteration of simple self-assertion. For some obscure reason the phrase "oleographic sounds" drifted into the bishop's thoughts. This bird produced

the peculiar and irrational impression that it had recently made a considerable sum of money by shrewd industrialism. It was, he thought grimly, a genuine Princhester blackbird.

This wickedly uncharitable reference to his diocese ran all unchallenged through the bishop's mind. And others no less wicked followed it.

Once during his summer holidays in Florence he and Lady Ella had subscribed to an association for the protection of song-birds. He recalled this now with a mild wonder. It seemed to him that perhaps after all it was as well to let fruit-growers and Italians deal with singing-birds in their own way. Perhaps after all they had a wisdom....

He passed his hands over his face. The world after all is not made entirely for singing-birds; there is such a thing as proportion. Singing-birds may become a luxury, an indulgence, an excess.

Did the birds eat the fruit in Paradise?

Perhaps there they worked for some collective musical effect, had some sort of conductor in the place of this--hullabaloo....

He decided to walk about the room for a time and then remake his bed....

The sunrise found the bishop with his head and shoulders out of the window trying to see that blackbird. He just wanted to look at it. He was persuaded it was a quite exceptional blackbird.

Again came that oppressive sense of the futility of the contemporary church, but this time it came in the most grotesque form. For hanging half out of the casement he was suddenly

reminded of St. Francis of Assisi, and how at his rebuke the wheeling swallow stilled their cries.

But it was all so different then.

(3)

It was only after he had passed four similar nights, with intervening days of lassitude and afternoon siestas, that the bishop realized that he was in the grip of insomnia.

He did not go at once to a doctor, but he told his trouble to every one he met and received much tentative advice. He had meant to have his talk with Eleanor on the morning next after their conversation in the dining-room, but his bodily and spiritual anaemia prevented him.

The fifth night was the beginning of the Whitsuntide Ember week, and he wore a red cassock and had a distracting and rather interesting day welcoming his ordination candidates. They had a good effect upon him; we spiritualize ourselves when we seek to spiritualize others, and he went to bed in a happier frame of mind than he had done since the day of the shock. He woke in the night, but he woke much more himself than he had been since the trouble began. He repeated that verse of Ken's:

"When in the night I sleepless lie,
My soul with heavenly thoughts supply;
Let no ill dreams disturb my rest,
No powers of darkness me molest."

Almost immediately after these there floated into his mind, as if it were a message, the dear familiar words:

"He giveth his Beloved sleep."

These words irradiated and soothed him quite miraculously, the clouds of doubt seemed to dissolve and vanish and leave him safe and calm under a clear sky; he knew those words were a promise, and very speedily he fell asleep and slept until he was called.

But the next day was a troubled one. Whippham had muddled his timetable and crowded his afternoon; the strike of the transport workers had begun, and the ugly noises they made at the tramway depot, where they were booing some one, penetrated into the palace. He had to snatch a meal between services, and the sense of hurry invaded his afternoon lectures to the candidates. He hated hurry in Ember week. His ideal was one of quiet serenity, of grave things said slowly, of still, kneeling figures, of a sort of dark cool spiritual germination. But what sort of dark cool spiritual germination is possible with an ass like Whippham about?

In the fresh courage of the morning the bishop had arranged for that talk with Eleanor he had already deferred too long, and this had proved less satisfactory than he had intended it to be.

The bishop's experience with the ordination candidates was following the usual course. Before they came there was something bordering upon distaste for the coming invasion; then always there was an effect of surprise at the youth and faith of the neophytes and a real response of the spirit to the occasion. Throughout the first twenty-four hours they were all simply neophytes, without individuality to break up their uniformity of self-devotion. Then afterwards they began to develop little personal traits, and scarcely ever were these pleasing traits. Always one or two of them would begin haunting the bishop, giving

way to an appetite for special words, special recognitions. He knew the expression of that craving on their faces. He knew the way-laying movements in room and passage that presently began.

This time in particular there was a freckled underbred young man who handed in what was evidently a carefully prepared memorandum upon what he called "my positions." Apparently he had a muddle of doubts about the early fathers and the dates of the earlier authentic copies of the gospels, things of no conceivable significance.

The bishop glanced through this bale of papers--it had of course no index and no synopsis, and some of the pages were not numbered--handed it over to Whippham, and when he proved, as usual, a broken reed, the bishop had the brilliant idea of referring the young man to Canon Bliss (of Pringle), "who has a special knowledge quite beyond my own in this field."

But he knew from the young man's eye even as he said this that it was not going to put him off for more than a day or so.

The immediate result of glancing over these papers was, however, to enhance in the bishop's mind a growing disposition to minimize the importance of all dated and explicit evidences and arguments for orthodox beliefs, and to resort to vague symbolic and liberal interpretations, and it was in this state that he came to his talk with Eleanor.

He did not give her much time to develop her objections. He met her half way and stated them for her, and overwhelmed her with sympathy and understanding. She had been "too literal." "Too literal" was his keynote. He was a little astonished at the liberality of his own views. He had been getting along now for some years without looking into his own opinions too closely and he was by no means prepared to discover how far he had come to

meet his daughter's scepticisms. But he did meet them. He met them so thoroughly that he almost conveyed that hers was a needlessly conservative and oldfashioned attitude.

Occasionally he felt he was being a little evasive, but she did not seem to notice it. As she took his drift, her relief and happiness were manifest. And he had never noticed before how clear and pretty her eyes were; they were the most honest eyes he had ever seen. She looked at him very steadily as he explained, and lit up at his points. She brightened wonderfully as she realized that after all they were not apart, they had not differed; simply they had misunderstood....

And before he knew where he was, and in a mere parenthetical declaration of liberality, he surprised himself by conceding her demand for Newnham even before she had repeated it. It helped his case wonderfully.

"Call in every exterior witness you can. The church will welcome them.... No, I want you to go, my dear...."

But his mind was stirred again to its depths by this discussion. And in particular he was surprised and a little puzzled by this Newnham concession and the necessity of making his new attitude clear to Lady Ella....

It was with a sense of fatality that he found himself awake again that night, like some one lying drowned and still and yet perfectly conscious at the bottom of deep cold water.

He repeated, "He giveth his Beloved sleep," but all the conviction had gone out of the words.

(4)

Neither the bishop's insomnia nor his incertitudes about himself and his faith developed in a simple and orderly manner. There were periods of sustained suffering and periods of recovery; it was not for a year or so that he regarded these troubles as more than acute incidental interruptions of his general tranquillity or realized that he was passing into a new phase of life and into a new quality of thought. He told every one of the insomnia and no one of his doubts; these he betrayed only by an increasing tendency towards vagueness, symbolism, poetry and toleration. Eleanor seemed satisfied with his exposition; she did not press for further enlightenment. She continued all her outward conformities except that after a time she ceased to communicate; and in September she went away to Newnham. Her doubts had not visibly affected Clementina or her other sisters, and the bishop made no further attempts to explore the spiritual life of his family below the surface of its formal acquiescence.

As a matter of fact his own spiritual wrestlings were almost exclusively nocturnal. During his spells of insomnia he led a curiously double existence. In the daytime he was largely the self he had always been, able, assured, ecclesiastical, except that he was a little jaded and irritable or sleepy instead of being quick and bright; he believed in God and the church and the Royal Family and himself securely; in the wakeful night time he experienced a different and novel self, a bare-minded self, bleakly fearless at its best, shamelessly weak at its worst, critical, sceptical, joyless, anxious. The anxiety was quite the worst element of all. Something sat by his pillow asking grey questions: "What are you doing? Where are you going? Is it really well with the children? Is it really well with the church? Is it really well with the country? Are you indeed doing anything at all? Are you anything more than an actor wearing a costume in an archaic play? The people turn their backs on you."

He would twist over on his pillow. He would whisper hymns and prayers that had the quality of charms.

"He giveth his Beloved sleep"; that answered many times, and many times it failed.

The labour troubles of 1912 eased off as the year wore on, and the bitterness of the local press over the palace abated very considerably. Indeed there was something like a watery gleam of popularity when he brought down his consistent friend, the dear old Princess Christiana of Hoch and Unter, black bonnet, deafness, and all, to open a new wing of the children's hospital. The Princhester conservative paper took the occasion to inform the diocese that he was a fluent German scholar and consequently a persona grata with the royal aunts, and that the Princess Christiana was merely just one of a number of royalties now practically at the beck and call of Princhester. It was not true, but it was very effective locally, and seemed to justify a little the hauteur of which Lady Ella was so unjustly suspected. Yet it involved a possibility of disappointments in the future.

He went to Brighton-Pomfrey too upon the score of his general health, and Brighton-Pomfrey revised his general regimen, discouraged indiscreet fasting, and suggested a complete abstinence from red wine except white port, if indeed that can be called a red wine, and a moderate use of Egyptian cigarettes.

But 1913 was a strenuous year. The labour troubles revived, the suffragette movement increased greatly in violence and aggressiveness, and there sprang up no less than three ecclesiastical scandals in the diocese. First, the Kensitites set themselves firmly to make presentations and prosecutions against Morrice Deans, who was reserving the sacrament, wearing, they said, "Babylonish garments," going beyond all reason in the

matter of infant confession, and generally brightening up Mogham Banks; next, a popular preacher in Wombash, published a book under the exasperating title, "The Light Under the Altar," in which he showed himself as something between an Arian and a Pantheist, and treated the dogma of the Trinity with as little respect as one would show to an intrusive cat; while thirdly, an obscure but overworked missionary of a tin mission church in the new working-class district at Pringle, being discovered in some sort of polygamous relationship, had seen fit to publish in pamphlet form a scandalous admission and defence, a pamphlet entitled "Marriage True and False," taking the public needlessly into his completest confidence and quoting the affairs of Abraham and Hosea, reviving many points that are better forgotten about Luther, and appealing also to such uncanonical authorities as Milton, Plato, and John Humphrey Noyes. This abnormal concurrence of indiscipline was extremely unlucky for the bishop. It plunged him into strenuous controversy upon three fronts, so to speak, and involved a great number of personal encounters far too vivid for his mental serenity.

The Pringle polygamist was the most moving as Morrice Deans was the most exacting and troublesome and the Wombash Pantheist the most insidiously destructive figure in these three toilsome disputes. The Pringle man's soul had apparently missed the normal distribution of fig-leaves; he was an illiterate, open-eyed, hard-voiced, freckled, rational-minded creature, with large expository hands, who had come by a side way into the church because he was an indefatigable worker, and he insisted upon telling the bishop with an irrepressible candour and completeness just exactly what was the matter with his intimate life. The bishop very earnestly did not want these details, and did his utmost to avoid the controversial questions that the honest man pressed respectfully but obstinately upon him.

"Even St. Paul, my lord, admitted that it is better to marry

than burn," said the Pringle misdemeanant, "and here was I, my lord, married and still burning!" and, "I think you would find, my lord, considering all Charlotte's peculiarities, that the situation was really much more trying than the absolute celibacy St. Paul had in view." ...

The bishop listened to these arguments as little as possible, and did not answer them at all. But afterwards the offender came and wept and said he was ruined and heartbroken and unfairly treated because he wasn't a gentleman, and that was distressing. It was so exactly true--and so inevitable. He had been deprived, rather on account of his voice and apologetics than of his offence, and public opinion was solidly with the sentence. He made a gallant effort to found what he called a Labour Church in Pringle, and after some financial misunderstandings departed with his unambiguous menage to join the advanced movement on the Clyde.

The Morrice Deans enquiry however demanded an amount of erudition that greatly fatigued the bishop. He had a very fair general knowledge of vestments, but he had never really cared for anything but the poetry of ornaments, and he had to work strenuously to master the legal side of the question. Whippham, his chaplain, was worse than useless as a helper. The bishop wanted to end the matter as quickly, quietly, and favourably to Morrice Deans as possible; he thought Morrice Deans a thoroughly good man in his parish, and he believed that the substitution of a low churchman would mean a very complete collapse of church influence in Mogham Banks, where people were now thoroughly accustomed to a highly ornate service. But Morrice Deans was intractable and his pursuers indefatigable, and on several occasions the bishop sat far into the night devising compromises and equivocations that should make the Kensitites think that Morrice Deans wasn't wearing vestments when he was, and that should make Morrice Deans think he was wearing vestments when he

wasn't. And it was Whippham who first suggested green tea as a substitute for coffee, which gave the bishop indigestion, as his stimulant for these nocturnal bouts.

Now green tea is the most lucid of poisons.

And while all this extra activity about Morrice Deans, these vigils and crammings and writings down, were using all and more energy than the bishop could well spare, he was also doing his quiet utmost to keep "The Light under the Altar" ease from coming to a head.

This man he hated.

And he dreaded him as well as hated him. Chasters, the author of "The Light under the Altar," was a man who not only reasoned closely but indelicately. There was a demonstrating, jeering, air about his preaching and writing, and everything he said and did was saturated by the spirit of challenge. He did not so much imitate as exaggerate the style of Matthew Arnold. And whatever was done publicly against him would have to be done very publicly because his book had got him a London reputation.

From the bishop's point of view Chasters was one of nature's ignoblemen. He seemed to have subscribed to the Thirty-Nine Articles and passed all the tests and taken all the pledges that stand on the way to ordination, chiefly for the pleasure of attacking them more successfully from the rear; he had been given the living of Wombash by a cousin, and filled it very largely because it was not only more piquant but more remunerative and respectable to be a rationalist lecturer in a surplice. And in a hard kind of ultra-Protestant way his social and parochial work was not badly done. But his sermons were terrible. "He takes a text," said one informant, "and he goes on firstly, secondly, thirdly, fourthly, like somebody tearing the petals from a

flower. 'Finally,' he says, and throws the bare stalk into the dustbin."

The bishop avoided "The Light under the Altar" for nearly a year. It was only when a second book was announced with the winning title of "The Core of Truth in Christianity" that he perceived he must take action. He sat up late one night with a marked copy, a very indignantly marked copy, of the former work that an elderly colonel, a Wombash parishioner, an orthodox Layman of the most virulent type, had sent him. He perceived that he had to deal with a dialectician of exceptional ability, who had concentrated a quite considerable weight of scholarship upon the task of explaining away every scrap of spiritual significance in the Eucharist. From Chasters the bishop was driven by reference to the works of Legge and Frazer, and for the first time he began to measure the dimensions and power of the modern criticism of church doctrine and observance. Green tea should have lit his way to refutation; instead it lit up the whole inquiry with a light of melancholy confirmation. Neither by night nor by day could the bishop find a proper method of opening a counter attack upon Chasters, who was indisputably an intellectually abler man and a very ruthless beast indeed to assail, and meanwhile the demand that action should be taken increased.

The literature of church history and the controversies arising out of doctrinal development became the employment of the bishop's leisure and a commanding preoccupation. He would have liked to discuss with some one else the network of perplexities in which he was entangling himself, and more particularly with Canon Bliss, but his own positions were becoming so insecure that he feared to betray them by argument. He had grown up with a kind of intellectual modesty. Some things he had never yet talked about; it made his mind blench to think of talking about them. And his great aching gaps of wakefulness began now, thanks to the

green tea, to be interspersed with theological dreams and visions of an extravagant vividness. He would see Frazer's sacrificial kings butchered picturesquely and terribly amidst strange and grotesque rituals; he would survey long and elaborate processions and ceremonials in which the most remarkable symbols were borne high in the sight of all men; he would cower before a gigantic and threatening Heaven. These green-tea dreams and visions were not so much phases of sleep as an intensification and vivid furnishing forth of insomnia. It added greatly to his disturbance that--exceeding the instructions of Brighton-Pomfrey--he had now experimented ignorantly and planlessly with one or two narcotics and sleeping mixtures that friends and acquaintances had mentioned in his hearing. For the first time in his life he became secretive from his wife. He knew he ought not to take these things, he knew they were physically and morally evil, but a tormenting craving drove him to them. Subtly and insensibly his character was being undermined by the growing nervous trouble.

He astonished himself by the cunning and the hypocritical dignity he could display in procuring these drugs. He arranged to have a tea-making set in his bedroom, and secretly substituted green tea, for which he developed a powerful craving, in the place of the delicate China tea Lady Ella procured him.

(5)

These doctrinal and physical anxieties and distresses were at their worst in the spring and early summer of 1914. That was a time of great mental and moral disturbance. There was premonition in the air of those days. It was like the uneasiness sensitive people experience before a thunderstorm. The moral atmosphere was sullen and close. The whole world seemed irritable and mischievous. The suffragettes became extraordinarily malignant; the democratic movement went rotten with sabotage and with a cant

of being "rebels"; the reactionary Tories and a crew of noisy old peeresses set themselves to create incurable confusion again in the healing wounds of Ireland, and feuds and frantic folly broke out at every point of the social and political edifice. And then a bomb burst at Sarajevo that silenced all this tumult. The unstable polity of Europe heeled over like a ship that founders.

Through the swiftest, tensest week in history Europe capsized into war.

(6)

The first effect of the war upon the mind of the bishop, as upon most imaginative minds, was to steady and exalt it. Trivialities and exasperations seemed swept out of existence. Men lifted up their eyes from disputes that had seemed incurable and wrangling that promised to be interminable, and discovered a plain and tragic issue that involved every one in a common call for devotion. For a great number of men and women who had been born and bred in security, the August and September of 1914 were the supremely heroic period of their lives. Myriads of souls were born again to ideas of service and sacrifice in those tremendous days.

Black and evil thing as the war was, it was at any rate a great thing; it did this much for countless minds that for the first time they realized the epic quality of history and their own relationship to the destinies of the race. The flimsy roof under which we had been living our lives of comedy fell and shattered the floor under our feet; we saw the stars above and the abyss below. We perceived that life was insecure and adventurous, part of one vast adventure in space and time....

Presently the smoke and dust of battle hid the great distances

again, but they could not altogether destroy the memories of this revelation.

For the first two months the bishop's attention was so detached from his immediate surroundings and employments, so absorbed by great events, that his history if it were told in detail would differ scarcely at all from the histories of most comparatively unemployed minds during those first dramatic days, the days when the Germans made their great rush upon Paris and it seemed that France was down, France and the whole fabric of liberal civilization. He emerged from these stunning apprehensions after the Battle of the Marne, to find himself busy upon a score of dispersed and disconnected war jobs, and trying to get all the new appearances and forces and urgencies of the war into relations with himself. One thing became very vivid indeed, that he wasn't being used in any real and effective way in the war. There was a mighty going to and fro upon Red Cross work and various war committees, a vast preparation for wounded men and for the succour of dislocated families; a preparation, that proved to be needless, for catastrophic unemployment. The war problem and the puzzle of German psychology ousted for a time all other intellectual interests; like every one else the bishop swam deep in Nietzsche, Bernhardt, Houston Stewart Chamberlain, and the like; he preached several sermons upon German materialism and the astonishing decay of the German character. He also read every newspaper he could lay his hands on--like any secular man. He signed an address to the Russian Orthodox church, beginning "Brethren," and he revised his impressions of the Filioque controversy. The idea of a reunion of the two great state churches of Russia and England had always attracted him. But hitherto it had been a thing quite out of scale, visionary, utopian. Now in this strange time of altered perspectives it seemed the most practicable of suggestions. The mayor and corporation and a detachment of the special reserve in uniform came to a great intercession service, and in the palace there

were two conferences of local influential people, people of the most various types, people who had never met tolerantly before, expressing now opinions of unprecedented breadth and liberality.

All this sort of thing was fresh and exciting at first, and then it began to fall into a routine and became habitual, and as it became habitual he found that old sense of detachment and futility was creeping back again. One day he realized that indeed the whole flood and tumult of the war would be going on almost exactly as it was going on now if there had been neither cathedral nor bishop in Princhester. It came to him that if archbishops were rolled into patriarchs and patriarchs into archbishops, it would matter scarcely more in the world process that was afoot than if two men shook hands while their house was afire. At times all of us have inappropriate thoughts. The unfortunate thought that struck the bishop as a bullet might strike a man in an exposed trench, as he was hurrying through the cloisters to a special service and address upon that doubly glorious day in our English history, the day of St. Crispin, was of Diogenes rolling his tub.

It was a poisonous thought.

It arose perhaps out of an article in a weekly paper at which he had glanced after lunch, an article written by one of those sceptical spirits who find all too abundant expression in our periodical literature. The writer boldly charged the "Christian churches" with absolute ineffectiveness. This war, he declared, was above all other wars a war of ideas, of material organization against rational freedom, of violence against law; it was a war more copiously discussed than any war had ever been before, the air was thick with apologetics. And what was the voice of the church amidst these elemental issues? Bishops and divines who were patriots one heard discordantly enough, but where were the bishops and divines who spoke for the Prince of Peace? Where was

the blessing of the church, where was the veto of the church?
When it came to that one discovered only a broad preoccupied back
busied in supplementing the Army Medical Corps with Red Cross
activities, good work in its way--except that the canonicals
seemed superfluous. Who indeed looked to the church for any voice
at all? And so to Diogenes.

The bishop's mind went hunting for an answer to that
indictment. And came back and came back to the image of Diogenes.

It was with that image dangling like a barbed arrow from his
mind that the bishop went into the pulpit to preach upon St.
Crispin's day, and looked down upon a thin and scattered
congregation in which the elderly, the childless, and the
unoccupied predominated.

That night insomnia resumed its sway.

Of course the church ought to be controlling this great storm,
the greatest storm of war that had ever stirred mankind. It ought
to be standing fearlessly between the combatants like a figure in
a wall painting, with the cross of Christ uplifted and the
restored memory of Christendom softening the eyes of the armed
nations. "Put down those weapons and listen to me," so the church
should speak in irresistible tones, in a voice of silver
trumpets.

Instead it kept a long way from the fighting, tucked up its
vestments, and was rolling its local tubs quite briskly.

(7)

And then came the aggravation of all these distresses by an
abrupt abandonment of smoking and alcohol. Alcoholic relaxation,

a necessary mitigation of the unreality of peacetime politics, becomes a grave danger in war, and it was with an understandable desire to forward the interests of his realm that the King decided to set his statesmen an example--which unhappily was not very widely followed--by abstaining from alcohol during the continuance of the struggle. It did however swing over the Bishop of Princhester to an immediate and complete abandonment of both drink and tobacco. At that time he was finding comfort for his nerves in Manila cheroots, and a particularly big and heavy type of Egyptian cigarette with a considerable amount of opium, and his disorganized system seized upon this sudden change as a grievance, and set all his jangling being crying aloud for one cigarette--just one cigarette.

The cheroots, it seemed, he could better spare, but a cigarette became his symbol for his lost steadiness and ease.

It brought him low.

The reader has already been told the lamentable incident of the stolen cigarette and the small boy, and how the bishop, tormented by that shameful memory, cried aloud in the night.

The bishop rolled his tub, and is there any tub-rolling in the world more busy and exacting than a bishop's? He rolled in it spite of ill-health and insomnia, and all the while he was tormented by the enormous background of the world war, by his ineffective realization of vast national needs, by his passionate desire, for himself and his church, not to be ineffective.

The distressful alternation between nights of lucid doubt and days of dull acquiescence was resumed with an intensification of its contrasts. The brief phase of hope that followed the turn of the fighting upon the Maine, the hope that after all the war would end swiftly, dramatically, and justly, and everything be as

it had been before--but pleasanter, gave place to a phase that bordered upon despair. The fall of Antwerp and the doubts and uncertainties of the Flanders situation weighed terribly upon the bishop. He was haunted for a time by nightmares of Zeppelins presently raining fire upon London. These visions became Apocalyptic. The Zeppelins came to England with the new year, and with the close of the year came the struggle for Ypres that was so near to being a collapse of the allied defensive. The events of the early spring, the bloody failure of British generalship at Neuve Chapelle, the naval disaster in the Dardanelles, the sinking of the Falaba, the Russian defeat in the Masurian Lakes, all deepened the bishop's impression of the immensity of the nation's difficulties and of his own unhelpfulness. He was ashamed that the church should hold back its curates from enlistment while the French priests were wearing their uniforms in the trenches; the expedition of the Bishop of London to hold open-air services at the front seemed merely to accentuate the tub-rolling. It was rolling the tub just where it was most in the way.

What was wrong? What was wanting?

The Westminster Gazette, The Spectator, and several other of the most trusted organs of public opinion were intermittently discussing the same question. Their discussions implied at once the extreme need that was felt for religion by all sorts of representative people, and the universal conviction that the church was in some way muddling and masking her revelation. "What is wrong with the Churches?" was, for example, the general heading of The Westminster Gazette's correspondence.

One day the bishop skimmed a brief incisive utterance by Sir Harry Johnston that pierced to the marrow of his own shrinking convictions. Sir Harry is one of those people who seem to write as well as speak in a quick tenor. "Instead of propounding

plainly and without the accreted mythology of Asia Minor, Greece and Rome, the pure Gospel of Christ.... they present it overloaded with unbelievable myths (such as, among a thousand others, that Massacre of the Innocents which never took place).... bore their listeners by a Tibetan repetition of creeds that have ceased to be credible.... Mutually contradictory propositions.... Prayers and litanies composed in Byzantine and mediaeval times.... the want of actuality, the curious silliness which has, ever since the destruction of Jerusalem, hung about the exposition of Christianity.... But if the Bishops continue to fuss about the trappings of religion.... the maintenance of codes compiled by people who lived sixteen hundred or two thousand five hundred years ago.... the increasingly educated and practical-minded working classes will not come to church, weekday or Sunday."

The bishop held the paper in his hand, and with a mind that he felt to be terribly open, asked himself how true that sharp indictment might be, and, granting its general truth, what was the duty of the church, that is to say of the bishops, for as Cyprian says, *ecclesia est in episcopo*. We say the creeds; how far may we unsay them?

So far he had taken no open action against Chasters. Suppose now he were to side with Chasters and let the whole diocese, the church of Princhester, drift as far as it chose under his inaction towards an extreme modernism, risking a conflict with, and if necessary fighting, the archbishop.... It was but for a moment that his mind swung to this possibility and then recoiled. The Laymen, that band of bigots, would fight. He could not contemplate litigation and wrangling about the teaching of the church. Besides, what were the "trappings of religion" and what the essentials? What after all was "the pure gospel of Christ" of which this writer wrote so glibly? He put the paper down and took a New Testament from his desk and opened it haphazard. He felt a

curious wish that he could read it for the first time. It was over-familiar. Everything latterly in his theology and beliefs had become over-familiar. It had all become mechanical and dead and unmeaning to his tired mind....

Whippam came with a reminder of more tub-rolling, and the bishop's speculations were broken off.

CHAPTER THE FOURTH - THE SYMPATHY OF LADY SUNDERBUND

(1)

THAT night when he cried aloud at the memory of his furtive cigarette, the bishop was staying with a rich man named Garstein Fellows. These Garstein Fellows people were steel people with a financial side to them; young Garstein Fellows had his fingers in various chemical businesses, and the real life of the firm was in various minor partners called Hartstein and Blumenhart and so forth, who had acquired a considerable amount of ungentlemanly science and energy in Germany and German Switzerland. But the Fellows element was good old Princhester stuff. There had been a Fellows firm in Princhester in 1819. They were not people the bishop liked and it was not a house the bishop liked staying at, but it had become part of his policy to visit and keep in touch with as many of the local plutocracy as he could, to give and take with them, in order to make the presence of the church a reality to them. It had been not least among the negligences and evasions of the sainted but indolent Hood that he had invariably refused overnight hospitality whenever it was possible for him to get back to his home. The morning was his working time. His books and hymns had profited at the cost of missing many a generous after-dinner subscription, and at the expense of social unity. From the outset Scrope had set himself to alter this. A certain lack of enthusiasm on Lady Ella's part had merely provoked him to greater effort on his own. His ideal of what was needed with the people was something rather jolly and familiar, something like a very good and successful French or Irish priest, something that came easily and readily into their homes and laid a friendly hand on their shoulders. The less he liked these rich people naturally the more familiar his resolution to be successfully intimate made him. He put down the names and brief characteristics of their

sons and daughters in a little note-book and consulted it before every visit so as to get his most casual enquiries right. And he invited himself to the Garstein Fellows house on this occasion by telegram.

"A special mission and some business in Wombash may I have a scrap of supper and a bed?"

Now Mrs. Garstein Fellows was a thoroughly London woman; she was one of the banking Grunenbaums, the fair tall sort, and she had a very decided tendency to smartness. She had a little party in the house, a sort of long week-end party, that made her hesitate for a minute or so before she framed a reply to the bishop's request.

It was the intention of Mrs. Garstein Fellows to succeed very conspicuously in the British world, and the British world she felt was a complicated one; it is really not one world but several, and if you would surely succeed you must keep your peace with all the systems and be a source of satisfaction to all of them. So at least Mrs. Garstein Fellows saw it, and her method was to classify her acquaintances according to their systems, to keep them in their proper bundles, and to give every one the treatment he or she was accustomed to receive. And since all things British are now changing and passing away, it may not be uninteresting to record the classification Mrs. Garstein Fellows adopted. First she set apart as most precious and desirable, and requiring the most careful treatment, the "court dowdies"--for so it was that the dignity and quiet good taste that radiated from Buckingham Palace impressed her restless, shallow mind--the sort of people who prefer pair horse carriages to automobiles, have quiet friendships in the highest quarters,

quietly do not know any one else, busy themselves with charities, dress richly rather than impressively, and have either little water-colour accomplishments or none at all, and no other relations with "art." At the skirts of this crowning British world Mrs. Garstein Fellows tugged industriously and expensively. She did not keep a carriage and pair and an old family coachman because that, she felt, would be considered pushing and presumptuous; she had the sense to stick to her common unpretending 80 h.p. Daimler; but she wore a special sort of blackish hat-bonnet for such occasions as brought her near the centre of honour, which she got from a little good shop known only to very few outside the inner ring, which hat-bonnet she was always careful to sit on for a few minutes before wearing. And it was to this first and highest and best section of her social scheme that she considered that bishops properly belonged. But some bishops, and in particular such a comparatively bright bishop as the Bishop of Princhester, she also thought of as being just as comfortably accommodated in her second system, the "serious liberal lot," which was more fatiguing and less boring, which talked of books and things, visited the Bells, went to all first-nights when Granville Barker was the producer, and knew and valued people in the grey and earnest plains between the Cecils and the Sidney Webbs. And thirdly there were the smart intellectual lot, again not very well marked off, and on the whole practicable to bishops, of whom fewer particulars are needed because theirs is a perennial species, and then finally there was that fourth world which was paradoxically at once very brilliant and a little shady, which had its Night Club side, and seemed to set no limit to its eccentricities. It seemed at times to be aiming to shock and yet it had its standards, but here it was that the dancers and actresses and forgiven divorcees came in --and the bishops as a rule, a rule hitherto always respected, didn't. This was the ultimate world of Mrs. Garstein Fellows; she had no use for merely sporting people and the merely correct smart and the duller county families, sets that led nowhere, and

it was from her fourth system of the Glittering Doubtfuls that this party which made her hesitate over the bishop's telegram, was derived.

She ran over their names as she sat considering her reply.

What was there for a bishop to object to? There was that admirable American widow, Lady Sunderbund. She was enormously rich, she was enthusiastic. She was really on probation for higher levels; it was her décolletage delayed her. If only she kept off theosophy and the Keltic renaissance and her disposition to profess wild intellectual passions, there would be no harm in her. Provided she didn't come down to dinner in anything too fantastically scanty--but a word in season was possible. No! there was no harm in Lady Sunderbund. Then there were Ridgeway Kelso and this dark excitable Catholic friend of his, Pádraig O'Gorman. Mrs. Garstein Fellows saw no harm in them. Then one had to consider Lord Gatling and Lizzie Barusetter. But nothing showed, nothing was likely to show even if there was anything. And besides, wasn't there a Church and Stage Guild?

Except for those people there seemed little reason for alarm. Mrs. Garstein Fellows did not know that Professor Hoppert, who so amusingly combined a professorship of political economy with the writing of music-hall lyrics, was a keen amateur theologian, nor that Bent, the sentimental novelist, had a similar passion. She did not know that her own eldest son, a dark, romantic-looking youngster from Eton, had also come to the theological stage of development. She did however weigh the possibilities of too liberal opinions on what are called social questions on the part of Miss Sharsper, the novelist, and decided that if that lady was watched nothing so terrible could be said even in an undertone; and as for the Mariposa, the dancer, she had nothing but Spanish and bad French, she looked all right, and it wasn't very likely she would go out of her way to startle an Anglican bishop. Simply

she needn't dance. Besides which even if a man does get a glimpse of a little something--it isn't as if it was a woman.

But of course if the party mustn't annoy the bishop, the bishop must do his duty by the party. There must be the usual purple and the silver buckles.

She wired back:

"A little party but it won't put you out send your man with your change."

(2)

In making that promise Mrs. Garstein Fellows reckoned without the morbid sensibility of the bishop's disorganized nervous system and the unsuspected theological stirrings beneath the apparent worldliness of Hoppart and Bent.

The trouble began in the drawing-room after dinner. Out of deference to the bishop's abstinence the men did not remain to smoke, but came in to find the Mariposa and Lady Sunderbund smoking cigarettes, which these ladies continued to do a little defiantly. They had hoped to finish them before the bishop came up. The night was chilly, and a cheerful wood fire cracking and banging on the fireplace emphasized the ordinary heating. Mrs. Garstein Fellows, who had not expected so prompt an appearance of the men, had arranged her chairs in a semicircle for a little womanly gossip, and before she could intervene she found her party, with the exception of Lord Gatling, who had drifted just a little too noticeably with Miss Barnsetter into a window, sitting round with a conscious air, that was perhaps just a trifle too apparent, of being "good."

And Mr. Bent plunged boldly into general conversation.

"Are you reading anything now, Mrs. Garstein Fellows?" he asked. "I'm an interested party."

She was standing at the side of the fireplace. She bit her lip and looked at the cornice and meditated with a girlish expression. "Yes," she said. "I am reading again. I didn't think I should but I am."

"For a time," said Hoppart, "I read nothing but the papers. I bought from a dozen to twenty a day."

"That is wearing off," said the bishop.

"The first thing I began to read again," said Mrs. Garstein Fellows, "--I'm not saying it for your sake, Bishop--was the Bible."

"I went to the Bible," said Bent as if he was surprised.

"I've heard that before," said Ridgeway Kelso, in that slightly explosive manner of his. "All sorts of people who don't usually read the Bible--"

"But Mr. Kelso!" protested their hostess with raised eyebrows.

"I was thinking of Bent. But anyhow there's been a great wave of seriousness, a sudden turning to religion and religious things. I don't know if it comes your way, Bishop...."

"I've had no rows of penitents yet."

"We may be coming," said Hoppart.

He turned sideways to face the bishop. "I think we should be coming if--if it wasn't for old entangled difficulties. I don't know if you will mind my saying it to you, but...."

The bishop returned his frank glance. "I'd like to know above all things," he said. "If Mrs. Garstein Fellow will permit us. It's my business to know."

"We all want to know," said Lady Sunderbund, speaking from the low chair on the other side of the fireplace. There was a vibration in her voice and a sudden gleam of enthusiasm in her face. "Why shouldn't people talk seriously sometimes?"

"Well, take my own case," said Hoppart. "In the last few weeks, I've been reading not only in the Bible but in the Fathers. I've read most of Athanasius, most of Eusebius, and--I'll confess it --Gibbon. I find all my old wonder come back. Why are we pinned to--to the amount of creed we are pinned to? Why for instance must you insist on the Trinity?"

"Yes," said the Eton boy explosively, and flushed darkly to find he had spoken.

"Here is a time when men ask for God," said Hoppart. "And you give them three!" cried Bent rather cheaply. "I confess I find the way encumbered by these Alexandrian elaborations," Hoppart completed.

"Need it be?" whispered Lady Sunderbund very softly.

"Well," said the bishop, and leant back in his armchair and knitted his brow at the fire. "I do not think," he said, "that men coming to God think very much of the nature of God. Nevertheless," he spoke slowly and patted the arm of his chair,

"nevertheless the church insists that certain vitally important truths have to be conveyed, certain mortal errors are best guarded against, by these symbols."

"You admit they are symbols."

"So the church has always called them."

Hoppart showed by a little movement and grimace that he thought the bishop quibbled.

"In every sense of the word," the bishop hastened to explain, "the creeds are symbolical. It is clear they seek to express ineffable things by at least an extended use of familiar words. I suppose we are all agreed nowadays that when we speak of the Father and of the Son we mean something only in a very remote and exalted way parallel with--with biological fatherhood and sonship."

Lady Sunderbund nodded eagerly. "Yes," she said, "oh, yes," and held up an expectant face for more.

"Our utmost words, our most elaborately phrased creeds, can at the best be no better than the shadow of something unseen thrown upon the screen of experience."

He raised his rather weary eyes to Hoppart as if he would know what else needed explanation. He was gratified by Lady Sunderbund's approval, but he affected not to see or hear it. But it was Bent who spoke.

He spoke in the most casual way. He made the thing seem the most incidental of observations.

"What puzzles me," he said, "is why the early Christians

identified the Spermaticos Logos of the Stoics with the second and not with the third person of the Trinity."

To which the bishop, rising artlessly to the bait, replied, "Ah! that indeed is the unfortunate aspect of the whole affair."

And then the Irish Catholic came down on him....

(3)

How the bishop awakened in the night after this dispute has been told already in the opening section of this story. To that night of discomfort we now return after this comprehensive digression. He awoke from nightmares of eyes and triangles to bottomless remorse and perplexity. For the first time he fully measured the vast distances he had travelled from the beliefs and attitudes of his early training, since his coming to Princhester. Travelled--or rather slipped and fallen down the long slopes of doubt.

That clear inky dimness that comes before dawn found his white face at the window looking out upon the great terrace and the park.

(4)

After a bout of mental distress and sleeplessness the bishop would sometimes wake in the morning not so much exhausted as in a state of thin mental and bodily activity. This was more particularly so if the night had produced anything in the nature of a purpose. So it was on this occasion. The day was clear before him; at least it could be cleared by sending three telegrams; his man could go back to Princhester and so leave him

perfectly free to go to Brighton-Pomfrey in London and secure that friendly dispensation to smoke again which seemed the only alternative to a serious mental breakdown. He would take his bag, stay the night in London, smoke, sleep well, and return the next morning. Dunk, his valet-butler, found him already bathed and ready for a cup of tea and a Bradshaw at half-past seven. He went on dressing although the good train for London did not start until 10.45.

Mrs. Garstein Fellows was by nature and principle a late riser; the breakfast-room showed small promise yet of the repast, though the table was set and bright with silver and fresh flowers, and a wood fire popped and spurted to greet and encourage the March sunshine. But standing in the doorway that led to the promise and daffodils and crocuses of Mrs. Garstein Fellows' garden stood Lady Sunderbund, almost with an effect of waiting, and she greeted the bishop very cheerfully, doubted the immediate appearance of any one else, and led him in the most natural manner into the new but already very pleasant shrubbery.

In some indefinable special way the bishop had been aware of Lady Sunderbund's presence since first he had met her, but it was only now that he could observe her with any particularity. She was tall like his own Lady Ella but not calm and quiet; she was electric, her eyes, her smiles, her complexion had as it were an established brightness that exceeded the common lustre of things. This morning she was dressed in grey that was nevertheless not grey but had an effect of colour, and there was a thread of black along the lines of her body and a gleam of gold. She carried her head back with less dignity than pride; there was a little frozen movement in her dark hair as if it flamed up out of her head. There were silver ornaments in her hair. She spoke with a pretty little weakness of the r's that had probably been acquired abroad. And she lost no time in telling him, she was eager to tell him, that she had been waylaying him. "I did so want to talk

to you some maw," she said. "I was shy last night and they we' all so noisy and eaga'. I p'ayed that you might come down early.

"It's an oppo'tunity I've longed for," she said.

She did her very pretty best to convey what it was had been troubling her. 'iligion bad been worrying her for years. Life was --oh--just ornaments and games and so wea'isome, so wea'isome, unless it was 'iligious. And she couldn't get it 'iligious.

The bishop nodded his head gravely.

"You unde'stand?" she pressed.

"I understand too well--the attempt to get hold--and keep hold."

"I knew you would!" she cried.

She went on with an impulsive rapidity. O'thodoxy had always 'ipelled her,--always. She had felt herself confronted by the most insurmountable difficulties, and yet whenever she had gone away from Christianity--she had gone away from Christianity, to the Theosophists and the Christian Scientists--she had felt she was only "st'aying fu'tha." And then suddenly when he was speaking last night, she had felt he knew. It was so wonderful to hear the "k'eed was only a symbol."

"Symbol is the proper name for it," said the bishop. "It wasn't for centuries it was called the Creed."

Yes, and so what it really meant was something quite different from what it did mean.

The bishop felt that this sentence also was only a symbol, and

nodded encouragingly--but gravely, warily.

And there she was, and the point was there were thousands and thousands and thousands of educated people like her who were dying to get through these old-fashioned symbols to the true faith that lay behind them. That they knew lay behind them. She didn't know if he had read "The Light under the Altar"?

"He's vicar of Wombash--in my diocese," said the bishop with restraint.

"It's wonde'ful stuff," said Lady Sunderbund. "It's spi'tually cold, but it's intellectually wonde'ful. But we want that with spi'tuality. We want it so badly. If some one--"

She became daring. She bit her under lip and flashed her spirit at him.

"If you--" she said and paused.

"Could think aloud," said the bishop.

"Yes," she said, nodding rapidly, and became breathless to hear.

It would certainly be an astonishing end to the Chasters difficulty if the bishop went over to the heretic, the bishop reflected.

"My dear lady, I won't disguise," he began; "in fact I don't see how I could, that for some years I have been growing more and more discontented with some of our most fundamental formulae. But it's been very largely a shapeless discontent--hitherto. I don't think I've said a word to a single soul. No, not a word. You are the first person to whom I've ever made the admission

that even my feelings are at times unorthodox."

She lit up marvellously at his words. "Go on," she whispered.

But she did not need to tell him to go on. Now that he had once broached the casket of his reserves he was only too glad of a listener. He talked as if they were intimate and loving friends, and so it seemed to both of them they were. It was a wonderful release from a long and painful solitude.

To certain types it is never quite clear what has happened to them until they tell it. So that now the bishop, punctuated very prettily by Lady Sunderbund, began to measure for the first time the extent of his departure from the old innate convictions of Otteringham Rectory. He said that it was strange to find doubt coming so late in life, but perhaps it was only in recent years that his faith had been put to any really severe tests. It had been sheltered and unchallenged.

"This fearful wa'," Lady Sunderbund interjected.

But Princhester had been a critical and trying change, and "The Light under the Altar" case had ploughed him deeply. It was curious that his doubts always seemed to have a double strand; there was a moral objection based on the church's practical futility and an intellectual strand subordinated to this which traced that futility largely to its unconvincing formulae.

"And yet you know," said the bishop, "I find I can't go with Chasters. He beats at the church; he treats her as though she were wrong. I feel like a son, growing up, who finds his mother isn't quite so clear-spoken nor quite so energetic as she seemed to be once. She's right, I feel sure. I've never doubted her fundamental goodness."

"Yes," said Lady Sunderbund, very eagerly, "yes."

"And yet there's this futility.... You know, my dear lady, I don't know what to do. One feels on the one hand, that here is a cloud of witnesses, great men, sainted men, subtle men, figures permanently historical, before whom one can do nothing but bow down in the utmost humility, here is a great instrument and organization--what would the world be without the witness of the church?--and on the other hand here are our masses out of hand and hostile, our industrial leaders equally hostile; there is a failure to grip, and that failure to grip is so clearly traceable to the fact that our ideas are not modern ideas, that when we come to profess our faith we find nothing in our mouths but antiquated Alexandrian subtleties and phrases and ideas that may have been quite alive, quite significant, quite adequate in Asia Minor or Egypt, among men essentially orientals, fifteen hundred years ago, but which now--Ä

He expressed just what they came to now by a gesture.

She echoed his gesture.

"Probably I'm not alone among my brethren," he went on, and then: "But what is one to do?"

With her hands she acted her sense of his difficulty.

"One may be precipitate," he said. "There's a kind of loyalty and discipline that requires one to keep the ranks until one's course of action is perfectly clear. One owes so much to so many. One has to consider how one may affect--oh! people one has never seen."

He was lugging things now into speech that so far had been scarcely above the threshold of his conscious thought. He went on

to discuss the entire position of the disbelieving cleric. He discovered a fine point.

"If there was something else, an alternative, another religion, another Church, to which one could go, the whole case would be different. But to go from the church to nothingness isn't to go from falsehood to truth. It's to go from truth, rather badly expressed, rather conservatively hidden by its protections, truth in an antiquated costume, to the blackest lie--in the world."

She took that point very brightly.

"One must hold fast to 'iligion," she said, and looked earnestly at him and gripped fiercely, pink thumbs out, with her beautiful hands held up.

That was it, exactly. He too was gripping. But while on the outside the Midianites of denial were prowling for these clinging souls, within the camp they were assailed by a meticulous orthodoxy that was only too eager to cast them forth. The bishop dwelt for a time upon the curious fierceness orthodoxy would sometimes display. Nowadays atheism can be civil, can be generous; it is orthodoxy that trails a scurrilous fringe.

"Who was that young man with a strong Irish accent--who contradicted me so suddenly?" he asked.

"The dark young man?"

"The noisy young man."

"That was Mist' Pat'ick O'Go'man. He is a Kelt and all that. Spells Pat'ick with eva so many letters. You know. They say he spends ouas and ouas lea'ning E'se. He wo'ies about it. They all t'y to lea'n E'se, and it wo'ies them and makes them hate England

moa and moa."

"He is orthodox. He--is what I call orthodox to the ridiculous extent."

"idiculous."

A deep-toned gong proclaimed breakfast over a square mile or so of territory, and Lady Sunderbund turned about mechanically towards the house. But they continued their discussion.

She started indeed a new topic. "Shall we eva, do 'ou think, have a new 'iligion--t'ua and betta?"

That was a revolutionary idea to him.

He was still fending it off from him when a gap in the shrubs brought them within sight of the house and of Mrs. Garstein Fellows on the portico waving a handkerchief and crying "Break-fast."

"I wish we could talk for houas," said Lady Sunderbund.

"I've been glad of this talk," said the bishop. "Very glad."

She lifted her soft abundant skirts and trotted briskly across the still dewy lawn towards the house door. The bishop followed gravely and slowly with his hands behind his back and an unusually peaceful expression upon his face. He was thinking how rare and precious a thing it is to find intelligent friendship in women. More particularly when they were dazzlingly charming and pretty. It was strange, but this was really his first woman friend. If, as he hoped, she became his friend.

Lady Sunderbund entered the breakfast room in a gusty abundance

like Botticelli's Primavera, and kissed Mrs. Garstein Fellows good-morning. She exhaled a glowing happiness. "He is wondrous," she panted. "He is most wondrous."

"Mr. Higeway Kelso?"

"No, the dee' bishop! I love him. Are those the little sausages I like? May I take th'ee? I've been up houas."

The dee' bishop appeared in the sunlit doorway.

(5)

The bishop felt more contentment in the London train than he had felt for many weeks. He had taken two decisive and relieving steps. One was that he had stated his case to another human being, and that a very charming and sympathetic human being, he was no longer a prey to a current of secret and concealed thoughts running counter to all the appearances of his outward life; and the other was that he was now within an hour or so of Brighton-Pomfrey and a cigarette. He would lunch on the train, get to London about two, take a taxi at once to the wise old doctor, catch him over his coffee in a charitable and understanding mood, and perhaps be smoking a cigarette publicly and honourably and altogether satisfyingly before three.

So far as Brighton-Pomfrey's door this program was fulfilled without a hitch. The day was fine and he had his taxi opened, and noted with a patriotic satisfaction as he rattled through the streets, the glare of the recruiting posters on every vacant piece of wall and the increasing number of men in khaki in the streets. But at the door he had a disappointment. Dr. Brighton-Pomfrey was away at the front--of all places; he had gone for some weeks; would the bishop like to see Dr. Dale?

The bishop hesitated. He had never set eyes on this Dr. Dale.

Indeed, he had never heard of Dr. Dale.

Seeing his old friend Brighton-Pomfrey and being gently and tactfully told to do exactly what he was longing to do was one thing; facing some strange doctor and going slowly and elaborately through the whole story of his illness, his vow and his breakdown, and perhaps having his reaction time tested and all sorts of stripping and soundings done, was quite another. He was within an ace of turning away.

If he had turned away his whole subsequent life would have been different. It was the very slightest thing in the world tipped the beam. It was the thought that, after all, whatever inconvenience and unpleasantness there might be in this interview, there was at the end of it a very reasonable prospect of a restored and legitimate cigarette.

CHAPTER THE FIFTH - THE FIRST VISION

(1)

Dr. DALE exceeded the bishop's worst apprehensions. He was a lean, lank, dark young man with long black hair and irregular, rather prolonged features; his chin was right over to the left; he looked constantly at the bishop's face with a distinctly sceptical grey eye; he could not have looked harder if he had been a photographer or a portrait painter. And his voice was harsh, and the bishop was particularly sensitive to voices.

He began by understanding far too much of the bishop's illness, and he insisted on various familiarities with the bishop's heart and tongue and eye and knee that ruffled the bishop's soul.

"Brighton-Pomfrey talked of neurasthenia?" he asked. "That was his diagnosis," said the bishop. "Neurasthenia," said the young man as though he despised the word.

The bishop went on buttoning up his coat.

"You don't of course want to break your vows about drinking and smoking," said the young man with the very faintest suggestion of derision in his voice.

"Not if it can possibly be avoided," the bishop asserted. "Without a loss, that is, of practical efficiency," he added. "For I have much to do."

"I think that it is possible to keep your vow," said the young man, and the bishop could have sworn at him. "I think we can manage that all right."

(2)

The bishop sat at the table resting his arm upon it and awaiting the next development of this unsatisfactory interview. He was on the verge of asking as unpleasantly as possible when Brighton-Pomfrey would return.

The young man stood upon Brighton-Pomfrey's hearth-rug and was evidently contemplating dissertations.

"Of course," he said, as though he discussed a problem with himself, "you must have some sort of comfort. You must get out of this state, one way or another."

The bishop nodded assent. He had faint hopes of this young man's ideas of comfort.

Dr. Dale reflected. Then he went off away from the question of comfort altogether. "You see, the trouble in such a case as this is peculiarly difficult to trace to its sources because it comes just upon the border-line of bodily and mental things. You may take a drug or alter your regimen and it disturbs your thoughts, you may take an idea and it disturbs your health. It is easy enough to say, as some do, that all ideas have a physical substratum; it is almost as easy to say with the Christian Scientist that all bodily states are amenable to our ideas. The truth doesn't, I think, follow the border between those opposite opinions very exactly on either side. I can't, for instance, tell you to go home and pray against these uncertainties and despairs, because it is just these uncertainties and despairs that rob you of the power of efficient prayer."

He did not seem to expect anything from the bishop.

"I don't see that because a case brings one suddenly right up against the frontier of metaphysics, why a doctor should necessarily pull up short at that, why one shouldn't go on into either metaphysics or psychology if such an extension is necessary for the understanding of the case. At any rate if you'll permit it in this consultation...."

"Go on," said the bishop, holding on to that promise of comfort. "The best thing is to thrash out the case in your own way. And then come to what is practical."

"What is really the matter here--the matter with you that is --is a disorganization of your tests of reality. It's one of a group of states hitherto confused. Neurasthenia, that comprehensive phrase--well, it is one of the neurasthenias. Here, I confess, I begin to talk of work I am doing, work still to be published, finished first and then published.... But I go off from the idea that every living being lives in a state not differing essentially from a state of hallucination concerning the things about it. Truth, essential truth, is hidden. Always. Of course there must be a measure of truth in our working illusions, a working measure of truth, or the creature would smash itself up and end itself, but beyond that discretion of the fire and the pitfall lies a wide margin of error about which we may be deceived for years. So long as it doesn't matter, it doesn't matter. I don't know if I make myself clear."

"I follow you," said the bishop a little wearily, "I follow you. Phenomena and noumena and so on and so on. Kant and so forth. Pragmatism. Yes."

With a sigh.

"And all that," completed Dr. Dale in a voice that suggested mockery. "But you see we grow into a way of life, we settle down

among habits and conventions, we say 'This is all right' and 'That is always so.' We get more and more settled into our life as a whole and more and more confident. Unless something happens to shake us out of our sphere of illusion. That may be some violent contradictory fact, some accident, or it may be some subtle change in one's health and nerves that makes us feel doubtful. Or a change of habits. Or, as I believe, some subtle quickening of the critical faculty. Then suddenly comes the feeling as though we were lost in a strange world, as though we had never really seen the world before."

He paused.

The bishop was reluctantly interested. "That does describe something--of the mental side," he admitted. "I never believe in concealing my own thoughts from an intelligent patient," said Dr. Dale, with a quiet offensiveness. "That sort of thing belongs to the dark ages of the 'pothecary's art. I will tell you exactly my guesses and suppositions about you. At the base of it all is a slight and subtle kidney trouble, due I suggest to your going to Princhester and drinking the local water--"

"But it's excellent water. They boast of it."

"By all the established tests. As a matter of fact many of our best drinking waters have all sorts of unspecified qualities. Burton water, for example, is radioactive by Beetham's standards up to the ninth degree. But that is by the way. My theory about your case is that this produced a change in your blood, that quickened your sensibilities and your critical faculties just at a time when a good many bothers--I don't of course know what they were, but I can, so to speak, see the marks all over you--came into your life."

The bishop nodded.

"You were uprooted. You moved from house to house, and failed to get that curled up safe feeling one has in a real home in any of them."

"If you saw the fireplaces and the general decoration of the new palace!" admitted the bishop. "I had practically no control."

"That confirms me," said Dr. Dale. "Insomnia followed, and increased the feeling of physical strangeness by increasing the bodily disturbance. I suspect an intellectual disturbance."

He paused.

"There was," said the bishop.

"You were no longer at home anywhere. You were no longer at home in your diocese, in your palace, in your body, in your convictions. And then came the war. Quite apart from everything else the mind of the whole world is suffering profoundly from the shock of this war--much more than is generally admitted. One thing you did that you probably did not observe yourself doing, you drank rather more at your meals, you smoked a lot more. That was your natural and proper response to the shock."

"Ah!" said the bishop, and brightened up.

"It was remarked by Tolstoy, I think, that few intellectual men would really tolerate the world as it is if it were not for smoking and drinking. Even novelists have their moments of lucidity. Certainly these things soothe the restlessness in men's minds, deaden their sceptical sensibilities. And just at the time when you were getting most dislodged--you gave them up."

"And the sooner I go back to them the better," said the bishop

brightly. "I quite see that."

"I wouldn't say that," said Dr. Dale....

(3)

"That," said Dr. Dale, "is just where my treatment of this case differs from the treatment of "--he spoke the name reluctantly as if he disliked the mere sound of it--"Dr. Brighton-Pomfrey."

"Hitherto, of course," said the bishop, "I've been in his hands."

"He," said Dr. Dale, "would certainly set about trying to restore your old sphere of illusion, your old familiar sensations and ideas and confidences. He would in fact turn you back. He would restore all your habits. He would order you a rest. He would send you off to some holiday resort, fresh in fact but familiar in character, the High lands, North Italy, or Switzerland for example. He would forbid you newspapers and order you to botanize and prescribe tranquillizing reading; Trollope's novels, the Life of Gladstone, the works of Mr. A. C. Benson, memoirs and so on. You'd go somewhere where there was a good Anglican chaplain, and you'd take some of the services yourself. And we'd wash out the effects of the Princhester water with Contrexeville, and afterwards put you on Salutaris or Perrier. I don't know whether I shouldn't have inclined to some such treatment before the war began. Only--"

He paused.

"You think--?"

Dr. Dale's face betrayed a sudden sombre passion. "It won't do

now," he said in a voice of quiet intensity. "It won't do now."

He remained darkly silent for so long that at last the bishop spoke. "Then what," he asked, "do you suggest?"

"Suppose we don't try to go back," said Dr. Dale. "Suppose we go on and go through."

"Where?"

"To reality.

"I know it's doubtful, I know it's dangerous," he went on, "but I am convinced that now we can no longer keep men's minds and souls in these feathered nests, these spheres of illusion. Behind these veils there is either God or the Darkness.... Why should we not go on?"

The bishop was profoundly perplexed. He heard himself speaking. "It would be unworthy of my cloth," he was saying.

Dr. Dale completed the sentence: "to go back."

"Let me explain a little more," he said, "what I mean by 'going on.' I think that this loosening of the ties of association that bind a man to his everyday life and his everyday self is in nine cases out of ten a loosening of the ties that bind him to everyday sanity. One common form of this detachment is the form you have in those cases of people who are found wandering unaware of their names, unaware of their places of residence, lost altogether from themselves. They have not only lost their sense of identity with themselves, but all the circumstances of their lives have faded out of their minds like an idle story in a book that has been read and put aside. I have looked into hundreds of such cases. I don't think that loss of identity is a necessary

thing; it's just another side of the general weakening of the grip upon reality, a kind of anaemia of the brain so that interest fades and fails. There is no reason why you should forget a story because you do not believe it--if your brain is strong enough to hold it. But if your brain is tired and weak, then so soon as you lose faith in your records, your mind is glad to let them go. When you see these lost identity people that is always your first impression, a tired brain that has let go."

The bishop felt extremely like letting go.

"But how does this apply to my case?"

"I come to that," said Dr. Dale, holding up a long large hand. "What if we treat this case of yours in a new way? What if we give you not narcotics but stimulants and tonics? What if we so touch the blood that we increase your sense of physical detachment while at the same time feeding up your senses to a new and more vivid apprehension of things about you?" He looked at his patient's hesitation and added: "You'd lose all that craving feeling, that you fancy at present is just the need of a smoke. The world might grow a trifle--transparent, but you'd keep real. Instead of drugging oneself back to the old contentment--"

"You'd drug me on to the new," said the bishop.

"But just one word more!" said Dr. Dale. "Hear why I would do this! It was easy and successful to rest and drug people back to their old states of mind when the world wasn't changing, wasn't spinning round in the wildest tornado of change that it has ever been in. But now--Where can I send you for a rest? Where can I send you to get you out of sight and hearing of the Catastrophe? Of course old Brighton-Pomfrey would go on sending people away for rest and a nice little soothing change if the Day of Judgment was coming in the sky and the earth was opening and the sea was

giving up its dead. He'd send 'em to the seaside. Such things as that wouldn't shake his faith in the Channel crossing. My idea is that it's not only right for you to go through with this, but that it's the only thing to do. If you go right on and right through with these doubts and intimations--"

He paused.

"You may die like a madman," he said, "but you won't die like a tame rabbit."

(4)

The bishop sat reflecting. What fascinated and attracted him was the ending of all the cravings and uneasinesses and restlessness that had distressed his life for over four years; what deterred him was the personality of this gaunt young man with his long grey face, his excited manner, his shock of black hair. He wanted that tonic--with grave misgivings. "If you think this tonic is the wiser course," he began. "I'd give it you if you were my father," said Dr. Dale. "I've got everything for it," he added.

"You mean you can make it up--without a prescription."

"I can't give you a prescription. The essence of it--It's a distillate I have been trying. It isn't in the Pharmacopeia."

Again the bishop had a twinge of misgiving.

But in the end he succumbed. He didn't want to take the stuff, but also he did not want to go without his promised comfort.

Presently Dale had given him a little phial--and was holding

up to the window a small medicine glass into which he was pouring very carefully twenty drops of the precious fluid. "Take it only," he said, "when you feel you must."

"It is the most golden of liquids," said the bishop, peering at it.

"When you want more I will make you more. Later of course, it will be possible to write a prescription. Now add the water--so.

"It becomes opalescent. How beautifully the light plays in it!

"Take it."

The bishop dismissed his last discretion and drank.

"Well?" said Dr. Dale.

"I am still here," said the bishop, smiling, and feeling a joyous tingling throughout his body. "It stirs me."

(5)

The bishop stood on the pavement outside Dr. Brighton-Pomfrey's house. The massive door had closed behind him.

It had been an act of courage, of rashness if you will, to take this draught. He was acutely introspective, ready for anything, for the most disagreeable or the most bizarre sensations. He was asking himself, Were his feet steady? Was his head swimming?

His doubts glowed into assurance.

Suddenly he perceived that he was sure of God.

Not perhaps of the God of Nicaea, but what did these poor little quibblings and definitions of the theologians matter? He had been worrying about these definitions and quibblings for four long restless years. Now they were just failures to express-- what surely every one knew--and no one would ever express exactly. Because here was God, and the kingdom of God was manifestly at hand. The visible world hung before him as a mist might hang before the rising sun. He stood proudly and masterfully facing a universe that had heretofore bullied him into doubt and apologetics, a universe that had hitherto been opaque and was now betrayed translucent.

That was the first effect of the new tonic, complete reassurance, complete courage. He turned to walk towards Mount Street and Berkeley Square as a sultan might turn to walk among his slaves.

But the tonic was only beginning.

Before he had gone a dozen steps he was aware that he seemed more solid and larger than the people about him. They had all a curious miniature effect, as though he was looking at them through the wrong end of an opera glass. The houses on either side of the street and the traffic shared this quality in an equal measure. It was as if he was looking at the world through apertures in a miniature cinematograph peep-show. This surprised him and a little dashed his first glow of satisfaction.

He passed a man in khaki who, he fancied, looked at him with an odd expression. He observed the next passers-by narrowly and suspiciously, a couple of smartish young men, a lady with a poodle, a grocer's boy with a basket, but none seemed to observe anything remarkable about him. Then he caught the eye of a taxi-

driver and became doubtful again.

He had a feeling that this tonic was still coming in like a tide. It seemed to be filling him and distending him, in spite of the fact that he was already full. After four years of flaccidity it was pleasant to be distended again, but already he felt more filled than he had ever been before. At present nothing was showing, but all his body seemed braced and uplifted. He must be careful not to become inflated in his bearing.

And yet it was difficult not to betray a little inflation. He was so filled with assurance that things were right with him and that God was there with him. After all it was not mere fancy; he was looking through the peepholes of his eyes at the world of illusion and appearance. The world that was so intent upon its immediate business, so regardless of eternal things, that had so dominated him but a little while ago, was after all a thing more mortal than himself.

Another man in khaki passed him.

For the first time he saw the war as something measurable, as something with a beginning and an end, as something less than the immortal spirit in man. He had been too much oppressed by it. He perceived all these people in the street were too much oppressed by it. He wanted to tell them as much, tell them that all was well with them, bid them be of good cheer. He wanted to bless them. He found his arm floating up towards gestures of benediction. Self-control became increasingly difficult.

All the way down Berkeley Square the bishop was in full-bodied struggle with himself. He was trying to control himself, trying to keep within bounds. He felt that he was stepping too high, that his feet were not properly reaching the ground, that he was walking upon cushions of air.

The feeling of largeness increased, and the feeling of transparency in things about him. He avoided collision with passers-by--excessively. And he felt his attention was being drawn more and more to something that was going on beyond the veil of visible things. He was in Piccadilly now, but at the same time Piccadilly was very small and he was walking in the presence of God.

He had a feeling that God was there though he could not see him. And at the same time he was in this transitory world, with people going to and fro, men with umbrellas tucked dangerously under their arms, men in a hurry, policemen, young women rattling Red Cross collecting boxes, smart people, loafers. They distracted one from God.

He set out to cross the road just opposite Prince's, and jumping needlessly to give way to an omnibus had the narrowest escape from a taxicab.

He paused on the pavement edge to recover himself. The shock of his near escape had, as people say, pulled him together.

What was he to do? Manifestly this opalescent draught was overpowering him. He ought never to have taken it. He ought to have listened to the voice of his misgivings. It was clear that he was not in a fit state to walk about the streets. He was-- what had been Dr. Dale's term?--losing his sense of reality. What was he to do? He was alarmed but not dismayed. His thoughts were as full-bodied as the rest of his being, they came throbbing and bumping into his mind. What was he to do?

Brighton-Pomfrey ought never to have left his practice in the hands of this wild-eyed experimenter.

Strange that after a lifetime of discretion and men's respect one should be standing on the Piccadilly pavement--intoxicated!

It came into his head that he was not so very far from the Athenaeum, and surely there if anywhere a bishop may recover his sense of being--ordinary.

And behind everything, behind the tall buildings and the swarming people there was still the sense of a wide illuminated space, of a light of wonder and a Presence. But he must not give way to that again! He had already given way altogether too much. He repeated to himself in a whisper, "I am in Piccadilly."

If he kept tight hold upon himself he felt he might get to the Athenaeum before--before anything more happened.

He murmured directions to himself. "Keep along the pavement. Turn to the right at the Circus. Now down the hill. Easily down the hill. Don't float! Junior Army and Navy Stores. And the bookseller."

And presently he had a doubt of his name and began to repeat it.

"Edward Princhester. Edward Scrope, Lord Bishop of Princhester."

And all the while voices within him were asserting, "You are in the kingdom of Heaven. You are in the presence of God. Place and time are a texture of illusion and dreamland. Even now, you are with God."

(6)

The porter of the Athenaeum saw him come in, looking well--flushed indeed--but queer in expression; his blue eyes were wide open and unusually vague and blue.

He wandered across towards the dining-room, hesitated, went to look at the news, seemed in doubt whether he would not go into the smoking-room, and then went very slowly upstairs, past the golden angel up to the great drawing-room.

In the drawing-room he found only Sir James Mounce, the man who knew the novels of Sir Walter Scott by heart and had the minutest and most unsparing knowledge of every detail in the life of that supreme giant of English literature. He had even, it was said, acquired a Scotch burr in the enthusiasm of his hero-worship. It was usually sufficient only to turn an ear towards him for him to talk for an hour or so. He was now studying Bradshaw.

The bishop snatched at him desperately. He felt that if he went away there would be no hold left upon the ordinary things of life.

"Sir James," he said, "I was wondering the other day when was the exact date of the earliest public ascription of Waverley to Scott."

"Eh!" said Sir James, "but I'd like to talk that over with ye. Indeed I would. It would be depending very largely on what ye called 'public.' But--"

He explained something about an engagement in Birmingham that night, a train to catch. Reluctantly but relentlessly he abandoned the proffered ear. But he promised that the next time they met in the club he would go into the matter "exhaustevely."

The door closed upon him. The bishop was alone. He was flooded

with the light of the world that is beyond this world. The things about him became very small and indistinct.

He would take himself into a quiet corner in the library of this doll's house, and sit his little body down in one of the miniature armchairs. Then if he was going to faint or if the trancelike feeling was to become altogether a trance--well, a bishop asleep in an armchair in the library of the Athenaeum is nothing to startle any one.

He thought of that convenient hidden room, the North Library, in which is the bust of Croker. There often one can be quite alone.... It was empty, and he went across to the window that looks out upon Pall Mall and sat down in the little uncomfortable easy chair by the desk with its back to the Benvenuto Cellini.

And as he sat down, something snapped--like the snapping of a lute string--in his brain.

(7)

With a sigh of deep relief the bishop realized that this world had vanished.

He was in a golden light.

He perceived it as a place, but it was a place without buildings or trees or any very definite features. There was a cloudy suggestion of distant hills, and beneath his feet were little gem-like flowers, and a feeling of divinity and infinite friendliness pervaded his being. His impressions grew more definite. His feet seemed to be bare. He was no longer a bishop nor clad as a bishop. That had gone with the rest of the world. He was seated on a slab of starry rock.

This he knew quite clearly was the place of God.

He was unable to disentangle thoughts from words. He seemed to be speaking in his mind.

"I have been very foolish and confused and perplexed. I have been like a creature caught among thorns."

"You served the purpose of God among those thorns." It seemed to him at first that the answer also was among his thoughts.

"I seemed so silly and so little. My wits were clay."

"Clay full of desires."

"Such desires!"

"Blind desires. That will presently come to the light."

"Shall we come to the light?"

"But here it is, and you see it!"

(8)

It became clearer in the mind of the bishop that a figure sat beside him, a figure of great strength and beauty, with a smiling face and kindly eyes. A strange thought and a strange courage came to the bishop.

"Tell me," he whispered, "are you God?"

"I am the Angel of God."

The bishop thought over that for some moments.

"I want," he said, "to know about God.

"I want," he said, with a deepening passion of the soul, "to know about God. Slowly through four long years I have been awakening to the need of God. Body and soul I am sick for the want of God and the knowledge of God. I did not know what was the matter with me, why my life had become so disordered and confused that my very appetites and habits are all astray. But I am perishing for God as a waterless man upon a raft perishes for drink, and there is nothing but madness if I touch the seas about me. Not only in my thoughts but in my under thoughts and in my nerves and bones and arteries I have need of God. You see I grew up in the delusion that I knew God, I did not know that I was unprovisioned and unprovided against the tests and strains and hardships of life. I thought that I was secure and safe. I was told that we men--who were apes not a quarter of a million years ago, who still have hair upon our arms and ape's teeth in our jaws--had come to the full and perfect knowledge of God. It was all put into a creed. Not a word of it was to be altered, not a sentence was to be doubted any more. They made me a teacher of this creed. They seemed to explain it to me. And when I came to look into it, when my need came and I turned to my creed, it was old and shrivelled up, it was the patched-up speculations of vanished Greeks and Egyptians, it was a mummy of ancient disputes, old and dry, that fell to dust as I unwrapped it. And I was dressed up in the dress of old dead times and put before an altar of forgotten sacrifices, and I went through ceremonies as old as the first seedtime; and suddenly I knew clearly that God was not there, God was not in my Creed, not in my cathedral, not in my ceremonies, nowhere in my life. And at the same time I knew, I knew as I had never known before, that certainly there was God."

He paused. "Tell me," said the friend at his side; "tell me."

"It was as if a child running beside its mother, looked up and saw that he had never seen her face before, that she was not his mother, and that the words he had seemed to understand were--now that he listened--words in an unknown tongue.

"You see, I am but a common sort of man, dear God; I have neither lived nor thought in any way greatly, I have gone from one day to the next day without looking very much farther than the end of the day, I have gone on as life has befallen; if no great trouble had come into my life, so I should have lived to the end of my days. But life which began for me easily and safely has become constantly more difficult and strange. I could have held my services and given my benedictions, I could have believed I believed in what I thought I believed.... But now I am lost and astray--crying out for God...."

(9)

"Let us talk a little about your troubles," said the Angel.
"Let us talk about God and this creed that worries you and this church of yours."

"I feel as though I had been struggling to this talk through all the years--since my doubts began."

"The story your Creed is trying to tell is much the same story that all religions try to tell. In your heart there is God, beyond the stars there is God. Is it the same God?"

"I don't know," said the bishop.

"Does any one know?"

"I thought I knew."

"Your creed is full of Levantine phrases and images, full of the patched contradictions of the human intelligence utterly puzzled. It is about those two Gods, the God beyond the stars and the God in your heart. It says that they are the same God, but different. It says that they have existed together for all time, and that one is the Son of the other. It has added a third Person --but we won't go into that."

The bishop was reminded suddenly of the dispute at Mrs. Garstein Fellows'. "We won't go into that," he agreed. "No!"

"Other religions have told the story in a different way. The Cathars and Gnostics did. They said that the God in your heart is a rebel against the God beyond the stars, that the Christ in your heart is like Prometheus--or Hiawatha--or any other of the sacrificial gods, a rebel. He arises out of man. He rebels against that high God of the stars and crystals and poisons and monsters and of the dead emptiness of space.... The Manicheans and the Persians made out our God to be fighting eternally against that Being of silence and darkness beyond the stars. The Buddhists made the Lord Buddha the leader of men out of the futility and confusion of material existence to the great peace beyond. But it is all one story really, the story of the two essential Beings, always the same story and the same perplexity cropping up under different names, the story of one being who stirs us, calls to us, and leads us, and of another who is above and outside and in and beneath all things, inaccessible and incomprehensible. All these religions are trying to tell something they do not clearly know--of a relationship between these two, that eludes them, that eludes the human mind, as water escapes from the hand. It is unity and opposition they have to

declare at the same time; it is agreement and propitiation, it is infinity and effort."

"And the truth?" said the bishop in an eager whisper. "You can tell me the truth."

The Angel's answer was a gross familiarity. He thrust his hand through the bishop's hair and ruffled it affectionately, and rested for a moment holding the bishop's cranium in his great palm.

"But can this hold it?" he said....

"Not with this little box of brains," said the Angel. "You could as soon make a meal of the stars and pack them into your belly. You haven't the things to do it with inside this."

He gave the bishop's head a little shake and relinquished it.

He began to argue as an elder brother might.

"Isn't it enough for you to know something of the God that comes down to the human scale, who has been born on your planet and arisen out of Man, who is Man and God, your leader? He's more than enough to fill your mind and use up every faculty of your being. He is courage, he is adventure, he is the King, he fights for you and with you against death...."

"And he is not infinite? He is not the Creator?" asked the bishop.

"So far as you are concerned, no," said the Angel.

"So far as I am concerned?"

"What have you to do with creation?"

And at that question it seemed that a great hand swept carelessly across the blackness of the farther sky, and smeared it with stars and suns and shining nebulas as a brush might smear dry paint across a canvas.

The bishop stared in front of him. Then slowly he bowed his head, and covered his face with his hands.

"And I have been in orders," he murmured; "I have been teaching people the only orthodox and perfect truth about these things for seven and twenty years."

And suddenly he was back in his gaiters and his apron and his shovel hat, a little black figure exceedingly small in a very great space....

(10)

It was a very great space indeed because it was all space, and the roof was the ebony of limitless space from which the stars swung flaming, held by invisible ties, and the soil beneath his feet was a dust of atoms and the little beginnings of life. And long before the bishop bared his face again, he knew that he was to see his God.

He looked up slowly, fearing to be dazzled.

But he was not dazzled. He knew that he saw only the likeness and bodying forth of a being inconceivable, of One who is greater than the earth and stars and yet no greater than a man. He saw a being for ever young, for ever beginning, for ever triumphant. The quality and texture of this being was a warm and living light

like the effulgence at sunrise; He was hope and courage like a sunlit morning in spring. He was adventure for ever, and His courage and adventure flowed into and submerged and possessed the being of the man who beheld him. And this presence of God stood over the bishop, and seemed to speak to him in a wordless speech.

He bade him surrender himself. He bade him come out upon the Adventure of Life, the great Adventure of the earth that will make the atoms our bond-slaves and subdue the stars, that will build up the white fires of ecstasy to submerge pain for ever, that will overcome death. In Him the spirit of creation had become incarnate, had joined itself to men, summoning men to Him, having need of them, having need of them, having need of their service, even as great kings and generals and leaders need and use men. For a moment, for an endless age, the bishop bowed himself in the being and glory of God, felt the glow of the divine courage and confidence in his marrow, felt himself one with God.

For a timeless interval....

Never had the bishop had so intense a sense of reality. It seemed that never before had he known anything real. He knew certainly that God was his King and master, and that his unworthy service could be acceptable to God. His mind embraced that idea with an absolute conviction that was also absolute happiness.

(11)

The thoughts and sensations of the bishop seemed to have lifted for a time clean away from the condition of time, and then through a vast orbit to be returning to that limitation.

He was aware presently that things were changing, that the

light was losing its diviner rays, that in some indescribable manner the glory and the assurance diminished.

The onset of the new phase was by imperceptible degrees. From a glowing, serene, and static realization of God, everything relapsed towards change and activity. He was in time again and things were happening, it was as if the quicksands of time poured by him, and it was as if God was passing away from him. He fell swiftly down from the heaven of self-forgetfulness to a grotesque, pathetic and earthly self-consciousness.

He became acutely aware of his episcopal livery. And that God was passing away from him.

It was as if God was passing, and as if the bishop was unable to rise up and follow him.

Then it was as if God had passed, and as if the bishop was in headlong pursuit of him and in a great terror lest he should be left behind. And he was surely being left behind.

He discovered that in some unaccountable way his gaiters were loose; most of their buttons seemed to have flown off, and his episcopal sash had slipped down about his feet. He was sorely impeded. He kept snatching at these things as he ran, in clumsy attempts to get them off.

At last he had to stop altogether and kneel down and fumble with the last obstinate button.

"Oh God!" he cried, "God my captain! Wait for me! Be patient with me!"

And as he did so God turned back and reached out his hand. It was indeed as if he stood and smiled. He stood and smiled as a

kind man might do; he dazzled and blinded his worshipper, and yet it was manifest that he had a hand a man might clasp.

Unspeakable love and joy irradiated the whole being of the bishop as he seized God's hand and clasped it desperately with both his own. It was as if his nerves and arteries and all his substance were inundated with golden light....

It was again as if he merged with God and became God....

CHAPTER THE SIXTH - EXEGETICAL

(1)

WITHOUT any sense of transition the bishop found himself seated in the little North Library of the Athenaeum club and staring at the bust of John Wilson Croker. He was sitting motionless and musing deeply. He was questioning with a cool and steady mind whether he had seen a vision or whether he had had a dream. If it had been a dream it had been an extraordinarily vivid and convincing dream. He still seemed to be in the presence of God, and it perplexed him not at all that he should also be in the presence of Croker. The feeling of mental rottenness and insecurity that had weakened his thought through the period of his illness, had gone. He was secure again within himself.

It did not seem to matter fundamentally whether it was an experience of things without or of things within him that had happened to him. It was clear to him that much that he had seen was at most expressive, that some was altogether symbolical. For example, there was that sudden absurd realization of his sash and gaiters, and his perception of them as encumbrances in his pursuit of God. But the setting and essential of the whole thing remained in his mind neither expressive nor symbolical, but as real and immediately perceived, and that was the presence and kingship of God. God was still with him and about him and over him and sustaining him. He was back again in his world and his ordinary life, in his clothing and his body and his club, but God had been made and remained altogether plain and manifest.

Whether an actual vision had made his conviction, or whether the conviction of his own subconscious mind had made the dream, seemed but a small matter beside the conviction that this was indeed the God he had desired and the God who must rule his life.

"The stuff? The stuff had little to do with it. It just cleared my head.... I have seen. I have seen really. I know."

(2)

For a long time as it seemed the bishop remained wrapped in clouds of luminous meditation. Dream or vision it did not matter; the essential thing was that he had made up his mind about God, he had found God. Moreover, he perceived that his theological perplexities had gone. God was higher and simpler and nearer than any theological God, than the God of the Three Creeds. Those creeds lay about in his mind now like garments flung aside, no trace nor suspicion of divinity sustained them any longer. And now--Now he would go out into the world.

The little Library of the Athenaeum has no visible door. He went to the book-masked entrance in the corner, and felt among the bookshelves for the hidden latch. Then he paused, held by a curious thought. What exactly was the intention of that symbolical struggle with his sash and gaiters, and why had they impeded his pursuit of God?

To what particularly significant action was he going out?

The Three Creeds were like garments flung aside. But he was still wearing the uniform of a priest in the service of those three creeds.

After a long interval he walked into the big reading-room. He ordered some tea and dry toast and butter, and sat down very thoughtfully in a corner. He was still sitting and thinking at half-past eight.

It may seem strange to the reader that this bishop who had been doubting and criticizing the church and his system of beliefs for four long years had never before faced the possibility of a severance from his ecclesiastical dignity. But he had grown up in the church, his life had been so entirely clerical and Anglican, that the widest separation he had hitherto been able to imagine from this past had left him still a bishop, heretical perhaps, innovating in the broadening of beliefs and the liberalizing of practice, defensive even as Chasters was defensive, but still with the palace and his dignities, differing in opinion rather than in any tangible reality from his previous self. For a bishop, disbelief in the Church is a far profounder scepticism than mere disbelief in God. God is unseen, and in daily things unfelt; but the Church is with the predestined bishop always. His concept of the extremest possible departure from orthodoxy had been something that Chasters had phrased as "a restatement of Christ." It was a new idea, an idea that had come with an immense effect of severance and novelty, that God could be other than the God of the Creed, could present himself to the imagination as a figure totally unlike the white, gentle, and compromising Redeemer of an Anglican's thought. That the bishop should treat the whole teaching of the church and the church itself as wrong, was an idea so new that it fell upon him now like a thunderbolt out of a cloudless sky. But here, clear in his mind now, was a feeling, amounting to conviction, that it was the purpose and gesture of the true God that he should come right out of the church and all his professions.

And in the first glow of his vision he felt this gesture imperative. He must step right out.... Whither? how? And when?

To begin with it seemed to him that an immediate renunciation was demanded. But it was a momentous step. He wanted to think. And to go on thinking. Rather than to act precipitately. Although the imperative seemed absolute, some delaying and arresting

instinct insisted that he must "think" If he went back to Princhester, the everyday duties of his position would confront him at once with an effect of a definite challenge. He decided to take one of the Reform club bedrooms for two or three days, and wire to Princhester that he was "unavoidably delayed in town," without further explanations. Then perhaps this inhibitory force would give way.

It did not, however, give way. His mind sat down for two days in a blank amazement at the course before him, and at the end of that time this reasonless and formless institution was as strong as ever. During that time, except for some incidental exchanges at his clubs, he talked to no one. At first he did not want to talk to any one. He remained mentally and practically active, with a still intensely vivid sense that God, the true God, stood watching him and waiting for him to follow. And to follow meant slipping right out of all the world he had ever known. To thrust his foot right over the edge of a cliff would scarcely have demanded more from the bishop's store of resolution. He stood on the very verge. The chief secretion of his mind was a shadowy experiment or so in explanation of why he did not follow.

(3)

Insensibly the extreme vividness of his sense of God's nearness decreased. But he still retained a persuasion of the reality of an immediate listener waiting, and of the need of satisfying him.

On the third day he found his mind still further changed. He no longer felt that God was in Pall Mall or St. James's Park, whither he resorted to walk and muse. He felt now that God was somewhere about the horizon....

He felt too no longer that he thought straight into the mind of

God. He thought now of what he would presently say to God. He turned over and rehearsed phrases. With that came a desire to try them first on some other hearer. And from that to the attentive head of Lady Sunderbund, prettily bent towards him, was no great leap. She would understand, if any one could understand, the great change that had happened in his mind.

He found her address in the telephone book. She could be quite alone to him if he wouldn't mind "just me." It was, he said, exactly what he desired.

But when he got to her great airy flat overlooking Hyde Park, with its Omega Workshop furniture and its arresting decoration, he was not so sure whether this encounter was so exactly the thing he had desired as he had supposed.

The world had become opaque and real again as he walked up St. James's Street and past the Ritz. He had a feeling that he was taking an afternoon off from God. The adventurous modernity of the room in which he waited intensified that. One whole white wall was devoted to a small picture by Wyndham Lewis. It was like a picture of an earthquake in a city of aniline pink and grey and keen green cardboard, and he wished it had never existed.

He turned his back upon it and stared out of the window over the trees and greenery. The balcony was decorated with white and pink geraniums in pots painted black and gold, and the railings of the balcony were black and gold with crimson shape like squares wildly out of drawing.

Lady Sunderbund kept him waiting perhaps five minutes. Then she came sailing in to him.

She was dressed in a way and moved across the room in a way that was more reminiscent of Botticelli's Spring than ever--

only with a kind of superadded stiffish polonaise of lace--and he did not want to be reminded of Botticelli's Spring or wonder why she had taken to stiff lace polonaises. He did not enquire whether he had met Lady Sunderbund to better advantage at Mrs. Garstein Fellows' or whether his memory had overrated her or whether anything had happened to his standard of taste, but his feeling now was decidedly one of disappointment, and all the talk and self-examination he had promised himself seemed to wither and hide away within him. For a time he talked of her view, and then admired her room and its arrangement, which he thought really were quite unbecomingly flippant and undignified for a room. Then came the black tea-things on their orange tray, and he searched in his mind for small talk to sustain their interview.

But he had already betrayed his disposition to "go on with our talk" in his telephone enquiry, and Lady Sunderbund, perceiving his shyness, began to make openings for him, at first just little hinting openings, and then larger and larger ones, until at last one got him.

"I'm so glad," she said, "to see you again. I'm so glad to go on with our talk. I've thought about it and thought about it."

She beamed at him happily.

"I've thought ova ev'y wo'd you said," she went on, when she had finished conveying her pretty bliss to him. "I've been so helped by thinking the k'eeds are symbols. And all you said. And I've felt time after time, you couldn't stay whe' you we'. That what you we' saying to me, would have to be said 'ight out."

That brought him in. He could not very well evade that opening without incivility. After all he had asked to see her, and it was a foolish thing to let little decorative accidentals put him off his friendly purpose. A woman may have flower-pots painted gold

with black checkers and still be deeply understanding. He determined to tell her what was in his mind. But he found something barred him from telling that he had had an actual vision of God. It was as if that had been a private and confidential meeting. It wasn't, he felt, for him either to boast a privilege or tell others of things that God had not chosen to show them.

"Since I saw you," he said, "I have thought a great deal--of the subject of our conversation."

"I have been t'ying to think," she said in a confirmatory tone, as if she had co-operated.

"My faith in God grows," he said.

She glowed. Her lips fell apart. She flamed attention.

"But it grows less like the faith of the church, less and less. I was born and trained in Anglicanism, and it is with a sort of astonishment I find myself passing now out of every sort of Catholicism--seeing it from the outside...."

"Just as one might see Buddhism," she supplied.

"And yet feeling nearer Ä infinitely nearer to God," he said.

"Yes," she panted; "yes."

"I thought if one went out, one went out just to doubt and darkness."

"And you don't?"

"No."

"You have gone at one step to a new 'iligion!"

He stared for a moment at the phrase.

"To religion," he said.

"It is so wondyful," she said, with her hands straight down upon the couch upon which she was sitting, and leaning forward at him, so as to seem almost as much out of drawing as a modern picture.

"It seems," he reflected; "--as if it were a natural thing."

She came back to earth very slowly. She turned to the tea-things with hushed and solemn movements as though she administered a ceremony of peculiar significance. The bishop too rose slowly out of the profundity of his confession. "No sugar please," he said, arresting the lump in mid air.

It was only when they were embarked upon cups of tea and had a little refreshed themselves, that she carried the talk further.

"Does it mean that you must leave the church?" she asked.

"It seemed so at first," he said. "But now I do not know. I do not know what I ought to do."

She awaited his next thought.

"It is as if one had lived in a room all one's life and thought it the world--and then suddenly walked out through a door and discovered the sea and the mountains and stars. So it was with me and the Anglican Church. It seems so extraordinary now--and it would have seemed the most natural thing a year ago--to think

that I ever believed that the Anglican Compromise was the final truth of religion, that nothing more until the end of the world could ever be known that Cosmo Gordon Lang did not know, that there could be no conception of God and his quality that Randall Davidson did not possess."

He paused.

"I did," he said.

"I did," she responded with round blue eyes of wonder.

"At the utmost the Church of England is a tabernacle on a road."

"A 'oad that goes whe'?" she rhetorized.

"Exactly," said the bishop, and put down his cup.

"You see, my dear Lady Sunderbund," he resumed, "I am exactly in the same position of that man at the door."

She quoted aptly and softly: "The wo'ld was all befo' them whe' to choose."

He was struck by the aptness of the words.

"I feel I have to come right out into the bare truth. What exactly then do I become? Do I lose my priestly function because I discover how great God is? But what am I to do?"

He opened a new layer of his thoughts to her.

"There is a saying," he remarked, "once a priest, always a priest. I cannot imagine myself as other than what I am."

"But o'thodox no maw," she said.

"Orthodox--self-satisfied, no longer. A priest who seeks, an exploring priest."

"In a Chu'ch of P'og'ess and B'othe'hood," she carried him on.

"At any rate, in a progressive and learning church."

She flashed and glowed assent.

"I have been haunted," he said, "by those words spoken at Athens. 'Whom therefore ye ignorantly worship, Him declare I unto you.' That comes to me with an effect of--guidance is an old-fashioned word--shall I say suggestion? To stand by the altar bearing strange names and ancient symbols, speaking plainly to all mankind of the one true God--!"

(4)

He did not get much beyond this point at the time, though he remained talking with Lady Sunderbund for nearly an hour longer. The rest was merely a beating out of what had already been said. But insensibly she renewed her original charm, and as he became accustomed to her he forgot a certain artificiality in her manner and the extreme modernity of her costume and furniture. She was a wonderful listener; nobody else could have helped him to expression in quite the same way, and when he left her he felt that now he was capable of stating his case in a coherent and acceptable form to almost any intelligent hearer. He had a point of view now that was no longer embarrassed by the immediate golden presence of God; he was no longer dazzled nor ecstatic; his problem had diminished to the scale of any other great human

problem, to the scale of political problems and problems of integrity and moral principle, problems about which there is no such urgency as there is about a house on fire, for example.

And now the desire for expression was running strong. He wanted to state his situation; if he did not state he would have to act; and as he walked back to the club dinner he turned over possible interlocutors in his thoughts. Lord Rampound sat with him at dinner, and he came near broaching the subject with him. But Lord Rampound that evening had that morbid running of bluish legal anecdotes which is so common an affliction with lawyers, and theology sinks and dies in that turbid stream.

But as he lay in bed that night he thought of his old friend and helper Bishop Likeman, and it was borne in upon him that he should consult him. And this he did next day.

Since the days when the bishop had been only plain Mr. Scrope, the youngest and most helpful of Likeman's historical band of curates, their friendship had continued. Likeman had been a second father to him; in particular his tact and helpfulness had shone during those days of doubt and anxiety when dear old Queen Victoria, God's representative on earth, had obstinately refused, at the eleventh hour, to make him a bishop. She had those pigheaded fits, and she was touchy about the bishops. She had liked Scrope on account of the excellence of his German pronunciation, but she had been irritated by newspaper paragraphs --nobody could ever find out who wrote them and nobody could ever find out who showed them to the old lady--anticipating his elevation. She had gone very red in the face and stiffened in the Guelphic manner whenever Scrope was mentioned, and so a rich harvest of spiritual life had remained untilled for some months. Likeman had brought her round.

It seemed arguable that Scrope owed some explanation to Likeman

before he came to any open breach with the Establishment.

He found Likeman perceptibly older and more shrivelled on account of the war, but still as sweet and lucid and subtle as ever. His voice sounded more than ever like a kind old woman's.

He sat buried in his cushions--for "nowadays I must save every scrap of vitality"--and for a time contented himself with drawing out his visitor's story.

Of course, one does not talk to Likeman of visions or intuitions. "I am disturbed, I find myself getting out of touch;" that was the bishop's tone.

Occasionally Likeman nodded slowly, as a physician might do at the recital of familiar symptoms. "Yes," he said, "I have been through most of this.... A little different in the inessentials.... How clear you are!"

"You leave our stupid old Trinities--as I left them long ago," said old Likeman, with his lean hand feeling and clawing at the arm of his chair.

"But--!"

The old man raised his hand and dropped it. "You go away from it all--straight as a line. I did. You take the wings of the morning and fly to the uttermost parts of the earth. And there you find--"

He held up a lean finger, and inclined it to tick off each point.

"Fate--which is God the Father, the Power of the Heart, which is God the Son, and that Light which comes in upon us from the

inaccessible Godhead, which is God the Holy Spirit."

"But I know of no God the Holy Spirit, and Fate is not God at all. I saw in my vision one sole God, uncrucified, militant--conquering and to conquer."

Old Likeman stared. "You saw!"

The Bishop of Princhester had not meant to go so far. But he stuck to his words. "As if I saw with my eyes. A God of light and courage."

"You have had visions, Scrope?"

"I seemed to see."

"No, you have just been dreaming dreams."

"But why should one not see?"

"See! The things of the spirit. These symbols as realities! These metaphors as men walking!"

"You talk like an agnostic."

"We are all agnostics. Our creeds are expressions of ourselves and our attitude and relationship to the unknown. The triune God is just the form of our need and disposition. I have always assumed that you took that for granted. Who has ever really seen or heard or felt God? God is neither of the senses nor of the mind; he is of the soul. You are realistic, you are materialistic...."

His voice expostulated.

The Bishop of Princhester reflected. The vision of God was far off among his memories now, and difficult to recall. But he said at last: "I believe there is a God and that he is as real a person as you or I. And he is not the theological God we set out before the world."

"Personification," said Likeman. "In the eighteenth century they used to draw beautiful female figures as Science and Mathematics. Young men have loved Science--and Freedom--as Pygmalion loved Galatea. Have it so if you will. Have a visible person for your Deity. But let me keep up my--spirituality."

"Your spirituality seems as thin as a mist. Do you really believe--anything?"

"Everything!" said Likeman emphatically, sitting up with a transitory vigour. "Everything we two have ever professed together. I believe that the creeds of my church do express all that can possibly be expressed in the relationship of--That "--he made a comprehensive gesture with a twist of his hand upon its wrist--"to the human soul. I believe that they express it as well as the human mind can express it. Where they seem to be contradictory or absurd, it is merely that the mystery is paradoxical. I believe that the story of the Fall and of the Redemption is a complete symbol, that to add to it or to subtract from it or to alter it is to diminish its truth; if it seems incredible at this point or that, then simply I admit my own mental defect. And I believe in our Church, Scrope, as the embodied truth of religion, the divine instrument in human affairs. I believe in the security of its tradition, in the complete and entire soundness of its teaching, in its essential authority and divinity."

He paused, and put his head a little on one side and smiled sweetly. "And now can you say I do not believe?"

"But the historical Christ, the man Jesus?"

"A life may be a metaphor. Why not? Yes, I believe it all. All."

The Bishop of Princhester was staggered by this complete acceptance. "I see you believe all you profess," he said, and remained for a moment or so rallying his forces.

"Your vision--if it was a vision--I put it to you, was just some single aspect of divinity," said Likeman. "We make a mistake in supposing that Heresy has no truth in it. Most heresies are only a disproportionate apprehension of some essential truth. Most heretics are men who have suddenly caught a glimpse through the veil of some particular verity.... They are dazzled by that aspect. All the rest has vanished.... They are obsessed. You are obsessed clearly by this discovery of the militancy of God. God the Son--as Hero. And you want to go out to the simple worship of that one aspect. You want to go out to a Dissenter's tent in the wilderness, instead of staying in the Great Temple of the Ages."

Was that true?

For some moments it sounded true.

The Bishop of Princhester sat frowning and looking at that. Very far away was the vision now of that golden Captain who bade him come. Then at a thought the bishop smiled.

"The Great Temple of the Ages," he repeated. "But do you remember the trouble we had when the little old Queen was so pigheaded?"

"Oh! I remember, I remember," said Likeman, smiling with unshaken confidence. "Why not?"

"For sixty years all we bishops in what you call the Great Temple of the Ages, were appointed and bullied and kept in our places by that pink irascible bit of dignity. I remember how at the time I didn't dare betray my boiling indignation even to you --I scarcely dared admit it to myself...."

He paused.

"It doesn't matter at all," and old Likeman waved it aside.

"Not at all," he confirmed, waving again.

"I spoke of the whole church of Christ on earth," he went on. "These things, these Victorias and Edwards and so on, are temporary accidents--just as the severance of an Anglican from a Roman communion and a Greek orthodox communion are temporary accidents. You will remark that wise men in all ages have been able to surmount the difficulty of these things. Why? Because they knew that in spite of all these splits and irregularities and defacements--like the cracks and crannies and lichens on a cathedral wall--the building held good, that it was shelter and security. There is no other shelter and security. And so I come to your problem. Suppose it is true that you have this incidental vision of the militant aspect of God, and he isn't, as you see him now that is,--he isn't like the Trinity, he isn't like the Creed, he doesn't seem to be related to the Church, then comes the question, are you going out for that? And whither do you go if you do go out? The Church remains. We alter doctrines not by changing the words but by shifting the accent. We can underÄaccentuate below the threshold of consciousness."

"But can we?"

"We do. Where's Hell now? Eighty years ago it warmed the whole Church. It was--as some atheist or other put it the other day --the central heating of the soul. But never mind that point now. Consider the essential question, the question of breaking with the church. Ask yourself, whither would you go? To become an oddity! A Dissenter. A Negative. Self emasculated. The spirit that denies. You would just go out. You would just cease to serve Religion. That would be all. You wouldn't do anything. The Church would go on; everything else would go on. Only you would be lost in the outer wilderness.

"But then--"

Old Likeman leant forward and pointed a bony finger. "Stay in the Church and modify it. Bring this new light of yours to the altar."

There was a little pause.

"No man," the bishop thought aloud, "putteth new wine into old bottles."

Old Likeman began to speak and had a fit of coughing. "Some of these texts--whuff, whuff--like a conjuror's hat--whuff--make 'em--fit anything."

A man-servant appeared and handed a silver box of lozenges into which the old bishop dipped with a trembling hand.

"Tricks of that sort," he said, "won't do, Scrope--among professionals.

"And besides," he was inspired; "true religion is old wine--as old as the soul.

"You are a bishop in the Church of Christ on Earth," he summed it up. "And you want to become a detached and wandering Ancient Mariner from your shipwreck of faith with something to explain--that nobody wants to hear. You are going out I suppose you have means?"

The old man awaited the answer to his abrupt enquiry with a handful of lozenges.

"No," said the Bishop of Princhester, "practically--I haven't."

"My dear boy!" it was as if they were once more rector and curate. "My dear brother! do you know what the value of an ex-bishop is in the ordinary labour market?"

"I have never thought of that."

"Evidently. You have a wife and children?"

"Five daughters."

"And your wife married you--I remember, she married you soon after you got that living in St. John's Wood. I suppose she took it for granted that you were fixed in an ecclesiastical career. That was implicit in the transaction."

"I haven't looked very much at that side of the matter yet," said the Bishop of Princhester.

"It shouldn't be a decisive factor," said Bishop Likeman, "not decisive. But it will weigh. It should weigh...."

The old man opened out fresh aspects of the case. His argument

was for delay, for deliberation. He went on to a wider set of considerations. A man who has held the position of a bishop for some years is, he held, no longer a free man in matters of opinion. He has become an official part of a great edifice which supports the faith of multitudes of simple and dependant believers. He has no right to indulge recklessly in intellectual and moral integrities. He may understand, but how is the flock to understand? He may get his own soul clear, but what will happen to them? He will just break away their supports, astonish them, puzzle them, distress them, deprive them of confidence, convince them of nothing.

"Intellectual egotism may be as grave a sin," said Bishop Likeman, "as physical selfishness.

"Assuming even that you are absolutely right," said Bishop Likeman, "aren't you still rather in the position of a man who insists upon Swedish exercises and a strengthening dietary on a raft?"

"I think you have made out a case for delay," said his hearer.

"Three months."

The Bishop of Princhester conceded three months.

"Including every sort of service. Because, after all, even supposing it is damnable to repeat prayers and creeds you do not believe in, and administer sacraments you think superstition, nobody can be damned but yourself. On the other hand if you express doubts that are not yet perfectly digested--you experiment with the souls of others...."

(5)

The bishop found much to ponder in his old friend's counsels. They were discursive and many-fronted, and whenever he seemed to be penetrating or defeating the particular considerations under examination the others in the background had a way of appearing invincible. He had a strong persuasion that Likeman was wrong--and unanswerable. And the true God now was no more than the memory of a very vividly realized idea. It was clear to the bishop that he was no longer a churchman or in the generally accepted sense of the word a Christian, and that he was bound to come out of the church. But all sense of urgency had gone. It was a matter demanding deliberation and very great consideration for others.

He took no more of Dale's stuff because he felt bodily sound and slept well. And he was now a little shy of this potent fluid. He went down to Princhester the next day, for his compromise of an interval of three months made it seem possible to face his episcopal routine again. It was only when he was back in his own palace that the full weight of his domestic responsibilities in the discussion of the course he had to take, became apparent.

Lady Ella met him with affection and solicitude.

"I was tired and mentally fagged," he said. "A day or so in London had an effect of change."

She agreed that he looked much better, and remained for a moment or so scrutinizing him with the faint anxiety of one resolved to be completely helpful.

He regarded her with a renewed sense of her grace and dignity and kindness. She was wearing a grey dress of soft silky material, touched with blue and covered with what seemed to him very rich and beautiful lace; her hair flowed back very

graciously from her broad brow, and about her wrist and neck were delicate lines of gold. She seemed tremendously at home and right just where she was, in that big hospitable room, cultured but Anglican, without pretensions or novelties, with a glow of bound books, with the grand piano that Miriam, his third daughter, was beginning to play so well, with the tea equipage of shining silver and fine porcelain.

He sat down contentedly in the low armchair beside her.

It wasn't a setting that one would rashly destroy....

And that evening at dinner this sense of his home as a complex of finely adjusted things not to be rashly disturbed was still more in the mind of the bishop. At dinner he had all his domesticities about him. It was the family time, from eight until ten, at which latter hour he would usually go back from the drawing-room to his study. He surveyed the table. Eleanor was at home for a few days, looking a little thin and bright but very keen and happy. She had taken a first in the first part of the Moral Science Tripos, and she was working hard now for part two. Clementina was to go back to Newnham with her next September. She aspired to history. Miriam's bent was musical. She and Phoebe and Daphne and Clementina were under the care of skilful Mademoiselle Lafarge, most tactful of Protestant French-women, Protestant and yet not too Protestant, one of those rare French Protestants in whom a touch of Bergson and the Pasteur Monod

"scarce suspected, animates the whole."

And also they had lessons, so high are our modern standards of education, from Mr. Blent, a brilliant young mathematician in orders, who sat now next to Lady Ella. Mr. Whippham, the chaplain, was at the bishop's right hand, ready for any chance of

making arrangements to clear off the small arrears of duty the little holiday in London had accumulated. The bishop surveyed all these bright young people between himself and the calm beauty of his wife. He spoke first to one and then another upon the things that interested them. It rejoiced his heart to be able to give them education and opportunity, it pleased him to see them in clothes that he knew were none the less expensive because of their complete simplicity. Miriam and Mr. Blent wrangled pleasantly about Debussy, and old Dunk waited as though in orders of some rare and special sort that qualified him for this service.

All these people, the bishop reflected, counted upon him that this would go on....

Eleanor was answering some question of her mother's. They were so oddly alike and so curiously different, and both in their several ways so fine. Eleanor was dark like his own mother. Perhaps she did a little lack Lady Ella's fine reserves; she could express more, she could feel more acutely, she might easily be very unhappy or very happy....

All these people counted on him. It was indeed acutely true, as Likeman had said, that any sudden breach with his position would be a breach of faith--so far as they were concerned.

And just then his eye fell upon the epergne, a very old and beautiful piece of silver, that graced the dinner-table. It had been given him, together with an episcopal ring, by his curates and choristers at the Church of the Holy Innocents, when he became bishop of Pinner. When they gave it him, had any one of them dreamt that some day he might be moved to strike an ungracious blow at the mother church that had reared them all?

It was his custom to join the family in the drawing-room after

dinner. To-night he was a little delayed by Whippham, with some trivialities about next month's confirmations in Pringle and Princhester. When he came in he found Miriam playing, and playing very beautifully one of those later sonatas of Beethoven, he could never remember whether it was Of. 109 or Of. 111, but he knew that he liked it very much; it was solemn and sombre with phases of indescribable sweetness--while Clementina, Daphne and Mademoiselle Lafarge went on with their war knitting and Phoebe and Mr. Blent bent their brows over chess. Eleanor was reading the evening paper. Lady Ella sat on a high chair by the coffee things, and he stood in the doorway surveying the peaceful scene for a moment or so, before he went across the room and sat down on the couch close to her.

"You look tired," she whispered softly.

"Worries."

"That Chasters case?"

"Things developing out of that. I must tell you later." It would be, he felt, a good way of breaking the matter to her.

"Is the Chasters case coming on again, Daddy?" asked Eleanor.

He nodded.

"It's a pity," she said.

"What ?

"That he can't be left alone."

"It's Sir Reginald Phipps. The Church would be much more tolerant if it wasn't for the House of Laymen. But they--they

feel they must do something."

He seized the opportunity of the music ceasing to get away from the subject. "Miriam dear," he asked, raising his voice; "is that 109 or 111? I can never tell."

"That is always 111, Daddy," said Miriam. "It's the other one is 109." And then evidently feeling that she had been pert: "Would you like me to play you 109, Daddy?"

"I should love it, my dear." And he leant back and prepared to listen in such a thorough way that Eleanor would have no chance of discussing the Chasters' heresies. But this was interrupted by the consummation of the coffee, and Mr. Blent, breaking a long silence with "Mate in three, if I'm not mistaken," leapt to his feet to be of service. Eleanor, with the rough seriousness of youth, would not leave the Chasters case alone.

"But need you take action against Mr. Chasters?" she asked at once.

"It's a very complicated subject, my dear," he said.

"His arguments?"

"The practical considerations."

"But what are practical considerations in such a case?"

"That's a post-graduate subject, Norah," her father said with a smile and a sigh.

"But," began Eleanor, gathering fresh forces.

"Daddy is tired," Lady Ella intervened, patting him on the

head.

"Oh, terribly!--of that," he said, and so escaped Eleanor for the evening.

But he knew that before very long he would have to tell his wife of the changes that hung over their lives; it would be shabby to let the avalanche fall without giving the longest possible warning; and before they parted that night he took her hands in his and said: "There is much I have to tell you, dear. Things change, the whole world changes. The church must not live in a dream...."

"No," she whispered. "I hope you will sleep to-night," and held up her grave sweet face to be kissed.

(6)

But he did not sleep perfectly that night.

He did not sleep indeed very badly, but he lay for some time thinking, thinking not onward but as if he pressed his mind against very strong barriers that had closed again. His vision of God which had filled the heavens, had become now gem-like, a minute, hard, clear-cut conviction in his mind that he had to disentangle himself from the enormous complications of symbolism and statement and organization and misunderstanding in the church and achieve again a simple and living worship of a simple and living God. Likeman had puzzled and silenced him, only upon reflection to convince him that amidst such intricacies of explanation the spirit cannot live. Creeds may be symbolical, but symbols must not prevaricate. A church that can symbolize everything and anything means nothing.

It followed from this that he ought to leave the church. But there came the other side of this perplexing situation. His feelings as he lay in his bed were exactly like those one has in a dream when one wishes to run or leap or shout and one can achieve no movement, no sound. He could not conceive how he could possibly leave the church.

His wife became as it were the representative of all that held him helpless. She and he had never kept secret from one another any plan of action, any motive, that affected the other. It was clear to him that any movement towards the disavowal of doctrinal Christianity and the renunciation of his see must be first discussed with her. He must tell her before he told the world.

And he could not imagine his telling her except as an incredibly shattering act.

So he left things from day to day, and went about his episcopal routines. He preached and delivered addresses in such phrases as he knew people expected, and wondered profoundly why it was that it should be impossible for him to discuss theological points with Lady Ella. And one afternoon he went for a walk with Eleanor along the banks of the Prin, and found himself, in response to certain openings of hers, talking to her in almost exactly the same terms as Likeman had used to him.

Then suddenly the problem of this theological eclaireissement was complicated in an unexpected fashion.

He had just been taking his Every Second Thursday Talk with Diocesan Men Helpers. He had been trying to be plain and simple upon the needless narrowness of enthusiastic laymen. He was still in the Bishop Andrews cap and purple cassock he affected on these occasions; the Men Helpers loved purple; and he was disentangling himself from two or three resolute bores--for our loyal laymen

can be at times quite superlative bores--when Miriam came to him.

"Mummy says, 'Come to the drawing-room if you can.' There is a Lady Sunderbund who seems particularly to want to see you."

He hesitated for a moment, and then decided that this was a conversation he ought to control.

He found Lady Sunderbund looking very tall and radiantly beautiful in a sheathlike dress of bright crimson trimmed with snow-white fur and a white fur toque. She held out a long white-gloved hand to him and cried in a tone of comradeship and profound understanding: "I've come, Bishop!"

"You've come to see me?" he said without any sincerity in his polite pleasure.

"I've come to P'inchesta to stay!" she cried with a bright triumphant rising note.

She evidently considered Lady Ella a mere conversational stop-gap, to be dropped now that the real business could be commenced. She turned her pretty profile to that lady, and obliged the bishop with a compact summary of all that had preceded his arrival. "I have been telling Lady Ella," she said, "I've taken a house, fu'nitua and all! Hea. In P'inchesta! I've made up my mind to sit unda you--as they say in Clapham. I've come 'ight down he' fo' good. I've taken a little house--oh! a sweet little house that will be all over 'oses next month. I'm living f'om 'oom to 'oom and having the othas done up. It's in that little quiet st'eet behind you' ga'den wall. And he' I am!"

"Is it the old doctor's house?" asked Lady Ella.

"Was it an old docta?" cried Lady Sunderbund. "How delightful! And now I shall be a patient!"

She concentrated upon the bishop.

"Oh, I've been thinking all the time of all the things you told me. Ova and ova. It's all so wondrous and so--so like a Gate Daw opening. New light. As if it was all just beginning."

She clasped her hands.

The bishop felt that there were a great number of points to this situation, and that it was extremely difficult to grasp them all at once. But one that seemed of supreme importance to his whirling intelligence was that Lady Ella should not know that he had gone to relieve his soul by talking to Lady Sunderbund in London. It had never occurred to him at the time that there was any shadow of disloyalty to Lady Ella in his going to Lady Sunderbund, but now he realized that this was a thing that would annoy Lady Ella extremely. The conversation had in the first place to be kept away from that. And in the second place it had to be kept away from the abrupt exploitation of the new theological developments.

He felt that something of the general tension would be relieved if they could all three be got to sit down.

"I've been talking for just upon two hours," he said to Lady Ella. "It's good to see the water boiling for tea."

He put a chair for Lady Sunderbund to the right of Lady Ella, got her into it by infusing an ecclesiastical insistence into his manner, and then went and sat upon the music-stool on his wife's left, so as to establish a screen of tea-things and cakes and so forth against her more intimate enthusiasm. Meanwhile he began to

see his way clearer and to develop his line.

"Well, Lady Sunderbund," he said, "I can assure you that I think you will be no small addition to the church life of Princhester. But I warn you this is a hard-working and exacting diocese. We shall take your money, all we can get of it, we shall take your time, we shall work you hard."

"Wo'k me hard!" cried Lady Sunderbund with passion.

"We will, we will," said the bishop in a tone that ignored her passionate note.

"I am sure Lady Sunderbund will be a great help to us," said Lady Ella. "We want brightening. There's a dinginess...."

Lady Sunderbund beamed an acknowledgment. "I shall exact a 'eturn," she said. "I don't mind wo'king, but I shall wo'k like the poo' students in the Middle Ages did, to get my teaching. I've got my own soul to save as well as help saving othas. Since oua last talk--"

She found the bishop handing her bread and butter. For a time the bishop fought a delaying action with the tea-things, while he sought eagerly and vainly in his mind for some good practical topic in which he could entangle and suppress Lady Sunderbund's enthusiasms. From this she broke away by turning suddenly to Lady Ella.

"Youa husband's views," she said, "we'e a 'eal 'evelation to me. It was like not being blind--all at once."

Lady Ella was always pleased to hear her husband praised. Her colour brightened a little. "They seem very ordinary views," she said modestly.

"You share them?" cried Lady Sunderbund.

"But of course," said Lady Ella.

"Wondrous!" cried Lady Sunderbund.

"Tell me, Lady Sunderbund," said the bishop, "are you going to alter the outer appearance of the old doctor's house?" And found that at last he had discovered the saving topic.

"Hardly at all," she said. "I shall just have it pointed white and do the door--I'm not sure how I shall do the door. Whether I shall do the door gold or a very, very 'itch blue."

For a time she and Lady Ella, to whom these ideas were novel, discussed the animation of grey and sombre towns by house painting. In such matter Lady Sunderbund had a Russian mind. "I can't bear grey," she said. "Not in my surroundings, not in my k'eed, nowhere." She turned to the bishop. "If I had my way I would paint your cathedral inside and out."

"They used to be painted," said the bishop. "I don't know if you have seen Ely. There the old painting has been largely restored...."

From that to the end there was no real danger, and at last the bishop found himself alone with his wife again.

"Remarkable person," he said tentatively. "I never met any one whose faults were more visible. I met her at Wimbush House."

He glanced at his watch.

"What did she mean," asked Lady Ella abruptly, "by talking of

your new views? And about revelations?"

"She probably misunderstood something I said at the Garstein Fellows'," he said. "She has rather a leaping mind."

He turned to the window, looked at his nails, and appeared to be suddenly reminded of duties elsewhere....

It was chiefly manifest to him that the difficulties in explaining the changes of his outlook to Lady Ella had now increased enormously.

(7)

A day or so after Lady Sunderbund's arrival in Princhester the bishop had a letter from Likeman. The old man was manifestly in doubt about the effect of their recent conversation.

"My dear Scrope," it began. "I find myself thinking continually about our interview and the difficulties you laid bare so frankly to me. We touched upon many things in that talk, and I find myself full of afterthoughts, and not perfectly sure either quite of what I said or of what I failed to say. I feel that in many ways I was not perhaps so clear and convincing as the justice of my case should have made me, and you are one of my own particular little company, you were one of the best workers in that band of good workers, your life and your career are very much my concern. I know you will forgive me if I still mingle something of the paternal with my fraternal admonitions. I watched you closely. I have still my old diaries of the St. Matthew's days, and I have been looking at them to remind me of what you once were. It was my custom to note my early impressions of all the men who worked with me, because I have a firm belief in the soundness of first impressions and the considerable risk one runs of having them

obscured by the accidents and habitations of constant intercourse. I found that quite early in your days at St. Matthew's I wrote against your name 'enthusiastic, but a saving delicacy.' After all our life-long friendship I would not write anything truer. I would say of you to-day, 'This man might have been a revivalist, if he were not a gentleman.' There is the enthusiast, there is the revivalist, in you. It seems to me that the stresses and questions of this great crisis in the world's history have brought it nearer to the surface than I had ever expected it to come.

"I quite understand and I sympathize with your impatience with the church at the present time; we present a spectacle of pompous insignificance hard to bear with. We are doing very little, and we are giving ourselves preposterous airs. There seems to be an opinion abroad that in some quasi-automatic way the country is going to collapse after the war into the arms of the church and the High Tories; a possibility I don't accept for a moment. Why should it? These forcible-feeble reactionaries are much more likely to explode a revolution that will disestablish us. And I quite understand your theological difficulties--quite. The creeds, if their entire symbolism is for a moment forgotten, if they are taken as opaque statements of fact, are inconsistent, incredible. So incredible that no one believes them; not even the most devout. The utmost they do is to avert their minds--reverentially. Credo quia impossibile. That is offensive to a Western mind. I can quite understand the disposition to cry out at such things, 'This is not the Church of God!'--to run out from it--

"You have some dream, I suspect, of a dramatic dissidence.

"Now, my dear Brother and erstwhile pupil, I ask you not to do this thing. Wait, I implore you. Give me--and some others, a little time. I have your promise for three months, but even after

that, I ask you to wait. Let the reform come from within the church. The church is something more than either its creeds, its clergy, or its laymen. Look at your cathedral rising out of and dominating Princhester. It stands not simply for Athanasius; it stands but incidentally for Athanasius; it stands for all religion. Within that fabric--let me be as frank here as in our private conversation--doctrine has altered again and again. To-day two distinct religions worship there side by side; one that fades and one that grows brighter. There is the old quasi-materialistic belief of the barbarians, the belief in such things, for example, as that Christ the physical Son of God descended into hell and stayed there, seeing the sights I suppose like any tourist and being treated with diplomatic civilities for three terrestrial days; and on the other hand there is the truly spiritual belief that you and I share, which is absolutely intolerant of such grotesque ideas. My argument to you is that the new faith, the clearer vision, gains ground; that the only thing that can prevent or delay the church from being altogether possessed by what you call and I admit is, the true God, is that such men as yourself, as the light breaks upon you, should be hasty and leave the church. You see my point of view, do you not? It is not one that has been assumed for our discussion; it is one I came to long years ago, that I was already feeling my way to in my St. Matthew's Lenton sermons.

"A word for your private ear. I am working. I cannot tell you fully because I am not working alone. But there are movements afoot in which I hope very shortly to be able to ask you to share. That much at least I may say at this stage. Obscure but very powerful influences are at work for the liberalizing of the church, for release from many narrow limitations, for the establishment of a modus vivendi with the nonconformist and dissentient bodies in Britain and America, and with the churches of the East. But of that no more now.

"And in conclusion, my dear Scrope, let me insist again upon the eternal persistence of the essential Religious Fact:

(Greek Letters Here)

(Rev. i. 18. "Fear not. I am the First and Last thing, the Living thing.")

And these promises which, even if we are not to take them as promises in the exact sense in which, let us say, the payment of five sovereigns is promised by a five-pound note, are yet assertions of practically inevitable veracity:

(Greek Letters Here)

(Phil. i. 6. "He who began... will perfect."
Eph. v. 14. "He will illuminate.")

The old man had written his Greek tags in shakily resolute capitals. It was his custom always to quote the Greek Testament in his letters, never the English version. It is a practice not uncommon with the more scholarly of our bishops. It is as if some eminent scientific man were to insist upon writing H₂O instead of "water," and "sodium chloride" instead of "table salt" in his private correspondence. Or upon hanging up a stuffed crocodile in his hall to give the place tone. The Bishop of Princhester construed these brief dicta without serious exertion, he found them very congenial texts, but there were insuperable difficulties in the problem why Likeman should suppose they had the slightest weight upon his side of their discussion. The more he thought the less they seemed to be on Likeman's side, until at last they began to take on a complexion entirely opposed to the

old man's insidious arguments, until indeed they began to bear the extraordinary interpretation of a special message, unwittingly delivered.

(8)

The bishop was still thinking over this communication when he was interrupted by Lady Ella. She came with a letter in her hand to ask him whether she might send five-and-twenty pounds to a poor cousin of his, a teacher in a girls' school, who had been incapacitated from work by a dislocation of the cartilage of her knee. If she could go to that unorthodox but successful practitioner, Mr. Barker, the bone-setter, she was convinced she could be restored to efficiency. But she had no ready money. The bishop agreed without hesitation. His only doubt was the certainty of the cure, but upon that point Lady Ella was convinced; there had been a great experience in the Walshingham family.

"It is pleasant to be able to do things like this," said Lady Ella, standing over him when this matter was settled.

"Yes," the bishop agreed; "it is pleasant to be in a position to do things like this...."

CHAPTER THE SEVENTH - THE SECOND VISION

(1)

A MONTH later found the bishop's original state of perplexity and insomnia returned and intensified. He had done none of all the things that had seemed so manifestly needing to be done after his vision in the Athenaeum. All the relief and benefit of his experience in London had vanished out of his life. He was afraid of Dr. Dale's drug; he knew certainly that it would precipitate matters; and all his instincts in the state of moral enfeeblement to which he had relapsed, were to temporize.

Although he had said nothing further about his changed beliefs to Lady Ella, yet he perceived clearly that a shadow had fallen between them. She had a wife's extreme sensitiveness to fine shades of expression and bearing, and manifestly she knew that something was different. Meanwhile Lady Sunderbund had become a frequent worshipper in the cathedral, she was a figure as conspicuous in sombre Princhester as a bird of paradise would have been; common people stood outside her very very rich blue door on the chance of seeing her; she never missed an opportunity of hearing the bishop preach or speak, she wrote him several long and thoughtful letters with which he did not bother Lady Ella, she communicated persistently, and manifestly intended to become a very active worker in diocesan affairs.

It was inevitable that she and the bishop should meet and talk occasionally in the cathedral precincts, and it was inevitable that he should contrast the flexibility of her rapid and very responsive mind with a certain defensiveness, a stoniness, in the intellectual bearing of Lady Ella.

If it had been Lady Sunderbund he had had to explain to,

instead of Lady Ella, he could have explained a dozen times a day.

And since his mind was rehearsing explanations it was not unnatural they should overflow into this eagerly receptive channel, and that the less he told Lady Ella the fuller became his spiritual confidences to Lady Sunderbund.

She was clever in realizing that they were confidences and treating them as such, more particularly when it chanced that she and Lady Ella and the bishop found themselves in the same conversation.

She made great friends with Miriam, and initiated her by a whole collection of pretty costume plates into the mysteries of the "Ussian Ballet" and the works of Moussorgski and "Imsky Ko'zakof."

The bishop liked a certain religiosity in the texture of Moussorgski's music, but failed to see the "significance"--of many of the costumes.

(2)

It was on a Sunday night--the fourth Sunday after Easter--that the supreme crisis of the bishop's life began. He had had a feeling all day of extreme dulness and stupidity; he felt his ministrations unreal, his ceremonies absurd and undignified. In the night he became bleakly and painfully awake. His mind occupied itself at first chiefly with the tortuousness and weakness of his own character. Every day he perceived that the difficulty of telling Lady Ella of the change in his faith became more mountainous. And every day he procrastinated. If he had told her naturally and simply on the evening of his return from London

--before anything material intervened--everything would have been different, everything would have been simpler....

He groaned and rolled over in his bed.

There came upon him the acutest remorse and misery. For he saw that amidst these petty immediacies he had lost touch with God. The last month became incredible. He had seen God. He had touched God's hand. God had been given to him, and he had neglected the gift. He was still lost amidst the darkness and loneliness, the chaotic ends and mean shifts, of an Erastian world. For a month now and more, after a vision of God so vivid and real and reassuring that surely no saint nor prophet had ever had a better, he had made no more than vague responsive movements; he had allowed himself to be persuaded into an unreasonable and cowardly delay, and the fetters of association and usage and minor interests were as unbroken as they had been before ever the vision shone. Was it credible that there had ever been such a vision in a life so entirely dictated by immediacy and instinct as his? We are all creatures of the dark stream, we swim in needs and bodily impulses and small vanities; if ever and again a bubble of spiritual imaginativeness glows out of us, it breaks and leaves us where we were.

"Louse that I am!" he cried.

He still believed in God, without a shadow of doubt; he believed in the God that he had seen, the high courage, the golden intention, the light that had for a moment touched him. But what had he to do with God, he, the loiterer, the little thing?

He was little, he was funny. His prevarications with his wife, for example, were comic. There was no other word for him but "funny."

He rolled back again and lay staring.

"Who will deliver me from the body of this death?" What right has a little bishop in a purple stock and doeskin breeches, who hangs back in his palace from the very call of God, to a phrase so fine and tragic as "the body of this death?"

He was the most unreal thing in the universe. He was a base insect giving himself airs. What advantage has a bishop over the Praying Mantis, that cricket which apes the attitude of piety? Does he matter more--to God?

"To the God of the Universe, who can tell? To the God of man,--yes."

He sat up in bed struck by his own answer, and full of an indescribable hunger for God and an indescribable sense of his complete want of courage to make the one simple appeal that would satisfy that hunger. He tried to pray. "O God!" he cried, "forgive me! Take me!" It seemed to him that he was not really praying but only making believe to pray. It seemed to him that he was not really existing but only seeming to exist. He seemed to himself to be one with figures on a china plate, with figures painted on walls, with the flimsy imagined lives of men in stories of forgotten times. "O God!" he said, "O God," acting a gesture, mimicking appeal.

"Anaemic," he said, and was given an idea.

He got out of bed, he took his keys from the night-table at the bed head and went to his bureau.

He stood with Dale's tonic in his hand. He remained for some time holding it, and feeling a curious indisposition to go on

with the thing in his mind.

He turned at last with an effort. He carried the little phial to his bedside, and into the tumbler of his water-bottle he let the drops fall, drop by drop, until he had counted twenty. Then holding it to the bulb of his reading lamp he added the water and stood watching the slow pearly eddies in the mixture mingle into an opalescent uniformity. He replaced the water-bottle and stood with the glass in his hand. But he did not drink.

He was afraid.

He knew that he had only to drink and this world of confusion would grow transparent, would roll back and reveal the great simplicities behind. And he was afraid.

He was afraid of that greatness. He was afraid of the great imperatives that he knew would at once take hold of his life. He wanted to muddle on for just a little longer. He wanted to stay just where he was, in his familiar prison-house, with the key of escape in his hand. Before he took the last step into the very presence of truth, he would--think.

He put down the glass and lay down upon his bed....

(3)

He awoke in a mood of great depression out of a dream of wandering interminably in an endless building of innumerable pillars, pillars so vast and high that the ceiling was lost in darkness. By the scale of these pillars he felt himself scarcely larger than an ant. He was always alone in these wanderings, and always missing something that passed along distant passages, something desirable, something in the nature of a procession or

of a ceremony, something of which he was in futile pursuit, of which he heard faint echoes, something luminous of which he seemed at times to see the last fading reflection, across vast halls and wildernesses of shining pavement and through Cyclopaean archways. At last there was neither sound nor gleam, but the utmost solitude, and a darkness and silence and the uttermost profundity of sorrow....

It was bright day. Dunk had just come into the room with his tea, and the tumbler of Dr. Dale's tonic stood untouched upon the night-table. The bishop sat up in bed. He had missed his opportunity. To-day was a busy day, he knew.

"No," he said, as Dunk hesitated whether to remove or leave the tumbler. "Leave that."

Dunk found room for it upon the tea-tray, and vanished softly with the bishop's evening clothes.

The bishop remained motionless facing the day. There stood the draught of decision that he had lacked the decision even to touch.

From his bed he could just read the larger items that figured upon the engagement tablet which it was Whippham's business to fill over-night and place upon his table. He had two confirmation services, first the big one in the cathedral and then a second one in the evening at Pringle, various committees and an interview with Chasters. He had not yet finished his addresses for these confirmation services....

The task seemed mountainous--overwhelming.

With a gesture of desperation he seized the tumblerful of tonic and drank it off at a gulp.

(4)

For some moments nothing seemed to happen.

Then he began to feel stronger and less wretched, and then came a throbbing and tingling of artery and nerve.

He had a sense of adventure, a pleasant fear in the thing that he had done. He got out of bed, leaving his cup of tea untasted, and began to dress. He had the sensation of relief a prisoner may feel who suddenly tries his cell door and finds it open upon sunshine, the outside world and freedom.

He went on dressing although he was certain that in a few minutes the world of delusion about him would dissolve, and that he would find himself again in the great freedom of the place of God.

This time the transition came much sooner and much more rapidly. This time the phases and quality of the experience were different. He felt once again that luminous confusion between the world in which a human life is imprisoned and a circumambient and interpenetrating world, but this phase passed very rapidly; it did not spread out over nearly half an hour as it had done before, and almost immediately he seemed to plunge away from everything in this life altogether into that outer freedom he sought. And this time there was not even the elemental scenery of the former vision. He stood on nothing; there was nothing below and nothing above him. There was no sense of falling, no terror, but a feeling as though he floated released. There was no light, but as it were a clear darkness about him. Then it was manifest to him that he was not alone, but that with him was that same being that in his former vision had called himself the Angel of

God. He knew this without knowing why he knew this, and either he spoke and was answered, or he thought and his thought answered him back. His state of mind on this occasion was altogether different from the first vision of God; before it had been spectacular, but now his perception was altogether super-sensuous.

(And nevertheless and all the time it seemed that very faintly he was still in his room.)

It was he who was the first to speak. The great Angel whom he felt rather than saw seemed to be waiting for him to speak.

"I have come," he said, "because once more I desire to see God."

"But you have seen God."

"I saw God. God was light, God was truth. And I went back to my life, and God was hidden. God seemed to call me. He called. I heard him, I sought him and I touched his hand. When I went back to my life I was presently lost in perplexity. I could not tell why God had called me nor what I had to do."

"And why did you not come here before?"

"Doubt and fear. Brother, will you not lay your hand on mine?"

The figure in the darkness became distincter. But nothing touched the bishop's seeking hands.

"I want to see God and to understand him. I want reassurance. I want conviction. I want to understand all that God asks me to do. The world is full of conflict and confusion and the spirit of war. It is dark and dreadful now with suffering and bloodshed. I

want to serve God who could save it, and I do not know how."

It seemed to the bishop that now he could distinguish dimly but surely the form and features of the great Angel to whom he talked. For a little while there was silence, and then the Angel spoke.

"It was necessary first," said the Angel, "that you should apprehend God and desire him. That was the purport of your first vision. Now, since you require it, I will tell you and show you certain things about him, things that it seems you need to know, things that all men need to know. Know then first that the time is at hand when God will come into the world and rule it, and when men will know what is required of them. This time is close at hand. In a little while God will be made manifest throughout the earth. Men will know him and know that he is King. To you this truth is to be shown--that you may tell it to others."

"This is no vision?" said the bishop, "no dream that will pass away?"

"Am I not here beside you?"

(5)

The bishop was anxious to be very clear. Things that had been shapelessly present in his mind now took form and found words for themselves.

"The God I saw in my vision--He is not yet manifest in the world?"

"He comes. He is in the world, but he is not yet manifested. He whom you saw in your vision will speedily be manifest in the

world. To you this vision is given of the things that come. The world is already glowing with God. Mankind is like a smouldering fire that will presently, in quite a little time, burst out into flame.

"In your former vision I showed you God," said the Angel. "This time I will show you certain signs of the coming of God. And then you will understand the place you hold in the world and the task that is required of you."

(6)

And as the Angel spoke he lifted up his hands with the palms upward, and there appeared above them a little round cloud, that grew denser until it had the likeness of a silver sphere. It was a mirror in the form of a ball, but a mirror not shining uniformly; it was discoloured with greyish patches that had a familiar shape. It circled slowly upon the Angel's hands. It seemed no greater than the compass of a human skull, and yet it was as great as the earth. Indeed it showed the whole earth. It was the earth. The hands of the Angel vanished out of sight, dissolved and vanished, and the spinning world hung free. All about the bishop the velvet darkness broke into glittering points that shaped out the constellations, and nearest to them, so near as to seem only a few million miles away in the great emptiness into which everything had resolved itself, shone the sun, a ball of red-tongued fires. The Angel was but a voice now; the bishop and the Angel were somewhere aloof from and yet accessible to the circling silver sphere.

At the time all that happened seemed to happen quite naturally, as things happen in a dream. It was only later, when all this was a matter of memory, that the bishop realized how strange and incomprehensible his vision had been. The sphere was the earth

with all its continents and seas, its ships and cities, its country-sides and mountain ranges. It was so small that he could see it all at once, and so great and full that he could see everything in it. He could see great countries like little patches upon it, and at the same time he could see the faces of the men upon the highways, he could see the feelings in men's hearts and the thoughts in their minds. But it did not seem in any way wonderful to the bishop that so he should see those things, or that it was to him that these things were shown.

"This is the whole world," he said.

"This is the vision of the world," the Angel answered.

"It is very wonderful," said the bishop, and stood for a moment marvelling at the compass of his vision. For here was India, here was Samarkand, in the light of the late afternoon; and China and the swarming cities upon her silvery rivers sinking through twilight to the night and throwing a spray and tracery of lantern spots upon the dark; here was Russia under the noontide, and so great a battle of artillery raging on the Dunajec as no man had ever seen before; whole lines of trenches dissolved into clouds of dust and heaps of blood-streaked earth; here close to the waiting streets of Constantinople were the hills of Gallipoli, the grave of British Imperialism, streaming to heaven with the dust and smoke of bursting shells and rifle fire and the smoke and flame of burning brushwood. In the sea of Marmora a big ship crowded with Turkish troops was sinking; and, purple under the clear water, he could see the shape of the British submarine which had torpedoed her and had submerged and was going away. Berlin prepared its frugal meals, still far from famine. He saw the war in Europe as if he saw it on a map, yet every human detail showed. Over hundreds of miles of trenches east and west of Germany he could see shells bursting and the men below dropping, and the stretcher-bearers going back with the wounded.

The roads to every front were crowded with reserves and munitions. For a moment a little group of men indifferent to all this struggle, who were landing amidst the Antarctic wilderness, held his attention; and then his eyes went westward to the dark rolling Atlantic across which, as the edge of the night was drawn like a curtain, more and still more ships became visible beating upon their courses eastward or westward under the overtaking day.

The wonder increased; the wonder of the single and infinitely multitudinous adventure of mankind.

"So God perhaps sees it," he whispered.

(7)

"Look at this man," said the Angel, and the black shadow of a hand seemed to point.

It was a Chinaman sitting with two others in a little low room separated by translucent paper windows from a noisy street of shrill-voiced people. The three had been talking of the ultimatum that Japan had sent that day to China, claiming a priority in many matters over European influences they were by no means sure whether it was a wrong or a benefit that had been done to their country. From that topic they had passed to the discussion of the war, and then of wars and national aggressions and the perpetual thrusting and quarrelling of mankind. The older man had said that so life would always be; it was the will of Heaven. The little, very yellow-faced, emaciated man had agreed with him. But now this younger man, to whose thoughts the Angel had so particularly directed the bishop's attention, was speaking. He did not agree with his companion.

"War is not the will of Heaven," he said; "it is the blindness

of men."

"Man changes," he said, "from day to day and from age to age. The science of the West has taught us that. Man changes and war changes and all things change. China has been the land of flowery peace, and she may yet give peace to all the world. She has put aside that puppet Emperor at Peking, she turns her face to the new learning of the West as a man lays aside his heavy robes, in order that her task may be achieved."

The older man spoke, his manner was more than a little incredulous, and yet not altogether contemptuous. "You believe that someday there will be no more war in the world, that a time will come when men will no longer plot and plan against the welfare of men?"

"Even that last," said the younger man. "Did any of us dream twenty-five years ago that here in China we should live to see a republic? The age of the republics draws near, when men in every country of the world will look straight up to the rule of Right and the empire of Heaven."

(" And God will be King of the World," said the Angel. "Is not that faith exactly the faith that is coming to you? ")

The two other Chinamen questioned their companion, but without hostility.

"This war," said the Chinaman, "will end in a great harvesting of kings."

"But Japan--" the older man began.

The bishop would have liked to hear more of that conversation, but the dark hand of the Angel motioned him to another part of

the world. "Listen to this," said the Angel.

He pointed the bishop to where the armies of Britain and Turkey lay in the heat of Mesopotamia. Along the sandy bank of a wide, slow-flowing river rode two horsemen, an Englishman and a Turk. They were returning from the Turkish lines, whither the Englishman had been with a flag of truce. When Englishmen and Turks are thrown together they soon become friends, and in this case matters had been facilitated by the Englishman's command of the Turkish language. He was quite an exceptional Englishman. The Turk had just been remarking cheerfully that it wouldn't please the Germans if they were to discover how amiably he and his charge had got on. "It's a pity we ever ceased to be friends," he said.

"You Englishmen aren't like our Christians," he went on.

The Englishmen wanted to know why.

"You haven't priests in robes. You don't chant and worship crosses and pictures, and quarrel among yourselves."

"We worship the same God as you do," said the Englishman.

"Then why do we fight?"

"That's what we want to know."

"Why do you call yourselves Christians? And take part against us? All who worship the One God are brothers."

"They ought to be," said the Englishman, and thought. He was struck by what seemed to him an amazingly novel idea.

"If it weren't for religions all men would serve God together,"

he said. "And then there would be no wars--only now and then perhaps just a little honest fighting...."

"And see here," said the Angel. "Here close behind this frightful battle, where the German phalanx of guns pounds its way through the Russian hosts. Here is a young German talking to two wounded Russian prisoners, who have stopped to rest by the roadside. He is a German of East Prussia; he knows and thinks a little Russian. And they too are saying, all three of them, that the war is not God's will, but the confusion of mankind.

"Here," he said, and the shadow of his hand hovered over the burning-ghats of Benares, where a Brahmin of the new persuasion watched the straight spires of funereal smoke ascend into the glow of the late afternoon, while he talked to an English painter, his friend, of the blind intolerance of race and caste and custom in India.

"Or here."

The Angel pointed to a group of people who had gathered upon a little beach at the head of a Norwegian fiord. There were three lads, an old man and two women, and they stood about the body of a drowned German sailor which had been washed up that day. For a time they had talked in whispers, but now suddenly the old man spoke aloud.

"This is the fourth that has come ashore," he said. "Poor drowned souls! Because men will not serve God."

"But folks go to church and pray enough," said one of the women.

"They do not serve God," said the old man. "They just pray to him as one nods to a beggar. They do not serve God who is their

King. They set up their false kings and emperors, and so all Europe is covered with dead, and the seas wash up these dead to us. Why does the world suffer these things? Why did we Norwegians, who are a free-spirited people, permit the Germans and the Swedes and the English to set up a king over us? Because we lack faith. Kings mean secret counsels, and secret counsels bring war. Sooner or later war will come to us also if we give the soul of our nation in trust to a king.... But things will not always be thus with men. God will not suffer them for ever. A day comes, and it is no distant day, when God himself will rule the earth, and when men will do, not what the king wishes nor what is expedient nor what is customary, but what is manifestly right."....

"But men are saying that now in a thousand places," said the Angel. "Here is something that goes a little beyond that."

His pointing hand went southward until they saw the Africanders riding down to Windhuk. Two men, Boer farmers both, rode side by side and talked of the German officer they brought prisoner with them. He had put sheep-dip in the wells of drinking-water; his life was fairly forfeit, and he was not to be killed. "We want no more hate in South Africa," they agreed. "Dutch and English and German must live here now side by side. Men cannot always be killing."

"And see his thoughts," said the Angel.

The German's mind was one amazement. He had been sure of being shot, he had meant to make a good end, fierce and scornful, a relentless fighter to the last; and these men who might have shot him like a man were going to spare him like a dog. His mind was a tumbled muddle of old and new ideas. He had been brought up in an atmosphere of the foulest and fiercest militarism; he had been trained to relentlessness, ruthlessness and so forth; war was war

and the bitterer the better, frightfulness was your way to victory over every enemy. But these people had found a better way. Here were Dutch and English side by side; sixteen years ago they had been at war together and now they wore the same uniform and rode together, and laughed at him for a queer fellow because he was for spitting at them and defying them, and folding his arms and looking level at the executioners' rifles. There were to be no executioners' rifles.... If it was so with Dutch and English, why shouldn't it be so presently with French and Germans? Why someday shouldn't French, German, Dutch and English, Russian and Pole, ride together under this new star of mankind, the Southern Cross, to catch whatever last mischief-maker was left to poison the wells of goodwill?

His mind resisted and struggled against these ideas. "Austere," he whispered. "The ennobling tests of war." A trooner rode up alongside, and offered him a drink of water

"Just a mouthful," he said apologetically. "We've had to go rather short."...

"There's another brain busy here with the same idea," the Angel interrupted. And the bishop found himself looking into the bedroom of a young German attache in Washington, sleepless in the small hours.

"Ach!" cried the young man, and sat up in bed and ran his hands through his fair hair.

He had been working late upon this detestable business of the Lusitania; the news of her sinking had come to hand two days before, and all America was aflame with it. It might mean war. His task had been to pour out explanations and justifications to the press; to show that it was an act of necessity, to pretend a conviction that the great ship was loaded with munitions, to

fight down the hostility and anger that blazed across a continent. He had worked to his limit. He had taken cup after cup of coffee, and had come to bed worked out not two hours ago. Now here he was awake after a nightmare of drowning women and children, trying to comfort his soul by recalling his own arguments. Never once since the war began had he doubted the rightness of the German cause. It seemed only a proof of his nervous exhaustion that he could doubt it now. Germany was the best organized, most cultivated, scientific and liberal nation the earth had ever seen, it was for the good of mankind that she should be the dominant power in the world; his patriotism had had the passion of a mission. The English were indolent, the French decadent, the Russians barbaric, the Americans basely democratic; the rest of the world was the "White man's Burthen"; the clear destiny of mankind was subservience to the good Prussian eagle. Nevertheless--those wet draggled bodies that swirled down in the eddies of the sinking Titan--Ach! He wished it could have been otherwise. He nursed his knees and prayed that there need not be much more of these things before the spirit of the enemy was broken and the great Peace of Germany came upon the world.

And suddenly he stopped short in his prayer.

Suddenly out of the nothingness and darkness about him came the conviction that God did not listen to his prayers....

Was there any other way?

It was the most awful doubt he had ever had, for it smote at the training of all his life. "Could it be possible that after all our old German God is not the proper style and title of the true God? Is our old German God perhaps only the last of a long succession of bloodstained tribal effigies--and not God at all?"

For a long time it seemed that the bishop watched the thoughts that gathered in the young attache's mind. Until suddenly he broke into a quotation, into that last cry of the dying Goethe, for "Light. More Light!"...

"Leave him at that," said the Angel. "I want you to hear these two young women."

The hand came back to England and pointed to where Southend at the mouth of the Thames was all agog with the excitement of an overnight Zeppelin raid. People had got up hours before their usual time in order to look at the wrecked houses before they went up to their work in town. Everybody seemed abroad. Two nurses, not very well trained as nurses go nor very well-educated women, were snatching a little sea air upon the front after an eventful night. They were too excited still to sleep. They were talking of the horror of the moment when they saw the nasty thing "up there," and felt helpless as it dropped its bombs. They had both hated it.

"There didn't ought to be such things," said one.

"They don't seem needed," said her companion.

"Men won't always go on like this--making wars and all such wickedness."

"It's 'ow to stop them?"

"Science is going to stop them."

"Science?"

"Yes, science. My young brother--oh, he's a clever one--he says such things! He says that it's science that they won't

always go on like this. There's more sense coming into the world and more--my young brother says so. Says it stands to reason; it's Evolution. It's science that men are all brothers; you can prove it. It's science that there oughtn't to be war. Science is ending war now by making it horrible like this, and making it so that no one is safe. Showing it up. Only when nobody is safe will everybody want to set up peace, he says. He says it's proved there could easily be peace all over the world now if it wasn't for flags and kings and capitalists and priests. They still manage to keep safe and out of it. He says the world ought to be just one state. The World State, he says it ought to be."

("Under God," said the bishop, "under God.")

"He says science ought to be King of the whole world."

"Call it Science if you will," said the bishop. "God is wisdom."

"Out of the mouths of babes and elementary science students," said the Angel. "The very children in the board schools are turning against this narrowness and nonsense and mischief of nations and creeds and kings. You see it at a thousand points, at ten thousand points, look, the world is all flashing and flickering; it is like a spintharoscope; it is aquiver with the light that is coming to mankind. It is on the verge of blazing even now."

"Into a light."

"Into the one Kingdom of God. See here! See here! And here! This brave little French priest in a helmet of steel who is daring to think for the first time in his life; this gentle-mannered emir from Morocco looking at the grave-diggers on the battlefield; this mother who has lost her son....

"You see they all turn in one direction, although none of them seem to dream yet that they are all turning in the same direction. They turn, every one, to the rule of righteousness, which is the rule of God. They turn to that communism of effort in the world which alone permits men to serve God in state and city and their economic lives.... They are all coming to the verge of the same salvation, the salvation of one human brotherhood under the rule of one Righteousness, one Divine will.... Is that the salvation your church offers?"

(8)

"And now that we have seen how religion grows and spreads in men's hearts, now that the fields are white with harvest, I want you to look also and see what the teachers of religion are doing," said the Angel.

He smiled. His presence became more definite, and the earthly globe about them and the sun and the stars grew less distinct and less immediately there. The silence invited the bishop to speak.

"In the light of this vision, I see my church plainly for the little thing it is," he said.

He wanted to be perfectly clear with the Angel and himself.

"This church of which I am a bishop is just a part of our poor human struggle, small and pitiful as one thinks of it here in the light of the advent of God's Kingdom, but very great, very great indeed, ancient and high and venerable, in comparison with me. But mostly it is human. It is most human. For my story is the church's story, and the church's story is mine. Here I could almost believe myself the church itself. The world saw a light,

the nations that were sitting in darkness saw a great light. Even as I saw God. And then the church began to forget and lose itself among secondary things. As I have done.... It tried to express the truth and lost itself in a maze of theology. It tried to bring order into the world and sold its faith to Constantine. These men who had professed the Invisible King of the World, shirked his service. It is a most terrible disaster that Christianity has sold itself to emperors and kings. They forged a saying of the Master's that we should render unto Ceasar the things that are Ceasar's and unto God the things that are God's....

"Who is this Ceasar to set himself up to share mankind with God? Nothing that is Ceasar's can be any the less God's. But Constantine Caesar sat in the midst of the council, his guards were all about it, and the poor fanatics and trimmers and schemers disputed nervously with their eyes on him, disputed about homoousian and homoiousian, and grimaced and pretended to be very very fierce and exact to hide how much they were frightened and how little they knew, and because they did not dare to lay violent hands upon that usurper of the empire of the world....

"And from that day forth the Christian churches have been damned and lost. Kept churches. Lackey churches. Roman, Russian, Anglican; it matters not. My church indeed was twice sold, for it doubled the sin of Nicaea and gave itself over to Henry and Elizabeth while it shammed a dispute about the sacraments. No one cared really about transubstantiation any more than the earlier betrayers cared about consubstantiality; that dispute did but serve to mask the betrayal."

He turned to the listening Angel. "What can you show me of my church that I do not know? Why! we Anglican bishops get our sees as footmen get a job. For months Victoria, that old German Frau,

delayed me--because of some tittle-tattle.... The things we are! Snape, who afterwards became Bishop of Burnham, used to waylay the Prince Consort when he was riding in Hyde Park and give him, he boasts, 'a good loud cheer,' and then he would run very fast across the park so as to catch him as he came round, and do it again.... It is to that sort of thing we bearers of the light have sunken....

"I have always despised that poor toady," the bishop went on. "And yet here am I, and God has called me and shown me the light of his countenance, and for a month I have faltered. That is the mystery of the human heart, that it can and does sin against the light. What right have I, who have seen the light--and failed, what right have I--to despise any other human being? I seem to have been held back by a sort of paralysis.

"Men are so small, so small still, that they cannot keep hold of the vision of God. That is why I want to see God again.... But if it were not for this strange drug that seems for a little while to lift my mind above the confusion and personal entanglements of every day, I doubt if even now I could be here. I am here, passionate to hold this moment and keep the light. As this inspiration passes, I shall go back, I know, to my home and my place and my limitations. The littleness of men! The forgetfulness of men! I want to know what my chief duty is, to have it plain, in terms so plain that I can never forget.

"See in this world," he said, turning to the globe, "while Chinese merchants and Turkish troopers, school-board boys and Norwegian fishermen, half-trained nurses and Boer farmers are full of the spirit of God, see how the priests of the churches of Nicaea spend their time."

And now it was the bishop whose dark hands ran over the great silver globe, and it was the Angel who stood over him and

listened, as a teacher might stand over a child who is learning a lesson. The bishop's hand rested for a second on a cardinal who was planning a political intrigue to produce a reaction in France, then for a moment on a Pomeranian pastor who was going out to his well-tilled fields with his Sunday sermon, full of fierce hatred of England, still echoing in his head. Then he paused at a Mollah preaching the Jihad, in doubt whether he too wasn't a German pastor, and then at an Anglican clergyman still lying abed and thinking out a great mission of Repentance and Hope that should restore the authority of the established church --by incoherent missioning--without any definite sin indicated for repentance nor any clear hope for anything in particular arising out of such activities. The bishop's hand went seeking to and fro, but nowhere could he find any religious teacher, any religious body rousing itself to meet the new dawn of faith in the world. Some few men indeed seemed thoughtful, but within the limitation of their vows. Everywhere it was church and creed and nation and king and property and partisanship, and nowhere was it the True God that the priests and teachers were upholding. It was always the common unhampered man through whom the light of God was breaking; it was always the creed and the organization of the religious professionals that stood in the way to God....

"God is putting the priests aside," he cried, "and reaching out to common men. The churches do not serve God. They stand between man and God. They are like great barricades on the way to God."

The bishop's hand brushed over Archbishop Pontifex, who was just coming down to breakfast in his palace. This pompous old man was dressed in a purple garment that set off his tall figure very finely, and he was holding out his episcopal ring for his guests to kiss, that being the customary morning greeting of Archbishop Pontifex. The thought of that ring-kissing had made much hard work at lower levels "worth while" to Archbishop Pontifex. And seventy miles away from him old Likeman breakfasted in bed on

Benger's food, and searched his Greek Testament for tags to put to his letters. And here was the familiar palace at Princhester, and in an armchair in his bed-room sat Bishop Scrope insensible and motionless, in a trance in which he was dreaming of the coming of God.

"I see my futility. I see my vanity. But what am I to do?" he said, turning to the darkness that now wrapped about the Angel again, fold upon fold. "The implications of yesterday bind me for the morrow. This is my world. This is what I am and what I am in. How can I save myself? How can I turn from these habits and customs and obligations to the service of the one true God? When I see myself, then I understand how it is with the others. All we priests and teachers are men caught in nets. I would serve God. Easily said! But how am I to serve God? How am I to help and forward His coming, to make myself part of His coming?"

He perceived that he was returning into himself, and that the vision of the sphere and of the starry spaces was fading into non-existence.

He struggled against this return. He felt that his demand was still unanswered. His wife's face had suddenly come very close to him, and he realized she intervened between him and that solution.

What was she doing here?

(9)

The great Angel seemed still to be near at hand, limitless space was all about him, and yet the bishop perceived that he was now sitting in the arm-chair in his bedroom in the palace of Princhester. He was both there and not there. It seemed now as if

he had two distinct yet kindred selves, and that the former watched the latter. The latter was now awakening to the things about him; the former marked his gestures and listened with an entire detachment to the words he was saying. These words he was saying to Lady Ella: "God is coming to rule the world, I tell you. We must leave the church."

Close to him sat Lady Ella, watching him with an expression in which dismay and resolution mingled. Upon the other side of him, upon a little occasional table, was a tray with breakfast things. He was no longer the watcher now, but the watched.

Lady Ella bent towards him as he spoke. She seemed to struggle with and dismiss his astonishing statement.

"Edward," she said, "you have been taking a drug." He looked round at his night table to see the little phial. It had gone. Then he saw that Lady Ella held it very firmly in her hand.

"Dunk came to me in great distress. He said you were insensible and breathing heavily. I came. I realized. I told him to say nothing to any one, but to fetch me a tray with your breakfast. I have kept all the other servants away and I have waited here by you.... Dunk I think is safe.... You have been muttering and moving your head from side to side...."

The bishop's mind was confused. He felt as though God must be standing just outside the room. "I have failed in my duty," he said. "But I am very near to God." He laid his hand on her arm. "You know, Ella, He is very close to us...."

She looked perplexed.

He sat up in his chair.

"For some months now," he said, "there have been new forces at work in my mind. I have been invaded by strange doubts and still stranger realizations. This old church of ours is an empty mask. God is not specially concerned in it."

"Edward!" she cried, "what are you saying?"

"I have been hesitating to tell you. But I see now I must tell you plainly. Our church is a cast hull. It is like the empty skin of a snake. God has gone out of it."

She rose to her feet. She was so horrified that she staggered backward, pushing her chair behind her. "But you are mad," she said.

He was astonished at her distress. He stood up also.

"My dear," he said, "I can assure you I am not mad. I should have prepared you, I know...."

She looked at him wild-eyed. Then she glanced at the phial, gripped in her hand.

"Oh!" she exclaimed, and going swiftly to the window emptied out the contents of the little bottle. He realized what she was doing too late to prevent her.

"Don't waste that!" he cried, and stepping forward caught hold of her wrist. The phial fell from her white fingers, and crashed upon the rough paved garden path below.

"My dear," he cried, "my dear. You do not understand."

They stood face to face. "It was a tonic," he said. "I have been ill. I need it."

"It is a drug," she answered. "You have been uttering blasphemies."

He dropped her arm and walked half-way across the room. Then he turned and faced her.

"They are not blasphemies," he said. "But I ought not to have surprised you and shocked you as I have done. I want to tell you of changes that have happened to my mind."

"Now!" she exclaimed, and then: "I will not hear them now. Until you are better. Until these fumes--"

Her manner changed. "Oh, Edward!" she cried, "why have you done this? Why have you taken things secretly? I know you have been sleepless, but I have been so ready to help you. I have been willing--you know I have been willing--for any help. My life is all to be of use to you...."

"Is there any reason," she pleaded, "why you should have hidden things from me?"

He stood remorseful and distressed. "I should have talked to you," he said lamely.

"Edward," she said, laying her hands on his shoulders, "will you do one thing for me? Will you try to eat a little breakfast? And stay here? I will go down to Mr. Whippham and arrange whatever is urgent with him. Perhaps if you rest--There is nothing really imperative until the confirmation in the afternoon.... I do not understand all this. For some time--I have felt it was going on. But of that we can talk. The thing now is that people should not know, that nothing should be seen.... Suppose for instance that horrible White Blackbird were to hear

of it.... I implore you. If you rest here--And if I were to send for that young doctor who attended Miriam."

"I don't want a doctor," said the bishop.

"But you ought to have a doctor."

"I won't have a doctor," said the bishop.

It was with a perplexed but powerless dissent that the externalized perceptions of the bishop witnessed his agreement with the rest of Lady Ella's proposals so soon as this point about the doctor was conceded.

(10)

For the rest of that day until his breakdown in the cathedral the sense of being in two places at the same time haunted the bishop's mind. He stood beside the Angel in the great space amidst the stars, and at the same time he was back in his ordinary life, he was in his palace at Princhester, first resting in his bedroom and talking to his wife and presently taking up the routines of his duties again in his study downstairs.

His chief task was to finish his two addresses for the confirmation services of the day. He read over his notes, and threw them aside and remained for a time thinking deeply. The Greek tags at the end of Likeman's letter came into his thoughts; they assumed a quality of peculiar relevance to this present occasion. He repeated the words: "Epitelesei. Epiphausei."

He took his little Testament to verify them. After some slight trouble he located the two texts. The first, from Philippians, ran in the old version, "He that hath begun a good work in you

will perform it"; the second was expressed thus: "Christ shall give thee light." He was dissatisfied with these renderings and resorted to the revised version, which gave "perfect" instead of "perform," and "shall shine upon you" for "give thee light." He reflected profoundly for a time.

Then suddenly his addresses began to take shape in his mind, and these little points lost any significance. He began to write rapidly, and as he wrote he felt the Angel stood by his right hand and read and approved what he was writing. There were moments when his mind seemed to be working entirely beyond his control. He had a transitory questioning whether this curious intellectual automatism was not perhaps what people meant by "inspiration."

(11)

The bishop had always been sensitive to the secret fount of pathos that is hidden in the spectacle of youth. Long years ago when he and Lady Ella had been in Florence he had been moved to tears by the beauty of the fresh-faced eager Tobit who runs beside the great angel in the picture of Botticelli. And suddenly and almost as uncontrollably, that feeling returned at the sight of the young congregation below him, of all these scores of neophytes who were gathered to make a public acknowledgment of God. The war has invested all youth now with the shadow of tragedy; before it came many of us were a little envious of youth and a little too assured of its certainty of happiness. All that has changed. Fear and a certain tender solicitude mingle in our regard for every child; not a lad we pass in the street but may presently be called to face such pain and stress and danger as no ancient hero ever knew. The patronage, the insolent condescension of age, has vanished out of the world. It is dreadful to look upon the young.

He stood surveying the faces of the young people as the rector read the Preface to the confirmation service. How simple they were, how innocent! Some were a little flushed by the excitement of the occasion; some a little pallid. But they were all such tender faces, so soft in outline, so fresh and delicate in texture and colour. They had soft credulous mouths. Some glanced sideways at one another; some listened with a forced intentness. The expression of one good-looking boy, sitting in a corner seat, struck the bishop as being curiously defiant. He stood very erect, he blinked his eyes as though they smarted, his lips were compressed bitterly. And then it seemed to the bishop that the Angel stood beside him and gave him understanding.

"He is here," the bishop knew, "because he could not avoid coming. He tried to excuse himself. His mother wept. What could he do? But the church's teaching nowadays fails even to grip the minds of boys."

The rector came to the end of his Preface: "They will evermore endeavour themselves faithfully to observe such things as they by their own confession have assented unto."

"Like a smart solicitor pinning them down," said the bishop to himself, and then roused himself, unrolled the little paper in his hand, leant forward, and straightway began his first address.

Nowadays it is possible to say very unorthodox things indeed in an Anglican pulpit unchallenged. There remains no alert doctrinal criticism in the church congregations. It was possible, therefore, for the bishop to say all that follows without either hindrance or disturbance. The only opposition, indeed, came from within, from a sense of dreamlike incongruity between the place and the occasion and the things that he found himself delivering.

"All ceremonies," he began, "grow old. All ceremonies are tainted even from the first by things less worthy than their first intention, and you, my dear sons and daughters, who have gathered to-day in this worn and ancient building, beneath these monuments to ancient vanities and these symbols of forgotten or abandoned theories about the mystery of God, will do well to distinguish in your minds between what is essential and what is superfluous and confusing in this dedication you make of yourselves to God our Master and King. For that is the real thing you seek to do today, to give yourselves to God. This is your spiritual coming of age, in which you set aside your childish dependence upon teachers and upon taught phrases, upon rote and direction, and stand up to look your Master in the face. You profess a great brotherhood when you do that, a brotherhood that goes round the earth, that numbers men of every race and nation and country, that aims to bring God into all the affairs of this world and make him not only the king of your individual lives but the king--in place of all the upstarts, usurpers, accidents, and absurdities who bear crowns and sceptres today--of an united mankind."

He paused, and in the pause he heard a little rustle as though the congregation before him was sitting up in its places, a sound that always nerves and reassures an experienced preacher.

"This, my dear children, is the reality of this grave business to-day, as indeed it is the real and practical end of all true religion. This is your sacrament urn, your soldier's oath. You salute and give your fealty to the coming Kingdom of God. And upon that I would have you fix your minds to the exclusion of much that, I know only too well, has been narrow and evil and sectarian in your preparation for this solemn rite. God is like a precious jewel found among much rubble; you must cast the rubble from you. The crowning triumph of the human mind is simplicity; the supreme significance of God lies in his unity and

universality. The God you salute to-day is the God of the Jews and Gentiles alike, the God of Islam, the God of the Brahmo Somaj, the unknown God of many a righteous unbeliever. He is not the God of those felted theologies and inexplicable doctrines with which your teachers may have confused your minds. I would have it very clear in your minds that having drunken the draught you should not reverence unduly the cracked old vessel that has brought it to your lips. I should be falling short of my duty if I did not make that and everything I mean by that altogether plain to you."

He saw the lad whose face of dull defiance he had marked before, sitting now with a startled interest in his eyes. The bishop leant over the desk before him, and continued in the persuasive tone of a man who speaks of things too manifest for laboured argument.

"In all ages religion has come from God through broad-minded creative men, and in all ages it has fallen very quickly into the hands of intense and conservative men. These last--narrow, fearful, and suspicious--have sought in every age to save the precious gift of religion by putting it into a prison of formulae and asseverations. Bear that in mind when you are pressed to definition. It is as if you made a box hermetically sealed to save the treasure of a fresh breeze from the sea. But they have sought out exact statements and tortuous explanations of the plain truth of God, they have tried to take down God in writing, to commit him to documents, to embalm his living faith as though it would otherwise corrupt. So they have lost God and fallen into endless differences, disputes, violence, and darkness about insignificant things. They have divided religion between this creed and teacher and that. The corruption of the best is the worst, said Aristotle; and the great religions of the world, and especially this Christianity of ours, are the ones most darkened and divided and wasted by the fussings and false exactitudes of

the creed-monger and the sectary. There is no lie so bad as a stale disfigured truth. There is no heresy so damnable as a narrow orthodoxy. All religious associations carry this danger of the over-statement that misstates and the over-emphasis that divides and betrays. Beware of that danger. Do not imagine, because you are gathered in this queerly beautiful old building today, because I preside here in this odd raiment of an odder compromise, because you see about you in coloured glass and carven stone the emblems of much vain disputation, that thereby you cut yourselves off and come apart from the great world of faith, Catholic, Islamic, Brahministic, Buddhistic, that grows now to a common consciousness of the near Advent of God our King. You enter that waiting world fraternity now, you do not leave it. This place, this church of ours, should be to you not a seclusion and a fastness but a door.

"I could quote you a score of instances to establish that this simple universalism was also the teaching of Christ. But now I will only remind you that it was Mary who went to her lord simply, who was commended, and not Martha who troubled about many things. Learn from the Mary of Faith and not from these Marthas of the Creeds. Let us abandon the presumptions of an ignorant past. The perfection of doctrine is not for finite men. Give yourselves to God. Give yourselves to God. Not to churches and uses, but to God. To God simply. He is the first word of religion and the last. He is Alpha; he is Omega. Epitelesei; it is He who will finish the good work begun."

The bishop ended his address in a vivid silence. Then he began his interrogation.

"Do you here, in the presence of God, and of this congregation, renew the solemn promise and vow that was made in your name at your Baptism; ratifying and confirming the same in your own persons, and acknowledging yourselves--"

He stopped short. The next words were: "bound to believe and do all those things, which your Godfathers and Godmothers then undertook for you."

He could not stand those words. He hesitated, and then substituted: "acknowledge yourselves to be the true servants of the one God, who is the Lord of Mankind?"

For a moment silence hung in the cathedral. Then one voice, a boy's voice, led a ragged response. "I do."

Then the bishop: "Our help is in the Name of the Lord."

The congregation answered doubtfully, with a glance at its prayer books: "Who hath made heaven and earth."

The bishop: "Blessed be the name of the Lord."

The congregation said with returning confidence: "Henceforth, world without end."

(12)

Before his second address the bishop had to listen to *Veni Creator Spiritus*, in its English form, and it seemed to him the worst of all possible hymns. Its defects became monstrously exaggerated to his hypersensitive mind. It impressed him in its Englished travesty as a grotesque, as a veritable Charlie Chaplin among hymns, and in truth it does stick out most awkward feet, it misses its accusatives, it catches absurdly upon points of abstruse doctrine. The great Angel stood motionless and ironical at the bishop's elbow while it was being sung. "Your church," he seemed to say.

"We must end this sort of thing," whispered the bishop. "We must end this sort of thing--absolutely." He glanced at the faces of the singers, and it became beyond all other things urgent, that he should lift them once for all above the sectarian dogmatism of that hymn to a simple vision of God's light....

He roused himself to the touching business of the laying on of hands. While he did so the prepared substance of his second address was running through his mind. The following prayer and collects he read without difficulty, and so came to his second address. His disposition at first was explanatory.

"When I spoke to you just now," he began, "I fell unintentionally into the use of a Greek word, epitelesei. It was written to me in a letter from a friend with another word that also I am now going to quote to you. This letter touched very closely upon the things I want to say to you now, and so these two words are very much in my mind. The former one was taken from the Epistle to the Philippians; it signifies, 'He will complete the work begun'; the one I have now in mind comes from the Epistle to the Ephesians; it is Epiphausei--or, to be fuller, epiphausei soi ho Christos, which signifies that He will shine upon us. And this is very much in my thoughts now because I do believe that this world, which seemed so very far from God a little while ago, draws near now to an unexampled dawn. God is at hand.

"It is your privilege, it is your grave and terrible position, that you have been born at the very end and collapse of a negligent age, of an age of sham kingship, sham freedom, relaxation, evasion, greed, waste, falsehood, and sinister preparation. Your lives open out in the midst of the breakdown for which that age prepared. To you negligence is no longer possible. There is cold and darkness, there is the heat of the

furnace before you; you will live amidst extremes such as our youth never knew; whatever betide, you of your generation will have small chance of living untempered lives. Our country is at war and half mankind is at war; death and destruction trample through the world; men rot and die by the million, food diminishes and fails, there is a wasting away of all the hoarded resources, of all the accumulated well-being of mankind; and there is no clear prospect yet of any end to this enormous and frightful conflict. Why did it ever arise? What made it possible? It arose because men had forgotten God. It was possible because they worshipped simulacra, were loyal to phantoms of race and empire, permitted themselves to be ruled and misled by idiot princes and usurper kings. Their minds were turned from God, who alone can rule and unite mankind, and so they have passed from the glare and follies of those former years into the darkness and anguish of the present day. And in darkness and anguish they will remain until they turn to that King who comes to rule them, until the sword and indignation of God have overthrown their misleaders and oppressors, and the Justice of God, the Kingdom of God set high over the republics of mankind, has brought peace for ever to the world. It is to this militant and imminent God, to this immortal Captain, this undying Law-giver, that you devote yourselves to-day.

"For he is imminent now. He comes. I have seen in the east and in the west, the hearts and the minds and the wills of men turning to him as surely as when a needle is magnetized it turns towards the north. Even now as I preach to you here, God stands over us all, ready to receive us...."

And as he said these words, the long nave of the cathedral, the shadows of its fretted roof, the brown choir with its golden screen, the rows of seated figures, became like some picture cast upon a flimsy and translucent curtain. Once more it seemed to the bishop that he saw God plain. Once more the glorious effulgence

poured about him, and the beautiful and wonderful conquest of men's hearts and lives was manifest to him.

He lifted up his hands and cried to God, and with an emotion so profound, an earnestness so commanding, that very many of those who were present turned their faces to see the figure to which he looked and spoke. And some of the children had a strange persuasion of a presence there, as of a divine figure militant, armed, and serene....

"Oh God our Leader and our Master and our Friend," the bishop prayed, "forgive our imperfection and our little motives, take us and make us one with thy great purpose, use us and do not reject us, make us all here servants of thy kingdom, weave our lives into thy struggle to conquer and to bring peace and union to the world. We are small and feeble creatures, we are feeble in speech, feebler still in action, nevertheless let but thy light shine upon us and there is not one of us who cannot be lit by thy fire, and who cannot lose himself in thy salvation. Take us into thy purpose, O God. Let thy kingdom come into our hearts and into this world."

His voice ceased, and he stood for a measurable time with his arms extended and his face upturned....

The golden clouds that whirled and eddied so splendidly in his brain thinned out, his sense of God's immediacy faded and passed, and he was left aware of the cathedral pulpit in which he stood so strangely posed, and of the astonished congregation below him. His arms sank to his side. His eyes fell upon the book in front of him and he felt for and gripped the two upper corners of it and, regardless of the common order and practice, read out the Benediction, changing the words involuntarily as he read:

"The Blessing of God who is the Father, the Son, the Spirit and

the King of all Mankind, be upon you and remain with you for ever. Amen."

Then he looked again, as if to look once more upon that radiant vision of God, but now he saw only the clear cool space of the cathedral vault and the coloured glass and tracery of the great rose window. And then, as the first notes of the organ came pealing above the departing stir of the congregation, he turned about and descended slowly, like one who is still half dreaming, from the pulpit.

(13)

In the vestry he found Canon Bliss. "Help me to take off these garments," the bishop said. "I shall never wear them again."

"You are ill," said the canon, scrutinizing his face.

"Not ill. But the word was taken out of my mouth. I perceive now that I have been in a trance, a trance in which the truth is real. It is a fearful thing to find oneself among realities. It is a dreadful thing when God begins to haunt a priest.... I can never minister in the church again."

Whippham thrust forward a chair for the bishop to sit down. The bishop felt now extraordinarily fatigued. He sat down heavily, and rested his wrists on the arms of the chair. "Already," he resumed presently, "I begin to forget what it was I said."

"You became excited," said Bliss, "and spoke very loudly and clearly."

"What did I say?"

"I don't know what you said; I have forgotten. I never want to remember. Things about the Second Advent. Dreadful things. You said God was close at hand. Happily you spoke partly in Greek. I doubt if any of those children understood. And you had a kind of lapse--an aphasia. You mutilated the interrogation and you did not pronounce the benediction properly. You changed words and you put in words. One sat frozen--waiting for what would happen next."

"We must postpone the Pringle confirmation," said Whippham. "I wonder to whom I could telephone."

Lady Ella appeared, and came and knelt down by the bishop's chair. "I never ought to have let this happen," she said, taking his wrists in her hands. "You are in a fever, dear."

"It seemed entirely natural to say what I did," the bishop declared.

Lady Ella looked up at Bliss.

"A doctor has been sent for," said the canon to Lady Ella.

"I must speak to the doctor," said Lady Ella as if her husband could not hear her. "There is something that will make things clearer to the doctor. I must speak to the doctor for a moment before he sees him."

Came a gust of pretty sounds and a flash of bright colour that shamed the rich vestments at hand. Over the shoulder of the rector and quite at the back, appeared Lady Sunderbund resolutely invading the vestry. The rector intercepted her, stood broad with extended arms.

"I must come in and speak to him. If it is only fo' a moment."

The bishop looked up and saw Lady Ella's expression. Lady Ella was sitting up very stiffly, listening but not looking round.

A vague horror and a passionate desire to prevent the entry of Lady Sunderbund at any cost, seized upon the bishop. She would, he felt, be the last overwhelming complication. He descended to a base subterfuge. He lay back in his chair slowly as though he unfolded himself, he covered his eyes with his hand and then groaned aloud.

"Leave me alone!" he cried in a voice of agony. "Leave me alone! I can see no one.... I can--no more."

There was a momentous silence, and then the tumult of Lady Sunderbund receded.

CHAPTER THE EIGHTH - THE NEW WORLD

(1)

THAT night the bishop had a temperature of a hundred and a half. The doctor pronounced him to be in a state of intense mental excitement, aggravated by some drug. He was a doctor modern and clear-minded enough to admit that he could not identify the drug. He overruled, every one overruled, the bishop's declaration that he had done with the church, that he could never mock God with his episcopal ministrations again, that he must proceed at once with his resignation. "Don't think of these things," said the doctor. "Banish them from your mind until your temperature is down to ninety-eight. Then after a rest you may go into them."

Lady Ella insisted upon his keeping his room. It was with difficulty that he got her to admit Whippham, and Whippham was exasperatingly in order. "You need not trouble about anything now, my lord," he said. "Everything will keep until you are ready to attend to it. It's well we're through with Easter. Bishop Buncombe of Eastern Blowdesia was coming here anyhow. And there is Canon Bliss. There's only two ordination candidates because of the war. We'll get on swimmingly."

The bishop thought he would like to talk to those two ordination candidates, but they prevailed upon him not to do so. He lay for the best part of one night confiding remarkable things to two imaginary ordination candidates.

He developed a marked liking for Eleanor's company. She was home again now after a visit to some friends. It was decided that the best thing to do with him would be to send him away in her charge. A journey abroad was impossible. France would remind him

too dreadfully of the war. His own mind turned suddenly to the sweet air of Hunstanton. He had gone there at times to read, in the old Cambridge days. "It is a terribly ugly place," he said, "but it is wine in the veins."

Lady Ella was doubtful about Zeppelins. Thrice they had been right over Hunstanton already. They came in by the easy landmark of the Wash.

"It will interest him," said Eleanor, who knew her father better.

(2)

One warm and still and sunny afternoon the bishop found himself looking out upon the waters of the Wash. He sat where the highest pebble layers of the beach reached up to a little cliff of sandy earth perhaps a foot high, and he looked upon sands and sea and sky and saw that they were beautiful.

He was a little black-gaitered object in a scene of the most exquisite and delicate colour. Right and left of him stretched the low grey salted shore, pale banks of marly earth surmounted by green-grey wiry grass that held and was half buried in fine blown sand. Above, the heavens made a complete hemisphere of blue in which a series of remote cumulus clouds floated and dissolved. Before him spread the long levels of the sands, and far away at its utmost ebb was the sea. Eleanor had gone to explore the black ribs of a wrecked fishing-boat that lay at the edge of a shallow lagoon. She was a little pink-footed figure, very bright and apparently transparent. She had reverted for a time to shameless childishness; she had hidden her stockings among the reeds of the bank, and she was running to and fro, from star-fish to razor shell and from cockle to weed. The shingle was pale drab and

purple close at hand, but to the westward, towards Hunstanton, the sands became brown and purple, and were presently broken up into endless skerries of low flat weed-covered boulders and little intensely blue pools. The sea was a band of sapphire that became silver to the west; it met the silver shining sands in one delicate breathing edge of intensely white foam. Remote to the west, very small and black and clear against the afternoon sky, was a cart, and about it was a score or so of mussel-gatherers. A little nearer, on an apparently empty stretch of shining wet sand, a multitude of gulls was mysteriously busy. These two groups of activities and Eleanor's flitting translucent movements did but set off and emphasize the immense and soothing tranquillity.

For a long time the bishop sat passively receptive to this healing beauty. Then a little flow of thought began and gathered in his mind. He had come out to think over two letters that he had brought with him. He drew these now rather reluctantly from his pocket, and after a long pause over the envelopes began to read them.

He reread Likeman's letter first.

Likeman could not forgive him.

"My dear Scrope," he wrote, "your explanation explains nothing. This sensational declaration of infidelity to our mother church, made under the most damning and distressing circumstances in the presence of young and tender minds entrusted to your ministrations, and in defiance of the honourable engagements implied in the confirmation service, confirms my worst apprehensions of the weaknesses of your character. I have always felt the touch of theatricality in your temperament, the peculiar craving to be pseudo-deeper, pseudo-simpler than us all, the need of personal excitement. I know that you were never quite

contented to believe in God at second-hand. You wanted to be taken notice of--personally. Except for some few hints to you, I have never breathed a word of these doubts to any human being; I have always hoped that the ripening that comes with years and experience would give you an increasing strength against the dangers of emotionalism and against your strong, deep, quiet sense of your exceptional personal importance...."

The bishop read thus far, and then sat reflecting.

Was it just?

He had many weaknesses, but had he this egotism? No; that wasn't the justice of the case. The old man, bitterly disappointed, was endeavouring to wound. Scrope asked himself whether he was to blame for that disappointment. That was a more difficult question....

He dismissed the charge at last, crumpled up the letter in his hand, and after a moment's hesitation flung it away.... But he remained acutely sorry, not so much for himself as for the revelation of Likeman this letter made. He had had a great affection for Likeman and suddenly it was turned into a wound.

(3)

The second letter was from Lady Sunderbund, and it was an altogether more remarkable document. Lady Sunderbund wrote on a notepaper that was evidently the result of a perverse research, but she wrote a letter far more coherent than her speech, and without that curious falling away of the r's that flavoured even her gravest observations with an unjust faint aroma of absurdity. She wrote with a thin pen in a rounded boyish handwriting. She italicized with slashes of the pen.

He held this letter in both hands between his knees, and considered it now with an expression that brought his eyebrows forward until they almost met, and that tucked in the corners of his mouth.

"My dear Bishop," it began.

"I keep thinking and thinking and thinking of that wonderful service, of the wonderful, wonderful things you said, and the wonderful choice you made of the moment to say them--when all those young lives were coming to the great serious thing in life. It was most beautifully done. At any rate, dear Bishop and Teacher, it was most beautifully begun. And now we all stand to you like creditors because you have given us so much that you owe us ever so much more. You have started us and you have to go on with us. You have broken the shell of the old church, and here we are running about with nowhere to go. You have to make the shelter of a new church now for us, purged of errors, looking straight to God. The King of Mankind!--what a wonderful, wonderful phrase that is. It says everything. Tell us more of him and more. Count me first--not foremost, but just the little one that runs in first--among your disciples. They say you are resigning your position in the church. Of course that must be true. You are coming out of it--what did you call it?--coming out of the cracked old vessel from which you have poured the living waters. I called on Lady Ella yesterday. She did not tell me very much; I think she is a very reserved as well as a very dignified woman, but she said that you intended to go to London. In London then I suppose you will set up the first altar to the Divine King. I want to help.

"Dear Bishop and Teacher, I want to help tremendously--with all my heart and all my soul. I want to be let do things for you." (The "you" was erased by three or four rapid slashes, and

"our King" substituted.) "I want to be privileged to help build that First Church of the World Unified under God. It is a dreadful thing to say but, you see, I am very rich; this dreadful war has made me ever so much richer--steel and shipping and things--it is my trustees have done it. I am ashamed to be so rich. I want to give. I want to give and help this great beginning of yours. I want you to let me help on the temporal side, to make it easy for you to stand forth and deliver your message, amidst suitable surroundings and without any horrid worries on account of the sacrifices you have made. Please do not turn my offering aside. I have never wanted anything so much in all my life as I want to make this gift. Unless I can make it I feel that for me there is no salvation! I shall stick with my loads and loads of stocks and shares and horrid possessions outside the Needle's Eye. But if I could build a temple for God, and just live somewhere near it so as to be the poor woman who sweeps out the chapels, and die perhaps and be buried under its floor! Don't smile at me. I mean every word of it. Years ago I thought of such a thing. After I had visited the Certosa di Pavia --do you know it? So beautiful, and those two still alabaster figures--recumbent. But until now I could never see my way to any such service. Now I do. I am all afire to do it. Help me! Tell me! Let me stand behind you and make your mission possible. I feel I have come to the most wonderful phase in my life. I feel my call has come....

"I have written this letter over three times, and torn each of them up. I do so want to say all this, and it is so desperately hard to say. I am full of fears that you despise me. I know there is a sort of high colour about me. My passion for brightness. I am absurd. But inside of me is a soul, a real, living, breathing soul. Crying out to you: 'Oh, let me help! Let me help!' I will do anything, I will endure anything if only I can keep hold of the vision splendid you gave me in the cathedral. I see it now

day and night, the dream of the place I can make for you--and you preaching! My fingers itch to begin. The day before yesterday I said to myself, 'I am quite unworthy, I am a worldly woman, a rich, smart, decorated woman. He will never accept me as I am.' I took off all my jewels, every one, I looked through all my clothes, and at last I decided I would have made for me a very simple straight grey dress, just simple and straight and grey. Perhaps you will think that too is absurd of me, too self-conscious. I would not tell of it to you if I did not want you to understand how alive I am to my utter impossibilities, how resolved I am to do anything so that I may be able to serve. But never mind about silly me; let me tell you how I see the new church.

"I think you ought to have some place near the centre of London; not too west, for you might easily become fashionable, not too east because you might easily be swallowed up in merely philanthropic work, but somewhere between the two. There must be vacant sites still to be got round about Kingsway. And there we must set up your tabernacle, a very plain, very simple, very beautifully proportioned building in which you can give your message. I know a young man, just the very young man to do something of the sort, something quite new, quite modern, and yet solemn and serious. Lady Ella seemed to think you wanted to live somewhere in the north-west of London--but she would tell me very little. I seem to see you not there at all, not in anything between west-end and suburb, but yourself as central as your mind, in a kind of clergy house that will be part of the building. That is how it is in my dream anyhow. All that though can be settled afterwards. My imagination and my desire is running away with me. It is no time yet for premature plans. Not that I am not planning day and night. This letter is simply to offer. I just want to offer. Here I am and all my worldly goods. Take me, I pray you. And not only pray you. Take me, I demand of

you, in the name of God our king. I have a right to be used. And you have no right to refuse me. You have to go on with your message, and it is your duty to take me--just as you are obliged to step on any steppingstone that lies on your way to do God service.... And so I am waiting. I shall be waiting--on thorns. I know you will take your time and think. But do not take too much time. Think of me waiting.

"Your servant, your most humble helper in God (your God),

"AGATHA SUNDERBUND."

And then scrawled along the margin of the last sheet:

"If, when you know--a telegram. Even if you cannot say so much as 'Agreed,' still such a word as 'Favourable.' I just hang over the Void until I hear.

"AGATHA S."

A letter demanding enormous deliberation. She argued closely in spite of her italics. It had never dawned upon the bishop before how light is the servitude of the disciple in comparison with the servitude of the master. In many ways this proposal repelled and troubled him, in many ways it attracted him. And the argument of his clear obligation to accept her co-operation gripped him; it was a good argument.

And besides it worked in very conveniently with certain other difficulties that perplexed him.

(4)

The bishop became aware that Eleanor was returning to him across the sands. She had made an end to her paddling, she had put on her shoes and stockings and become once more the grave and responsible young woman who had been taking care of him since his flight from Princhester. He replaced the two letters in his pocket, and sat ready to smile as she drew near; he admired her open brow, the toss of her hair, and the poise of her head upon her neck. It was good to note that her hard reading at Cambridge hadn't bent her shoulders in the least....

"Well, old Dad! " she said as she drew near. "You've got back a colour."

"I've got back everything. It's time I returned to Princhester."

"Not in this weather. Not for a day or so." She flung herself at his feet. "Consider your overworked little daughter. Oh,how good this is!"

"No," said the bishop in a grave tone that made her look up into his face. "I must go hack."

He met her clear gaze. "What do you think of all this business, Eleanor?" he asked abruptly. "Do you think I had a sort of fit in the cathedral?"

He winced as he asked the question.

"Daddy," she said, after a little pause; "the things you said and did that afternoon were the noblest you ever did in your life. I wish I had been there. It must have been splendid to be

there. I've not told you before--I've been dying to.... I'd promised not to say a word--not to remind you. I promised the doctor. But now you ask me, now you are well again, I can tell you. Kitty Kingdom has told me all about it, how it felt. It was like light and order coming into a hopeless dark muddle. What you said was like what we have all been trying to think--I mean all of us young people. Suddenly it was all clear."

She stopped short. She was breathless with the excitement of her confession.

Her father too remained silent for a little while. He was reminded of his weakness; he was, he perceived, still a little hysterical. He felt that he might weep at her youthful enthusiasm if he did not restrain himself.

"I'm glad," he said, and patted her shoulder. "I'm glad, Norah."

She looked away from him out across the lank brown sands and water pools to the sea. "It was what we have all been feeling our way towards, the absolute simplification of religion, the absolute simplification of politics and social duty; just God, just God the King."

"But should I have said that--in the cathedral?"

She felt no scruples. "You had to," she said.

"But now think what it means," he said. "I must leave the church."

"As a man strips off his coat for a fight."

"That doesn't dismay you?"

She shook her head, and smiled confidently to sea and sky.

"I'm glad if you're with me," he said. "Sometimes--I think--I'm not a very self-reliant man."

"You'll have all the world with you," she was convinced, "in a little time."

"Perhaps rather a longer time than you think, Norah. In the meantime--"

She turned to him once more.

"In the meantime there are a great many things to consider. Young people, they say, never think of the transport that is needed to win a battle. I have it in my mind that I should leave the church. But I can't just walk out into the marketplace and begin preaching there. I see the family furniture being carried out of the palace and put into vans. It has to go somewhere...."

"I suppose you will go to London."

"Possibly. In fact certainly. I have a plan. Or at least an opportunity.... But that isn't what I have most in mind. These things are not done without emotion and a considerable strain upon one's personal relationships. I do not think this--I do not think your mother sees things as we do."

"She will," said young enthusiasm, "when she understands."

"I wish she did. But I have been unlucky in the circumstances of my explanations to her. And of course you understand all this means risks--poverty perhaps--going without things--travel, opportunity, nice possessions--for all of us. A loss of position too. All this sort of thing," he stuck out a gaitered

calf and smiled, "will have to go. People, some of them, may be disagreeable to us...."

"After all, Daddy," she said, smiling, "it isn't so bad as the cross and the lions and burning pitch. And you have the Truth."

"You do believe--?" He left his sentence unfinished.

She nodded, her face aglow. "We know you have the Truth."

"Of course in my own mind now it is very clear. I had a kind of illumination...." He would have tried to tell her of his vision, and he was too shy. "It came to me suddenly that the whole world was in confusion because men followed after a thousand different immediate aims, when really it was quite easy, if only one could be simple it was quite easy, to show that nearly all men could only be fully satisfied and made happy in themselves by one single aim, which was also the aim that would make the whole world one great order, and that aim was to make God King of one's heart and the whole world. I saw that all this world, except for a few base monstrous spirits, was suffering hideous things because of this war, and before the war it was full of folly, waste, social injustice and suspicion for the same reason, because it had not realized the kingship of God. And that is so simple; the essence of God is simplicity. The sin of this war lies with men like myself, men who set up to tell people about God, more than it lies with any other class--"

"Kings?" she interjected. "Diplomatists? Finance?"

"Yes. Those men could only work mischief in the world because the priests and teachers let them. All things human lie at last at the door of the priest and teacher. Who differentiate, who qualify and complicate, who make mean unnecessary elaborations, and so divide mankind. If it were not for the weakness and

wickedness of the priests, every one would know and understand God. Every one who was modest enough not to set up for particular knowledge. Men disputed whether God is Finite or Infinite, whether he has a triple or a single aspect. How should they know? All we need to know is the face he turns to us. They impose their horrible creeds and distinctions. None of those things matter. Call him Christ the God or call him simply God, Allah, Heaven; it does not matter. He comes to us, we know, like a Helper and Friend; that is all we want to know. You may speculate further if you like, but it is not religion. They dispute whether he can set aside nature. But that is superstition. He is either master of nature and he knows that it is good, or he is part of nature and must obey. That is an argument for hair-splitting metaphysicians. Either answer means the same for us. It does not matter which way we come to believe that he does not idly set the course of things aside. Obviously he does not set the course of things aside. What he does do for certain is to give us courage and save us from our selfishness and the bitter hell it makes for us. And every one knows too what sort of things we want, and for what end we want to escape from ourselves. We want to do right. And right, if you think clearly, is just truth within and service without, the service of God's kingdom, which is mankind, the service of human needs and the increase of human power and experience. It is all perfectly plain, it is all quite easy for any one to understand, who isn't misled and chattered at and threatened and poisoned by evil priests and teachers."

"And you are going to preach that, Daddy?"

"If I can. When I am free--you know I have still to resign and give up--I shall make that my message."

"And so God comes."

"God comes as men perceive him in his simplicity.... Let men

but see God simply, and forthwith God and his kingdom possess the world."

She looked out to sea in silence for awhile.

Then she turned to her father. "And you think that His Kingdom will come--perhaps in quite a little time--perhaps in our lifetimes? And that all these ridiculous or wicked little kings and emperors, and these political parties, and these policies and conspiracies, and this nationalist nonsense and all the patriotism and rowdyism, all the private profit-seeking and every baseness in life, all the things that it is so horrible and disgusting to be young among and powerless among, you think they will fade before him?"

The bishop pulled his faith together.

"They will fade before him--but whether it will take a lifetime or a hundred lifetimes or a thousand lifetimes, my Norah --"

He smiled and left his sentence unfinished, and she smiled back at him to show she understood.

And then he confessed further, because he did not want to seem merely sentimentally hopeful.

"When I was in the cathedral, Norah--and just before that service, it seemed to me--it was very real.... It seemed that perhaps the Kingdom of God is nearer than we suppose, that it needs but the faith and courage of a few, and it may be that we may even live to see the dawning of his kingdom, even--who knows?--the sunrise. I am so full of faith and hope that I fear to be hopeful with you. But whether it is near or far--"

"We work for it," said Eleanor.

Eleanor thought, eyes downcast for a little while, and then looked up.

"It is so wonderful to talk to you like this, Daddy. In the old days, I didn't dream--Before I went to Newnham. I misjudged you. I thought Never mind what I thought. It was silly. But now I am so proud of you. And so happy to be back with you, Daddy, and find that your religion is after all just the same religion that I have been wanting."

CHAPTER THE NINTH - THE THIRD VISION

(1)

ONE afternoon in October, four months and more after that previous conversation, the card of Mr. Edward Scrope was brought up to Dr. Brighton-Pomfrey. The name awakened no memories. The doctor descended to discover a man so obviously in unaccustomed plain clothes that he had a momentary disagreeable idea that he was facing a detective. Then he saw that this secular disguise draped the familiar form of his old friend, the former Bishop of Princhester. Scrope was pale and a little untidy; he had already acquired something of the peculiar, slightly faded quality one finds in a don who has gone to Hampstead and fallen amongst advanced thinkers and got mixed up with the Fabian Society. His anxious eyes and faintly propitiatory manner suggested an impending appeal.

Dr. Brighton-Pomfrey had the savoir-faire of a successful consultant; he prided himself on being all things to all men; but just for an instant he was at a loss what sort of thing he had to be here. Then he adopted the genial, kindly, but by no means lavishly generous tone advisable in the case of a man who has suffered considerable social deterioration without being very seriously to blame.

Dr. Brighton-Pomfrey was a little round-faced man with defective eyesight and an unsuitable nose for the glasses he wore, and he flaunted--God knows why--enormous side-whiskers.

"Well," he said, balancing the glasses skilfully by throwing back his head, "and how are you? And what can I do for you? There's no external evidence of trouble. You're looking lean and a little pale, but thoroughly fit."

"Yes," said the late bishop, "I'm fairly fit--"

"Only--?" said the doctor, smiling his teeth, with something of the manner of an old bathing woman who tells a child to jump.

"Well, I'm run down and--worried."

"We'd better sit down," said the great doctor professionally, and looked hard at him. Then he pulled at the arm of a chair.

The ex-bishop sat down, and the doctor placed himself between his patient and the light.

"This business of resigning my bishopric and so forth has involved very considerable strains," Scrope began. "That I think is the essence of the trouble. One cuts so many associations.... I did not realize how much feeling there would be.... Difficulties too of readjusting one's position."

"Zactly. Zactly. Zactly," said the doctor, snapping his face and making his glasses vibrate. "Run down. Want a tonic or a change?"

"Yes. In fact--I want a particular tonic."

Dr. Brighton-Pomfrey made his eyes and mouth round and interrogative.

"While you were away last spring--"

"Had to go," said the doctor, "unavoidable. Gas gangrene. Certain enquiries. These young investigators all very well in their way. But we older reputations--Experience. Maturity of judgment. Can't do without us. Yes?"

"Well, I came here last spring and saw, an assistant I suppose he was, or a supply,--do you call them supplies in your profession?--named, I think--Let me see--D--?"

"Dale!"

The doctor as he uttered this word set his face to the unaccustomed exercise of expressing malignity. His round blue eyes sought to blaze, small cherubic muscles exerted themselves to pucker his brows. His colour became a violent pink. "Lunatic!" he said. "Dangerous Lunatic! He didn't do anything--anything bad in your case, did he?"

He was evidently highly charged with grievance in this matter. "That man was sent to me from Cambridge with the highest testimonials. The very highest. I had to go at twenty-four hours' notice. Enquiry--gas gangrene. There was nothing for it but to leave things in his hands."

Dr. Brighton-Pomfrey disavowed responsibility with an open, stumpy-fingered hand.

"He did me no particular harm," said Scrope.

"You are the first he spared," said Dr. Brighton-Pomfrey.

"Did he--? Was he unskilful?"

"Unskilful is hardly the word."

"Were his methods peculiar?"

The little doctor sprang to his feet and began to pace about the room. "Peculiar!" he said. "It was abominable that they

should send him to me. Abominable!"

He turned, with all the round knobs that constituted his face, aglow. His side-whiskers waved apart like wings about to flap. He protruded his face towards his seated patient. "I am glad that he has been killed," he said. "Glad! There!"

His glasses fell off--shocked beyond measure. He did not heed them. They swung about in front of him as if they sought to escape while he poured out his feelings.

"Fool!" he spluttered with demonstrative gestures. "Dangerous fool! His one idea--to upset everybody. Drugs, Sir! The most terrible drugs! I come back. Find ladies. High social position. Morphine-maniacs. Others. Reckless use of the most dangerous expedients.... Cocaine not in it. Stimulants--violent stimulants. In the highest quarters. Terrible. Exalted persons. Royalty! Anxious to be given war work and become anonymous.... Horrible! He's been a terrible influence. One idea--to disturb soul and body. Minds unhinged. Personal relations deranged. Shattered the practice of years. The harm he has done! The harm!"

He looked as though he was trying to burst--as a final expression of wrath. He failed. His hands felt trembling to recover his pince-nez. Then from his tail pocket he produced a large silk handkerchief and wiped the glasses. Replaced them. Wriggled his head in his collar, running his fingers round his neck. Patted his tie.

"Excuse this outbreak!" he said. "But Dr. Dale has inflicted injuries "

Scrope got up, walked slowly to the window, clasping his hands behind his back, and turned. His manner still retained much of his episcopal dignity. "I am sorry. But still you can no doubt

tell from your books what it was he gave me. It was a tonic that had a very great effect on me. And I need it badly now."

Dr. Brighton-Pomfrey was quietly malignant. "He kept no diary at all," he said. "No diary at all."

"But

"If he did," said Dr. Brighton-Pomfrey, holding up a flat hand and wagging it from side to side, "I wouldn't follow his treatment." He intensified with the hand going faster. "I wouldn't follow his treatment. Not under any circumstances."

"Naturally," said Scrope, "if the results are what you say. But in my case it wasn't a treatment. I was sleepless, confused in my mind, wretched and demoralized; I came here, and he just produced the stuff--It clears the head, it clears the mind. One seems to get away from the cloud of things, to get through to essentials and fundamentals. It straightened me out.... You must know such a stuff. Just now, confronted with all sorts of problems arising out of my resignation, I want that tonic effect again. I must have it. I have matters to decide--and I can't decide. I find myself uncertain, changeable from hour to hour. I don't ask you to take up anything of this man Dale's. This is a new occasion. But I want that drug."

At the beginning of this speech Dr. Brighton-Pomfrey's hands had fallen to his hips. As Scrope went on the doctor's pose had stiffened. His head had gone a little on one side; he had begun to play with his glasses. At the end he gave vent to one or two short coughs, and then pointed his words with his glasses held out.

"Tell me," he said, "tell me." (Cough.) "Had this drug that cleared your head--anything to do with your resignation?"

And he put on his glasses disconcertingly, and threw his head back to watch the reply.

"It did help to clear up the situation."

"Exactly," said Dr. Brighton-Pomfrey in a tone that defined his own position with remorseless clearness. "Exactly." And he held up a flat, arresting hand. .

"My dear Sir," he said. "How can you expect me to help you to a drug so disastrous?--even if I could tell you what it is."

"But it was not disastrous to me," said Scrope.

"Your extraordinary resignation--your still more extraordinary way of proclaiming it!"

"I don't think those were disasters."

"But my dear Sir!"

"You don't want to discuss theology with me, I know. So let me tell you simply that from my point of view the illumination that came to me--this drug of Dr. Dale's helping--has been the great release of my life. It crystallized my mind. It swept aside the confusing commonplace things about me. Just for a time I saw truth clearly.... I want to do so again."

"Why?"

"There is a crisis in my affairs--never mind what. But I cannot see my way clear."

Dr. Brighton-Pomfrey was meditating now with his eyes on his

carpet and the corners of his mouth tucked in. He was swinging his glasses pendulum-wise. "Tell me," he said, looking sideways at Scrope, "what were the effects of this drug? It may have been anything. How did it give you this--this vision of the truth--that led to your resignation?"

Scrope felt a sudden shyness. But he wanted Dale's drug again so badly that he obliged himself to describe his previous experiences to the best of his ability.

"It was," he said in a matter-of-fact tone, "a golden, transparent liquid. Very golden, like a warm-tinted Chablis. When water was added it became streaked and opalescent, with a kind of living quiver in it. I held it up to the light."

"Yes? And when you took it?"

"I felt suddenly clearer. My mind--I had a kind of exaltation and assurance."

"Your mind," Dr. Brighton-Pomfrey assisted, "began to go twenty-nine to the dozen."

"It felt stronger and clearer," said Scrope, sticking to his quest.

"And did things look as usual?" asked the doctor, protruding his knobby little face like a clenched fist.

"No," said Scrope and regarded him. How much was it possible to tell a man of this type?

"They differed?" said the doctor, relaxing.

"Yes.... Well, to be plain.... I had an immediate sense of God.

I saw the world--as if it were a transparent curtain, and then God became--evident.... Is it possible for that to determine the drug?"

"God became--evident," the doctor said with some distaste, and shook his head slowly. Then in a sudden sharp cross-examining tone: "You mean you had a vision? Actually saw 'um?"

"It was in the form of a vision." Scrope was now mentally very uncomfortable indeed.

The doctor's lips repeated these words noiselessly, with an effect of contempt. "He must have given you something--It's a little like morphia. But golden--opalescent? And it was this vision made you astonish us all with your resignation?"

"That was part of a larger process," said Scrope patiently. "I had been drifting into a complete repudiation of the Anglican positions long before that. All that this drug did was to make clear what was already in my mind. And give it value. Act as a developer."

The doctor suddenly gave way to a botryoidal hilarity. "To think that one should be consulted about visions of God--in Mount Street!" he said. "And you know, you know you half want to believe that vision was real. You know you do."

So far Scrope had been resisting his realization of failure. Now he gave way to an exasperation that made him reckless of Brighton-Pomfrey's opinion. "I do think," he said, "that that drug did in some way make God real to me. I think I saw God."

Dr. Brighton-Pomfrey shook his head in a way that made Scrope want to hit him.

"I think I saw God," he repeated more firmly. "I had a sudden realization of how great he was and how great life was, and how timid and mean and sordid were all our genteel, professional lives. I was seized upon, for a time I was altogether possessed by a passion to serve him fitly and recklessly, to make an end to compromises with comfort and self-love and secondary things. And I want to hold to that. I want to get back to that. I am given to lassitudes. I relax. I am by temperament an easy-going man. I want to buck myself up, I want to get on with my larger purposes, and I find myself tired, muddled, entangled.... The drug was a good thing. For me it was a good thing. I want its help again."

"I know no more than you do what it was."

"Are there no other drugs that you do know, that have a kindred effect? If for example I tried morphia in some form?"

"You'd get visions. They wouldn't be divine visions. If you took small quantities very discreetly you might get a temporary quickening. But the swift result of all repeated drug-taking is, I can assure you, moral decay--rapid moral decay. To touch drugs habitually is to become hopelessly unpunctual, untruthful, callously selfish and insincere. I am talking mere textbook, mere everyday common-places, to you when I tell you that."

"I had an idea. I had a hope...."

"You've a stiff enough fight before you," said the doctor, "without such a handicap as that."

"You won't help me?"

The doctor walked up and down his hearthrug, and then delivered himself with an extended hand and wagging fingers.

"I wouldn't if I could. For your good I wouldn't. And even if I would I couldn't, for I don't know the drug. One of his infernal brews, no doubt. Something--accidental. It's lost--for good--for your good, anyhow...."

(2)

Scrope halted outside the stucco portals of the doctor's house. He hesitated whether he should turn to the east or the west.

"That door closes," he said. "There's no getting back that way."...

He stood for a time on the kerb. He turned at last towards Park Lane and Hyde Park. He walked along thoughtfully, inattentively steering a course for his new home in Pembury Road, Notting Hill.

(3)

At the outset of this new phase in Scrope's life that had followed the crisis of the confirmation service, everything had seemed very clear before him. He believed firmly that he had been shown God, that he had himself stood in the presence of God, and that there had been a plain call to him to proclaim God to the world. He had realized God, and it was the task of every one who had realized God to help all mankind to the same realization. The proposal of Lady Sunderbund had fallen in with that idea. He had been steeling himself to a prospect of struggle and dire poverty, but her prompt loyalty had come as an immense relief to his anxiety for his wife and family. When he had talked to Eleanor upon the beach at Hunstanton it had seemed to him that his course was manifest, perhaps a little severe but by no means impossible. They had sat together in the sunshine, exalted by a sense of fine

adventure and confident of success, they had looked out upon the future, upon the great near future in which the idea of God was to inspire and reconstruct the world.

It was only very slowly that this pristine clearness became clouded and confused. It had not been so easy as Eleanor had supposed to win over the sympathy of Lady Ella with his resignation. Indeed it had not been won over. She had become a stern and chilling companion, mute now upon the issue of his resignation, but manifestly resentful. He was secretly disappointed and disconcerted by her tone. And the same hesitation of the mind, instinctive rather than reasoned, that had prevented a frank explanation of his earlier doubts to her, now restrained him from telling her naturally and at once of the part that Lady Sunderbund was to play in his future ministry. In his own mind he felt assured about that part, but in order to excuse his delay in being frank with his wife, he told himself that he was not as yet definitely committed to Lady Sunderbund's project. And in accordance with that idea he set up housekeeping in London upon a scale that implied a very complete cessation of income. "As yet," he told Lady Ella, "we do not know where we stand. For a time we must not so much house ourselves as camp. We must take some quite small and modest house in some less expensive district. If possible I would like to take it for a year, until we know better how things are with us."

He reviewed a choice of London districts.

Lady Ella said her bitterest thing. "Does it matter where we hide our heads?"

That wrung him to: "We are not hiding our heads."

She repented at once. "I am sorry, Ted," she said. "It slipped from me."...

He called it camping, but the house they had found in Pembury Road, Notting Hill, was more darkened and less airy than any camp. Neither he nor his wife had ever had any experience of middle-class house-hunting or middle-class housekeeping before, and they spent three of the most desolating days of their lives in looking for this cheap and modest shelter for their household possessions. Hitherto life had moved them from one established and comfortable home to another; their worst affliction had been the modern decorations of the Palace at Princeschester, and it was altogether a revelation to them to visit house after house, ill-lit, ill-planned, with dingy paint and peeling wallpaper, kitchens for the most part underground, and either without bathrooms or with built-out bathrooms that were manifestly grudging afterthoughts, such as harbour the respectable middle classes of London. The house agents perceived intimations of helplessness in their manner, adopted a "rushing" method with them strange to people who had hitherto lived in a glowing halo of episcopal dignity. "Take it or leave it," was the note of those gentlemen; "there are always people ready for houses." The line that property in land and houses takes in England, the ex-bishop realized, is always to hold up and look scornful. The position of the land-owning, house-owning class in a crowded country like England is ultra-regal. It is under no obligation to be of use, and people are obliged to get down to the land somewhere. They cannot conduct business and rear families in the air. England's necessity is the landlord's opportunity....

Scrope began to generalize about this, and develop a new and sincerer streak of socialism in his ideas. "The church has been very remiss," he said, as he and Lady Ella stared at the basement "breakfast room" of their twenty-seventh dismal possibility. "It should have insisted far more than it has done upon the landlord's responsibility. No one should tolerate the offer of such a house as this--at such a rent--to decent people. It is

unrighteous."

At the house agent's he asked in a cold, intelligent ruling-class voice, the name of the offending landlord.

"It's all the property of the Ecclesiastical Commissioners that side of the railway," said the agent, picking his teeth with a pin. "Lazy lot. Dreadfully hard to get 'em to do anything. Own some of the worst properties in London."

Lady Ella saw things differently again. "If you had stayed in the church," she said afterwards, "you might have helped to alter such things as that."

At the time he had no answer.

"But," he said presently as they went back in the tube to their modest Bloomsbury hotel, "if I had stayed in the church I should never have realized things like that."

(4)

But it does no justice to Lady Ella to record these two unavoidable expressions of regret without telling also of the rallying courage with which she presently took over the task of resettling herself and her stricken family. Her husband's change of opinion had fallen upon her out of a clear sky, without any premonition, in one tremendous day. In one day there had come clamouring upon her, with an effect of revelation after revelation, the ideas of drugs, of heresy and blasphemy, of an alien feminine influence, of the entire moral and material breakdown of the man who had been the centre of her life. Never was the whole world of a woman so swiftly and comprehensively smashed. All the previous troubles of her life seemed

infinitesimal in comparison with any single item in this dismaying debacle. She tried to consolidate it in the idea that he was ill, "disordered." She assured herself that he would return from Hunstanton restored to health and orthodoxy, with all his threatenings of a resignation recalled; the man she had loved and trusted to succeed in the world and to do right always according to her ideas. It was only with extreme reluctance that she faced the fact that with the fumes of the drug dispelled and all signs of nervous exhaustion gone, he still pressed quietly but resolutely toward a severance from the church. She tried to argue with him and she found she could not argue. The church was a crystal sphere in which her life was wholly contained, her mind could not go outside it even to consider a dissentient proposition.

While he was at Hunstanton, every day she had prayed for an hour, some days she had prayed for several hours, in the cathedral, kneeling upon a harsh hassock that hurt her knees. Even in her prayers she could not argue nor vary. She prayed over and over again many hundreds of times: "Bring him back, dear Lord. Bring him back again."

In the past he had always been a very kind and friendly mate to her, but sometimes he had been irritable about small things, especially during his seasons of insomnia; now he came back changed, a much graver man, rather older in his manner, carefully attentive to her, kinder and more watchful, at times astonishingly apologetic, but rigidly set upon his purpose of leaving the church. "I know you do not think with me in this," he said. "I have to pray you to be patient with me. I have struggled with my conscience.... For a time it means hardship, I know. Poverty. But if you will trust me I think I shall be able to pull through. There are ways of doing my work. Perhaps we shall not have to undergo this cramping in this house for very long...."

"It is not the poverty I fear," said Lady Ella.

And she did face the worldly situation, if a little sadly, at any rate with the courage of practical energy. It was she who stood in one ungainly house after another and schemed how to make discomforts tolerable, while Scrope raged unhelpfully at landlordism and the responsibility of the church for economic disorder. It was she who at last took decisions into her hands when he was too jaded to do anything but generalize weakly, and settled upon the house in Pembury Road which became their London home. She got him to visit Hunstanton again for half a week while she and Miriam, who was the practical genius of the family, moved in and made the new home presentable. At the best it was barely presentable. There were many plain hardships. The girls had to share one of the chief bedrooms in common instead of their jolly little individual dens at Princhester.... One little room was all that could be squeezed out as a study for "father"; it was not really a separate room, it was merely cut off by closed folding doors from the dining-room, folding doors that slowly transmitted the dinner flavours to a sensitive worker, and its window looked out upon a blackened and uneventful yard and the skylights of a populous, conversational, and high-spirited millinery establishment that had been built over the corresponding garden of the house in Restharrow Street. Lady Ella had this room lined with open shelves, and Clementina (in the absence of Eleanor at Newuham) arranged the pick of her father's books. It is to be noted as a fact of psychological interest that this cramped, ill-lit little room distressed Lady Ella more than any other of the discomforts of their new quarters. The bishop's writing-desk filled a whole side of it. Parsimony ruled her mind, but she could not resist the impulse to get him at least a seemingly reading-lamp.

He came back from Hunstanton full of ideas for work in London. He was, he thought, going to "write something" about his views.

He was very grateful and much surprised at what she had done to that forbidding house, and full of hints and intimations that it would not be long before they moved to something roomier. She was disposed to seek some sort of salaried employment for Clementina and Miriam at least, but he would not hear of that. "They must go on and get educated," he said, "if I have to give up smoking to do it. Perhaps I may manage even without that." Eleanor, it seemed, had a good prospect of a scholarship at the London School of Economics that would practically keep her. There would be no Cambridge for Clementina, but London University might still be possible with a little pinching, and the move to London had really improved the prospects of a good musical training for Miriam. Phoebe and Daphne, Lady Ella believed, might get in on special terms at the Notting Hill High School.

Scrope found it difficult to guess at what was going on in the heads of his younger daughters. None displayed such sympathy as Eleanor had confessed. He had a feeling that his wife had schooled them to say nothing about the change in their fortunes to him. But they quarrelled a good deal, he could hear, about the use of the one bathroom--there was never enough hot water after the second bath. And Miriam did not seem to enjoy playing the new upright piano in the drawing-room as much as she had done the Princhester grand it replaced. Though she was always willing to play that thing he liked; he knew now that it was the Adagio of Of. 111; whenever he asked for it.

London servants, Lady Ella found, were now much more difficult to get than they had been in the Holy Innocents' days in St. John's Wood. And more difficult to manage when they were got. The households of the more prosperous clergy are much sought after by domestics of a serious and excellent type; an unfrocked clergyman's household is by no means so attractive. The first comers were young women of unfortunate dispositions; the first cook was reluctant and insolent, she went before her month was

up; the second careless; she made burnt potatoes and cindered chops, underboiled and overboiled eggs; a "dropped" look about everything, harsh coffee and bitter tea seemed to be a natural aspect of the state of being no longer a bishop. He would often after a struggle with his nerves in the bedroom come humming cheerfully to breakfast, to find that Phoebe, who was a delicate eater, had pushed her plate away scarcely touched, while Lady Ella sat at the end of the table in a state of dangerous calm, framing comments for delivering downstairs that would be sure to sting and yet leave no opening for repartee, and trying at the same time to believe that a third cook, if the chances were risked again, would certainly be "all right."

The drawing-room was papered with a morose wallpaper that the landlord, in view of the fact that Scrope in his optimism would only take the house on a yearly agreement, had refused to replace; it was a design of very dark green leaves and grey gothic arches; and the apartment was lit by a chandelier, which spilt a pool of light in the centre of the room and splashed useless weak patches elsewhere. Lady Ella had to interfere to prevent the monopolization of this centre by Phoebe and Daphne for their home work. This light trouble was difficult to arrange; the plain truth was that there was not enough illumination to go round. In the Princhester drawing-room there had been a number of obliging little electric pushes. The size of the dining-room, now that the study was cut off from it, forbade hospitality. As it was, with only the family at home, the housemaid made it a grievance that she could scarcely squeeze by on the sideboard side to wait.

The house vibrated to the trains in the adjacent underground railway. There was a lady next door but one who was very pluckily training a contralto voice that most people would have gladly thrown away. At the end of Restharrow Street was a garage, and a yard where chauffeurs were accustomed to "tune up" their engines.

All these facts were persistently audible to any one sitting down in the little back study to think out this project of "writing something," about a change in the government of the whole world. Petty inconveniences no doubt all these inconveniences were, but they distressed a rather oversensitive mind which was also acutely aware that even upon this scale living would cost certainly two hundred and fifty pounds if not more in excess of the little private income available.

(5)

These domestic details, irrelevant as they may seem in a spiritual history, need to be given because they added an intimate keenness to Scrope's readiness for this private chapel enterprise that he was discussing with Lady Sunderbund. Along that line and along that line alone, he saw the way of escape from the great sea of London dinginess that threatened to submerge his family. And it was also, he felt, the line of his duty; it was his "call."

At least that was how he felt at first. And then matters began to grow complicated again.

Things had gone far between himself and Lady Sunderbund since that letter he had read upon the beach at Old Hunstanton. The blinds of the house with the very very blue door in Princhester had been drawn from the day when the first vanload of the renegade bishop's private possessions had departed from the palace. The lady had returned to the brightly decorated flat overlooking Hyde Park. He had seen her repeatedly since then, and always with a fairly clear understanding that she was to provide the chapel and pulpit in which he was to proclaim to London the gospel of the Simplicity and Universality of God. He

was to be the prophet of a reconsidered faith, calling the whole world from creeds and sects, from egotisms and vain loyalties, from prejudices of race and custom, to the worship and service of the Divine King of all mankind. That in fact had been the ruling resolve in his mind, the resolve determining his relations not only with Lady Sunderbund but with Lady Ella and his family, his friends, enemies and associates. He had set out upon this course unchecked by any doubt, and overriding the manifest disapproval of his wife and his younger daughters. Lady Sunderbund's enthusiasm had been enormous and sustaining....

Almost imperceptibly that resolve had weakened. Imperceptibly at first. Then the decline had been perceived as one sometimes perceives a thing in the background out of the corner of one's eye.

In all his early anticipations of the chapel enterprise, he had imagined himself in the likeness of a small but eloquent figure standing in a large exposed place and calling this lost misled world back to God. Lady Sunderbund, he assumed, was to provide the large exposed place (which was dimly paved with pews) and guarantee that little matter which was to relieve him of sordid anxieties for his family, the stipend. He had agreed in an inattentive way that this was to be eight hundred a year, with a certain proportion of the subscriptions. "At fl'st, I shall be the chief subsc'iber," she said. "Before the 'ush comes." He had been so content to take all this for granted and think no more about it--more particularly to think no more about it--that for a time he entirely disregarded the intense decorative activities into which Lady Sunderbund incontinently plunged. Had he been inclined to remark them he certainly might have done so, even though a considerable proportion was being thoughtfully veiled for a time from his eyes.

For example, there was the young architect with the wonderful

tie whom he met once or twice at lunch in the Hyde Park flat. This young man pulled the conversation again and again, Lady Sunderbund aiding and abetting, in the direction of the "ideal church." It was his ambition, he said, someday, to build an ideal church, "divorced from tradition."

Scrope had been drawn at last into a dissertation. He said that hitherto all temples and places of worship had been conditioned by orientation due to the seasonal aspects of religion, they pointed to the west or--as in the case of the Egyptian temples --to some particular star, and by sacramentalism, which centred everything on a highly lit sacrificial altar. It was almost impossible to think of a church built upon other lines than that. The architect would be so free that--"

"Absolutely free," interrupted the young architect. "He might, for example, build a temple like a star."

"Or like some wondrous casket," said Lady Sunderbund....

And also there was a musician with fuzzy hair and an impulsive way of taking the salted almonds, who wanted to know about religious music.

Scrope hazarded the idea that a chanting people was a religious people. He said, moreover, that there was a fine religiosity about Moussorgski, but that the most beautiful single piece of music in the world was Beethoven's sonata, Opus 111,--he was thinking, he said, more particularly of the Adagio at the end, *molto semplice e cantabile*. It had a real quality of divinity.

The musician betrayed impatience at the name of Beethoven, and thought, with his mouth appreciatively full of salted almonds, that nowadays we had got a little beyond that anyhow.

"We shall be superhuman before we get beyond either Purcell or Beethoven," said Scrope.

Nor did he attach sufficient importance to Lady Sunderbund's disposition to invite Positivists, members of the Brotherhood Church, leaders among the Christian Scientists, old followers of the Rev. Charles Voysey, Swedenborgians, Moslem converts, Indian Theosophists, psychic phenomena and so forth, to meet him. Nevertheless it began to drift into his mind that he was by no means so completely in control of the new departure as he had supposed at first. Both he and Lady Sunderbund professed universalism; but while his was the universalism of one who would simplify to the bare fundamentals of a common faith, hers was the universalism of the collector. Religion to him was something that illuminated the soul, to her it was something that illuminated prayer-books. For a considerable time they followed their divergent inclinations without any realization of their divergence. None the less a vague doubt and dissatisfaction with the prospect before him arose to cloud his confidence.

At first there was little or no doubt of his own faith. He was still altogether convinced that he had to confess and proclaim God in his life. He was as sure that God was the necessary king and saviour of mankind and of a man's life, as he was of the truth of the Binomial Theorem. But what began first to fade was the idea that he had been specially called to proclaim the True God to all the world. He would have the most amiable conference with Lady Sunderbund, and then as he walked back to Notting Hill he would suddenly find stuck into his mind like a challenge, Heaven knows how: "Another prophet?" Even if he succeeded in this mission enterprise, he found himself asking, what would he be but just a little West-end Mahomet? He would have founded another sect, and we have to make an end to all sects. How is there to be an end to sects, if there are still to be chapels--richly decorated chapels--and congregations, and salaried specialists

in God?

That was a very disconcerting idea. It was particularly active at night. He did his best to consider it with a cool detachment, regardless of the facts that his private income was just under three hundred pounds a year, and that his experiments in cultured journalism made it extremely improbable that the most sedulous literary work would do more than double this scanty sum. Yet for all that these nasty, ugly, sordid facts were entirely disregarded, they did somehow persist in coming in and squatting down, shapeless in a black corner of his mind--from which their eyes shone out, so to speak--whenever his doubt whether he ought to set up as a prophet at all was under consideration.

(6)

Then very suddenly on this October afternoon the situation had come to a crisis.

He had gone to Lady Sunderbund's flat to see the plans and drawings for the new church in which he was to give his message to the world. They had brought home to him the complete realization of Lady Sunderbund's impossibility. He had attempted upon the spur of the moment an explanation of just how much they differed, and he had precipitated a storm of extravagantly perplexing emotions....

She kept him waiting for perhaps ten minutes before she brought the plans to him. He waited in the little room with the Wyndham Lewis picture that opened upon the balcony painted with crazy squares of livid pink. On a golden table by the window a number of recently bought books were lying, and he went and stood over these, taking them up one after another. The first was "The Countess of Huntingdon and Her Circle," that bearded of

lightminded archbishops, that formidable harbourer of Wesleyan chaplains. For some minutes he studied the grim portrait of this inspired lady standing with one foot ostentatiously on her coronet and then turned to the next volume. This was a life of Saint Teresa, that energetic organizer of Spanish nunneries. The third dealt with Madame Guyon. It was difficult not to feel that Lady Sunderbund was reading for a part.

She entered.

She was wearing a long simple dress of spangled white with a very high waist; she had a bracelet of green jade, a waistband of green silk, and her hair was held by a wreath of artificial laurel, very stiff and green. Her arms were full of big rolls of cartridge paper and tracing paper. "I'm so pleased," she said. "It's 'eady at last and I can show you."

She banged the whole armful down upon a vivid little table of inlaid black and white wood. He rescued one or two rolls and a sheet of tracing paper from the floor.

"It's the Temple," she panted in a significant whisper. "It's the Temple of the One T'ue God!"

She scabbled among the papers, and held up the elevation of a strange square building to his startled eyes. "Iszi't it just pe'fect?" she demanded.

He took the drawing from her. It represented a building, manifestly an enormous building, consisting largely of two great, deeply fluted towers flanking a vast archway approached by a long flight of steps. Between the towers appeared a dome. It was as if the Mosque of Saint Sophia had produced this offspring in a mesalliance with the cathedral of Wells. Its enormity was made manifest by the minuteness of the large automobiles that were

driving away in the foreground after "setting down." "Here is the plan," she said, thrusting another sheet upon him before he could fully take in the quality of the design. "The g'eat Hall is to be pe'fectly 'ound, no aisle, no altar, and in lettas of sapphiah, 'God is ev'ywhe'."

She added with a note of solemnity, "It will hold th'ee thousand people sitting down."

"But--!" said Scrope.

"The'e's a sort of g'andeur," she said. "It's young Venable's wo'k. It's his fl'st g'ate oppo'tunity."

"But--is this to go on that little site in Aldwych?"

"He says the' isn't 'oom the'!" she explained. "He wants to put it out at Golda's G'een."

"But--if it is to be this little simple chapel we proposed, then wasn't our idea to be central?"

"But if the' isn't 'oem! "she said--conclusively. "And isn't this--isn't it rather a costly undertaking, rather more costly--"

"That docsn't matta. I'm making heaps and heaps of money. Half my p'ope'ty is in shipping and a lot of the 'eat in munitions. I'm 'icher than eva. Isn't the' a sort of g'andeur?" she pressed.

He put the elevation down. He took the plan from her hands and seemed to study it. But he was really staring blankly at the whole situation.

"Lady Sunderbund," he said at last, with an effort, "I am afraid all this won't do."

"Won't do!"

"No. It isn't in the spirit of my intention. It isn't in a great building of this sort--so--so ornate and imposing, that the simple gospel of God's Universal Kingdom can be preached."

"But oughtn't so gate a message to have as g'ate a pulpit?"

And then as if she would seize him before he could go on to further repudiations, she sought hastily among the drawings again.

"But look," she said. "It has ev'ything! It's not only a p'eaching place; it's a headquarters for ev'ything."

With the rapid movements of an excited child she began to thrust the remarkable features and merits of the great project upon him. The preaching dome was only the heart of it. There were to be a library, "'efecto'ies," consultation rooms, classrooms, a publication department, a big underground printing establishment. "Nowadays," she said, "ev'y gate movement must p'int." There was to be music, she said, "a gate invisible o'gan," hidden amidst the architectural details, and pouring out its sounds into the dome, and then she glanced in passing at possible "p'ocessions" round the preaching dome. This preaching dome was not a mere shut-in drum for spiritual reverberations, around it ran great open corridors, and in these corridors there were to be "chapels."

"But what for?" he asked, stemming the torrent. "What need is there for chapels? There are to be no altars, no masses, no sacraments?"

"No," she said, "but they are to be chapels for special

int'ests; a chapel for science, a chapel for healing, a chapel for gov'ment. Places for peoples to sit and think about those things--with paintings and symbols."

"I see your intention," he admitted. "I see your intention."

"The' is to be a gate da'k blue 'ound chapel for sta's and atoms and the myst'ry of matta." Her voice grew solemn. "All still and deep and high. Like a k'ystal in a da'k place. You will go down steps to it. Th'ough a da'k 'ounded a'ch ma'ked with mathematical symbols and balances and scientific app'atus.... And the ve'y next to it, the ve'y next, is to be a little b'ight chapel for bi'ds and flowas!"

"Yes," he said, "it is all very fine and expressive. It is, I see, a symbolical building, a great artistic possibility. But is it the place for me? What I have to say is something very simple, that God is the king of the whole world, king of the ha'penny newspaper and the omnibus and the vulgar everyday things, and that they have to worship him and serve him as their leader in every moment of their lives. This isn't that. This is the old religions over again. This is taking God apart. This is putting him into a fresh casket instead of the old one. And.... I don't like it."

"Don't like it," she cried, and stood apart from him with her chin in the air, a tall astonishment and dismay.

"I can't do the work I want to do with this."

"But--Isn't it you' idea?"

"No. It is not in the least my idea. I want to tell the whole world of the one God that can alone unite it and save it--and you make this extravagant toy."

He felt as if he had struck her directly he uttered that last word.

"Toy!" she echoed, taking it in, "you call it a Toy!"

A note in her voice reminded him that there were two people who might feel strongly in this affair.

"My dear Lady Sunderbund," he said with a sudden change of manner, "I must needs follow the light of my own mind. I have had a vision of God, I have seen him as a great leader towering over the little lives of men, demanding the little lives of men, prepared to take them and guide them to the salvation of mankind and the conquest of pain and death. I have seen him as the God of the human affair, a God of politics, a God of such muddy and bloody wars as this war, a God of economics, a God of railway junctions and clinics and factories and evening schools, a God in fact of men. This God--this God here, that you want to worship, is a God of artists and poets--of elegant poets, a God of bric-a-brac, a God of choice allusions. Oh, it has its grandeur! I don't want you to think that what you are doing may not be altogether fine and right for you to do. But it is not what I have to do.... I cannot--indeed I cannot--go on with this project--upon these lines."

He paused, flushed and breathless. Lady Sunderbund had heard him to the end. Her bright face was brightly flushed, and there were tears in her eyes. It was like her that they should seem tears of the largest, most expensive sort, tears of the first water.

"But," she cried, and her red delicate mouth went awry with dismay and disappointment, and her expression was the half incredulous expression of a child suddenly and cruelly

disappointed: "You won't go on with all this?"

"No," he said. "My dear Lady Sunderbund--"

"Oh! don't Lady Sunderbund me!" she cried with a novel rudeness. "Don't you see I've done it all for you?"

He winced and felt boorish. He had never liked and disapproved of Lady Sunderbund so much as he did at that moment. And he had no words for her.

"How can I stop it all at once like this?"

And still he had no answer.

She pursued her advantage. "What am I to do?" she cried.

She turned upon him passionately. "Look what you've done!" She marked her points with finger upheld, and gave odd suggestions in her face of an angry coster girl. "Eva' since I met you, I've wo'shipped you. I've been 'eady to follow you anywhe'--to do anything. Eva' since that night when you sat so calm and dignified, and they baited you and wo'id you. When they we' all vain and cleva, and you--you thought only of God and 'iligion and didn't mind fo' you'self.... Up to then--I'd been living--oh! the emptiest life..."

The tears ran. "Pe'haps I shall live it again...." She dashed her grief away with a hand beringed with stones as big as beetles.

"I said to myself, this man knows something I don't know. He's got the seeds of ete'nal life su'ely. I made up my mind then and the' I'd follow you and back you and do all I could fo' you. I've lived fo' you. Eve' since. Lived fo' you. And now when all my

little plans are 'ipe, you--! Oh!"

She made a quaint little gesture with pink fists upraised, and then stood with her hand held up, staring at the plans and drawings that were littered over the inlaid table. "I've planned and planned. I said, I will build him a temple. I will be his temple se'vant.... Just a me' se'vant...."

She could not go on.

"But it is just these temples that have confused mankind," he said.

"Not my temple," she said presently, now openly weeping over the gay rejected drawings. "You could have explained...."

"Oh!" she said petulantly, and thrust them away from her so that they went sliding one after the other on to the floor. For some long-drawn moments there was no sound in the room but the slowly accelerated slide and flop of one sheet of cartridge paper after another.

"We could have been so happy," she wailed, "se'ving oua God."

And then this disconcerting lady did a still more disconcerting thing. She staggered a step towards Scrape, seized the lapels of his coat, bowed her head upon his shoulder, put her black hair against his cheek, and began sobbing and weeping.

"My dear lady! " he expostulated, trying weakly to disengage her.

"Let me k'y," she insisted, gripping more resolutely, and following his backward pace. "You must let me k'y. You must let me k'y."

His resistance ceased. One hand supported her, the other patted her shining hair. "My dear child!" he said. "My dear child! I had no idea. That you would take it like this...."

(7)

That was but the opening of an enormous interview. Presently he had contrived in a helpful and sympathetic manner to seat the unhappy lady on a sofa, and when after some cramped discourse she stood up before him, wiping her eyes with a wet wonder of lace, to deliver herself the better, a newborn appreciation of the tactics of the situation made him walk to the other side of the table under colour of picking up a drawing.

In the retrospect he tried to disentangle the threads of a discussion that went to and fro and contradicted itself and began again far back among things that had seemed forgotten and disposed of. Lady Sunderbund's mind was extravagantly untrained, a wild-grown mental thicket. At times she reproached him as if he were a heartless God; at times she talked as if he were a recalcitrant servant. Her mingling of utter devotion and the completest disregard for his thoughts and wishes dazzled and distressed his mind. It was clear that for half a year her clear, bold, absurd will had been crystallized upon the idea of giving him exactly what she wanted him to want. The crystal sphere of those ambitions lay now shattered between them.

She was trying to reconstruct it before his eyes.

She was, she declared, prepared to alter her plans in any way that would meet his wishes. She had not understood. "If it is a Toy," she cried, "show me how to make it not a Toy! Make it 'real!'"

He said it was the bare idea of a temple that made it impossible. And there was this drawing here; what did it mean? He held it out to her. It represented a figure, distressingly like himself, robed as a priest in vestments.

She snatched the offending drawing from him and tore it to shreds.

"If you don't want a Temple, have a meeting-house. You wanted a meeting-house anyhow."

"Just any old meeting-house," he said. "Not that special one. A place without choirs and clergy."

"If you won't have music," she responded, "don't have music. If God doesn't want music it can go. I can't think God does not approve of music, but--that is for you to settle. If you don't like the' being o'naments, we'll make it all plain. Some g'ate g'ey Dome--all g'ey and black. If it isn't to be beautiful, it can be ugly. Yes, ugly. It can be as ugly "--she sobbed--" as the City Temple. We will get some otha a'chitect--some City a'chitect. Some man who has built B'anch Banks or 'ailway stations. That's if you think it pleases God.... B'eak young Venable's hea't.... Only why should you not let me make a place fo' you' message? Why shouldn't it be me? You must have a place. You've got 'to p'each somewhe'."

"As a man, not as a priest."

"Then p'each as a man. You must still wea' something."

"Just ordinary clothes."

"O'dina'y clothes a' clothes in the fashion," she said. "You

would have to go to you' taila for a new p'eaching coat with b'aid put on dif'ently, or two buttons instead of th'ee...."

"One needn't be fashionable."

"Ev'ybody is fash'nable. How can you help it? Some people wea' old fashions; that's all.... A cassock's an old fashion. There's nothing so plain as a cassock."

"Except that it's a clerical fashion. I want to be just as I am now."

"If you think that--that owoble suit is o'dina'y clothes!" she said, and stared at him and gave way to tears of real tenderness.

"A cassock," she cried with passion. "Just a pe'fectly plain cassock. Fo' deecency!... Oh, if you won't--not even that!"

(8)

As he walked now after his unsuccessful quest of Dr. Brighton-Pomfrey towards the Serpentine he acted that stormy interview with Lady Sunderbund over again. At the end, as a condition indeed of his departure, he had left things open. He had assented to certain promises. He was to make her understand better what it was he needed. He was not to let anything that had happened affect that "spi'tual f'enship." She was to abandon all her plans, she was to begin again "at the ve'y beginning." But he knew that indeed there should be no more beginning again with her. He knew that quite beyond these questions of the organization of a purified religion, it was time their association ended. She had wept upon him; she had clasped both his hands at parting and prayed to be forgiven. She was drawing

him closer to her by their very dissension. She had infected him with the softness of remorse; from being a bright and spirited person, she had converted herself into a warm and touching person. Her fine, bright black hair against his cheek and the clasp of her hand on his shoulder was now inextricably in the business. The perplexing, the astonishing thing in his situation was that there was still a reluctance to make a conclusive breach.

He was not the first of men who have tried to find in vain how and when a relationship becomes an entanglement. He ought to break off now, and the riddle was just why he should feel this compunction in breaking off now. He had disappointed her, and he ought not to have disappointed her; that was the essential feeling. He had never realized before as he realized now this peculiar quality of his own mind and the gulf into which it was leading him. It came as an illuminating discovery.

He was a social animal. He had an instinctive disposition to act according to the expectations of the people about him, whether they were reasonable or congenial expectations or whether they were not. That, he saw for the first time, had been the ruling motive of his life; it was the clue to him. Man is not a reasonable creature; he is a socially responsive creature trying to be reasonable in spite of that fact. From the days in the rectory nursery when Scrope had tried to be a good boy on the whole and just a little naughty sometimes until they stopped smiling, through all his life of school, university, curacy, vicarage and episcopacy up to this present moment, he perceived now that he had acted upon no authentic and independent impulse. His impulse had always been to fall in with people and satisfy them. And all the painful conflicts of those last few years had been due to a growing realization of jarring criticisms, of antagonized forces that required from him incompatible things. From which he had now taken refuge--or at any rate sought

refuge--in God. It was paradoxical, but manifestly in God he not only sank his individuality but discovered it.

It was wonderful how much he had thought and still thought of the feelings and desires of Lady Sunderbund, and how little he thought of God. Her he had been assiduously propitiating, managing, accepting, for three months now. Why? Partly because she demanded it, and there was a quality in her demand that had touched some hidden spring--of vanity perhaps it was--in him, that made him respond. But partly also it was because after the evacuation of the palace at Princhester he had felt more and more, felt but never dared to look squarely in the face, the catastrophic change in the worldly circumstances of his family. Only this chapel adventure seemed likely to restore those fallen and bedraggled fortunes. He had not anticipated a tithe of the dire quality of that change. They were not simply uncomfortable in the Notting Hill home. They were miserable. He fancied they looked to him with something between reproach and urgency. Why had he brought them here? What next did he propose to do? He wished at times they would say it out instead of merely looking it. Phoebe's failing appetite chilled his heart.

That concern for his family, he believed, had been his chief motive in clinging to Lady Sunderbund's projects long after he had realized how little they would forward the true service of God. No doubt there had been moments of flattery, moments of something, something rather in the nature of an excited affection; some touch of the magnificent in her, some touch of the infantile,--both appealed magnetically to his imagination; but the real effective cause was his habitual solicitude for his wife and children and his consequent desire to prosper materially. As his first dream of being something between Mohammed and Peter the Hermit in a new proclamation of God to the world lost colour and life in his mind, he realized more and more clearly that there was no way of living in a state of material

prosperity and at the same time in a state of active service to God. The Church of the One True God (by favour of Lady Sunderbund) was a gaily-coloured lure.

And yet he wanted to go on with it. All his imagination and intelligence was busy now with the possibility of in some way subjugating Lady Sunderbund, and modifying her and qualifying her to an endurable proposition. Why?

Why?

There could be but one answer, he thought. Brought to the test of action, he did not really believe in God! He did not believe in God as he believed in his family. He did not believe in the reality of either his first or his second vision; they had been dreams, autogenous revelations, exaltations of his own imaginations. These beliefs were upon different grades of reality. Put to the test, his faith in God gave way; a sword of plaster against a reality of steel.

And yet he did believe in God. He was as persuaded that there was a God as he was that there was another side to the moon. His intellectual conviction was complete. Only, beside the living, breathing--occasionally coughing--reality of Phoebe, God was something as unsubstantial as the Binomial Theorem....

Very like the Binomial Theorem as one thought over that comparison.

By this time he had reached the banks of the Serpentine and was approaching the grey stone bridge that crosses just where Hyde Park ends and Kensington Gardens begins. Following upon his doubts of his religious faith had come another still more extraordinary question: "Although there is a God, does he indeed matter more in our ordinary lives than that same demonstrable

Binomial Theorem? Isn't one's duty to Phoebe plain and clear?" Old Likeman's argument came back to him with novel and enhanced powers. Wasn't he after all selfishly putting his own salvation in front of his plain duty to those about him? What did it matter if he told lies, taught a false faith, perjured and damned himself, if after all those others were thereby saved and comforted?

"But that is just where the whole of this state of mind is false and wrong," he told himself. "God is something more than a priggish devotion, an intellectual formula. He has a hold and a claim--he should have a hold and a claim--exceeding all the claims of Phoebe, Miriam, Daphne, Clementina--all of them....

But he hasn't!...

It was to that he had got after he had left Lady Sunderbund, and to that he now returned. It was the thinness and unreality of his thought of God that had driven him post-haste to Brighton-Pomfrey in search for that drug that had touched his soul to belief.

Was God so insignificant in comparison with his family that after all with a good conscience he might preach him every Sunday in Lady Sunderbund's church, wearing Lady Sunderbund's vestments?

Before him he saw an empty seat. The question was so immense and conclusive, it was so clearly a choice for all the rest of his life between God and the dear things of this world, that he felt he could not decide it upon his legs. He sat down, threw an arm along the back of the seat and drummed with his fingers.

If the answer was "yes" then it was decidedly a pity that he had not stayed in the church. It was ridiculous to strain at the cathedral gnat and then swallow Lady Sunderbund's decorative

Pantehnicon.

For the first time, Scrope definitely regretted his apostasy.

A trivial matter, as it may seem to the reader, intensified that regret. Three weeks ago Borrowdale, the bishop of Howeaster, had died, and Scrope would have been the next in rotation to succeed him on the bench of bishops. He had always looked forward to the House of Lords, intending to take rather a new line, to speak more, and to speak more plainly and fully upon social questions than had hitherto been the practice of his brethren. Well, that had gone....

(9)

Regrets were plain now. The question before his mind was growing clear; whether he was to persist in this self-imposed martyrdom of himself and his family or whether he was to go back upon his outbreak of visionary fanaticism and close with this last opportunity that Lady Sunderbund offered of saving at least the substance of the comfort and social status of his wife and daughters. In which case it was clear to him he would have to go to great lengths and exercise very considerable subtlety--and magnetism--in the management of Lady Sunderbund....

He found himself composing a peculiar speech to her, very frank and revealing, and one that he felt would dominate her thoughts.... She attracted him oddly.... At least this afternoon she had attracted him....

And repelled him....

A wholesome gust of moral impatience stirred him. He smacked the back of the seat hard, as though he smacked himself.

No. He did not like it....

A torn sunset of purple and crimson streamed raggedly up above and through the half stripped trees of Kensington Gardens, and he found himself wishing that Heaven would give us fewer sublimities in sky and mountain and more in our hearts. Against the background of darkling trees and stormily flaming sky a girl was approaching him. There was little to be seen of her but her outline. Something in her movement caught his eye and carried his memory back to a sundown at Hunstanton. Then as she came nearer he saw that it was Eleanor.

It was odd to see her here. He had thought she was at Newnham.

But anyhow it was very pleasant to see her. And there was something in Eleanor that promised an answer to his necessity. The girl had a kind of instinctive wisdom. She would understand the quality of his situation better perhaps than any one. He would put the essentials of that situation as fully and plainly as he could to her. Perhaps she, with that clear young idealism of hers, would give him just the lift and the light of which he stood in need. She would comprehend both sides of it, the points about Phoebe as well as the points about God.

When first he saw her she seemed to be hurrying, but now she had fallen to a loitering pace. She looked once or twice behind her and then ahead, almost as though she expected some one and was not sure whether this person would approach from east or west. She did not observe her father until she was close upon him.

Then she was so astonished that for a moment she stood motionless, regarding him. She made an odd movement, almost as if she would have walked on, that she checked in its inception. Then

she came up to him and stood before him. "It's Dad," she said.

"I didn't know you were in London, Norah," he began.

"I came up suddenly."

"Have you been home?"

"No. I wasn't going home. At least--not until afterwards."

Then she looked away from him, east and then west, and then met his eye again.

"Won't you sit down, Norah?"

"I don't know whether I can."

She consulted the view again and seemed to come to a decision.

"At least, I will for a minute."

She sat down. For a moment neither of them spoke....

"What are you doing here, little Norah?"

She gathered her wits. Then she spoke rather volubly. "I know it looks bad, Daddy. I came up to meet a boy I know, who is going to France to-morrow. I had to make excuses--up there. I hardly remember what excuses I made."

"A boy you know?"

"Yes."

"Do we know him? "

"Not yet."

For a time Scrope forgot the Church of the One True God altogether. "Who is this boy?" he asked.

With a perceptible effort Eleanor assumed a tone of commonsense conventionality. "He's a boy I met first when we were skating last year. His sister has the study next to mine."

Father looked at daughter, and she met his eyes. "Well? "

"It's all happened so quickly, Daddy," she said, answering all that was implicit in that "Well?" She went on, "I would have told you about him if he had seemed to matter. But it was just a friendship. It didn't seem to matter in any serious way. Of course we'd been good friends--and talked about all sorts of things. And then suddenly you see,"--her tone was offhand and matter-of-fact--" he has to go to France."

She stared at her father with the expression of a hostess who talks about the weather. And then the tears gathered and ran down her cheek.

She turned her face to the Serpentine and clenched her fist.

But she was now fairly weeping. "I didn't know he cared. I didn't know I cared."

His next question took a little time in coming.

"And it's love, little Norah?" he asked.

She was comfortably crying now, the defensive altogether abandoned. "It's love, Daddy.... Oh! love!.... He's going tomorrow." For a minute or so neither spoke. Scrope's mind was

entirely made up in the matter. He approved altogether of his daughter. But the traditions of parentage, his habit of restrained decision, made him act a judicial part. "I'd like just to see this boy," he said, and added: "If it isn't rather interfering...."

"Dear Daddy!" she said. "Dear Daddy!" and touched his hand. "He'll be coming here...."

"If you could tell me a few things about him," said Scrope. "Is he an undergraduate?"

"You see," began Eleanor and paused to marshal her facts. "He graduated this year. Then he's been in training at Cambridge. Properly he'd have a fellowship. He took the Natural Science tripos, zoology chiefly. He's good at philosophy, but of course our Cambridge philosophy is so silly--McTaggart blowing bubbles.... His father's a doctor, Sir Hedley Riverton."

As she spoke her eyes had been roving up the path and down. "He's coming," she interrupted. She hesitated. "Would you mind if I went and spoke to him first, Daddy?"

"Of course go to him. Go and warn him I'm here," said Scrope.

Eleanor got up, and was immediately greeted with joyful gestures by an approaching figure in khaki. The two young people quickened their paces as they drew nearer one another. There was a rapid greeting; they stood close together and spoke eagerly. Scrope could tell by their movements when he became the subject of their talk. He saw the young man start and look over Eleanor's shoulder, and he assumed an attitude of philosophical contemplation of the water, so as to give the young man the liberty of his profile.

He did not look up until they were quite close to him, and when he did he saw a pleasant, slightly freckled fair face a little agitated, and very honest blue eyes. "I hope you don't think, Sir, that it's bad form of me to ask Eleanor to come up and see me as I've done. I telegraphed to her on an impulse, and it's been very kind of her to come up to me."

"Sit down," said Scrope, "sit down. You're Mr. Riverton?"

"Yes, Sir," said the young man. He had the frequent "Sir" of the subaltern. Scrope was in the centre of the seat, and the young officer sat down on one side of him while Eleanor took up a watching position on her father's other hand. "You see, Sir, we've hardly known each other--I mean we've been associated over a philosophical society and all that sort of thing, but in a more familiar way, I mean...."

He hung for a moment, just a little short of breath. Scrope helped him with a grave but sympathetic movement of the head. "It's a little difficult to explain," the young man apologized.

"We hadn't understood, I think, either of us very much. We'd just been friendly--and liked each other. And so it went on even when I was training. And then when I found I had to go out--I'm going out a little earlier than I expected--I thought suddenly I wouldn't ever go to Cambridge again at all perhaps--and there was something in one of her letters.... I thought of it a lot, Sir, I thought it all over, and I thought it wasn't right for me to do anything and I didn't do anything until this morning. And then I sort of had to telegraph. I know it was frightful cheek and bad form and all that, Sir. It is. It would be worse if she wasn't different--I mean, Sir, if she was just an ordinary girl.... But I had a sort of feeling--just wanting to see her. I don't suppose you've ever felt anything, Sir, as I felt I wanted to see her--and just hear her speak to me...."

He glanced across Scrope at Eleanor. It was as if he justified himself to them both.

Scrope glanced furtively at his daughter who was leaning forward with tender eyes on her lover, and his heart went out to her. But his manner remained judicial.

"All this is very sudden," he said.

"Or you would have heard all about it, Sir," said young Riverton. "It's just the hurry that has made this seem furtive. All that there is between us, Sir, is just the two telegrams we've sent, hers and mine. I hope you won't mind our having a little time together. We won't do anything very committal. It's as much friendship as anything. I go by the evening train to-morrow."

"Mm," said Scrope with his eye on Eleanor.

"In these uncertain times," he began.

"Why shouldn't I take a risk too, Daddy?" said Eleanor sharply.

"I know there's that side of it," said the young man. "I oughtn't to have telegraphed," he said.

"Can't I take a risk?" exclaimed Eleanor. "I'm not a doll. I don't want to live in wadding until all the world is safe for me."

Scrope looked at the glowing face of the young man.

"Is this taking care of her?" he asked.

"If you hadn't telegraphed--!" she cried with a threat in her voice, and left it at that.

"Perhaps I feel about her--rather as if she was as strong as I am--in those ways. Perhaps I shouldn't. I could hardly endure myself, Sir--cut off from her. And a sort of blank. Nothing said."

"You want to work out your own salvation," said Scrope to his daughter.

"No one else can," she answered. "I'm--I'm grown up."

"Even if it hurts?"

"To live is to be hurt somehow," she said. "This--This--" She flashed her love. She intimated by a gesture that it is better to be stabbed with a clean knife than to be suffocated or poisoned or to decay....

Scrope turned his eyes to the young man again. He liked him. He liked the modelling of his mouth and chin and the line of his brows. He liked him altogether. He pronounced his verdict slowly. "I suppose, after all," he said, "that this is better than the tender solicitude of a safe and prosperous middleaged man. Eleanor, my dear, I've been thinking to-day that a father who stands between his children and hardship, by doing wrong, may really be doing them a wrong. You are a dear girl to me.

"I won't stand between you two. Find your own salvation." He got up. "I go west," he said, "presently. You, I think, go east."

"I can assure you, Sir," the young man began.

Scrope held his hand out. "Take your life in your own way," he

said.

He turned to Eleanor. "Talk as you will," he said.

She clasped his hand with emotion. Then she turned to the waiting young man, who saluted.

"You'll come back to supper?" Scrope said, without thinking out the implications of that invitation.

She assented as carelessly. The fact that she and her lover were to go, with their meeting legalized and blessed, excluded all other considerations. The two young people turned to each other.

Scrope stood for a moment or so and then sat down again.

For a time he could think only of Eleanor.... He watched the two young people as they went eastward. As they walked their shoulders and elbows bumped amicably together.

(10)

Presently he sought to resume the interrupted thread of his thoughts. He knew that he had been dealing with some very tremendous and urgent problem when Eleanor had appeared. Then he remembered that Eleanor at the time of her approach had seemed to be a solution rather than an interruption. Well, she had her own life. She was making her own life. Instead of solving his problems she was solving her own. God bless those dear grave children! They were nearer the elemental things than he was. That eastward path led to Victoria--and thence to a very probable death. The lad was in the infantry and going straight into the trenches.

Love, death, God; this war was bringing the whole world back to elemental things, to heroic things. The years of comedy and comfort were at an end in Europe; the age of steel and want was here. And he had been thinking--What had he been thinking?

He mused, and the scheme of his perplexities reshaped itself in his mind. But at that time he did not realize that a powerful new light was falling upon it now, cast by the tragic illumination of these young lovers whose love began with a parting. He did not see how reality had come to all things through that one intense reality. He reverted to the question as he had put it to himself, before first he recognized Eleanor. Did he believe in God? Should he go on with this Sunderbund adventure in which he no longer believed? Should he play for safety and comfort, trusting to God's toleration? Or go back to his family and warn them of the years of struggle and poverty his renunciation cast upon them?

Somehow Lady Sunderbund's chapel was very remote and flimsy now, and the hardships of poverty seemed less black than the hardship of a youthful death.

Did he believe in God? Again he put that fundamental question to himself.

He sat very still in the sunset peace, with his eyes upon the steel mirror of the waters. The question seemed to fill the whole scene, to wait, even as the water and sky and the windless trees were waiting....

And then by imperceptible degrees there grew in Scrope's mind the persuasion that he was in the presence of the living God. This time there was no vision of angels nor stars, no snapping of bow-strings, no throbbing of the heart nor change of scene, no magic and melodramatic drawing back of the curtain from the

mysteries; the water and the bridge, the ragged black trees, and a distant boat that broke the silvery calm with an arrow of black ripples, all these things were still before him. But God was there too. God was everywhere about him. This persuasion was over him and about him; a dome of protection, a power in his nerves, a peace in his heart. It was an exalting beauty; it was a perfected conviction.... This indeed was the coming of God, the real coming of God. For the first time Scrope was absolutely sure that for the rest of his life he would possess God. Everything that had so perplexed him seemed to be clear now, and his troubles lay at the foot of this last complete realization like a litter of dust and leaves in the foreground of a sunlit, snowy mountain range.

It was a little incredible that he could ever have doubted.

(11)

It was a phase of extreme intellectual clairvoyance. A multitude of things that hitherto had been higgledy-piggledy, contradictory and incongruous in his mind became lucid, serene, full and assured. He seemed to see all things plainly as one sees things plainly through perfectly clear still water in the shadows of a summer noon. His doubts about God, his periods of complete forgetfulness and disregard of God, this conflict of his instincts and the habits and affections of his daily life with the service of God, ceased to be perplexing incompatibilities and were manifest as necessary, understandable aspects of the business of living.

It was no longer a riddle that little immediate things should seem of more importance than great and final things. For man is a creature thrusting his way up from the beast to divinity, from the blindness of individuality to the knowledge of a common end. We stand deep in the engagements of our individual lives looking

up to God, and only realizing in our moments of exaltation that through God we can escape from and rule and alter the whole world-wide scheme of individual lives. Only in phases of illumination do we realize the creative powers that lie ready to man's hand. Personal affections, immediate obligations, ambitions, self-seeking, these are among the natural and essential things of our individual lives, as intimate almost as our primordial lusts and needs; God, the true God, is a later revelation, a newer, less natural thing in us; a knowledge still remote, uncertain, and confused with superstition; an apprehension as yet entangled with barbaric traditions of fear and with ceremonial surgeries, blood sacrifices, and the maddest barbarities of thought. We are only beginning to realize that God is here; so far as our minds go he is still not here continually; we perceive him and then again we are blind to him. God is the last thing added to the completeness of human life. To most His presence is imperceptible throughout their lives; they know as little of him as a savage knows of the electric waves that beat through us for ever from the sun. All this appeared now so clear and necessary to Scrope that he was astonished he had ever found the quality of contradiction in these manifest facts.

In this unprecedented lucidity that had now come to him, Scrope saw as a clear and simple necessity that there can be no such thing as a continuous living presence of God in our lives. That is an unreasonable desire. There is no permanent exaltation of belief. It is contrary to the nature of life. One cannot keep actively believing in and realizing God round all the twenty-four hours any more than one can keep awake through the whole cycle of night and day, day after day. If it were possible so to apprehend God without cessation, life would dissolve in religious ecstasy. But nothing human has ever had the power to hold the curtain of sense continually aside and retain the light of God always. We must get along by remembering our moments of assurance. Even Jesus himself, leader of all those who have hailed the coming

kingdom of God, had cried upon the cross, "My God, my God, why hast thou forsaken me?" The business of life on earth, life itself, is a thing curtained off, as it were, from such immediate convictions. That is in the constitution of life. Our ordinary state of belief, even when we are free from doubt, is necessarily far removed from the intuitive certainty of sight and hearing. It is a persuasion, it falls far short of perception....

"We don't know directly," Scrope said to himself with a checking gesture of the hand, "we don't see. We can't. We hold on to the remembered glimpse, we go over our reasons."...

And it was clear too just because God is thus manifest like the momentary drawing of a curtain, sometimes to this man for a time and sometimes to that, but never continuously to any, and because the perception of him depends upon the ability and quality of the perceiver, because to the intellectual man God is necessarily a formula, to the active man a will and a commandment, and to the emotional man love, there can be no creed defining him for all men, and no ritual and special forms of service to justify a priesthood. "God is God," he whispered to himself, and the phrase seemed to him the discovery of a sufficient creed. God is his own definition; there is no other definition of God. Scrope had troubled himself with endless arguments whether God was a person, whether he was concerned with personal troubles, whether he loved, whether he was finite. It were as reasonable to argue whether God was a frog or a rock or a tree. He had imagined God as a figure of youth and courage, had perceived him as an effulgence of leadership, a captain like the sun. The vision of his drug-quickenened mind had but symbolized what was otherwise inexpressible. Of that he was now sure. He had not seen the invisible but only its sign and visible likeness. He knew now that all such presentations were true and that all such presentations were false. Just as much and just as little was God the darkness and the brightness of the ripples under the bows of

the distant boat, the black beauty of the leaves and twigs of those trees now acid-clear against the flushed and deepening sky. These riddles of the profundities were beyond the compass of common living. They were beyond the needs of common living. He was but a little earth parasite, sitting idle in the darkling day, trying to understand his infinitesimal functions on a minor planet. Within the compass of terrestrial living God showed himself in its own terms. The life of man on earth was a struggle for unity of spirit and for unity with his kind, and the aspect of God that alone mattered to man was a unifying kingship without and within. So long as men were men, so would they see God. Only when they reached the crest could they begin to look beyond. So we knew God, so God was to us; since we struggled, he led our struggle, since we were finite and mortal he defined an aim, his personality was the answer to our personality; but God, except in so far as he was to us, remained inaccessible, inexplicable, wonderful, shining through beauty, shining beyond research, greater than time or space, above good and evil and pain and pleasure.

(12)

Serape's mind was saturated as it had never been before by his sense of the immediate presence of God. He floated in that realization. He was not so much thinking now as conversing starkly with the divine interlocutor, who penetrated all things and saw into and illuminated every recess of his mind. He spread out his ideas to the test of this presence; he brought out his hazards and interpretations that this light might judge them.

There came back to his mind the substance of his two former visions; they assumed now a reciprocal quality, they explained one another and the riddle before him. The first had shown him the personal human aspect of God, he had seen God as the unifying

captain calling for his personal service, the second had set the stage for that service in the spectacle of mankind's adventure. He had been shown a great multitude of human spirits reaching up at countless points towards the conception of the racial unity under a divine leadership, he had seen mankind on the verge of awakening to the kingdom of God. "That solves no mystery," he whispered, gripping the seat and frowning at the water; "mysteries remain mysteries; but that is the reality of religion. And now, now, what is my place? What have I to do? That is the question I have been asking always; the question that this moment now will answer; what have I to do?..."

God was coming into the life of all mankind in the likeness of a captain and a king; all the governments of men, all the leagues of men, their debts and claims and possessions, must give way to the world republic under God the king. For five troubled years he had been staring religion in the face, and now he saw that it must mean this--or be no more than fetishism, Obi, Orphic mysteries or ceremonies of Demeter, a legacy of mental dirtiness, a residue of self-mutilation and superstitious sacrifices from the cunning, fear-haunted, ape-dog phase of human development.

But

it did mean this. And every one who apprehended as much was called by that very apprehension to the service of God's kingdom. To live and serve God's kingdom on earth, to help to bring it about, to propagate the idea of it, to establish the method of it, to incorporate all that one made and all that one did into its growing reality, was the only possible life that could be lived, once that God was known.

He sat with his hands gripping his knees, as if he were holding on to his idea. "And now for my part," he whispered, brows knit, "now for my part."

Ever since he had given his confirmation addresses he had been

clear that his task, or at least a considerable portion of his task, was to tell of this faith in God and of this conception of service in his kingdom as the form and rule of human life and human society. But up to now he had been floundering hopelessly in his search for a method and means of telling. That, he saw, still needed to be thought out. For example, one cannot run through the world crying, "The Kingdom of God is at hand." Men's minds were still so filled with old theological ideas that for the most part they would understand by that only a fantasy of some great coming of angels and fiery chariots and judgments, and hardly a soul but would doubt one's sanity and turn scornfully away. But one must proclaim God not to confuse but to convince men's minds. It was that and the habit of his priestly calling that had disposed him towards a pulpit. There he could reason and explain. The decorative genius of Lady Sunderbund had turned that intention into a vast iridescent absurdity.

This sense he had of thinking openly in the sight of God, enabled him to see the adventure of Lady Sunderbund without illusion and without shame. He saw himself at once honest and disingenuous, divided between two aims. He had no doubt now of the path he had to pursue. A stronger man of permanently clear aims might possibly turn Lady Sunderbund into a useful opportunity, oblige her to provide the rostrum he needed; but for himself, he knew he had neither the needed strength nor clearness; she would smother him in decoration, overcome him by her picturesque persistence. It might be ridiculous to run away from her, but it was necessary. And he was equally clear now that for him there must be no idea of any pulpit, of any sustained mission. He was a man of intellectual moods; only at times, he realized, had he the inspiration of truth; upon such uncertain snatches and glimpses he must live; to make his life a ministry would be to face phases when he would simply be "carrying on," with his mind blank and his faith asleep.

His thought spread out from this perennial decision to more general things again. Had God any need of organized priests at all? Wasn't that just what had been the matter with religion for the last three thousand years?

His vision and his sense of access to God had given a new courage to his mind; in these moods of enlightenment he could see the world as a comprehensible ball, he could see history as an understandable drama. He had always been on the verge of realizing before, he realized now, the two entirely different and antagonistic strands that interweave in the twisted rope of contemporary religion; the old strand of the priest, the fetishistic element of the blood sacrifice and the obscene rite, the element of ritual and tradition, of the cult, the caste, the consecrated tribe; and interwoven with this so closely as to be scarcely separable in any existing religion was the new strand, the religion of the prophets, the unidolatrous universal worship of the one true God. Priest religion is the antithesis to prophet religion. He saw that the founders of all the great existing religions of the world had been like himself--only that he was a weak and commonplace man with no creative force, and they had been great men of enormous initiative--men reaching out, and never with a complete definition, from the old kind of religion to the new. The Hebrew prophets, Jesus, whom the priests killed when Pilate would have spared him, Mohammed, Buddha, had this much in common that they had sought to lead men from temple worship, idol worship, from rites and ceremonies and the rule of priests, from anniversaryism and sacramentalism, into a direct and simple relation to the simplicity of God. Religious progress had always been liberation and simplification. But none of these efforts had got altogether clear. The organizing temper in men, the disposition to dogmatic theorizing, the distrust of the discretion of the young by the wisdom of age, the fear of indiscipline which is so just in warfare and so foolish in education, the tremendous power of the propitiatory tradition,

had always caught and crippled every new gospel before it had run a score of years. Jesus for example gave man neither a theology nor a church organization; His sacrament was an innocent feast of memorial; but the fearful, limited, imitative men he left to carry on his work speedily restored all these three abominations of the antiquated religion, theology, priest, and sacrifice. Jesus indeed, caught into identification with the ancient victim of the harvest sacrifice and turned from a plain teacher into a horrible blood bath and a mock cannibal meal, was surely the supreme feat of the ironies of chance....

"It is curious how I drift back to Jesus," said Scrope. "I have never seen how much truth and good there was in his teaching until I broke away from Christianity and began to see him plain. If I go on as I am going, I shall end a Nazarene...."

He thought on. He had a feeling of temerity, but then it seemed as if God within him bade him be of good courage.

Already in a glow of inspiration he had said practically as much as he was now thinking in his confirmation address, but now he realized completely what it was he had then said. There could be no priests, no specialized ministers of the one true God, because every man to the utmost measure of his capacity was bound to be God's priest and minister. Many things one may leave to specialists: surgery, detailed administration, chemistry, for example; but it is for every man to think his own philosophy and think out his own religion. One man may tell another, but no man may take charge of another. A man may avail himself of electrician or gardener or what not, but he must stand directly before God; he may suffer neither priest nor king. These other things are incidental, but God, the kingdom of God, is what he is for.

"Good," he said, checking his reasoning. "So I must bear

witness to God--but neither as priest nor pastor. I must write and talk about him as I can. No reason why I should not live by such writing and talking if it does not hamper my message to do so. But there must be no high place, no ordered congregation. I begin to see my way....

The evening was growing dark and chill about him now, the sky was barred with deep bluish purple bands drawn across a chilly brightness that had already forgotten the sun, the trees were black and dim, but his understanding of his place and duty was growing very definite.

"And this duty to bear witness to God's kingdom and serve it is so plain that I must not deflect my witness even by a little, though to do so means comfort and security for my wife and children. God comes first...."

"They must not come between God and me...."

"But there is more in it than that."

He had come round at last through the long clearing-up of his mind, to his fundamental problem again. He sat darkly reluctant.

"I must not play priest or providence to them," he admitted at last. "I must not even stand between God and them."

He saw now what he had been doing; it had been the flaw in his faith that he would not trust his family to God. And he saw too that this distrust has been the flaw in the faith of all religious systems hitherto....

In this strange voyage of the spirit which was now drawing to its end, in which Scrope had travelled from the confused, unanalyzed formulas and assumptions and implications of his rectory upbringing to his present stark and simple realization of God, he had at times made some remarkable self-identifications. He was naturally much given to analogy; every train of thought in his mind set up induced parallel currents. He had likened himself to the Anglican church, to the whole Christian body, as, for example, in his imagined second conversation with the angel of God. But now he found himself associating himself with a still more far-reaching section of mankind. This excess of solicitude was traceable perhaps in nearly every one in all the past of mankind who had ever had the vision of God. An excessive solicitude to shield those others from one's own trials and hardships, to preserve the exact quality of the revelation, for example, had been the fruitful cause of crippling errors, spiritual tyrannies, dogmatisms, dissensions, and futilities. "Suffer little children to come unto me"; the text came into his head with an effect of contribution. The parent in us all flares out at the thought of the younger and weaker minds; we hide difficulties, seek to spare them from the fires that temper the spirit, the sharp edge of the truth that shapes the soul. Christian is always trying to have a carriage sent back from the Celestial City for his family. Why, we ask, should they flounder dangerously in the morasses that we escaped, or wander in the forest in which we lost ourselves? Catch these souls young, therefore, save them before they know they exist, kidnap them to heaven; vaccinate them with a catechism they may never understand, lull them into comfort and routine. Instinct plays us false here as it plays the savage mother false when she snatches her fevered child from the doctor's hands. The last act of faith is to trust those we love to God....

Hitherto he had seen the great nets of theological overstatement and dogma that kept mankind from God as if they

were the work of purely evil things in man, of pride, of self-assertion, of a desire to possess and dominate the minds and souls of others. It was only now that he saw how large a share in the obstruction of God's Kingdom had been played by the love of the elder and the parent, by the carefulness, the fussy care, of good men and women. He had wandered in wildernesses of unbelief, in dangerous places of doubt and questioning, but he had left his wife and children safe and secure in the self-satisfaction of orthodoxy. To none of them except to Eleanor had he ever talked with any freedom of his new apprehensions of religious reality. And that had been at Eleanor's initiative. There was, he saw now, something of insolence and something of treachery in this concealment. His ruling disposition throughout the crisis had been to force comfort and worldly well-being upon all those dependants even at the price of his own spiritual integrity. In no way had he consulted them upon the bargain.... While we have pottered, each for the little good of his own family, each for the lessons and clothes and leisure of his own children, assenting to this injustice, conforming to that dishonest custom, being myopically benevolent and fundamentally treacherous, our accumulated folly has achieved this catastrophe. It is not so much human wickedness as human weakness that has permitted the youth of the world to go through this hell of blood and mud and fire. The way to the kingdom of God is the only way to the true safety, the true wellbeing of the children of men....

It wasn't fair to them. But now he saw how unfair it was to them in a light that has only shone plainly upon European life since the great interlude of the armed peace came to an end in August, 1914. Until that time it had been the fashion to ignore death and evade poverty and necessity for the young. We can shield our young no longer, death has broken through our precautions and tender evasions--and his eyes went eastward into the twilight that had swallowed up his daughter and her lover.

The tumbled darkling sky, monstrous masses of frowning blue, with icy gaps of cold light, was like the great confusions of the war. All our youth has had to go into that terrible and destructive chaos--because of the kings and churches and nationalities sturdier-souled men would have set aside.

Everything was sharp and clear in his mind now. Eleanor after all had brought him his solution.

He sat quite still for a little while, and then stood up and turned northward towards Notting Hill.

The keepers were closing Kensington Gardens, and he would have to skirt the Park to Victoria Gate and go home by the Bayswater Road....

(14)

As he walked he rearranged in his mind this long-overdue apology for his faith that he was presently to make to his family. There was no one to interrupt him and nothing to embarrass him, and so he was able to set out everything very clearly and convincingly. There was perhaps a disposition to digress into rather voluminous subordinate explanations, on such themes, for instance, as sacramentalism, whereon he found himself summarizing Frazer's *Golden Bough*, which the Chasters' controversy had first obliged him to read, and upon the irrelevance of the question of immortality to the process of salvation. But the reality of his *eclaircissement* was very different from anything he prepared in these anticipations.

Tea had been finished and put away, and the family was disposed about the dining-room engaged in various evening occupations;

Phoebe sat at the table working at some mathematical problem, Clementina was reading with her chin on her fist and a frown on her brow; Lady Ella, Miriam and Daphne were busy making soft washing cloths for the wounded; Lady Ella had brought home the demand for them from the Red Cross centre in Burlington House. The family was all downstairs in the dining-room because the evening was chilly, and there were no fires upstairs yet in the drawing-room. He came into the room and exchanged greetings with Lady Ella. Then he stood for a time surveying his children. Phoebe, he noted, was a little flushed; she put passion into her work; on the whole she was more like Eleanor than any other of them. Miriam knitted with a steady skill. Clementina's face too expressed a tussle. He took up one of the rough-knit washing-cloths upon the side-table, and asked how many could be made in an hour. Then he asked some idle obvious question about the fire upstairs. Clementina made an involuntary movement; he was disturbing her. He hovered for a moment longer. He wanted to catch his wife's eye and speak to her first. She looked up, but before he could convey his wish for a private conference with her, she smiled at him and then bent over her work again.

He went into the back study and lit his gas fire. Hitherto he had always made a considerable explosion when he did so, but this time by taking thought and lighting his match before he turned on the gas he did it with only a gentle thud. Then he lit his reading-lamp and pulled down the blind--pausing for a time to look at the lit dressmaker's opposite. Then he sat down thoughtfully before the fire. Presently Ella would come in and he would talk to her. He waited a long time, thinking only weakly and inconsecutively, and then he became restless. Should he call her?

But he wanted their talk to begin in a natural-seeming way. He did not want the portentousness of "wanting to speak" to her and calling her out to him. He got up at last and went back into the

other room. Clementina had gone upstairs, and the book she had been reading was lying closed on the sideboard. He saw it was one of Chasters' books, he took it up, it was "The Core of Truth in Christianity," and he felt an irrational shock at the idea of Clementina reading it. In spite of his own immense changes of opinion he had still to revise his conception of the polemical Chasters as an evil influence in religion. He fidgeted past his wife to the mantel in search of an imaginary mislaid pencil. Clementina came down with some bandage linen she was cutting out. He hung over his wife in a way that he felt must convey his desire for a conversation. Then he picked up Chasters' book again. "Does any one want this?" he asked.

"Not if I may have it again," consented Clementina.

He took it back with him and began to read again those familiar controversial pages. He read for the best part of an hour with his knees drying until they smoked over the gas. What curious stuff it was! How it wrangled! Was Chasters a religious man? Why did he write these books? Had he really a passion for truth or only a Swift-like hatred of weakly-thinking people? None of this stuff in his books was really wrong, provided it was religious-spirited. Much of it had been indeed destructively illuminating to its reader. It let daylight through all sorts of walls.

Indeed, the more one read the more vividly true its acid-bit lines became.... And yet, and yet, there was something hateful in the man's tone. Scrope held the book and thought. He had seen Chasters once or twice. Chasters had the sort of face, the sort of voice, the sort of bearing that made one think of his possibly saying upon occasion, rudely and rejoicing, "More fool you!" Nevertheless Scrope perceived now with an effort of discovery that it was from Chasters that he had taken all the leading ideas of the new faith that was in him. Here was the stuff of it. He had forgotten how much of it was here. During those months of worried study while the threat of a Chasters prosecution hung

over him his mind had assimilated almost unknowingly every assimilable element of the Chasters doctrine; he had either assimilated and transmuted it by the alchemy of his own temperament, or he had reacted obviously and filled in Chasters' gaps and pauses. Chasters could beat a road to the Holy of Holies, and shy at entering it. But in spite of all the man's roughness, in spite of a curious flavour of baseness and malice about him, the spirit of truth had spoken through him. God has a use for harsh ministers. In one man God lights the heart, in another the reason becomes a consuming fire. God takes his own where he finds it. He does not limit himself to nice people. In these matters of evidence and argument, in his contempt for amiable, demoralizing compromise, Chasters served God as Scrope could never hope to serve him. Scrope's new faith had perhaps been altogether impossible if the Chasters controversy had not ploughed his mind.

For a time Scrope dwelt upon this remarkable realization. Then as he turned over the pages his eyes rested on a passage of uncivil and ungenerous sarcasm. Against old Likeman of all people!...

What did a girl like Clementina make of all this? How had she got the book? From Eleanor? The stuff had not hurt Eleanor. Eleanor had been able to take the good that Chasters taught, and reject the evil of his spirit....

He thought of Eleanor, gallantly working out her own salvation. The world was moving fast to a phase of great freedom--for the young and the bold.... He liked that boy....

His thoughts came back with a start to his wife. The evening was slipping by and he had momentous things to say to her. He went and just opened the door.

"Ella!" he said.

"Did you want me?"

"Presently."

She put a liberal interpretation upon that "presently," so that after what seemed to him a long interval he had to call again, "Ella!"

"Just a minute," she answered.

(15)

Lady Ella was still, so to speak, a little in the other room when she came to him.

"Shut that door, please," he said, and felt the request had just that flavour of portentousness he wished to avoid.

"What is it? " she asked.

"I wanted to talk to you--about some things. I've done something rather serious to-day. I've made an important decision."

Her face became anxious. "What do you mean?" she asked.

"You see," he said, leaning upon the mantelshelf and looking down at the gas flames, "I've never thought that we should all have to live in this crowded house for long."

"All!" she interrupted in a voice that made him look up sharply. "You're not going away, Ted?"

"Oh, no. But I hoped we should all be going away in a little time. It isn't so."

"I never quite understood why you hoped that."

"It was plain enough."

"How? "

"I thought I should have found something to do that would have enabled us to live in better style. I'd had a plan."

"What plan?"

"It's fallen through."

"But what plan was it?"

"I thought I should be able to set up a sort of broad church chapel. I had a promise."

Her voice was rich with indignation. "And she has betrayed you?"

"No," he said, "I have betrayed her."

Lady Ella's face showed them still at cross purposes. He looked down again and frowned. "I can't do that chapel business," he said. "I've had to let her down. I've got to let you all down. There's no help for it. It isn't the way. I can't have anything to do with Lady Sunderbund and her chapel."

"But," Lady Ella was still perplexed.

"It's too great a sacrifice."

"Of us?"

"No, of myself. I can't get into her pulpit and do as she wants and keep my conscience. It's been a horrible riddle for me. It means plunging into all this poverty for good. But I can't work with her, Ella. She's impossible."

"You mean--you're going to break with Lady Sunderbund?"

"I must."

"Then, Teddy!"--she was a woman groping for flight amidst intolerable perplexities--"why did you ever leave the church?"

"Because I have ceased to believe--"

"But had it nothing to do with Lady Sunderbund?"

He stared at her in astonishment.

"If it means breaking with that woman," she said.

"You mean," he said, beginning for the first time to comprehend her, "that you don't mind the poverty?"

"Poverty!" she cried. "I cared for nothing but the disgrace."

"Disgrace?"

"Oh, never mind, Ted! If it isn't true, if I've been dreaming...."

Instead of a woman stunned by a life sentence of poverty, he

saw his wife rejoicing as if she had heard good news.

Their minds were held for a minute by the sound of some one knocking at the house door; one of the girls opened the door, there was a brief hubbub in the passage and then they heard a cry of "Eleanor!" through the folding doors.

"There's Eleanor," he said, realizing he had told his wife nothing of the encounter in Hyde Park.

They heard Eleanor's clear voice: "Where's Mummy? Or Daddy?" and then: "Can't stay now, dears. Where's Mummy or Daddy?"

"I ought to have told you," said Scrope quickly. "I met Eleanor in the Park. By accident. She's come up unexpectedly. To meet a boy going to the front. Quite a nice boy. Son of Riverton the doctor. The parting had made them understand one another. It's all right, Ella. It's a little irregular, but I'd stake my life on the boy. She's very lucky."

Eleanor appeared through the folding doors. She came to business at once.

"I promised you I'd come back to supper here, Daddy," she said. "But I don't want to have supper here. I want to stay out late."

She saw her mother look perplexed. "Hasn't Daddy told you?"

"But where is young Riverton?"

"He's outside."

Eleanor became aware of a broad chink in the folding doors that was making the dining-room an auditorium for their dialogue. She shut them deftly.

"I have told Mummy," Scrope explained. "Bring him in to supper. We ought to see him."

Eleanor hesitated. She indicated her sisters beyond the folding doors. "They'll all be watching us, Mummy," she said. "We'd be uncomfortable. And besides

"But you can't go out and dine with him alone!"

"Oh, Mummy! It's our only chance."

"Customs are changing," said Scrope.

"But can they?" asked Lady Ella.

"I don't see why not."

The mother was still doubtful, but she was in no mood to cross her husband that night. "It's an exceptional occasion," said Scrope, and Eleanor knew her point was won. She became radiant. "I can be late?"

Scrope handed her his latch-key without a word.

"You dear kind things," she said, and went to the door. Then turned and came back and kissed her father. Then she kissed her mother. "It is so kind of you," she said, and was gone. They listened to her passage through a storm of questions in the dining-room.

"Three months ago that would have shocked me," said Lady Ella.

"You haven't seen the boy," said Scrope.

"But the appearances!"

"Aren't we rather breaking with appearances?" he said.

"And he goes to-morrow--perhaps to get killed," he added. "A lad like a schoolboy. A young thing. Because of the political foolery that we priests and teachers have suffered in the place of the Kingdom of God, because we have allowed the religion of Europe to become a lie; because no man spoke the word of God. You see--when I see that--see those two, those children of one-and-twenty, wrenched by tragedy, beginning with a parting.... It's like a knife slashing at all our appearances and discretions.... Think of our lovemaking...."

The front door banged.

He had some idea of resuming their talk. But his was a scattered mind now.

"It's a quarter to eight," he said as if in explanation.

"I must see to the supper," said Lady Ella.

(16)

There was an air of tension at supper as though the whole family felt that momentous words impended. But Phoebe had emerged victorious from her mathematical struggle, and she seemed to eat with better appetite than she had shown for some time. It was a cold meat supper; Lady Ella had found it impossible to keep up the regular practice of a cooked dinner in the evening, and now it was only on Thursdays that the Scropes, to preserve their social tradition, dressed and dined; the rest of the week they supped. Lady Ella never talked very much at supper; this evening

was no exception. Clementina talked of London University and Bedford College; she had been making enquiries; Daphne described some of the mistresses at her new school. The feeling that something was expected had got upon Scrope's nerves. He talked a little in a flat and obvious way, and lapsed into thoughtful silences. While supper was being cleared away he went back into his study.

Thence he returned to the dining-room hearthrug as his family resumed their various occupations.

He tried to speak in a casual conversational tone.

"I want to tell you all," he said, "of something that has happened to-day."

He waited. Phoebe had begun to figure at a fresh sheet of computations. Miriam bent her head closer over her work, as though she winced at what was coming. Daphne and Clementina looked at one another. Their eyes said "Eleanor!" But he was too full of his own intention to read that glance. Only his wife regarded him attentively.

"It concerns you all," he said.

He looked at Phoebe. He saw Lady Ella's hand go out and touch the girl's hand gently to make her desist. Phoebe obeyed, with a little sigh.

"I want to tell you that to-day I refused an income that would certainly have exceeded fifteen hundred pounds a year."

Clementina looked up now. This was not what she expected. Her expression conveyed protesting enquiry.

"I want you all to understand why I did that and why we are in the position we are in, and what lies before us. I want you to know what has been going on in my mind."

He looked down at the hearthrug, and tried to throw off a memory of his Princhester classes for young women, that oppressed him. His manner he forced to a more familiar note. He stuck his hands into his trouser pockets.

"You know, my dears, I had to give up the church. I just simply didn't believe any more in orthodox Church teaching. And I feel I've never explained that properly to you. Not at all clearly. I want to explain that now. It's a queer thing, I know, for me to say to you, but I want you to understand that I am a religious man. I believe that God matters more than wealth or comfort or position or the respect of men, that he also matters more than your comfort and prosperity. God knows I have cared for your comfort and prosperity. I don't want you to think that in all these changes we have been through lately, I haven't been aware of all the discomfort into which you have come--the relative discomfort. Compared with Princhester this is dark and crowded and poverty-stricken. I have never felt crowded before, but in this house I know you are horribly crowded. It is a house that seems almost contrived for small discomforts. This narrow passage outside; the incessant going up and down stairs. And there are other things. There is the blankness of our London Sundays. What is the good of pretending? They are desolating. There's the impossibility too of getting good servants to come into our dug-out kitchen. I'm not blind to all these sordid consequences. But all the same, God has to be served first. I had to come to this. I felt I could not serve God any longer as a bishop in the established church, because I did not believe that the established church was serving God. I struggled against that conviction--and I struggled against it largely for your sakes. But I had to obey my conviction.... I haven't talked to you about

these things as much as I should have done, but partly at least that is due to the fact that my own mind has been changing and reconsidering, going forward and going back, and in that fluid state it didn't seem fair to tell you things that I might presently find mistaken. But now I begin to feel that I have really thought out things, and that they are definite enough to tell you....

He paused and resumed. "A number of things have helped to change the opinions in which I grew up and in which you have grown up. There were worries at Princhester; I didn't let you know much about them, but there were. There was something harsh and cruel in that atmosphere. I saw for the first time--it's a lesson I'm still only learning--how harsh and greedy rich people and employing people are to poor people and working people, and how ineffective our church was to make things better. That struck me. There were religious disputes in the diocese too, and they shook me. I thought my faith was built on a rock, and I found it was built on sand. It was slipping and sliding long before the war. But the war brought it down. Before the war such a lot of things in England and Europe seemed like a comedy or a farce, a bad joke that one tolerated. One tried half consciously, half avoiding the knowledge of what one was doing, to keep one's own little circle and life civilized. The war shook all those ideas of isolation, all that sort of evasion, down. The world is the rightful kingdom of God; we had left its affairs to kings and emperors and suchlike impostors, to priests and profit-seekers and greedy men. We were genteel condoners. The war has ended that. It thrusts into all our lives. It brings death so close-- A fortnight ago twenty-seven people were killed and injured within a mile of this by Zeppelin bombs.... Every one loses some one.... Because through all that time men like myself were going through our priestly mummeries, abasing ourselves to kings and politicians, when we ought to have been crying out: 'No! No! There is no righteousness in the world, there is no right

government, except it be the kingdom of God."

He paused and looked at them. They were all listening to him now. But he was still haunted by a dread of preaching in his own family. He dropped to the conversational note again.

"You see what I had in mind. I saw I must come out of this, and preach the kingdom of God. That was my idea. I don't want to force it upon you, but I want you to understand why I acted as I did. But let me come to the particular thing that has happened to-day. I did not think when I made my final decision to leave the church that it meant such poverty as this we are living in-- permanently. That is what I want to make clear to you. I thought there would be a temporary dip into dinginess, but that was all. There was a plan; at the time it seemed a right and reasonable plan; for setting up a chapel in London, a very plain and simple undenominational chapel, for the simple preaching of the world kingdom of God. There was some one who seemed prepared to meet all the immediate demands for such a chapel."

"Was it Lady Sunderbund?" asked Clementina.

Scrope was pulled up abruptly. "Yes," he said. "It seemed at first a quite hopeful project."

"We'd have hated that," said Clementina, with a glance as if for assent, at her mother. "We should all have hated that."

"Anyhow it has fallen through."

"We don't mind that," said Clementina, and Daphne echoed her words.

"I don't see that there is any necessity to import this note of --hostility to Lady Sunderbund into this matter." He addressed

himself rather more definitely to Lady Ella. "She's a woman of a very extraordinary character, highly emotional, energetic, generous to an extraordinary extent...."

Daphne made a little noise like a comment.

A faint acerbity in her father's voice responded.

"Anyhow you make a mistake if you think that the personality of Lady Sunderbund has very much to do with this thing now. Her quality may have brought out certain aspects of the situation rather more sharply than they might have been brought out under other circumstances, but if this chapel enterprise had been suggested by quite a different sort of person, by a man, or by a committee, in the end I think I should have come to the same conclusion. Leave Lady Sunderbund out. Any chapel was impossible. It is just this specialization that has been the trouble with religion. It is just this tendency to make it the business of a special sort of man, in a special sort of building, on a special day--Every man, every building, every day belongs equally to God. That is my conviction. I think that the only possible existing sort of religions meeting is something after the fashion of the Quaker meeting. In that there is no professional religious man at all; not a trace of the sacrifices to the ancient gods.... And no room for a professional religions man...." He felt his argument did a little escape him. He snatched, "That is what I want to make clear to you. God is not a speciality; he is a universal interest."

He stopped. Both Daphne and Clementina seemed disposed to say something and did not say anything.

Miriam was the first to speak. "Daddy," she said, "I know I'm stupid. But are we still Christians?"

"I want you to think for yourselves."

"But I mean," said Miriam, "are we--something like Quakers--a sort of very broad Christians?"

"You are what you choose to be. If you want to keep in the church, then you must keep in the church. If you feel that the Christian doctrine is alive, then it is alive so far as you are concerned."

"But the creeds?" asked Clementina.

He shook his head. "So far as Christianity is defined by its creeds, I am not a Christian. If we are going to call any sort of religious feeling that has a respect for Jesus, Christianity, then no doubt I am a Christian. But so was Mohammed at that rate. Let me tell you what I believe. I believe in God, I believe in the immediate presence of God in every human life, I believe that our lives have to serve the Kingdom of God...."

"That practically is what Mr. Chasters calls 'The Core of Truth in Christianity.'"

"You have been reading him?"

"Eleanor lent me the book. But Mr. Chasters keeps his living."

"I am not Chasters," said Scrope stiffly, and then relenting: "What he does may be right for him. But I could not do as he does."

Lady Ella had said no word for some time.

"I would be ashamed," she said quietly, "if you had not done as you have done. I don't mind--The girls don't mind--all this...."

Not when we understand--as we do now.

That was the limit of her eloquence.

"Not now that we understand, Daddy," said Clementina, and a faint flavour of Lady Sunderbund seemed to pass and vanish.

There was a queer little pause. He stood rather distressed and perplexed, because the talk had not gone quite as he had intended it to go. It had deteriorated towards personal issues. Phoebe broke the awkwardness by jumping up and coming to her father. "Dear Daddy," she said, and kissed him.

"We didn't understand properly," said Clementina, in the tone of one who explains away much--that had never been spoken....

"Daddy," said Miriam with an inspiration, "may I play something to you presently?"

"But the fire!" interjected Lady Ella, disposing of that idea.

"I want you to know, all of you, the faith I have," he said.

Daphne had remained seated at the table.

"Are we never to go to church again?" she asked, as if at a loss.

(17)

Scrope went back into his little study. He felt shy and awkward with his daughters now. He felt it would be difficult to get back to usualness with them. To-night it would be impossible. To-morrow he must come down to breakfast as though their talk had

never occurred.... In his rehearsal of this deliverance during his walk home he had spoken much more plainly of his sense of the coming of God to rule the world and end the long age of the warring nations and competing traders, and he had intended to speak with equal plainness of the passionate subordination of the individual life to this great common purpose of God and man, an aspect he had scarcely mentioned at all. But in that little room, in the presence of those dear familiar people, those great horizons of life had vanished. The room with its folding doors had fixed the scale. The wallpaper had smothered the Kingdom of God; he had been, he felt, domestic; it had been an after-supper talk. He had been put out, too, by the mention of Lady Sunderbund and the case of Chasters....

In his study he consoled himself for this diminution of his intention. It had taken him five years, he reflected, to get to his present real sense of God's presence and to his personal subordination to God's purpose. It had been a little absurd, he perceived, to expect these girls to leap at once to a complete understanding of the halting hints, the allusive indications of the thoughts that now possessed his soul. He tried like some maiden speaker to recall exactly what it was he had said and what it was he had forgotten to say.... This was merely a beginning, merely a beginning.

After the girls had gone to bed, Lady Ella came to him and she was glowing and tender; she was in love again as she had not been since the shadow had first fallen between them. "I was so glad you spoke to them," she said. "They had been puzzled. But they are dear loyal girls."

He tried to tell her rather more plainly what he felt about the whole question of religion in their lives, but eloquence had departed from him.

"You see, Ella, life cannot get out of tragedy--and sordid tragedy--until we bring about the Kingdom of God. It's no unreality that has made me come out of the church."

"No, dear. No," she said soothingly and reassuringly. "With all these mere boys going to the most dreadful deaths in the trenches, with death, hardship and separation running amok in the world--"

"One has to do something," she agreed.

"I know, dear," he said, "that all this year of doubt and change has been a dreadful year for you."

"It was stupid of me," she said, "but I have been so unhappy. It's over now--but I was wretched. And there was nothing I could say.... I prayed.... It isn't the poverty I feared ever, but the disgrace. Now--I'm happy. I'm happy again.

"But how far do you come with me?"

"I'm with you."

"But," he said, "you are still a churchwoman?"

"I don't know," she said. "I don't mind."

He stared at her.

"But I thought always that was what hurt you most, my breach with the church."

"Things are so different now," she said.

Her heart dissolved within her into tender possessiveness.

There came flooding into her mind the old phrases of an ancient story: "Whither thou goest I will go... thy people shall be my people and thy God my God.... The Lord do so to me and more also if aught but death part thee and me."

Just those words would Lady Ella have said to her husband now, but she was capable of no such rhetoric.

"Whither thou goest," she whispered almost inaudibly, and she could get no further. "My dear," she said.

(18)

At two o'clock the next morning Scrope was still up. He was sitting over the snoring gas fire in his study. He did not want to go to bed. His mind was too excited, he knew, for any hope of sleep. In the last twelve hours, since he had gone out across the park to his momentous talk with Lady Sunderbund, it seemed to him that his life had passed through its cardinal crisis and come to its crown and decision. The spiritual voyage that had begun five years ago amidst a stormy succession of theological nightmares had reached harbour at last. He was established now in the sure conviction of God's reality, and of his advent to unify the lives of men and to save mankind. Some unobserved process in his mind had perfected that conviction, behind the cloudy veil of his vacillations and moods. Surely that work was finished now, and the day's experience had drawn the veil and discovered God established for ever.

He contrasted this simple and overruling knowledge of God as the supreme fact in a practical world with that vague and ineffective subject for sentiment who had been the "God" of his Anglican days. Some theologian once spoke of God as "the friend behind phenomena"; that Anglican deity had been rather a vague

flummery behind court and society, wealth, "respectability," and the comfortable life. And even while he had lived in lipservice to that complaisant compromise, this true God had been here, this God he now certainly professed, waiting for his allegiance, waiting to take up the kingship of this distraught and bloodstained earth. The finding of God is but the stripping of bandages from the eyes. Seek and ye shall find....

He whispered four words very softly: "The Kingdom of God!"

He was quite sure he had that now, quite sure.

The Kingdom of God!

That now was the form into which all his life must fall. He recalled his vision of the silver sphere and of ten thousand diverse minds about the world all making their ways to the same one conclusion. Here at last was a king and emperor for mankind for whom one need have neither contempt nor resentment; here was an aim for which man might forge the steel and wield the scalpel, write and paint and till and teach. Upon this conception he must model all his life. Upon this basis he must found friendships and co-operations. All the great religions, Christianity, Islam, in the days of their power and honesty, had proclaimed the advent of this kingdom of God. It had been their common inspiration. A religion surrenders when it abandons the promise of its Millennium. He had recovered that ancient and immortal hope. All men must achieve it, and with their achievement the rule of God begins. He muttered his faith. It made it more definite to put it into words and utter it. "It comes. It surely comes. To-morrow I begin. I will do no work that goes not Godward. Always now it shall be the truth as near as I can put it. Always now it shall be the service of the commonweal as well as I can do it. I will live for the ending of all false kingship and priestcraft, for the eternal growth of the spirit of man...."

He was, he knew clearly, only one common soldier in a great army that was finding its way to enlistment round and about the earth. He was not alone. While the kings of this world fought for dominion these others gathered and found themselves and one another, these others of the faith that grows plain, these men who have resolved to end the bloodstained chronicles of the Dynasts and the miseries of a world that trades in life, for ever. They were many men, speaking divers tongues. He was but one who obeyed the worldwide impulse. He could smile at the artless vanity that had blinded him to the import of his earlier visions, that had made him imagine himself a sole discoverer, a new Prophet, that had brought him so near to founding a new sect. Every soldier in the new host was a recruiting sergeant according to his opportunity.... And none was leader. Only God was leader....

"The achievement of the Kingdom of God;" this was his calling. Henceforth this was his business in life....

For a time he indulged in vague dreams of that kingdom of God on earth of which he would be one of the makers; it was a dream of a shadowy splendour of cities, of great scientific achievements, of a universal beauty, of beautiful people living in the light of God, of a splendid adventure, thrusting out at last among the stars. But neither his natural bent nor his mental training inclined him to mechanical or administrative explicitness. Much more was his dream a vision of men inwardly ennobled and united in spirit. He saw history growing reasonable and life visibly noble as mankind realized the divine aim. All the outward peace and order, the joy of physical existence finely conceived, the mounting power and widening aim were but the expression and verification of the growth of God within. Then we would bear children for finer ends than the blood and mud of battlefields. Life would tower up like a great flame. By faith we

reached forward to that. The vision grew more splendid as it grew more metaphorical. And the price one paid for that; one gave sham dignities, false honour, a Levitical righteousness, immediate peace, one bartered kings and churches for God.... He looked at the mean, poverty-struck room, he marked the dinginess and tawdriness of its detail and all the sordid evidences of ungracious bargaining and grudging service in its appointments. For all his life now he would have to live in such rooms. He who had been one of the lucky ones.... Well, men were living in dug-outs and dying gaily in muddy trenches, they had given limbs and lives, eyes and the joy of movement, prosperity and pride, for a smaller cause and a feebler assurance than this that he had found....

(19)

Presently his thoughts were brought back to his family by the sounds of Eleanor's return. He heard her key in the outer door; he heard her move about in the hall and then slip lightly up to bed. He did not go out to speak to her, and she did not note the light under his door.

He would talk to her later when this discovery of her own emotions no longer dominated her mind. He recalled her departing figure and how she had walked, touching and looking up to her young mate, and he a little leaning to her....

"God bless them and save them," he said....

He thought of her sisters. They had said but little to his clumsy explanations. He thought of the years and experience that they must needs pass through before they could think the fulness of his present thoughts, and so he tempered his disappointment. They were a gallant group, he felt. He had to thank Ella and good

fortune that so they were. There was Clementina with her odd quick combatant sharpness, a harder being than Eleanor, but nevertheless a finespirited and even more independent. There was Miriam, indefatigably kind. Phoebe too had a real passion of the intellect and Daphne an innate disposition to service. But it was strange how they had taken his proclamation of a conclusive breach with the church as though it was a command they must, at least outwardly, obey. He had expected them to be more deeply shocked; he had thought he would have to argue against objections and convert them to his views. Their acquiescence was strange. They were content he should think all this great issue out and give his results to them. And his wife, well as he knew her, had surprised him. He thought of her words: "Whither thou goest--"

He was dissatisfied with this unconditional agreement. Why could not his wife meet God as he had met God? Why must Miriam put the fantastic question--as though it was not for her to decide: "Are we still Christians?" And pursuing this thought, why couldn't Lady Sunderbund set up in religion for herself without going about the world seeking for a priest and prophet. Were women Undines who must get their souls from mortal men? And who was it tempted men to set themselves up as priests? It was the wife, the disciple, the lover, who was the last, the most fatal pitfall on the way to God.

He began to pray, still sitting as he prayed.

"Oh God!" he prayed. "Thou who has shown thyself to me, let me never forget thee again. Save me from forgetfulness. And show thyself to those I love; show thyself to all mankind. Use me, O God, use me; but keep my soul alive. Save me from the presumption of the trusted servant; save me from the vanity of authority...."

"And let thy light shine upon all those who are so dear to me.... Save them from me. Take their dear loyalty...."

He paused. A flushed, childishly miserable face that stared indignantly through glittering tears, rose before his eyes. He forgot that he had been addressing God.

"How can I help you, you silly thing?" he said. "I would give my own soul to know that God had given his peace to you. I could not do as you wished. And I have hurt you!... You hurt yourself.... But all the time you would have hampered me and tempted me--and wasted yourself. It was impossible.... And yet you are so fine!"

He was struck by another aspect.

"Ella was happy--partly because Lady Sunderbund was hurt and left desolated...."

"Both of them are still living upon nothings. Living for nothings. A phantom way of living...."

He stared blankly at the humming blue gas jets amidst the incandescent asbestos for a space.

"Make them understand," he pleaded, as though he spoke confidentially of some desirable and reasonable thing to a friend who sat beside him. "You see it is so hard for them until they understand. It is easy enough when one understands. Easy--" He reflected for some moments--" It is as if they could not exist - - except in relationship to other definite people. I want them to exist--as now I exist--in relationship to God. Knowing God...."

But now he was talking to himself again.

"So far as one can know God," he said presently.

For a while he remained frowning at the fire. Then he bent forward, turned out the gas, arose with the air of a man who relinquishes a difficult task. "One is limited," he said. "All one's ideas must fall within one's limitations. Faith is a sort of tour de force. A feat of the imagination. For such things as we are. Naturally--naturally.... One perceives it clearly only in rare moments.... That alters nothing...."

Mr. WELLS has also written the following novels:

LOVE AND MR. LEWISHAM

KIPPS

1917

Contents

The Passing of the Effigy

The War in Italy (August, 1916)

- I. The Isonzo Front**
- II. The Mountain War**
- III. Behind the Front**

The Western War (September, 1916)

- I. Ruins**
- II. The Grades of War**
- III. The War Landscape**
- IV. New Arms for Old Ones**
- V. Tanks**

How People Think About the War

- I. Do they Really Think at all?**
- II. The Yielding Pacifist and the Conscientious Objector**
- III. The Religious Revival**
- IV. The Riddle of the British**
- V. The Social Changes in Progress**
- VI. The Ending of the War**

THE PASSING OF THE EFFIGY

1

One of the minor peculiarities of this unprecedented war is the Tour of the Front. After some months of suppressed information--in which even the war correspondent was discouraged to the point of elimination--it was discovered on both sides that this was a struggle in which Opinion was playing a larger and more important part than it had ever done before. This wild spreading weed was perhaps of decisive importance; the Germans at any rate were attempting to make it a cultivated flower. There was Opinion flowering away at home, feeding rankly on rumour; Opinion in neutral countries; Opinion getting into great tangles of misunderstanding and incorrect valuation between the Allies. The confidence and courage of the enemy; the amiability and assistance of the neutral; the zeal, sacrifice, and serenity of the home population; all were affected. The German cultivation of opinion began long before the war; it is still the most systematic and, because of the psychological ineptitude of the Germans, it is probably the clumsiest. The French /Maison de la Presse/ is certainly the best organisation in existence for making things clear, counteracting hostile suggestion, the British official organisations are comparatively ineffective; but what is lacking officially is very largely made up for by the good will and generous efforts of the English and American press. An interesting monograph might be written upon these various attempts of the belligerents to get themselves and their proceedings explained.

Because there is perceptible in these developments, quite over and above the desire to influence opinion, a very real effort to

get things explained. It is the most interesting and curious--one might almost write touching--feature of these organisations that they do not constitute a positive and defined propaganda such as the Germans maintain. The German propaganda is simple, because its ends are simple; assertions of the moral elevation and loveliness of Germany; of the insuperable excellences of German Kultur, the Kaiser, and Crown Prince, and so forth; abuse of the "treacherous" English who allied themselves with the "degenerate" French and the "barbaric" Russians; nonsense about "the freedom of the seas"--the emptiest phrase in history--childish attempts to sow suspicion between the Allies, and still more childish attempts to induce neutrals and simple-minded pacifists of allied nationality to save the face of Germany by initiating peace negotiations. But apart from their steady record and reminder of German brutalities and German aggression, the press organisations of the Allies have none of this definiteness in their task. The aim of the national intelligence in each of the allied countries is not to exalt one's own nation and confuse and divide the enemy, but to get a real understanding with the peoples and spirits of a number of different nations, an understanding that will increase and become a fruitful and permanent understanding between the allied peoples. Neither the English, the Russians, the Italians, nor the French, to name only the bigger European allies, are concerned in setting up a legend, as the Germans are concerned in setting up a legend of themselves to impose upon mankind. They are reality dealers in this war, and the Germans are effigy mongers. Practically the Allies are saying each to one another, "Pray come to me and see for yourself that I am very much the human stuff that you are. Come and see that I am doing my best--and I think that is not so very bad a best...." And with that is something else still more subtle, something rather in the form of, "And please tell me what you think of me--and all this."

So we have this curious byplay of the war, and one day I find Mr.

Nabokoff, the editor of the *Retch*, and Count Alexy Tolstoy, that writer of delicate short stories, and Mr. Chukovsky, the subtle critic, calling in upon me after braving the wintry seas to see the British fleet; M. Joseph Reinach follows them presently upon the same errand; and then appear photographs of Mr. Arnold Bennett wading in the trenches of Flanders, Mr. Noyes becomes discreetly indiscreet about what he has seen among the submarines, and Mr. Hugh Walpole catches things from Mr. Stephen Graham in the Dark Forest of Russia. All this is quite over and above such writing of facts at first hand as Mr. Patrick McGill and a dozen other real experiencing soldiers--not to mention the soldiers' letters Mr. James Milne has collected, or the unforgettable and immortal *Prisoner of War* of Mr. Arthur Green--or such admirable war correspondents' work as Mr. Philip Gibbs or Mr. Washburne has done. Some of us writers--I can answer for one--have made our Tour of the Fronts with a very understandable diffidence. For my own part I did not want to go. I evaded a suggestion that I should go in 1915. I travel badly, I speak French and Italian with incredible atrociousness, and am an extreme Pacifist. I hate soldiering. And also I did not want to write anything "under instruction". It is largely owing to a certain stiffness in the composition of General Delme-Radcliffe is resolved that Italy shall not feel neglected by the refusal of the invitation from the Commando Supremo by anyone who from the perspective of Italy may seem to be a representative of British opinion. If Herbert Spencer had been alive General Radcliffe would have certainly made him come, travelling-hammock, ear clips and all--and I am not above confessing that I wish that Herbert Spencer was alive--for this purpose. I found Udine warm and gay with memories of Mr. Belloc, Lord Northcliffe, Mr. Sidney Low, Colonel Repington and Dr. Conan Doyle, and anticipating the arrival of Mr. Harold Cox. So we pass, mostly in automobiles that bump tremendously over war roads, a cloud of witnesses each testifying after his manner. Whatever else has happened, we have all been

photographed with invincible patience and resolution under the direction of Colonel Barberich in a sunny little court in Udine.

My own manner of testifying must be to tell what I have seen and what I have thought during this extraordinary experience. It has been my natural disposition to see this war as something purposeful and epic, as it is great, as an epoch, as "the War that will end War"--but of that last, more anon. I do not think I am alone in this inclination to a dramatic and logical interpretation. The caricatures in the French shops show civilisation (and particularly Marianne) in conflict with a huge and hugely wicked Hindenburg Ogre. Well, I come back from this tour with something not so simple as that. If I were to be tied down to one word for my impression of this war, I should say that this war is /Queer./ It is not like anything in a really waking world, but like something in a dream. It hasn't exactly that clearness of light against darkness or of good against ill. But it has the quality of wholesome instinct struggling under a nightmare. The world is not really awake. This vague appeal for explanations to all sorts of people, this desire to exhibit the business, to get something in the way of elucidation at present missing, is extraordinarily suggestive of the efforts of the mind to wake up that will sometimes occur at a deep crisis. My memory of this tour I have just made is full of puzzled-looking men. I have seen thousands of /poilus/ sitting about in cafes, by the roadside, in tents, in trenches, thoughtful. I have seen Alpini sitting restfully and staring with speculative eyes across the mountain gulfs towards unseen and unaccountable enemies. I have seen trainloads of wounded staring out of the ambulance train windows as we passed. I have seen these dim intimations of questioning reflection in the strangest juxtapositions; in Malagasy soldiers resting for a spell among the big shells they were hoisting into trucks for the front, in a couple of khaki-clad Maoris sitting upon the step of a horse-van in Amiens station. It is always the same expression one catches,

rather weary, rather sullen, inturned. The shoulders droop. The very outline is a note of interrogation. They look up as the privileged tourist of the front, in the big automobile or the reserved compartment, with his officer or so in charge, passes-- importantly. One meets a pair of eyes that seems to say: "Perhaps /you/ understand...."

"In which case---...?"

It is a part, I think, of this disposition to investigate what makes everyone collect "specimens" of the war. Everywhere the souvenir forces itself upon the attention. The homecoming permissionaire brings with him invariably a considerable weight of broken objects, bits of shell, cartridge clips, helmets; it is a peripatetic museum. It is as if he hoped for a clue. It is almost impossible, I have found, to escape these pieces in evidence. I am the least collecting of men, but I have brought home Italian cartridges, Austrian cartridges, the fuse of an Austrian shell, a broken Italian bayonet, and a note that is worth half a franc within the confines of Amiens. But a large heavy piece of exploded shell that had been thrust very urgently upon my attention upon the Carso I contrived to lose during the temporary confusion of our party by the arrival and explosion of another prospective souvenir in our close proximity. And two really very large and almost complete specimens of some species of /Ammonites/ unknown to me, from the hills to the east of the Adige, partially wrapped in a back number of the /Corriere della Sera/, that were pressed upon me by a friendly officer, were unfortunately lost on the line between Verona and Milan through the gross negligence of a railway porter. But I doubt if they would have thrown any very conclusive light upon the war.

I avow myself an extreme Pacifist. I am against the man who first takes up the weapon. I carry my pacifism far beyond the ambiguous little group of British and foreign sentimentalists who pretend so amusingly to be socialists in the /Labour Leader/, whose conception of foreign policy is to give Germany now a peace that would be no more than a breathing time for a fresh outrage upon civilisation, and who would even make heroes of the crazy young assassins of the Dublin crime. I do not understand those people. I do not merely want to stop this war. I want to nail down war in its coffin. Modern war is an intolerable thing. It is not a thing to trifle with in this Urban District Council way, it is a thing to end forever. I have always hated it, so far that is as my imagination enabled me to realise it; and now that I have been seeing it, sometimes quite closely for a full month, I hate it more than ever. I never imagined a quarter of its waste, its boredom, its futility, its desolation. It is merely a destructive and dispersive instead of a constructive and accumulative industrialism. It is a gigantic, dusty, muddy, weedy, bloodstained silliness. It is the plain duty of every man to give his life and all that he has if by so doing he may help to end it. I hate Germany, which has thrust this experience upon mankind, as I hate some horrible infectious disease. The new war, the war on the modern level, is her invention and her crime. I perceive that on our side and in its broad outlines, this war is nothing more than a gigantic and heroic effort in sanitary engineering; an effort to remove German militarism from the life and regions it has invaded, and to bank it in and discredit and enfeeble it so that never more will it repeat its present preposterous and horrible efforts. All human affairs and all great affairs have their reservations and their complications, but that is the broad outline of the business as it has impressed itself on my mind and as I find it conceived in

the mind of the average man of the reading class among the allied peoples, and as I find it understood in the judgment of honest and intelligent neutral observers.

It is my unshakeable belief that essentially the Allies fight for a permanent world peace, that primarily they do not make war but resist war, that has reconciled me to this not very congenial experience of touring as a spectator all agog to see, through the war zones. At any rate there was never any risk of my playing Balaam and blessing the enemy. This war is tragedy and sacrifice for most of the world, for the Germans it is simply the catastrophic outcome of fifty years of elaborate intellectual foolery. Militarism, Welt Politik, and here we are! What else /could/ have happened, with Michael and his infernal War Machine in the very centre of Europe, but this tremendous disaster?

It is a disaster. It may be a necessary disaster; it may teach a lesson that could be learnt in no other way; but for all that, I insist, it remains waste, disorder, disaster.

There is a disposition, I know, in myself as well as in others, to wriggle away from this verity, to find so much good in the collapse that has come to the mad direction of Europe for the past half-century as to make it on the whole almost a beneficial thing. But at most I can find it in no greater good than the good of a nightmare that awakens the sleeper in a dangerous place to a realisation of the extreme danger of his sleep. Better had he been awake--or never there. In Venetia Captain Pirelli, whose task it was to keep me out of mischief in the war zone, was insistent upon the way in which all Venetia was being opened up by the new military roads; there has been scarcely a new road made in Venetia since Napoleon drove his straight, poplar-bordered highways through the land. M. Joseph Reinach, who was my companion upon the French front, was equally impressed by the

stirring up and exchange of ideas in the villages due to the movement of the war. Charles Lamb's story of the discovery of roast pork comes into one's head with an effect of repartee. More than ideas are exchanged in the war zone, and it is doubtful how far the sanitary precautions of the military authorities avails against a considerable propaganda of disease. A more serious argument for the good of war is that it evokes heroic qualities that it has brought out almost incredible quantities of courage, devotion, and individual romance that did not show in the suffocating peace time that preceded the war. The reckless and beautiful zeal of the women in the British and French munition factories, for example, the gaiety and fearlessness of the common soldiers everywhere; these things have always been there--like champagne sleeping in bottles in a cellar. But was there any need to throw a bomb into the cellar?

I am reminded of a story, or rather of the idea for a story that I think I must have read in that curious collection of fantasies and observations, Hawthorne's *Note Book*. It was to be the story of a man who found life dull and his circumstances altogether mediocre. He had loved his wife, but now after all she seemed to be a very ordinary human being. He had begun life with high hopes--and life was commonplace. He was to grow fretful and restless. His discontent was to lead to some action, some irrevocable action; but upon the nature of that action I do not think the *Note Book* was very clear. It was to carry him in such a manner that he was to forget his wife. Then, when it was too late, he was to see her at an upper window, stripped and firelit, a glorious thing of light and loveliness and tragic intensity....

The elementary tales of the world are very few, and Hawthorne's story and Lamb's story are, after all, only variations upon the same theme. But can we poor human beings never realise our quality without destruction?

One of the larger singularities of the great war is its failure to produce great and imposing personalities, mighty leaders, Napoleons, Caesars. I would indeed make that the essential thing in my reckoning of the war. It is a drama without a hero; without countless incidental heroes no doubt, but no star part. Even the Germans, with a national predisposition for hero-cults and living still in an atmosphere of Victorian humbug, can produce nothing better than that timber image, Hindenburg.

It is not that the war has failed to produce heroes so much as that it has produced heroism in a torrent. The great man of this war is the common man. It becomes ridiculous to pick out particular names. There are too many true stories of splendid acts in the past two years ever to be properly set down. The V.C.'s and the palms do but indicate samples. One would need an encyclopaedia, a row of volumes, of the gloriousness of human impulses. The acts of the small men in this war dwarf all the pretensions of the Great Man. Imperatively these multitudinous heroes forbid the setting up of effigies. When I was a young man I imitated Swift and posed for cynicism; I will confess that now at fifty and greatly helped by this war, I have fallen in love with mankind.

But if I had to pick out a single figure to stand for the finest quality of the Allies' war, I should I think choose the figure of General Joffre. He is something new in history. He is leadership without vulgar ambition. He is the extreme antithesis to the Imperial boomster of Berlin. He is as it were the ordinary common sense of men, incarnate. He is the antithesis of the effigy.

By great good luck I was able to see him. I was delayed in Paris on my way to Italy, and my friend Captain Millet arranged for a visit to the French front at Soissons and put me in charge of Lieutenant de Tessin, whom I had met in England studying British social questions long before this war. Afterwards Lieutenant de Tessin took me to the great hotel--it still proclaims "/Restaurant/" in big black letters on the garden wall--which shelters the General Headquarters of France, and here I was able to see and talk to Generals Pelle and Castelnau as well as to General Joffre. They are three very remarkable and very different men. They have at least one thing in common; it is clear that not one of them has spent ten minutes in all his life in thinking of himself as a Personage or Great Man. They all have the effect of being active and able men doing an extremely complicated and difficult but extremely interesting job to the very best of their ability. With me they had all one quality in common. They thought I was interested in what they were doing, and they were quite prepared to treat me as an intelligent man of a different sort, and to show me as much as I could understand....

Let me confess that de Tessin had had to persuade me to go to Headquarters. Partly that was because I didn't want to use up even ten minutes of the time of the French commanders, but much more was it because I have a dread of Personages.

There is something about these encounters with personages--as if one was dealing with an effigy, with something tremendous put up to be seen. As one approaches they become remoter; great unsuspected crevasses are discovered. Across these gulfs one makes ineffective gestures. They do not meet you, they pose at you enormously. Sometimes there is something more terrible than dignity; there is condescension. They are affable. I had but recently had an encounter with an imported Colonial statesman, who was being advertised like a soap as the coming saviour of

England. I was curious to meet him. I wanted to talk to him about all sorts of things that would have been profoundly interesting, as for example his impressions of the Anglican bishops. But I met a hoarding. I met a thing like a mask, something surrounded by touts, that was dully trying--as we say in London--to "come it" over me. He said he had heard of me. He had read /Kipps./ I intimated that though I had written /Kipps/ I had continued to exist--but he did not see the point of that. I said certain things to him about the difference in complexity between political life in Great Britain and the colonies, that he was manifestly totally capable of understanding. But one could as soon have talked with one of the statesmen at Madame Tussaud's. An antiquated figure.

The effect of these French commanders upon me was quite different from my encounter with that last belated adventurer in the effigy line. I felt indeed that I was a rather idle and flimsy person coming into the presence of a tremendously compact and busy person, but I had none of that unpleasant sensation of a conventional role, of being expected to play the minute worshipper in the presence of the Great Image. I was so moved by the common humanity of them all that in each case I broke away from the discreet interpretations of de Tessin and talked to them directly in the strange dialect which I have inadvertently made for myself out of French, a disemvowelled speech of epicene substantives and verbs of incalculable moods and temperaments, "/Entente Cordiale./" They talked back as if we had met in a club. General Pelle pulled my leg very gaily with some quotations from an article I had written upon the conclusion of the war. I think he found my accent and my idioms very refreshing. I had committed myself to a statement that Bloch has been justified in his theory that under modern conditions the defensive wins. There were excellent reasons, and General Pelle pointed them out, for doubting the applicability of this to the present war.

Both he and General Castelnau were anxious that I should see a French offensive sector as well as Soissons. Then I should understand. And since then I have returned from Italy and I have seen and I do understand. The Allied offensive was winning; that is to say, it was inflicting far greater losses than it experienced; it was steadily beating the spirit out of the German army and shoving it back towards Germany. Only peace can, I believe, prevent the western war ending in Germany. And it is the Frenchmen mainly who have worked out how to do it.

But of that I will write later. My present concern is with General Joffre as the antithesis of the Effigy. The effigy,

"Thou Prince of Peace,
Thou God of War,"

as Mr. Sylvester Viereck called him, prances on a great horse, wears a Wagnerian cloak, sits on thrones and talks of shining armour and "unser Gott." All Germany gloats over his Jovian domesticities; when I was last in Berlin the postcard shops were full of photographs of a sort of procession of himself and his sons, all with long straight noses and sidelong eyes. It is all dreadfully old-fashioned. General Joffre sits in a pleasant little sitting-room in a very ordinary little villa conveniently close to Headquarters. He sits among furniture that has no quality of pose at all, that is neither magnificent nor ostentatiously simple and hardy. He has dark, rather sleepy eyes under light eyelashes, eyes that glance shyly and a little askance at his interlocutor and then, as he talks, away--as if he did not want to be preoccupied by your attention. He has a broad, rather broadly modelled face, a soft voice, the sort of persuasive reasoning voice that many Scotchmen have. I had a feeling that if he were to talk English he would do so with a Scotch accent. Perhaps somewhere I have met a Scotchman of his

type. He sat sideways to his table as a man might sit for a gossip in a cafe.

He is physically a big man, and in my memory he grows bigger and bigger. He sits now in my memory in a room like the rooms that any decent people might occupy, like that vague room that is the background of so many good portraits, a great blue-coated figure with a soft voice and rather tired eyes, explaining very simply and clearly the difficulties that this vulgar imperialism of Germany, seizing upon modern science and modern appliances, has created for France and the spirit of mankind.

He talked chiefly of the strangeness of this confounded war. It was exactly like a sanitary engineer speaking of the unexpected difficulties of some particularly nasty inundation. He made little stiff horizontal gestures with his hands. First one had to build a dam and stop the rush of it, so; then one had to organise the push that would send it back. He explained the organisation of the push. They had got an organisation now that was working out most satisfactorily. Had I seen a sector? I had seen the sector of Soissons. Yes, but that was not now an offensive sector. I must see an offensive sector; see the whole method. Lieutenant de Tessin must see that that was arranged....

Neither he nor his two colleagues spoke of the Germans with either hostility or humanity. Germany for them is manifestly merely an objectionable Thing. It is not a nation, not a people, but a nuisance. One has to build up this great counter-thrust bigger and stronger until they go back. The war must end in Germany. The French generals have no such delusions about German science or foresight or capacity as dominates the smart dinner chatter of England. One knows so well that detestable type of English folly, and its voice of despair: "They /plan/ everything. They foresee everything." This paralysing Germanophobia is not common among the French. The war, the

French generals said, might take--well, it certainly looked like taking longer than the winter. Next summer perhaps. Probably, if nothing unforeseen occurred, before a full year has passed the job might be done. Were any surprises in store? They didn't seem to think it was probable that the Germans had any surprises in store.... The Germans are not an inventive people; they are merely a thorough people. One never knew for certain.

Is any greater contrast possible than between so implacable, patient, reasonable--and above all things /capable/--a being as General Joffre and the rhetorician of Potsdam, with his talk of German Might, of Hammer Blows and Hacking Through? Can there be any doubt of the ultimate issue between them?

There are stories that sound pleasantly true to me about General Joffre's ambitions after the war. He is tired; then he will be very tired. He will, he declares, spend his first free summer in making a tour of the waterways of France in a barge. So I hope it may be. One imagines him as sitting quietly on the crumpled remains of the last and tawdriest of Imperial traditions, with a fishing line in the placid water and a large buff umbrella overhead, the good ordinary man who does whatever is given to him to do--as well as he can. The power that has taken the great effigy of German imperialism by the throat is something very composite and complex, but if we personify it at all it is something more like General Joffre than any other single human figure I can think of or imagine.

If I were to set a frontispiece to a book about this War I would make General Joffre the frontispiece.

As we swung back along the dusty road to Paris at a pace of fifty miles an hour and upwards, driven by a helmeted driver with an aquiline profile fit to go upon a coin, whose merits were a little flawed by a childish and dangerous ambition to run over every cat he saw upon the road, I talked to de Tessin about this big blue-coated figure of Joffre, which is not so much a figure as a great generalisation of certain hitherto rather obscured French qualities, and of the impression he had made upon me. And from that I went on to talk about the Super Man, for this encounter had suddenly crystallised out a set of realisations that had been for some time latent in my mind.

How much of what follows I said to de Tessin at the time I do not clearly remember, but this is what I had in mind.

The idea of the superman is an idea that has been developed by various people ignorant of biology and unaccustomed to biological ways of thinking. It is an obvious idea that follows in the course of half an hour or so upon one's realisation of the significance of Darwinism. If man has evolved from something different, he must now be evolving onward into something sur-human. The species in the future will be different from the species of the past. So far at least our Nietzsches and Shaws and so on went right.

But being ignorant of the elementary biological proposition that modification of a species means really a secular change in its average, they jumped to a conclusion--to which the late Lord Salisbury also jumped years ago at a very memorable British Association meeting--that a species is modified by the sudden appearance of eccentric individuals here and there in the general mass who interbreed--preferentially. Helped by a streak of antic

egotism in themselves, they conceived of the superman as a posturing personage, misunderstood by the vulgar, fantastic, wonderful. But the antic Personage, the thing I have called the Effigy, is not new but old, the oldest thing in history, the departing thing. It depends not upon the advance of the species but upon the uncritical hero-worship of the crowd. You may see the monster drawn twenty times the size of common men upon the oldest monuments of Egypt and Assyria. The true superman comes not as the tremendous personal entry of a star, but in the less dramatic form of a general increase of goodwill and skill and common sense. A species rises not by thrusting up peaks but by the brimming up as a flood does. The coming of the superman means not an epidemic of personages but the disappearance of the Personage in the universal ascent. That is the point overlooked by the megalomaniac school of Nietzsche and Shaw.

And it is the peculiarity of this war, it is the most reassuring evidence that a great increase in general ability and critical ability has been going on throughout the last century, that no isolated great personages have emerged. Never has there been so much ability, invention, inspiration, leadership; but the very abundance of good qualities has prevented our focusing upon those of any one individual. We all play our part in the realisation of God's sanity in the world, but, as the strange, dramatic end of Lord Kitchener has served to remind us, there is no single individual of all the allied nations whose death can materially affect the great destinies of this war.

In the last few years I have developed a religious belief that has become now to me as real as any commonplace fact. I think that mankind is still as it were collectively dreaming and hardly more awakened to reality than a very young child. It has these dreams that we express by the flags of nationalities and by strange loyalties and by irrational creeds and ceremonies, and its dreams at times become such nightmares as this war. But the

time draws near when mankind will awake and the dreams will fade away, and then there will be no nationality in all the world but humanity, and no kind, no emperor, nor leader but the one God of mankind. This is my faith. I am as certain of this as I was in 1900 that men would presently fly. To me it is as if it must be so.

So that to me this extraordinary refusal of the allied nations under conditions that have always hitherto produced a Great Man to produce anything of the sort, anything that can be used as an effigy and carried about for the crowd to follow, is a fact of extreme significance and encouragement. It seems to me that the twilight of the half gods must have come, that we have reached the end of the age when men needed a Personal Figure about which they could rally. The Kaiser is perhaps the last of that long series of crowned and cloaked and semi-divine personages which has included Caesar and Alexander and Napoleon the First-- and Third. In the light of the new time we see the emperor-god for the guy he is. In the August of 1914 he set himself up to be the paramount Lord of the World, and it will seem to the historian to come, who will know our dates so well and our feelings, our fatigues and efforts so little, it will seem a short period from that day to this, when the great figure already sways and staggers towards the bonfire.

5

I had the experience of meeting a contemporary king upon this journey. He was the first king I had ever met. The Potsdam figure--with perhaps some local exceptions behind the Gold Coast-- is, with its collection of uniforms and its pomps and splendours, the purest survival of the old tradition of divine monarchy now that the Emperor at Peking has followed the Shogun into the shadows. The modern type of king shows a disposition to intimate

at the outset that he cannot help it, and to justify or at any rate utilise his exceptional position by sound hard work. It is an age of working kings, with the manners of private gentlemen. The King of Italy for example is far more accessible than was the late Pierpont Morgan or the late Cecil Rhodes, and he seems to keep a smaller court.

I went to see him from Udine. He occupied a moderate-sized country villa about half an hour by automobile from headquarters. I went over with General Radcliffe; we drove through the gates of the villa past a single sentinel in an ordinary infantry uniform, up to the door of the house, and the number of guards, servants, attendants, officials, secretaries, ministers and the like that I saw in that house were--I counted very carefully--four.

Downstairs were three people, a tall soldier of the bodyguard in grey; an A.D.C., Captain Moreno, and Col. Matteoli, the minister of the household. I went upstairs to a drawing-room of much the same easy and generalised character as the one in which I had met General Joffre a few days before. I gave my hat to a second bodyguard, and as I did so a pleasantly smiling man appeared at the door of the study whom I thought at first must be some minister in attendance. I did not recognise him instantly because on the stamps and coins he is always in profile. He began to talk in excellent English about my journey, and I replied, and so talking we went into the study from which he had emerged. Then I realised I was talking to the king.

Addicted as I am to the cinematograph, in which the standard of study furniture is particularly rich and high, I found something very cooling and simple and refreshing in the sight of the king's study furniture. He sat down with me at a little useful writing table, and after asking me what I had seen in Italy and hearing what I had seen and what I was to see, he went on talking, very good talk indeed.

I suppose I did a little exceed the established tradition of courts by asking several questions and trying to get him to talk upon certain points as to which I was curious, but I perceived that he had had to carry on at least so much of the regal tradition as to control the conversation. He was, however, entirely un-posed. His talk reminded me somehow of Maurice Baring's books; it had just the same quick, positive understanding. And he had just the same detachment from the war as the French generals. He spoke of it--as one might speak of an inundation. And of its difficulties and perplexities.

Here on the Adriatic side there were political entanglements that by comparison made our western after-the-war problems plain sailing. He talked of the game of spellicans among the Balkan nationalities. How was that difficulty to be met? In Macedonia there were Turkish villages that were Christian and Bulgarians that were Moslem. There were families that changed the termination of their names from /ski/ to /off/ as Serbian or Bulgarian prevailed. I remarked that that showed a certain passion for peace, and that much of the mischief might be due to the propaganda of the great Powers. I have a prejudice against that blessed Whig "principle of nationality," but the King of Italy was not to be drawn into any statement about that. He left the question with his admission of its extreme complexity.

He went on to talk of the strange contrasts of war, of such things as the indifference of the birds to gunfire and desolation. One day on the Carso he had been near the newly captured Austrian trenches, and suddenly from amidst a scattered mass of Austrian bodies a quail had risen. that had struck him as odd, and so too had the sight of a pack of cards and a wine flask on some newly-made graves. The ordinary life was a very /obstinate/ thing....

He talked of the courage of modern men. He was astonished at the

quickness with which they came to disregard shrapnel. And they were so quietly enduring when they were wounded. He had seen a lot of the wounded, and he had expected much groaning and crying out. But unless a man is hit in the head and goes mad he does not groan or scream! They are just brave. If you ask them how they feel it is always one of two things: either they say quietly that they are very bad or else they say there is nothing the matter....

He spoke as if these were mere chance observations, but everyone tells me that nearly every day the king is at the front and often under fire. He has taken more risks in a week than the Potsdam War Lord has taken since the war began. He keeps himself acutely informed upon every aspect of the war. He was a little inclined to fatalism, he confessed. There were two stories current of two families of four sons, in each three had been killed and in each there was an attempt to put the fourth in a place of comparative safety. In one case a general took the fourth son in as an attendant and embarked upon a ship that was immediately torpedoed; in the other the fourth son was killed by accident while he was helping to carry dinner in a rest camp. From those stories we came to the question whether the uneducated Italians were more superstitious than the uneducated English; the king thought they were much less so. That struck me as a novel idea. But then he thought that English rural people believe in witches and fairies.

I have given enough of this talk to show the quality of this king of the new dispensation. It was, you see, the sort of easy talk one might hear from fine-minded people anywhere. When we had done talking he came to the door of the study with me and shook hands and went back to his desk--with that gesture of return to work which is very familiar and sympathetic to a writer, and with no gesture of regality at all.

Just to complete this impression let me repeat a pleasant story about this king and our Prince of Wales, who recently visited the Italian front. The Prince is a source of anxiety on these visits; he has a very strong and very creditable desire to share the ordinary risks of war. He is keenly interested, and unobtrusively bent upon getting as near the fighting as line as possible. But the King of Italy was firm upon keeping him out of anything more than the most incidental danger. "We don't want any historical incidents here," he said. I think that might well become an historical phrase. For the life of the Effigy is a series of historical incidents.

6

Manifestly one might continue to multiply portraits of fine people working upon this great task of breaking and ending the German aggression, the German legend, the German effigy, and the effigy business generally; the thesis being that the Allies have no effigy. One might fill a thick volume with pictures of men up the scale and down working loyally and devotedly upon the war, to make this point clear that the essential king and the essential loyalty of our side is the commonsense of mankind.

There comes into my head as a picture at the other extreme of this series, a memory of certain trenches I visited on my last day in France. They were trenches on an offensive front; they were not those architectural triumphs, those homes from home, that grow to perfection upon the less active sections of the great line. They had been first made by men who had run rapidly forward with spade and rifle, stooping as they ran, who had dropped into the craters of big shells, who had organised these chiefly at night and dug the steep ditches sideways to join up into continuous trenches. Now they were pushing forward saps into No Man's Land, linking them across, and so continually

creeping nearer to the enemy and a practicable jumping-off place for an attack. (It has been made since; the village at which I peeped was in our hands a week later.) These trenches were dug into a sort of yellowish sandy clay; the dug-outs were mere holes in the earth that fell in upon the clumsy; hardly any timber had been got up the line; a storm might flood them at any time a couple of feet deep and begin to wash the sides. Overnight they had been "strafed" and there had been a number of casualties; there were smashed rifles about and a smashed-up machine gun emplacement, and the men were dog-tired and many of them sleeping like logs, half buried in -clay. Some slept on the firing steps. As one went along one became aware ever and again of two or three pairs of clay-yellow feet sticking out of a clay hole, and peering down one saw the shapes of men like rudely modelled earthen images of soldiers, motionless in the cave.

I came round the corner upon a youngster with an intelligent face and steady eyes sitting up on the firing step, awake and thinking. We looked at one another. There are moments when mind leaps to mind. It is natural for the man in the trenches suddenly confronted by so rare a beast as a middle-aged civilian with an enquiring expression, to feel oneself something of a spectacle and something generalised. It is natural for the civilian to look rather in the vein of saying, "Well, how do you take it?" As I pushed past him we nodded slightly with an effect of mutual understanding. And we said with our nods just exactly what General Joffre had said with his horizontal gestures of the hand and what the King of Italy conveyed by his friendly manner; we said to each other that here was the trouble those Germans had brought upon us and here was the task that had to be done.

Our guide to these trenches was a short, stocky young man, a cobbler; with a rifle and a tight belt and projecting skirts and a helmet, a queer little figure that, had you seen it in a picture a year or so before the war, you would most certainly have pronounced

Chinese. He belonged to a Northumbrian battalion; it does not matter exactly which. As we returned from this front line, trudging along the winding path through the barbed wire tangles before the smashed and captured German trench that had been taken a fortnight before, I fell behind my guardian captain and had a brief conversation with this individual. He was a lad in the early twenties, weather-bit and with bloodshot eyes. He was, he told me, a miner. I asked my stock question in such cases, whether he would go back to the old work after the war. He said he would, and then added--with the events of overnight on his mind: "If A'hm looky."

Followed a little silence. Then I tried my second stock remark for such cases. One does not talk to soldiers at the front in this war of Glory or the "Empire on which the sun never sets" or "the meteor flag of England" or of King and Country or any of those fine old headline things. On the desolate path that winds about amidst the shell craters and the fragments and the red-rusted wire, with the silken shiver of passing shells in the air and the blue of the lower sky continually breaking out into eddying white puffs, it is wonderful how tawdry such panoplies of the effigy appear. We knew that we and our allies are upon a greater, graver, more fundamental business than that sort of thing now. We are very near the waking point.

"Well," I said, "it's got to be done."

"Aye," he said, easing the strap of his rifle a little; "it's got to be done."

THE WAR IN ITALY (AUGUST, 1916)

I. THE ISONZO FRONT

1

My first impressions of the Italian war centre upon Udine. So far I had had only a visit to Soissons on an exceptionally quiet day and the sound of a Zeppelin one night in Essex for all my experience of actual warfare. But my bedroom at the British mission in Udine roused perhaps extravagant expectations. There were holes in the plaster ceiling and wall, betraying splintered laths, holes, that had been caused by a bomb that had burst and killed several people in the little square outside. Such excitements seem to be things of the past now in Udine. Udine keeps itself dark nowadays, and the Austrian sea-planes, which come raiding the Italian coast country at night very much in the same aimless, casually malignant way in which the Zeppelins raid England, apparently because there is nothing else for them to do, find it easier to locate Venice.

My earlier rides in Venetia began always with the level roads of the plain, roads frequently edged by watercourses, with plentiful willows beside the road, vines and fields of Indian corn and suchlike lush crops. Always quite soon one came to some old Austrian boundary posts; almost everywhere the Italians are fighting upon what is technically enemy territory, but nowhere does it seem a whit less Italian than the plain of Lombardy. When at last I motored away from Udine to the northern mountain front I passed through Campo-Formio and saw the white-faced inn at which Napoleon dismembered the ancient republic of Venice and bartered away this essential part of Italy into foreign control. It just gravitates back now--as though there had been no

Napoleon.

And upon the roads and beside them was the enormous equipment of a modern army advancing. Everywhere I saw new roads being made, railways pushed up, vast store dumps, hospitals; everywhere the villages swarmed with grey soldiers; everywhere our automobile was threading its way and taking astonishing risks among interminable processions of motor lorries, strings of ambulances or of mule carts, waggons with timber, waggons with wire, waggons with men's gear, waggons with casks, waggons discreetly veiled, columns of infantry, cavalry, batteries /en route./ Every waggon that goes up full comes back empty, and many wounded were coming down and prisoners and troops returning to rest. Goritzia had been taken a week or so before my arrival; the Isonzo had been crossed and the Austrians driven back across the Carso for several miles; all the resources of Italy seemed to be crowding up to make good these gains and gather strength for the next thrust. The roads under all this traffic remained wonderful; gangs of men were everywhere repairing the first onset of wear, and Italy is the most fortunate land in the world for road metal; her mountains are solid road metal, and in this Venetian plain you need but to scrape through a yard of soil to find gravel.

One travelled through a choking dust under the blue sky, and above the steady incessant dusty succession of lorry, lorry, lorry, lorry that passed one by, one saw, looking up, the tree tops, house roofs, or the solid Venetian campanile of this or that wayside village. Once as we were coming out of the great grey portals of that beautiful old relic of a former school of fortification, Palmanova, the traffic became suddenly bright yellow, and for a kilometre or so we were passing nothing but Sicilian mule carts loaded with hay. These carts seem as strange among the grey shapes of modern war transport as a Chinese mandarin in painted silk would be. They are the most individual of things, all two-wheeled, all bright yellow and the same size

it is true, but upon each there are they gayest of little paintings, such paintings as one sees in England at times upon an ice-cream barrow. Sometimes the picture will present a scriptural subject, sometimes a scene of opera, sometimes a dream landscape or a trophy of fruits or flowers, and the harness--now much out of repair--is studded with brass. Again and again I have passed strings of these gay carts; all Sicily must be swept of them.

Through the dust I came to Aquileia, which is now an old cathedral, built upon the remains of a very early basilica, standing in a space in a scattered village. But across this dusty space there was carried the head of the upstart Maximinus who murdered Alexander Severus, and later Aquileia brought Attila near to despair. Our party alighted; we inspected a very old mosaic floor which has been uncovered since the Austrian retreat. The Austrian priests have gone too, and their Italian successors are already tracing out a score of Roman traces that it was the Austrian custom to minimise. Captain Pirelli refreshed my historical memories; it was rather like leaving a card on Gibbon /en route/ for contemporary history.

By devious routes I went on to certain batteries of big guns which had played their part in hammering the Austrian left above Monfalcone across an arm of the Adriatic, and which were now under orders to shift and move up closer. The battery was the most unobtrusive of batteries; its one desire seemed to be to appear a simple piece of woodland in the eye of God and the aeroplane. I went about the network of railways and paths under the trees that a modern battery requires, and came presently upon a great gun that even at the first glance seemed a little less carefully hidden than its fellows. Then I saw that it was a most ingenious dummy made of a tree and logs and so forth. It was in the emplacement of a real gun that had been located; it had its painted sandbags about it just the same, and it felt itself so

entirely a part of the battery that whenever its companions fired it burnt a flash and kicked up a dust. It was an excellent example of the great art of camouflage which this war has developed.

I went on through the wood to a shady observation post high in a tree, into which I clambered with my guide. I was able from this position to get a very good idea of the lie of the Italian eastern front. I was in the delta of the Isonzo. Directly in front of me were some marshes and the extreme tip of the Adriatic Sea, at the head of which was Monfalcone, now in Italian hands. Behind Monfalcone ran the red ridge of the Carso, of which the Italians had just captured the eastern half. Behind this again rose the mountains to the east of the Isonzo which the Austrians still held. The Isonzo came towards me from out of the mountains, in a great westward curve. Fifteen or sixteen miles away where it emerged from the mountains lay the pleasant and prosperous town of Goritzia, and at the westward point of the great curve was Sagrado with its broken bridge. The battle of Goritzia was really not fought at Goritzia at all. What happened was the brilliant and bloody storming of Mounts Podgora and Sabotino on the western side of the river above Goritzia, and simultaneously a crossing at Sagrado below Goritzia and a magnificent rush up the plateau and across the plateau of the Carso. Goritzia itself was not organised for defence, and the Austrians were so surprised by the rapid storm of the mountains to the north-west of it and of the Carso to the south-east, that they made no fight in the town itself.

As a consequence when I visited it I found it very little injured--compared, that is, with such other towns as have been fought through. Here and there the front of a house has been knocked in by an Austrian shell, or a lamp-post prostrated. But the road bridge had suffered a good deal; its iron parapet was twisted about by shell bursts and interwoven with young trees and big

boughs designed to screen the passer-by from the observation of the Austrian gunners upon Monte Santo. Here and there were huge holes through which one could look down upon the blue trickles of water in the stony river bed far below. The driver of our automobile displayed what seemed to me an extreme confidence in the margins of these gaps, but his confidence was justified. At Sagrado the bridge had been much more completely demolished; no effort had been made to restore the horizontal roadway, but one crossed by a sort of timber switchback that followed the ups and downs of the ruins.

It is not in these places that one must look for the real destruction of modern war. The real fight on the left of Goritzia went through the village of Lucinico up the hill of Podgora. Lucinico is nothing more than a heap of grey stones; except for a bit of the church wall and the gable end of a house one cannot even speak of it as ruins. But in one place among the rubble I saw the splintered top and a leg of a grand piano. Podgora hill, which was no doubt once neatly terraced and cultivated, is like a scrap of landscape from some airless, treeless planet. Still more desolate was the scene upon the Carso to the right (south) of Goritzia. Both San Martino and Doberdo are destroyed beyond the limits of ruination. The Carso itself is a waterless upland with but a few bushy trees; it must always have been a desolate region, but now it is an indescribable wilderness of shell craters, smashed-up Austrian trenches, splintered timber, old iron, rags, and that rusty thorny vileness of man's invention, worse than all the thorns and thickets of nature, barbed wire. There are no dead visible; the wounded have been cleared away; but about the trenches and particularly near some of the dug-outs there was a faint repulsive smell....

Yet into this wilderness the Italians are now thrusting a sort of order. The German is a wonderful worker, they say on the Anglo-

French front that he makes his trenches by way of resting, but I doubt if he can touch the Italian at certain forms of toil. All the way up to San Martino and beyond, swarms of workmen were making one of those carefully graded roads that the Italians make better than any other people. Other swarms were laying water-pipes. For upon the Carso there are neither roads nor water, and before the Italians can thrust farther both must be brought up to the front.

As we approached San Martino an Austrian aeroplane made its presence felt overhead by dropping a bomb among the tents of some workmen, in a little scrubby wood on the hillside near at hand. One heard the report and turned to see the fragments flying and the dust. Probably they got someone. And then, after a little pause, the encampment began to spew out men; here, there and everywhere they appeared among the tents, running like rabbits at evening-time, down the hill. Soon after and probably in connection with this signal, Austrian shells began to come over. They do not use shrapnel because the rocky soil of Italy makes that unnecessary. They fire a sort of shell that goes bang and releases a cloud of smoke overhead, and then drops a parcel of high explosive that bursts on the ground. The ground leaps into red dust and smoke. But these things are now to be seen on the cinema. Forthwith the men working on the road about us begin to down tools and make for the shelter trenches, a long procession going at a steady but resolute walk. Then like a blow in the chest came the bang of a big Italian gun somewhere close at hand....

Along about four thousand miles of the various fronts this sort of thing was going on that morning....

This Carso front is the practicable offensive front of Italy. From the left wing on the Isonzo along the Alpine boundary round to the Swiss boundary there is mountain warfare like nothing else in the world; it is warfare that pushes the boundary backward, but it is mountain warfare that will not, for so long a period that the war will be over first, hold out any hopeful prospects of offensive movements on a large scale against Austria or Germany. It is a short distance as the crow flies from Rovereto to Munich, but not as the big gun travels. The Italians, therefore, as their contribution to the common effort, are thrusting rather eastwardly towards the line of the Julian Alps through Carinthia and Carniola. From my observation post in the tree near Monfalcone I saw Trieste away along the coast to my right. It looked scarcely as distant as Folkestone from Dungeness. The Italian advanced line is indeed scarcely ten miles from Trieste. But the Italians are not, I think, going to Trieste just yet. That is not the real game now. They are playing loyally with the Allies for the complete defeat of the Central Powers, and that is to be achieved striking home into Austria. Meanwhile there is no sense in knocking Trieste to pieces, or using Italians instead of Austrian soldiers to garrison it.

II. THE MOUNTAIN WAR

1

The mountain warfare of Italy is extraordinarily unlike that upon any other front. From the Isonzo to the Swiss frontier we are dealing with high mountains, cut by deep valleys between which there is usually no practicable lateral communication. Each advance must have the nature of an unsupported shove along a narrow channel, until the whole mountain system, that is, is won,

and the attack can begin to deploy in front of the passes. Geographically Austria has the advantage. She had the gentler slope of the mountain chains while Italy has the steep side, and the foresight of old treaties has given her deep bites into what is naturally Italian territory; she is far nearer the Italian plain than Italy is near any practicable fighting ground for large forces; particularly is this the case in the region of the Adige valley and Lake Garda.

The legitimate war, so to speak, in this region is a mountaineering war. The typical position is roughly as follows. The Austrians occupy valley A which opens northward; the Italians occupy valley B which opens southward. The fight is for the crest between A and B. The side that wins that crest gains the power of looking down into, firing into and outflanking the positions of the enemy valley. In most cases it is the Italians now who are pressing, and if the reader will examine a map of the front and compare it with the official reports he will soon realise that almost everywhere the Italians are up to the head of the southward valleys and working over the crests so as to press down upon the Austrian valleys. But in the Trentino the Austrians are still well over the crest on the southward slopes. When I was in Italy they still held Roverto.

Now it cannot be said that under modern conditions mountains favour either the offensive or the defensive. But they certainly make operations far more deliberate than upon a level. An engineered road or railway in an Alpine valley is the most vulnerable of things; its curves and viaducts may be practically demolished by shell fire or swept by shrapnel, although you hold the entire valley except for one vantage point. All the mountains round about a valley must be won before that valley is safe for the transport of an advance. But on the other hand a surprise capture of some single mountain crest and the hoisting of one gun into position there may block the retreat of guns and

material from a great series of positions. Mountain surfaces are extraordinarily various and subtle. You may understand Picardy on a map, but mountain warfare is three-dimensional. A struggle may go on for weeks or months consisting of apparently separate and incidental skirmishes, and then suddenly a whole valley organisation may crumble away in retreat or disaster. Italy is gnawing into the Trentino day by day, and particularly around by her right wing. At no time I shall be surprised to see a sudden lunge forward on that front, and hear a tale of guns and prisoners. This will not mean that she has made a sudden attack, but that some system of Austrian positions has collapsed under her continual pressure.

Such briefly is the /idea/ of mountain struggle. Its realities, I should imagine, are among the strangest and most picturesque in all this tremendous world conflict. I know nothing of the war in the east, of course, but there are things here that must be hard to beat. Happily they will soon get justice done to them by an abler pen than mine. I hear that Kipling is to follow me upon this ground; nothing can be imagined more congenial to his extraordinary power of vivid rendering than this struggle against cliffs, avalanches, frost and the Austrian.

To go the Italian round needs, among other things, a good head. Everywhere it has been necessary to make roads where hitherto there have been only mule tracks or no tracks at all; the roads are often still in the making, and the automobile of the war tourist skirts precipices and takes hairpin bends upon tracks of loose metal not an inch too broad for the operation, or it floats for a moment over the dizzy edge while a train of mule transport blunders by. The unruly imagination of man's heart (which is "only evil continually") speculates upon what would be the consequences of one good bump from the wheel of a mule cart. Down below, the trees that one sees through a wisp of cloud look

far too small and spiky and scattered to hold out much hope for a fallen man of letters. And at the high positions they are too used to the vertical life to understand the secret feelings of the visitor from the horizontal. General Bompinani, whose writings are well known to all English students of military matters, showed me the Gibraltar he is making of a great mountain system east of the Adige.

"Let me show you," he said, and flung himself on to the edge of the precipice into exactly the position of a lady riding side-saddle. "You will find it more comfortable to sit down."

But anxious as I am abroad not to discredit my country by unseemly exhibitions I felt unequal to such gymnastics without a proper rehearsal at a lower level. I seated myself carefully at a yard (perhaps it was a couple of yards) from the edge, advanced on my trousers without dignity to the verge, and so with an effort thrust my legs over to dangle in the crystalline air.

"That," proceeded General Bompiani, pointing with a giddy flourish of his riding whip, "is Monte Tomba."

I swayed and half-extended my hand towards him. But he was still there--sitting, so to speak, on the half of himself.... I was astonished that he did not disappear abruptly during his exposition....

2

The fighting man in the Dolomites has been perhaps the most wonderful of all these separate campaigns. I went up by automobile as far as the clambering new road goes up the flanks of Tofana No. 2; thence for a time by mule along the flank of

Tofana No. 1, and thence on foot to the vestiges of the famous Castelletto.

The aspect of these mountains is particularly grim and wicked; they are worn old mountains, they tower overhead in enormous vertical cliffs of sallow grey, with the square jointings and occasional clefts and gullies, their summits are toothed and jagged; the path ascends and passes round the side of the mountain upon loose scree, which descend steeply to a lower wall of precipices. In the distance rise other harsh and desolate-looking mountain masses, with shining occasional scars of old snow. Far below is a bleak valley of stunted pine trees through which passes the road of the Dolomites.

As I ascended the upper track two bandages men were coming down on led mules. It was mid-August, and they were suffering from frostbite. Across the great gap between the summits a minute traveller with some provisions was going up by wire to some post upon the crest. For everywhere upon the icy pinnacles are observation posts directing the fire of the big guns on the slopes below, or machine-gun stations, or little garrisons that sit and wait through the bleak days. Often they have no link with the world below but a precipitous climb or a "teleferic" wire. Snow and frost may cut them off absolutely for weeks from the rest of mankind. The sick and wounded must begin their journey down to help and comfort in a giddy basket that swings down to the head of the mule track below.

Originally all these crests were in Austrian hands; they were stormed by the Alpini under almost incredible conditions. For fifteen days, for example, they fought their way up these scree on the flanks of Tofana No. 2 to the ultimate crags, making perhaps a hundred metres of ascent each day, hiding under rocks and in holes in the daylight and receiving fresh provisions and ammunition and advancing by night. They were subjected to rifle

fire, machine-gun fire and bombs of a peculiar sort, big iron balls of the size of a football filled with explosive that were just flung down the steep. They dodged flares and star shells. At one place they went up a chimney that would be far beyond the climbing powers of any but a very active man. It must have been like storming the skies. The dead and wounded rolled away often into inaccessible ravines. Stray skeletons, rags of uniform, fragments of weapons, will add to the climbing interest of these gaunt masses for many years to come. In this manner it was that Tofana No. 2 was taken.

Now the Italians are organising this prize, and I saw winding up far above me on the steep grey slope a multitudinous string of little things that looked like black ants, each carrying a small bright yellow egg. They were mules bringing back balks of timber....

But one position held out invincibly; this was the Castelletto, a great natural fortress of rock standing out at an angle of the mountain in such a position that it commanded the Italian communications (the Dolomite road) in the valley below, and rendered all their positions uncomfortable and insecure. This obnoxious post was practically inaccessible either from above or below, and it barred the Italians even from looking into the Val Travenanzes which it defended. It was, in fact, an impregnable position, and against it was pitted the invincible 5th Group of the Alpini. It was the old problem of the irresistible force in conflict with the immovable object. And the outcome has been the biggest military mine in all history.

The business began in January, 1916, with surveys of the rock in question. The work of surveying for excavations, never a very simple one, becomes much more difficult when the site is occupied by hostile persons with machine guns. In March, as the winter's snows abated, the boring machinery began to arrive, by mule as

far as possible and then by hand. Altogether about half a kilometre of gallery had to be made to the mine chamber, and meanwhile the explosive was coming up load by load and resting first here, then there, in discreetly chosen positions. There were at the last thirty-five tons of it in the inner chamber. And while the boring machines bored and the work went on, Lieutenant Malvezzi was carefully working out the problem of "il massimo effetto dirompimento" and deciding exactly how to pack and explode his little hoard. On the eleventh of July, at 3.30, as he rejoices to state in his official report, "the mine responded perfectly both in respect of the calculations made and of the practical effects," that is to say, the Austrians were largely missing and the Italians were in possession of the crater of the Castelletto and looking down the Val Travenanzes from which they had been barred for so long. Within a month things had been so tidied up, and secured by further excavations and sandbags against hostile fire, that even a middle-aged English writer, extremely fagged and hot and breathless, could enjoy the same privilege. All this, you must understand, had gone on at a level to which the ordinary tourist rarely climbs, in a rarefied, chest-tightening atmosphere, with wisps of clouds floating in the clear air below and club-huts close at hand....

Among these mountains avalanches are frequent; and they come down regardless of human strategy. In many cases the trenches cross avalanche tracks; they and the men in them are periodically swept away and periodically replaced. They are positions that must be held; if the Italians will not face such sacrifices, the Austrians will. Avalanches and frostbite have slain and disabled their thousands; they have accounted perhaps for as many Italians in this austere and giddy campaign as the Austrians....

It seems to be part of the stern resolve of Fate that this, the greatest of wars, shall be the least glorious; it is manifestly being decided not by victories but by blunders. It is indeed a history of colossal stupidities. Among the most decisive of these blunders, second only perhaps of the blunder of the Verdun attack and far outshining the wild raid of the British towards Bagdad, was the blunder of the Trentino offensive. It does not need the equipment of a military expert, it demands only quite ordinary knowledge and average intelligence, to realise the folly of that Austrian adventure. There is some justification for a claim that the decisive battle of the war was fought upon the soil of Italy. There is still more justification for saying that it might have been.

There was only one good point about the Austrian thrust. No one could have foretold it. And it did so completely surprise the Italians as to catch them without any prepared line of positions in the rear. On the very eve of the big Russian offensive, the Austrians thrust eighteen divisions hard at the Trentino frontier. The Italian posts were then in Austrian territory; they held on the left wing and the right, but they were driven by the sheer weight of men and guns in the centre; they lost guns and prisoners because of the difficulty of mountain retreats to which I have alluded, and the Austrians pouring through reached not indeed the plain of Venetia, but to the upland valleys immediately above it, to Asiago and Arsiero. They probably saw the Venetian plain through gaps in the hills, but they were still separated from it even at Arsiero by what are mountains to an English eye, mountains as high as Snowdon. But the Italians of such beautiful old places and Vicenza, Marostica, and Bassano could watch the Austrian shells bursting on the last line of hills above the plain, and I have no doubt they felt extremely uneasy.

As one motors through these ripe and beautiful towns and through

the rich valleys that link them--it is a smiling land abounding in old castles and villas, Vicenza is a rich museum of Palladio's architecture and Bassano is full of irreplaceable painted buildings--one feels that the things was a narrow escape, but from the military point of view it was merely an insane escapade. The Austrians had behind them--and some way behind them--one little strangulated railway and no good pass road; their right was held at Pasubio, their left was similarly bent back. In front of them was between twice and three times their number of first class troops, with an unlimited equipment. If they had surmounted that last mountain crest they would have come down to almost certain destruction in the plain. They could never have got back. For a time it was said that General Cardona considered that possibility. From the point of view of purely military considerations, the Trentino offensive should perhaps have ended in the capitulation of Vicenza.

I will confess I am glad it did not do so. This tour of the fronts has made me very sad and weary with a succession of ruins. I can bear no more ruins unless they are the ruins of Dusseldorf, Cologne, Berlin, or suchlike modern German city. Anxious as I am to be a systematic Philistine, to express my preference for Marinetti over the Florentine British and generally to antagonise aesthetic prigs, I rejoiced over that sunlit land as one might rejoice over a child saved from beasts.

On the hills beyond Schio I walked out through the embrasure of a big gun in a rock gallery, and saw the highest points upon the hillside to which the Austrian infantry clambered in their futile last attacks. Below me were the ruins of Arsiero and Velo d'Astico recovered, and across the broad valley rose Monte Cimone with the Italian trenches upon its crest and the Austrians a little below to the north. A very considerable bombardment was going on and it reverberated finely. (It is only among mountains that one hears anything that one can call the thunder of guns.

The heaviest bombardments I heard in France sounded merely like Brock's benefit on a much large scale, and disappointed me extremely.) As I sat and listened to the uproar and watched the shells burst on Cimone and far away up the valley over Castelletto above Pedescala, Captain Pirelli pointed out the position of the Austrian frontier. I doubt if the English people realise that the utmost depth to which this great Trentino offensive, which exhausted Austria, wasted the flower of the Hungarian army and led directly to the Galician disasters and the intervention of Rumania, penetrated into Italian territory was about six miles.

III. BEHIND THE FRONT

1

I have a peculiar affection for Verona and certain things in Verona. Italians must forgive us English this little streak of impertinent proprietorship in the beautiful things of their abundant land. It is quite open to them to revenge themselves by professing a tenderness for Liverpool or Leeds. It was, for instance, with a peculiar and personal indignation that I saw where an Austrian air bomb had killed five-and-thirty people in the Piazza Erbe. Somehow in that jolly old place, a place that have very much of the quality of a very pretty and cheerful old woman, it seemed exceptionally an outrage. And I made a special pilgrimage to see how it was with that monument of Can Grande, the equestrian Scaliger with the sidelong grin, for whom I confess a ridiculous admiration. Can Grande, I rejoice to say, has retired into a case of brickwork, surmounted by a steep roof of thick iron plates; no aeroplane exists to carry bombs enough to smash that covering; there he will smile securely in the darkness until peace comes again.

All over Venetia the Austrian seaplanes are making the same sort of idiot raid on lighted places that the Zeppelins have been making over England. These raids do no effective military work. What conceivable military advantage can there be in dropping bombs into a marketing crowd? It is a sort of anti-Teutonic propaganda by the Central Powers to which they seem to have been incited by their own evil genius. It is as if they could convince us that there is an essential malignity in Germans, that until the German powers are stamped down into the mud they will continue to do evil things. All of the Allies have borne the thrusting and boasting of Germany with exemplary patience for half a century; England gave her Heligoland and stood out of the way of her colonial expansion, Italy was a happy hunting ground for her business enterprise, France had come near resignation on the score of Alsace-Lorraine. And then over and above the great outrage of the war come these incessant mean-spirited atrocities. A great and simple wickedness it is possible to forgive; the war itself, had it been fought greatly by Austria and Germany, would have made no such deep and enduring breach as these silly, futile assassinations have done between the Austro-Germans and the rest of the civilised world. One great misdeed is a thing understandable and forgivable; what grows upon the consciousness of the world is the persuasion that here we fight not a national sin but a national insanity; that we dare not leave the German the power to attack other nations any more for ever....

Venice has suffered particularly from this ape-like impulse to hurt and terrorise enemy non-combatants. Venice has indeed suffered from this war far more than any other town in Italy. Her trade has largely ceased; she has no visitors. I woke up on my way to Udine and found my train at Venice with an hour to spare; after much examining and stamping of my passport I was allowed outside the station wicket to get coffee in the refreshment room and a glimpse of a very sad and silent Grand

Canal. There was nothing doing; a black despondent remnant of the old crowd of gondolas browsed dreamily among against the quay to stare at me the better. The empty palaces seemed to be sleeping in the morning sunshine because it was not worth while to wake up....

2

Except in the case of Venice, the war does not seem as yet to have made nearly such a mark upon life in Italy as it has in England or provincial France. People speak of Italy as a poor country, but that is from a banker's point of view. In some respects she is the richest country on earth, and in the matter of staying power I should think she is better off than any other belligerent. She produces food in abundance everywhere; her women are agricultural workers, so that the interruption of food production by the war has been less serious in Italy than in any other part of Europe. In peace time, she has constantly exported labour; the Italian worker has been a seasonal emigrant to America, north and south, to Switzerland, Germany and the south of France. The cessation of this emigration has given her great reserves of man power, so that she has carried on her admirable campaign with less interference with her normal economic life than any other power. The first person I spoke to upon the platform at Modane was a British officer engaged in forwarding Italian potatoes to the British front in France. Afterwards, on my return, when a little passport irregularity kept me for half a day in Modane, I went for a walk with him along the winding pass road that goes down into France. "You see hundreds and hundreds of new Fiat cars," he remarked, "along here--going up to the French front."

But there is a return trade. Near Paris I saw scores of thousands of shells piled high to go to Italy....

I doubt if English people fully realise either the economic sturdiness or the political courage of their Italian ally. Italy is not merely fighting a first-class war in first-class fashion but she is doing a big, dangerous, generous and far-sighted thing in fighting at all. France and England were obliged to fight; the necessity was as plain as daylight. The participation of Italy demanded a remoter wisdom. In the long run she would have been swallowed up economically and politically by Germany if she had not fought; but that was not a thing staring her plainly in the face as the danger, insult and challenge stared France and England in the face. What did stare her in the face was not merely a considerable military and political risk, but the rupture of very close financial and commercial ties. I found thoughtful men talking everywhere I have been in Italy of two things, of the Jugo-Slav riddle and of the question of post war finance. So far as the former matter goes, I think the Italians are set upon the righteous solution of all such riddles, they are possessed by an intelligent generosity. They are clearly set upon deserving Jugo-Slav friendship; they understand the plain necessity of open and friendly routes towards Roumania. It was an Italian who set out to explain to me that Fiume must be at least a free port; it would be wrong and foolish to cut the trade of Hungary off from the Mediterranean. But the banking puzzle is a more intricate and puzzling matter altogether than the possibility of trouble between Italian and Jugo-Slav.

I write of these things with the simplicity of an angel, but without an angelic detachment. Here are questions into which one does not so much rush as get reluctantly pushed. Currency and banking are dry distasteful questions, but it is clear that they are too much in the hands of mystery-mongers; it is as much the duty of anyone who talks and writes of affairs, it is as much the duty of every sane adult, to bring his possibly poor and unsuitable wits to bear upon these things, as it is for him to

vote or enlist or pay his taxes. Behind the simple ostensible spectacle of Italy recovering the unredeemed Italy of the Trentino and East Venetia, goes on another drama. Has Italy been sinking into something rather hard to define called "economic slavery"? Is she or is she not escaping from that magical servitude? Before this question has been under discussion for a minute comes a name--for a time I was really quite unable to decide whether it is the name of the villain in the piece or of the maligned heroine, or a secret society or a gold mine, or a pestilence or a delusion--the name of the /Banca Commerciale Italiana./

Banking in a country undergoing so rapid and vigorous an economic development as Italy is very different from the banking we simple English know of at home. Banking in England, like land-owning, has hitherto been a sort of hold up. There were always borrowers, there were always tenants, and all that had to be done was to refuse, obstruct, delay and worry the helpless borrower or would-be tenant until the maximum of security and profit was obtained. I have never borrowed but I have built, and I know something of the extreme hauteur of property of England towards a man who wants to do anything with land, and with money I gather the case is just the same. But in Italy, which already possessed a sunny prosperity of its own upon mediaeval lines, the banker has had to be suggestive and persuasive, sympathetic and helpful. These are unaccustomed attitudes for British capital. The field has been far more attractive to the German banker, who is less of a proudly impassive usurer and more of a partner, who demands less than absolute security because he investigates more industriously and intelligently. This great bank, the Banca Commerciale Italiana, is a bank of the German type: to begin with, it was certainly dominated by German directors; it was a bank of stimulation, and its activities interweave now into the whole fabric of Italian commercial life. But it has already liberated itself from German influence, and the bulk of its

capital is Italian. Nevertheless I found discussion ranging about firstly what the Banca Commerciale essentially /was/, secondly what it might /become/, thirdly what it might /do/, and fourthly what, if anything, had to be done to it.

It is a novelty to an English mind to find banking thus mixed up with politics, but it is not a novelty in Italy. All over Venetia there are agricultural banks which are said to be "clerical." I grappled with this mystery. "How are they clerical?" I asked Captain Pirelli. "Do they lend money on bad security to clerical voters, and on no terms whatever to anti-clericals?" He was quite of my way of thinking. "/Pecunia non olet/," he said; "I have never yet smelt a clerical fifty lira note."... But on the other hand Italy is very close to Germany; she wants easy money for development, cheap coal, a market for various products. The case against the Germans--this case in which the Banca Commerciale Italiana appears, I am convinced unjustly, as a suspect--is that they have turned this natural and proper interchange with Italy into the acquisition of German power. That they have not been merely easy traders, but patriotic agents. It is alleged that they used their early "pull" in Italian banking to favour German enterprises and German political influence against the development of native Italian business; that their merchants are not bona-fide individuals, but members of a nationalist conspiracy to gain economic controls. The German is a patriotic monomaniac. He is not a man but a limb, the worshipper of a national effigy, the digit of an insanelly proud and greedy Germania, and here are the natural consequences.

The case of the individual Italian compactly is this: "We do not like the Austrians and Germans. These Imperialisms look always over the Alps. Whatever increases German influence here threatens Italian life. The German is a German first and a human being afterwards.... But on the other hand England seems

commercially indifferent to us and France has been economically hostile..."

"After all," I said presently, after reflection, "in that matter of /Pecunia non olet/; there used to be fusses about European loans in China. And one of the favourite themes of British fiction and drama before the war was the unfortunate position of the girl who accepted a loan from the wicked man to pay her debts at bridge."

"Italy," said Captain Pirelli, "isn't a girl. And she hasn't been playing bridge."

I incline on the whole to his point of view. Money is facile cosmopolitan stuff. I think that any bank that settles down in Italy is going to be slowly and steadily naturalised Italian, it will become more and more Italian until it is wholly Italian. I would trust Italy to make and keep the Banca Commerciale Italiana Italian. I believe the Italian brain is a better brain than the German article. But still I heard people talking of the implicated organisation as if it were engaged in the most insidious duplicities. "Wait for only a year or so after the war," said one English authority to me, "and the mask will be off and it will be frankly a 'Deutsche Bank' once more." They assure me that then German enterprises will be favoured again, Italian and Allied enterprises blockaded and embarrassed, the good understanding of Italians and English poisoned, entirely through this organisation....

The reasonable uncommercial man would like to reject all this last sort of talk as "suspicion mania." So far as the Banca Commerciale Italiana goes, I at least find that easy enough; I quote that instance simply because it is a case where suspicion has been dispelled, but in regard to a score of other business veins it is not so easy to dispel suspicion. This war has been a

shock to reasonable men the whole world over. They have been forced to realise that after all a great number of Germans have been engaged in a crack-brained conspiracy against the non-German world; that in a great number of cases when one does business with a German the business does not end with the individual German. We hated to believe that a business could be tainted by German partners or German associations. If now we err on the side of over-suspicion, it is the German's little weakness for patriotic disingenuousness that is most to blame....

But anyhow I do not think there is much good in a kind of witch-smelling among Italian enterprises to find the hidden German. Certain things are necessary for Italian prosperity and Italy must get them. The Italians want intelligent and helpful capital. They want a helpful France. They want bituminous coal for metallurgical purposes. They want cheap shipping. The French too want metallurgical coal. It is more important for civilisation, for the general goodwill of the Allies and for Great Britain that these needs should be supplied than that individual British money-owners or ship-owners should remain sluggishly rich by insisting upon high security or high freights. The control of British coal-mining and shipping is in the national interests--for international interests--rather than for the creation of that particularly passive, obstructive, and wasteful type of wealth, the wealth of the mere profiteer, is as urgent a necessity for the commercial welfare of France and Italy and the endurance of the Great Alliance as it is for the well-being of the common man in Britain.

3

I left my military guide at Verona on Saturday afternoon and reached Milan in time to dine outside Salvini's in the Galleria Vittorio Emanuele, with an Italian fellow story-writer. The

place was as full as ever; we had to wait for a table. It is notable that there were still great numbers of young men not in uniform in Milan and Turin and Vicenza and Verona; there was no effect anywhere of a depletion of men. The whole crowded place was smouldering with excitement. The diners looked about them as they talked, some talked loudly and seemed to be expressing sentiments. Newspaper vendors appeared at the intersection of the arcades, uttering ambiguous cries, and did a brisk business of flitting white sheets among the little tables.

"To-night," said my companion, "I think we shall declare war upon Germany. The decision is being made."

I asked intelligently why this had not been done before. I forget the precise explanation he gave. A young soldier in uniform, who had been dining at an adjacent table and whom I had not recognised before as a writer I had met some years previously in London, suddenly joined in our conversation, with a slightly different explanation. I had been carrying on a conversation in slightly ungainly French, but now I relapsed into English.

But indeed the matter of that declaration of war is as plain as daylight; the Italian national consciousness has not at first that direct sense of the German danger that exists in the minds of the three northern Allies. To the Italian the traditional enemy is Austria, and this war is not primarily a war for any other end than the emancipation of Italy. Moreover we have to remember that for years there has been serious commercial friction between France and Italy, and considerable mutual elbowing in North Africa. Both Frenchmen and Italians are resolute to remedy this now, but the restoration of really friendly and trustful relations is not to be done in a day. It has been an extraordinary misfortune for Great Britain that instead of boldly taking over her shipping from its private owners and using it all, regardless of their profit, in the

interests of herself and her allies, her government has permitted so much of it as military and naval needs have not requisitioned to continue to ply for gain, which the government itself has shared by a tax on war profits. The Anglophobe elements in Italian public life have made the utmost of this folly or laxity in relation more particularly to the consequent dearness of coal in Italy. They have carried on an amazingly effective campaign in which this British slackness with the individual profiteer, is represented as if it were the deliberate greed of the British state. This certainly contributed very much to fortify Italy's disinclination to slam the door on the German connection.

I did my best to make it clear to my two friends that so far from England exploiting Italy, I myself suffered in exactly the same way as any Italian, through the extraordinary liberties of our shipping interest. "I pay as well as you do," I said; "the shippers' blockade of Great Britain is more effective than the submarines'. My food, my coal, my petrol are all restricted in the sacred name of private property. You see, capital in England has hitherto been not an exploitation but a hold-up. We are learning differently now.... And anyhow, Mr. Runciman has been here and given Italy assurances...."

In the train to Modane this old story recurred again. It is imperative that English readers should understand clearly how thoroughly these little matters have been /worked/ by the enemy.

Some slight civilities led to a conversation that revealed the Italian lady in the corner as an Irishwoman married to an Italian, and also brought out the latent English of a very charming elderly lady opposite to her. She had heard a speech, a wonderful speech from a railway train, by "the Lord Runciman." He had said the most beautiful things about Italy.

I did my best to echo these beautiful things.

Then the Irishwoman remarked that Mr. Runciman had not satisfied everybody. She and her husband had met a minister--I found afterwards he was one of the members of the late Giolotti government--who had been talking very loudly and scornfully of the bargain Italy was making with England. I assured her that the desire of England was simply to give Italy all that she needed.

"But," said the husband casually, "Mr. Runciman is a shipowner."

I explained that he was nothing of the sort. It was true that he came of a shipowning family--and perhaps inherited a slight tendency to see things from a shipowning point of view--but in England we did not suspect a man on such a score as that.

"In Italy I think we should," said the husband of the Irish lady.

4

This incidental discussion is a necessary part of my impression of Italy at war. The two western allies and Great Britain in particular have to remember Italy's economic needs, and to prepare to rescue them from the blind exploitation of private profit. They have to remember these needs too, because, if they are left out of the picture, then it becomes impossible to understand the full measure of the risk Italy has faced in undertaking this war for an idea. With a Latin lucidity she has counted every risk, and with a Latin idealism she has taken her place by the side of those who fight for a liberal civilisation against a Byzantine imperialism.

As I came out of the brightly lit Galleria Vittorio Emanuele into the darkened Piazza del Duomo I stopped under the arcade and stood looking up at the shadowy darkness of that great pinnacled barn, that marble bride-cake, which is, I suppose, the last southward fortress of the Franco-English Gothic.

"It was here," said my host, "that we burnt the German stuff."

"What German stuff?"

"Pianos and all sorts of things. From the shops. It is possible, you know, to buy things too cheaply--and to give too much for the cheapness."

THE WESTERN WAR (SEPTEMBER, 1916)

I. RUINS

1

If I had to present some particular scene as typical of the peculiar vileness and mischief wrought by this modern warfare that Germany has elaborated and thrust upon the world, I do not think I should choose as my instance any of those great architectural wrecks that seem most to impress contemporary writers. I have seen the injuries and ruins of the cathedrals at Arras and Soissons and the wreckage of the great church at Saint Eloi, I have visited the Hotel de Ville at Arras and seen photographs of the present state of the Cloth Hall at Ypres--a building I knew very well indeed in its days of pride--and I have not been very deeply moved. I suppose that one is a little accustomed to Gothic ruins, and that there is always something monumental about old buildings; it is only a question of degree whether they are more or less tumble-down. I was far more desolated by the obliteration of such villages as Fricourt and Dompierre, and by the horrible state of the fields and gardens round about them, and my visit to Arras railway station gave me all the sensations of coming suddenly on a newly murdered body.

Before I visited the recaptured villages in the zone of the actual fighting, I had an idea that their evacuation was only temporary, that as soon as the war line moved towards Germany the people of the devastated villages would return to build their houses and till their fields again. But I see now that not only are homes and villages destroyed almost beyond recognition, but the very fields are destroyed. They are wildernesses of shell craters; the old worked soil is buried and great slabs of crude

earth have been flung up over it. No ordinary plough will travel over this frozen sea, let alone that everywhere chunks of timber, horrible tangles of rusting wire, jagged fragments of big shells, and a great number of unexploded shells are entangled in the mess. Often this chaos is stained bright yellow by high explosives, and across it run the twisting trenches and communication trenches eight, ten, or twelve feet deep. These will become water pits and mud pits into which beasts will fall. It is incredible that there should be crops from any of this region of the push for many years to come. There is no shade left; the roadside trees are splintered stumps with scarcely the spirit to put forth a leaf; a few stunted thistles and weeds are the sole proofs that life may still go on.

The villages of this wide battle region are not ruined; they are obliterated. It is just possible to trace the roads in them, because the roads have been cleared and repaired for the passing of the guns and ammunition. Fricourt is a tangle of German dug-outs. One dug-out in particular there promises to become a show place. It must be the masterpiece of some genius for dug-outs; it is made as if its makers enjoyed the job; it is like the work of some horrible badger among the vestiges of what were pleasant human homes. You are taken down a timbered staircase into its warren of rooms and passages; you are shown the places under the craters of the great British shells, where the wood splintered but did not come in. (But the arrival of those shells must have been a stunning moment.) There are a series of ingenious bolting shafts set with iron climbing bars. In this place German officers and soldiers have lived continually for nearly two years. This war is, indeed, a troglodytic propaganda. You come up at last at the far end into what was once a cellar of a decent Frechman's home.

But there are stranger subterranean refuges than that at Fricourt. At Dompierre the German trenches skirted the cemetery,

and they turned the dead out of their vaults and made lurking places of the tombs. I walked with M. Joseph Reinach about this place, picking our way carefully amidst the mud holes and the wire, and watched the shells bursting away over the receding battle line to the west. The wreckage of the graves was Durereqsue. And here would be a fragment of marble angle and here a split stone with an inscription. Splinters of coffins, rusty iron crosses and the petals of tin flowers were trampled into the mud, amidst the universal barbed wire. A little distance down the slope is a brand new cemetery, with new metal wreaths and even a few flowers; it is a disciplined array of uniform wooden crosses, each with its list of soldiers' names. Unless I am wholly mistaken in France no Germans will ever get a chance for ever more to desecrate that second cemetery as they have done its predecessor.

We walked over the mud heaps and litter that had once been houses towards the centre of Dompierre village, and tried to picture to ourselves what the place had been. Many things are recognisable in Dompierre that have altogether vanished at Fricourt; for instance, there are quire large triangular pieces of the church wall upstanding at Dompierre. And a mile away perhaps down the hill on the road towards Amiens, the ruins of the sugar refinery are very distinct. A sugar refinery is an affair of big iron receptacles and great flues and pipes and so forth, and iron does not go down under gun fire as stone or brick does. The whole fabric wars rust, bent and twisted, gaping with shell holes, that raggedest display of old iron, but it still kept its general shape, as a smashed, battered, and sunken ironclad might do at the bottom of the sea.

There wasn't a dog left of the former life of Dompierre. There was not even much war traffic that morning on the worn and muddy road. The guns muttered some miles away to the west, and a lark sang. But a little way farther on up the road was an

intermediate dressing station, rigged up with wood and tarpaulins, and orderlies were packing two wounded men into an ambulance. The men on the stretchers were grey faced, as though they had been trodden on by some gigantic dirty boot.

As we came back towards where our car waited by the cemetery I heard the jingle of a horseman coming across the space behind us. I turned and beheld one of the odd contrasts that seem always to be happening in this incredible war. This man was, I suppose, a native officer of some cavalry force from French north Africa. He was a handsome dark brown Arab, wearing a long yellow-white robe and a tall cap about which ran a band of sheepskin. He was riding one of those little fine lean horses with long tails that I think are Barbary horses, his archaic saddle rose fore and aft of him, and the turned-up toes of his soft leather boots were stuck into great silver stirrups. He might have ridden straight out of the Arabian nights. He passed thoughtfully, picking his way delicately among the wire and the shell craters, and coming into the road, broke into a canter and vanished in the direction of the smashed-up refinery.

2

About such towns as Rheims or Arras or Soissons there is an effect of waiting stillness like nothing else I have ever experienced. At Arras the situation is almost incredible to the civilian mind. The British hold the town, the Germans hold a northern suburb; at one point near the river the trenches are just four metres apart. This state of tension has lasted for long months.

Unless a very big attack is contemplated, I suppose there is no advantage in an assault; across that narrow interval we should only get into trenches that might be costly or impossible to

hold, and so it would be for the Germans on our side. But there is a kind of etiquette observed; loud vulgar talking on either side of the four-metre gap leads at once to bomb throwing. And meanwhile on both sides guns of various calibre keep up an intermittent fire, the German guns register--I think that is the right term--on the cross of Arras cathedral, the British guns search lovingly for the German batteries. As one walks about the silent streets one hears, "/Bang/---Pheeee---woooo" and then far away "/dump./" One of ours. Then presently back comes "Pheeee---woooo---/Bang!/" One of theirs.

Amidst these pleasantries, the life of the town goes on. /Le Lion d'Arras/, an excellent illustrated paper, produces its valiant sheets, and has done so since the siege began.

The current number of /Le Lion d'Arras/ had to report a local German success. Overnight they had killed a gendarme. There is to be a public funeral and much ceremony. It is rare for anyone now to get killed; everything is so systematised.

You may buy postcards with views of the destruction at various angles, and send them off with the Arras postmark. The town is not without a certain business activity. There is, I am told, a considerable influx of visitors of a special sort; they wear khaki and lead the troglodytic life. They play cards and gossip and sleep in the shadows, and may not walk the streets. I had one glimpse of a dark crowded cellar. Now and then one sees a British soldier on some special errand; he keeps to the pavement, mindful of the spying German sausage balloon in the air. The streets are strangely quite and grass grows between the stones.

The Hotel de Ville and the cathedral are now mostly heaps of litter, but many streets of the town have suffered very little. Here and there a house has been crushed and one or two have been bisected, the front reduced to a heap of splinters and the back

halves of the rooms left so that one sees the bed, the hanging end of the carpet, the clothes cupboard yawning open, the pictures still on the wall. In one place a lamp stands on a chest of drawers, on a shelf of floor cut off completely from the world below.... Pheeee---woooo---/Bang!/ One would be irresistibly reminded of a Sunday afternoon in the city of London, if it were not for those unmeaning explosions.

I went to the station, a dead railway station. A notice-board requested us to walk around the silent square on the outside pavement and not across it. The German sausage balloon had not been up for days; it had probably gone off to the Somme; the Somme was a terrible vortex just then which was sucking away the resources of the whole German line; but still discipline is discipline. The sausage might come peeping up at any moment over the station roof, and so we skirted the square. Arras was fought for in the early stages of the war; two lines of sand-bagged breastworks still run obliquely through the station; one is where the porters used to put luggage upon cabs and one runs the length of the platform. The station was a fine one of the modern type, with a glass roof whose framework still remains, though the glass powders the floor and is like a fine angular gravel underfoot. The rails are rails of rust, and cornflowers and mustard and tall grasses grow amidst the ballast. The waiting-rooms have suffered from a shell or so, but there are still the sofas of green plush, askew, a little advertisement hung from the wall, the glass smashed. The ticket bureau is as if a giant had scattered a great number of tickets, mostly still done up in bundles, to Douai, to Valenciennes, to Lens and so on. These tickets are souvenirs too portable to resist. I gave way to that common weakness.

I went out and looked up and down the line; two deserted goods trucks stood as if they sheltered under a footbridge. The grass poked out through their wheels. The railway signals seemed

uncertain in their intimations; some were up and some were down. And it was as still and empty as a summer afternoon in Pompeii. No train has come into Arras for two long years now.

We lunched in a sunny garden with various men who love Arras but are weary of it, and we disputed about Irish politics. We discussed the political future of Sir F. E. Smith. We also disputed whether there was an equivalent in English for /embusque./ Every now and then a shell came over--an aimless shell.

A certain liveliness marked our departure from the town. Possibly the Germans also listen for the rare infrequent automobile. At any rate, as we were just starting our way back--it is improper to mention the exact point from which we started--came "Pheeee---woooo." Quite close. But there was no /Bang!/ One's mind hung expectant and disappointed. It was a dud shell.

And then suddenly I became acutely aware of the personality of our chauffeur. It was not his business to talk to us, but he turned his head, showed a sharp profile, wry lips and a bright excited eye, and remarked, "/That/ was a near one--anyhow." He then cut a corner over the pavement and very nearly cut it through a house. He bumped us over a shell hole and began to toot his horn. At every gateway, alley, and cross road on this silent and empty streets of Arras and frequently in between, he tooted punctiliously. (It is not proper to sound motor horns in Arras.) I cannot imagine what the listening Germans made of it. We passed the old gates of that city of fear, still tooting vehemently, and then with shoulders eloquent of his feelings, our chauffeur abandoned the horn altogether and put his whole soul into the accelerator....

Soissons was in very much the same case as Arras. There was the same pregnant silence in her streets, the same effect of waiting for the moment which draws nearer and nearer, when the brooding German lines away there will be full of the covert activities of retreat, when the streets of the old town will stir with the joyous excitement of the conclusive advance.

The organisation of Soissons for defence is perfect. I may not describe it, but think of whatever would stop and destroy an attacking party or foil the hostile shell. It is there. Men have had nothing else to do and nothing else to think of for two years. I crossed the bridge the English made in the pursuit after the Marne, and went into the first line trenches and peeped towards the invisible enemy. To show me exactly where to look a seventy-five obliged with a shell. In the crypt of the Abbey of St. Medard near by it--it must provoke the Germans bitterly to think that all the rest of the building vanished ages ago--the French boys sleep beside the bones of King Childebert the Second. They shelter safely in the prison of Louis the Pious. An ineffective shell from a German seventy-seven burst in the walled garden close at hand as I came out from those thousand-year-old memories again.

The cathedral at Soissons had not been nearly so completely smashed up as the one at Arras; I doubt if it has been very greatly fired into. There is a peculiar beauty in the one long vertical strip of blue sky between the broken arches in the chief gap where the wall has tumbled in. And the people are holding on in many cases exactly as they are doing in Arras; I do not know whether it is habit or courage that is most apparent in this persistence. About the chief place of the town there are ruined houses, but some invisible hand still keeps the grass of the little garden within bounds and has put out a bed of begonias. In Paris I met a charming American writer, the wife of a French

artist, the lady who wrote /My House on the Field of Honour./ She gave me a queer little anecdote. On account of some hospital work she had been allowed to visit Soissons--a rare privilege for a woman--and she stayed the night in a lodging. The room into which she was shown was like any other French provincial bedroom, and after her Anglo-Saxon habit she walked straight to the windows to open them.

They looked exactly like any other French bedroom windows, with neat, clean white lace curtains across them. The curtains had been put there, because they were the proper things to put there.

"Madame," said the hostess, "need not trouble to open the glass. There is no more glass in Soissons."

But there were curtains nevertheless. There was all the precise delicacy of the neatly curtained home life of France.

And she told me too of the people at dinner, and how as the little serving-maid passed about a proud erection of cake and conserve and cream, came the familiar "Pheeee---woooo---/Bang!/"

"That must have been the Seminaire," said someone.

As one speaks of the weather or a passing cart.

"It was in the Rue de la Bueire, M'sieur," the little maid asserted with quiet conviction, poising the trophy of confectionery for Madame Huard with an unshaking hand.

So stoutly do the roots of French life hold beneath the tramplings of war.

II. THE GRADES OF WAR

1

Soissons and Arras when I visited them were samples of the deadlock war; they were like Bloch come true. The living fact about war so far is that Bloch has not come true--/yet./ I think in the end he will come true, but not so far as this war is concerned, and to make that clear it is necessary to trouble the reader with a little disquisition upon war--omitting as far as humanly possible all mention of Napoleon's campaigns.

The development of war has depended largely upon two factors. One of these is invention. New weapons and new methods have become available, and have modified tactics, strategy, the relative advantage of offensive and defensive. The other chief factor in the evolution of the war has been social organisation. As Machiavelli points out in his /Art of War/, there was insufficient social stability in Europe to keep a properly trained and disciplined infantry in the field from the passing of the Roman legions to the appearance of the Swiss footmen. he makes it very clear that he considers the fighting of the Middle Ages, though frequent and bloody, to be a confused, mobbing sort of affair, and politically and technically unsatisfactory. The knight was an egotist in armour. Machiavelli does small justice to the English bowmen. It is interesting to note that Switzerland, that present island of peace, was regarded by him as the mother of modern war. Swiss aggression was the curse of the Milanese. That is a remark by the way; our interest here is to note that modern war emerges upon history as the sixteenth century unfolds, as an affair in which the essential factor is the drilled and trained infantryman. The artillery is developing as a means of breaking the infantry; cavalry for charging them when broken, for pursuit and scouting. To this day this triple

division of forces dominates soldiers' minds. The mechanical development of warfare has consisted largely in the development of facilities for enabling or hindering the infantry to get to close quarters. As that has been made easy or difficult the offensive or the defensive has predominated.

A history of military method for the last few centuries would be a record of successive alternate steps in which offensive and defensive contrivances pull ahead, first one and then the other. Their relative fluctuations are marked by the varying length of campaigns. From the very outset we have the ditch and the wall; the fortified place upon a pass or main road, as a check to the advance. Artillery improves, then fortification improves. The defensive holds its own for a long period, wars are mainly siege wars, and for a century before the advent of Napoleon there are no big successful sweeping invasions, no marches upon the enemy capital and so on. There were wars of reduction, wars of annoyance. Napoleon developed the offensive by seizing upon the enthusiastic infantry of the republic, improving transport and mobile artillery, using road-making as an aggressive method. In spite of the successful experiment of Torres Vedras and the warning of Plevna the offensive remained dominant throughout the nineteenth century.

But three things were working quietly towards the rehabilitation of the defensive; firstly the increased range, accuracy and rapidity of rifle fire, with which we may include the development of the machine gun; secondly the increasing use of the spade, and thirdly the invention of barbed wire. By the end of the century these things had come so far into military theory as to produce the great essay of Bloch, and to surprise the British military people, who are not accustomed to read books or talk shop, in the Boer war. In the thinly populated war region of South Africa the difficulties of forcing entrenched positions were largely met by outflanking, the Boers had only a limited amount of barbed wire

and could be held down in their trenches by shrapnel, and even at the beginning of the present war there can be little doubt that we and our Allies were still largely unprepared for the full possibilities of trench warfare, we attempted a war of manoeuvres, war at about the grade to which war had been brought in 1898, and it was the Germans who first brought the war up to date by entrenching upon the Aisne. We had, of course, a few aeroplanes at that time, but they were used chiefly as a sort of accessory cavalry for scouting; our artillery was light and our shell almost wholly shrapnel.

Now the grades of warfare that have been developed since the present war began, may be regarded as a series of elaborations and counter elaborations of the problem which begins as a line of trenches behind wire, containing infantry with rifles and machine guns. Against this an infantry attack with bayonet, after shrapnel fails. This we will call Grade A. To this the offensive replies with improved artillery, and particularly with high explosive shell instead of shrapnel. By this the wire is blown away, the trench wrecked and the defender held down as the attack charges up. This is Grade B. But now appear the dug-out elaborating the trench and the defensive battery behind the trench. The defenders, under the preliminary bombardment, get into the dug-outs with their rifles and machine guns, and emerge as fresh as paint as the attack comes up. Obviously there is much scope for invention and contrivance in the dug-out as the reservoir of counter attacks. Its possibilities have been very ably exploited by the Germans. Also the defensive batteries behind, which have of course the exact range of the captured trench, concentrate on it and destroy the attack at the moment of victory. The trench falls back to its former holders under this fire and a counter attack. Check again for the offensive. Even if it can take, it cannot hold a position under these conditions. This we will call Grade A2; a revised and improved A. What is the retort from the opposite side? Obviously to enhance and

extend the range of the preliminary bombardment behind the actual trench line, to destroy or block, if it can, the dug-outs and destroy or silence the counter offensive artillery. If it can do that, it can go on; otherwise Bloch wins.

If fighting went on only at ground level Bloch would win at this stage, but here it is that the aeroplane comes in. From the ground it would be practically impossible to locate the enemies' dug-outs, secondary defences, and batteries. But the aeroplane takes us immediately into a new grade of warfare, in which the location of the defender's secondary trenches, guns, and even machine-gun positions becomes a matter of extreme precision--provided only that the offensive has secured command of the air and can send his aeroplanes freely over the defender lines. Then the preliminary bombardment becomes of a much more extensive character; the defender's batteries are tackled by the overpowering fire of guns they are unable to locate and answer; the secondary dug-outs and strong places are plastered down, a barrage fire shuts off support from the doomed trenches, the men in these trenches are held down by a concentrated artillery fire and the attack goes up at last to hunt them out of the dug-outs and collect the survivors. Until the attack is comfortably established in the captured trench, the fire upon the old counter attack position goes on. This is the grade, Grade B2, to which modern warfare has attained upon the Somme front. The appearance of the Tank has only increased the offensive advantage. There at present warfare rests.

There is, I believe, only one grade higher possible. The success of B2 depends upon the completeness of the aerial observation. The invention of an anti-aircraft gun which would be practically sure of hitting and bringing down an aeroplane at any height whatever up to 20,000 feet, would restore the defensive and establish what I should think must be the final grade of war, A3. But at present nothing of the sort exists and nothing of the sort

is likely to exist for a very long time; at present hitting an aeroplane by any sort of gun at all is a rare and uncertain achievement. Such a gun is not impossible and therefore we must suppose such a gun will some day be constructed, but it will be of a novel type and character, unlike anything at present in existence. The grade of fighting that I was privileged to witness on the Somme, the grade at which a steady successful offensive is possible, is therefore, I conclude, the grade at which the present war will end.

2

But now having thus spread out the broad theory of the business, let me go on to tell some of the actualities of the Somme offensive. The key fact upon both British and French fronts was the complete ascendancy of the Allies aeroplanes. It is the necessary preliminary condition for the method upon which the great generals of the French army rely in this sanitary task of shoving the German Thing off the soil of Belgium and France back into its own land. A man who is frequently throwing out prophecies is bound to score a few successes, and one that I may legitimately claim is my early insistence upon that fact that the equality of the German aviator was likely to be inferior to that of his French or British rival. The ordinary German has neither the flexible quality of body, the quickness of nerve, the temperament, nor the mental habits that make a successful aviator. This idea was first put into my head by considering the way in which Germans walk and carry themselves, and by noting the difference in nimbleness between the cyclists in the streets of German and French towns. It was confirmed by a conversation I had with a German aviator who was also a dramatist, and who came to see me upon some copyright matter in 1912. He broached the view that aviation would destroy democracy, because he said only aristocrats make aviators. (He was a man of good family.) With a

duke or so in my mind I asked him why. Because, he explained, a man without aristocratic quality in tradition, cannot possibly endure the "high loneliness" of the air. That sounded rather like nonsense at the time, and then I reflected that for a Prussian that might be true. There may be something in the German composition that does demand association and the support of pride and training before dangers can be faced. The Germans are social and methodical, the French and English are by comparison chaotic and instinctive; perhaps the very readiness for a conscious orderliness that makes the German so formidable upon the ground, so thorough and fore-seeking, makes him slow and unsure in the air. At any rate the experiences of this war have seemed to carry out this hypothesis. The German aviators will not as a class stand up to those of the Allies. They are not nimble in the air. Such champions as they have produced have been men of one trick; one of their great men, Immelmann--he was put down by an English boy a month or so ago--had a sort of hawk's swoop. He would go very high and then come down at his utmost pace at his antagonist, firing his machine gun at him as he came. If he missed in this hysterical lunge, he went on down.... This does not strike the Allied aviator as very brilliant. A gentleman of that sort can sooner or later be caught on the rise by going for him over the German lines.

The first phase, then, of the highest grade offensive, the ultimate development of war regardless of expense, is the clearance of the air. Such German machines as are up are put down by fighting aviators. These last fly high; in the clear blue of the early morning they look exactly like gnats; some trail a little smoke in the sunshine; they take their machine guns in pursuit over the German lines, and the German anti-aircraft guns, the Archibalds, begin to pattern the sky about them with little balls of black smoke. From below one does not see men nor feel that men are there; it is as if it were an

affair of midges. Close after the fighting machines come the photographic aeroplanes, with cameras as long as a man is high, flying low--at four or five thousand feet that is--over the enemy trenches. The Archibald leaves these latter alone; it cannot fire a shell to explode safely so soon after firing; but they are shot at with rifles and machine guns. They do not mind being shot at; only the petrol tank and the head and thorax of the pilot are to be considered vital. They will come back with forty or fifty bullet holes in the fabric. They will go under this fire along the length of the German positions exposing plate after plate; one machine will get a continuous panorama of many miles and then come back straight to the aerodrome to develop its plates.

There is no waste of time about the business, the photographs are developed as rapidly as possible. Within an hour and a half after the photographs were taken the first prints are going back into the bureau for the examination of the photographs. Both British and French air photographs are thoroughly scrutinised and marked.

An air photograph to an inexperienced eye is not a very illuminating thing; one makes our roads, blurs of wood, and rather vague buildings. But the examiner has an eye that has been in training; he is a picked man; he has at hand yesterday's photographs and last week's photographs, marked maps and all sorts of aids and records. If he is a Frenchman he is only too happy to explain his ideas and methods. Here, he will point out, is a little difference between the German trench beyond the wood since yesterday. For a number of reasons he thinks that will be a new machine gun emplacement; here at the centre of the farm wall they have been making another. This battery here--isn't it plain? Well, it's a dummy. The grass in front of it hasn't been scorched, and there's been no serious wear on the road here for a week. Presently the Germans will send one or two waggons up and

down that road and instruct them to make figures of eight to imitate scorching on the grass in front of the gun. We know all about that. The real wear on the road, compare this and this and this, ends here at this spot. It turns off into the wood. There's a sort of track in the trees. Now look where the trees are just a little displaced! (This lens is rather better for that.) /That's/ one gun. You see? Here, I will show you another....

That process goes on two or three miles behind the front line. Very clean young men in white overalls do it as if it were a labour of love. And the Germans in the trenches, the German gunners, /know it is going on./ They know that in the quickest possible way these observations of the aeroplane that was over them just now will go to the gunners. The careful gunner, firing by the map and marking by aeroplane, kite balloon or direct observation, will be getting onto the located guns and machine guns in another couple of hours. The French claim that they have located new batteries, got their /tir de demolition/ upon them in and destroyed them within five hours. The British I told of that found it incredible. Every day the French print special maps showing the guns, sham guns, trenches, everything of significance behind the German lines, showing everything that has happened in the last four-and-twenty hours. It is pitiless. It is indecent. The map-making and printing goes on in the room next and most convenient to the examination of the photographs. And, as I say, the German army knows of this, and knows that it cannot prevent it because of its aerial weakness. That knowledge is not the last among the forces that is crumpling up the German resistance upon the Somme.

I visited some French guns during the /tir de demolition/ phase. I counted nine aeroplanes and twenty-six kite balloons in the air at the same time. There was nothing German visible in the air at all.

It is a case of eyes and no eyes.

The French attack resolves itself into a triple system of gun-fire. First for a day or so, or two or three days, there is demolition fire to smash up all the exactly located batteries, organisation, supports, behind the front line enemy trenches; then comes barrage fire to cut off supplies and reinforcements; then, before the advance, the hammering down fire, "heads down," upon the trenches. When at last this stops and the infantry goes forward to rout out the trenches and the dug-outs, they go forward with a minimum of inconvenience. The first wave of attack fights, destroys, or disarms the surviving Germans and sends them back across the open to the French trenches. They run as fast as they can, hands up, and are shepherded farther back. The French set to work to turn over the captured trenches and organise themselves against any counter attack that may face the barrage fire.

That is the formula of the present fighting, which the French have developed. After an advance there is a pause, while the guns move up nearer the Germans and fresh aeroplane reconnaissance goes on. Nowhere on this present offensive has a German counter attack had more than the most incidental success; and commonly they have had frightful losses. Then after a few days of refreshment and accumulation, the Allied attack resumes.

That is the perfected method of the French offensive. I had the pleasure of learning its broad outlines in good company, in the company of M. Joseph Reinach and Colonel Carence, the military writer. Their talk together and with me in the various messes at which we lunched was for the most part a keen discussion of every detail and every possibility of the offensive machine; every French officer's mess seems a little council upon the one supreme question in France, /how to do it best./ M. Reinach has

made certain suggestions about the co-operation of the French and British that I will discuss elsewhere, but one great theme was the constitution of "the ideal battery." For years French military thought has been acutely attentive to the best number of guns for effective common action, and has tended rather to the small battery theory. My two companies were playing with the idea that the ideal battery was a battery of one big gun, with its own aeroplane and kite balloon marking for it.

The British seem to be associated with the adventurous self-reliance needed in the air. The British aeroplanes do not simply fight the Germans out of the sky; they also make themselves an abominable nuisance by bombing the enemy trenches. For every German bomb that is dropped by aeroplane on or behind the British lines, about twenty go down on the heads of the Germans. British air bombs upon guns, stores and communications do some of the work that the French effect by their systematic demolition fire.

And the British aviator has discovered and is rapidly developing an altogether fresh branch of air activity in the machine-gun attack at a very low altitude. Originally I believe this was tried in western Egypt, but now it is being increasingly used upon the British front in France. An aeroplane which comes down suddenly, travelling very rapidly, to a few hundred feet, is quite hard to hit, even if it is not squirting bullets from a machine gun as it advances. Against infantry in the open this sort of thing is extremely demoralising. It is a method of attack still in its infancy, but there are great possibilities for it in the future, when the bending and cracking German line gives, as ultimately it must give if this offensive does not relax. If the Allies persist in their pressure upon the western front, if there is no relaxation in the supply of munitions from Britain and no lapse into tactical stupidity, a German retreat eastward is inevitable.

Now a cavalry pursuit alone may easily come upon disaster, cavalry can be so easily held up by wire and a few machine guns. I think the Germans have reckoned on that and on automobiles, probably only the decay of their /morale/ prevents their opening their lines now on the chance of the British attempting some such folly as a big cavalry advance, but I do not think the Germans have reckoned on the use of machine guns in aeroplanes, supported by and supporting cavalry or automobiles. At the present time I should imagine there is no more perplexing consideration amidst the many perplexities of the German military intelligence than the new complexion put upon pursuit by these low level air developments. It may mean that in all sorts of positions where they had counted confidently on getting away, they may not be able to get away--from the face of a scientific advance properly commanding and using modern material in a dexterous and intelligent manner.

III. THE WAR LANDSCAPE

1

I saw rather more of the British than of the French aviators because of the vileness of the weather when I visited the latter. It is quite impossible for me to institute comparisons between these two services. I should think that the British organisation I saw would be hard to beat, and that none but the French could hope to beat it. On the Western front the aviation has been screwed up to a very much higher level than on the Italian line. In Italy it has not become, as it has in France, the decisive factor. The war on the Carso front in Italy--I say nothing of the mountain warfare, which is a thing in itself--is in fact still in the stage that I have called B. It is good warfare well waged, but not such an intensity of warfare. It has not, as one

says of pianos and voices, the same compass.

This is true in spite of the fact that the Italians along of all the western powers have adopted a type of aeroplane larger and much more powerful than anything except the big Russian machines. They are not at all suitable for any present purpose upon the Italian front, but at a later stage, when the German is retiring and Archibald no longer searches the air, they would be invaluable on the western front because of their enormous bomb or machine gun carrying capacity. "But sufficient for the day is the swat thereof," as the British public schoolboy says, and no doubt we shall get them when we have sufficiently felt the need for them. The big Caproni machines which the Italians possess are of 300 h.p. and will presently be of 500h.p. One gets up a gangway into them as one gets into a yacht; they have a main deck, a forward machine gun deck and an aft machine gun; one may walk about in them; in addition to guns and men they carry a very considerable weight of bombs beneath. They cannot of course beget up with the speed nor soar to the height of our smaller aeroplanes; it is as carriers in raids behind a force of fighting machines that they should find their use.

The British establishment I visited was a very refreshing and reassuring piece of practical organisation. The air force of Great Britain has had the good fortune to develop with considerable freedom from old army tradition; many of its officers are ex-civil engineers and so forth; Headquarters is a little shy of technical direction; and all this in a service that is still necessarily experimental and plastic is to the good. There is little doubt that, given a release from prejudice, bad associations and the equestrian tradition, British technical intelligence and energy can do just as well as the French. Our problem with our army is not to create intelligence, there is an abundance of it, but to release it from a dreary social and official pressure. The air service ransacks the army for men

with technical training and sees that it gets them, there is a real keenness upon the work, and the men in these great mobile hangars talk shop readily and clearly.

I have already mentioned and the newspapers have told abundantly of the pluck, daring, and admirable work of our aviators; what is still untellable in any detail is the energy and ability of the constructive and repairing branch upon whose efficiency their feats depend. Perhaps the most interesting thing I saw in connection with the air work was the hospital for damaged machines and the dump to which those hopelessly injured are taken, in order that they may be disarticulated and all that is sound in them used for reconstruction. How excellently this work is being done may be judged from the fact that our offensive in July started with a certain number of aeroplanes, a number that would have seemed fantastic in a story a year before the war began. These aeroplanes were in constant action; they fought, they were shot down, they had their share of accidents. Not only did the repair department make good every loss, but after three weeks of the offensive the army was fighting with fifty more machines than at the outset. One goes through a vast Rembrandtesque shed opening upon a great sunny field, in whose cool shadows rest a number of interesting patients; captured and slightly damaged German machines, machines of our own with scars of battle upon them, one or two cases of bad landing. The star case came over from Peronne. It had come in two days ago.

I examined this machine and I will tell the state it was in, but I perceive that what I have to tell will read not like a sober statement of truth but like strained and silly lying. The machine had had a direct hit from an Archibald shell. The propeller had been clean blown away; so had the machine gun and all its fittings. The engines had been stripped naked and a good deal bent about. The timber stay over the aviator had been broken, so that it is marvellous the wings of the machine did not

just up at once like the wings of a butterfly. The solitary aviator had been wounded in the face. He had then come down in a long glide into the British lines, and made a tolerable landing....

2

One consequence of the growing importance of the aeroplane in warfare is the development of a new military art, the art of camouflage. Camouflage is humbugging disguise, it is making things--and especially in this connection, military things--seem not what they are, but something peaceful and rural, something harmless and quite uninteresting to aeroplane observers. It is the art of making big guns look like haystacks and tents like level patches of field.

Also it includes the art of making attractive models of guns, camps, trenches and the like that are not bona-fide guns, camps, or trenches at all, so that the aeroplane bomb-dropper and the aeroplane observer may waste his time and energies and the enemy gunfire be misdirected. In Italy I saw dummy guns so made as to deceive the very elect at a distance of a few thousand feet. The camouflage of concealment aims either at invisibility or imitation; I have seen a supply train look like a row of cottages, its smoke-stack a chimney, with the tops of sham palings running along the back of the engine and creepers painted up its sides. But that was a flight of the imagination; the commonest camouflage is merely to conceal. Trees are brought up and planted near the object to be hidden, it is painted in the same tones as its background, it is covered with an awning painted to look like grass or earth. I suppose it is only a matter of development before a dummy cow or so is put up to chew the cud on the awning.

But camouflage or no camouflage, the bulk of both the French and British forces in the new won ground of the great offensive lay necessarily in the open. Only the big guns and the advanced Red Cross stations had got into pits and subterranean hiding places. The advance has been too rapid and continuous for the armies to make much of a toilette as they halted, and the destruction and the desolation of the country won afforded few facilities for easy concealment. Tents, transport, munitions, these all indicated an army on the march--at the rate of half a mile in a week or so, to Germany. If the wet and mud of November and December have for a time delayed that advance, the force behind has but accumulated for the resumption of the thrust.

3

A journey up from the base to the front trenches shows an interesting series of phases. One leaves Amiens, in which the normal life threads its way through crowds of resting men in khaki and horizon blue, in which staff officers in automobiles whisk hither and thither, in which there are nurses and even a few inexplicable ladies in worldly costume, in which restaurants and cafes are congested and busy, through which there is a perpetual coming and going of processions of heavy vans to the railway sidings. One dodges past a monstrous blue-black gun going up to the British front behind two resolute traction engines--the three sun-blistered young men in the cart that trails behind lounge in attitudes of haughty pride that would shame the ceiling gods of Hampton Court. One passes through arcades of waiting motor vans, through arcades of waiting motor vans, through suburbs still more intensely khaki or horizon blue, and so out upon the great straight poplar-edged road--to the front. Sometimes one laces through spates of heavy traffic, sometimes the dusty road is clear ahead, now we pass a vast aviation camp, now a park of waiting field guns, now an

encampment of cavalry. One turns aside, and abruptly one is in France--France as one knew it before the war, on a shady secondary road, past a delightful chateau behind its iron gates, past a beautiful church, and then suddenly we are in a village street full of stately Indian soldiers.

It betrays no military secret to say that commonly the rare tourist to the British offensive passes through Albert, with its great modern red cathedral smashed to pieces and the great gilt Madonna and Child that once surmounted the tower now, as everyone knows, hanging out horizontally in an attitude that irresistibly suggests an imminent dive upon the passing traveller. One looks right up under it.

Presently we begin to see German prisoners. The whole lot look entirely contented, and are guarded by perhaps a couple of men in khaki. These German prisoners do not attempt to escape, they have not the slightest desire for any more fighting, they have done their bit, they say, honour is satisfied; they give remarkably little trouble. A little way further on perhaps we pass their cage, a double barbed-wire enclosure with a few tents and huts within.

A string of covered wagons passes by. I turn and see a number of men sitting inside and looking almost as cheerful as a beanfeast in Epping Forest. They make facetious gestures. They have a subdued sing-song going on. But one of them looks a little sick, and then I notice not very obtrusive bandages. "Sitting-up cases," my guide explains.

These are part of the casualties of last night's fight.

The fields on either side are now more evidently in the war zone. The array of carts, the patches of tents, the coming and going of men increases. But here are three women harvesting, and

presently in a cornfield are German prisoners working under one old Frenchman. Then the fields become trampled again. Here is a village, not so very much knocked about, and passing through it we go slowly beside a long column of men going up to the front. We scan their collars for signs of some familiar regiment. These are new men going up for the first time; there is a sort of solemn elation in many of their faces.

The men coming down are usually smothered in mud or dust, and unless there has been a fight they look pretty well done up. They stoop under their equipment, and some of the youngsters drag. One pleasant thing about this coming down is the welcome of the regimental band, which is usually at work as soon as the men turn off from the high road. I hear several bands on the British front; they do much to enhance the general cheerfulness. On one of these days of my tour I had the pleasure of seeing the ---th Blankshires coming down after a fight. As we drew near I saw that they combined an extreme muddiness with an unusual elasticity. They all seemed to be looking us in the face instead of being too fagged to bother. Then I noticed a nice grey helmet dangling from one youngster's bayonet, in fact his eye directed me to it. A man behind him had a black German helmet of the type best known in English illustrations; then two more grey appeared. The catch of helmets was indeed quite considerable. Then I perceived on the road bank above and marching parallel with this column, a double file of still muddier Germans. Either they wore caps or went bare-headed. There were no helmets among them. We do not rob our prisoners but--a helmet is a weapon. Anyhow, it is an irresistible souvenir.

Now and then one sees afar off an ammunition dump, many hundreds of stacks of shells--without their detonators as yet--being unloaded from railway trucks, transferred from the broad gauge to the narrow gauge line, or loaded onto motor trolleys. Now and then one crosses a railway line. The railway lines run

everywhere behind the British front, the construction follows the advance day by day. They go up as fast as the guns. One's guide remarks as the car bumps over the level crossing, "That is one of Haig's railways." It is an aspect of the Commander-in-Chief that has much impressed and pleased the men. And at last we begin to enter the region of the former Allied trenches, we pass the old German front line, we pass ruined houses, ruined fields, and thick patches of clustering wooden crosses and boards where the dead of the opening assaults lie. There are no more reapers now, there is no more green upon the fields, there is no green anywhere, scarcely a tree survives by the roadside, but only overthrown trunks and splintered stumps; the fields are wildernesses of shell craters and coarse weeds, the very woods are collections of blasted stems and stripped branches. This absolutely ravaged and ruined battlefield country extends now along the front of the Somme offensive for a depth of many miles; across it the French and British camps and batteries creep forward, the stores, the dumps, the railways creep forward, in their untiring, victorious thrust against the German lines. Overhead hum and roar the aeroplanes, away towards the enemy the humped, blue sausage-shaped kite balloons brood thoughtfully, and from this point and that, guns, curiously invisible until they speak, flash suddenly and strike their one short hammer-blow of sound.

Then one sees an enemy shell drop among the little patch of trees on the crest to the right, and kick up a great red-black mass of smoke and dust. We see it, and then we hear the whine of its arrival and at last the bang. The Germans are blind now, they have lost the air, they are firing by guesswork and their knowledge of the abandoned territory.

"They think they have got divisional headquarters there," someone remarks.... "They haven't. But they keep on."

In this zone where shells burst the wise automobile stops and tucks itself away as inconspicuously as possible close up to a heap of ruins. There is very little traffic on the road now except for a van or so that hurries up, unloads, and gets back as soon as possible. Mules and men are taking the stuff the rest of the journey. We are in a flattened village, all undermined by dug-outs that were in the original German second line. We report ourselves to a young troglodyte in one of these, and are given a guide, and so set out on the last part of the journey to the ultimate point, across the land of shell craters and barbed wire litter and old and new trenches. We have all put on British steel helmets, hard but heavy and inelegant head coverings. I can write little that is printable about these aesthetic crimes. The French and German helmets are noble and beautiful things. These lumpish /pans../..

They ought to be called by the name of the man who designed them.

Presently we are advised to get into a communication trench. It is not a very attractive communication trench, and we stick to our track across the open. Three or four shells shiver overhead, but we decide they are British shells, going out. We reach a supporting trench in which men are waiting in a state of nearly insupportable boredom for the midday stew, the one event of interest in a day-long vigil. Here we are told imperatively to come right in at once, and we do.

All communication trenches are tortuous and practically endless. On an offensive front they have vertical sides of unsupported earth and occasional soakaways for rain, covered by wooden gratings, and they go on and on and on. At rare intervals they branch, and a notice board says "To Regent Street," or "To Oxford Street," or some such lie. It is all just trench. For a time you talk, but talking in single file soon palls. You cease to

talk, and trudge. A great number of telephone wires come into the trench and cross and recross it. You cannot keep clear of them. Your helmet pings against them and they try to remove it. Sometimes you have to stop and crawl under wires. Then you wonder what the trench is like in really wet weather. You hear a shell burst at no great distance. You pass two pages of /The Strand Magazine./ Perhaps thirty yards on you pass a cigarette end. After these sensational incidents the trench quiets down again and continues to wind endlessly--just a sandy, extremely narrow vertical walled trench. A giant crack.

At last you reach the front line trench. On an offensive sector it has none of the architectural interest of first line trenches at such places as Soissons or Arras. It was made a week or so ago by joining up shell craters, and if all goes well we move into the German trench along by the line of scraggy trees, at which we peep discreetly, to-morrow night. We can peep discreetly because just at present our guns are putting shrapnel over the enemy at the rate of about three shells a minute, the puffs follow each other up and down the line, and no Germans are staring out to see us.

The Germans "strafed" this trench overnight, and the men are tired and sleepy. Our guns away behind us are doing their best now to give them a rest by strafing the Germans. One or two men are in each forward sap keeping a look out; the rest sleep, a motionless sleep, in the earthy shelter pits that have been scooped out. One officer sits by a telephone under an earth-covered tarpaulin, and a weary man is doing the toilet of a machine gun. We go on to a shallow trench in which we must stoop, and which has been badly knocked about.... Here we have to stop. The road to Berlin is not opened up beyond this point.

My companion on this excursion is a man I have admired for years and never met until I came out to see the war, a fellow writer.

He is a journalist let loose. Two-thirds of the junior British officers I met on this journey were really not "army men" at all. One finds that the apparent subaltern is really a musician, or a musical critic, or an Egyptologist, or a solicitor, or a cloth manufacturer, or a writer. At the outbreak of the war my guide dyed his hair to conceal its tell-tale silver, and having been laughed to scorn by the ordinary recruiting people, enlisted in the sportsmen's battalion. He was wounded, and then the authorities discovered that he was likely to be of more use with a commission and drew him, in spite of considerable resistance, out of the firing line. To which he always returns whenever he can get a visitor to take with him as an excuse. He now stood up, fairly high and clear, explaining casually that the Germans were no longer firing, and showed me the points of interest.

I had come right up to No Man's Land at last. It was under my chin. The skyline, the last skyline before the British could look down on Bapaume, showed a mangy wood and a ruined village, crouching under repeated gobbings of British shrapnel. "They've got a battery just there, and we're making it uncomfortable." No Man's Land itself is a weedy space broken up by shell craters, with very little barbed wire in front of us and very little in front of the Germans. "They've got snipers in most of the craters, and you see them at twilight hopping about from one to the other." We have very little wire because we don't mean to stay for very long in this trench, but the Germans have very little wire because they have not been able to get it up yet. They never will get it up now....

I had been led to believe that No Man's Land was littered with the unburied dead, but I saw nothing of the sort at this place. There had been no German counter attack since our men came up here. But at one point as we went along the trench there was a dull stench. "Germans, I think," said my guide, though I did not see how he could tell.

He looked at his watch and remarked reluctantly, "If you start at once, you may just do it."

I wanted to catch the Boulogne boat. It was then just past one in the afternoon. We met the stew as we returned along the communication trench, and it smelt very good indeed.... We hurried across the great spaces of rusty desolation upon which every now and again a German shell was bursting....

That night I was in my flat in London. I had finished reading the accumulated letters of some weeks, and I was just going comfortably to bed.

IV. NEW ARMS FOR OLD ONES

1

Such are the landscapes and method of modern war. It is more difficult in its nature from war as it was waged in the nineteenth century than that was from the nature of the phalanx or the legion. The nucleus fact--when I talked to General Joffre he was very insistent upon this point--is still as ever the ordinary fighting man, but all the accessories and conditions of his personal encounter with the fighting man of the other side have been revolutionised in a quarter of a century. The fighting together in a close disciplined order, shoulder to shoulder, which has held good for thousands of years as the best and most successful fighting, has been destroyed; the idea of /breaking/ infantry formation as the chief offensive operation has disappeared, the cavalry charge and the cavalry pursuit are as obsolete as the cross-bow. The modern fighting man is as individualised as a half back or a centre forward in a

football team. Personal fighting has become "scrapping" again, an individual adventure with knife, club, bomb, revolver or bayonet. In this war we are working out things instead of thinking them out, and these enormous changes are still but imperfectly apprehended. The trained and specialised military man probably apprehends them as feebly as anyone.

This is a thing that I want to state as emphatically as possible. It is the pith of the lesson I have learnt at the front. The whole method of war has been so altered in the past five and twenty years as to make it a new and different process altogether. Much the larger part of this alteration has only become effective in the last two years. Everyone is a beginner at this new game; everyone is experimenting and learning.

The idea has been put admirably by /Punch./ That excellent picture of the old-fashioned sergeant who complains to his officer of the new recruit; "'E's all right in the trenches, Sir; 'e's all right at a scrap; but 'e won't never make a soldier," is the quintessence of everything I am saying here. And were there not the very gravest doubts about General Smuts in British military circles because he had "had no military training"? A Canadian expressed the new view very neatly on being asked, in consequence of a deficient salute, whether he wanted to be a soldier, by saying, "Not I! I want to be a fighter!"

The professional officer of the old dispensation was a man specialised in relation to one of the established "arms." He was an infantryman, a cavalryman, a gunner or an engineer. It will be interesting to trace the changes that have happened to all these arms.

Before this war began speculative writers had argued that infantry drill in close formation had now no fighting value whatever, that it was no doubt extremely necessary for the

handling, packing, forwarding and distribution of men, but that the ideal infantry fighter was now a highly individualised and self-reliant man put into a pit with a machine gun, and supported by a string of other men bringing him up supplies and ready to assist him in any forward rush that might be necessary.

The opening phases of the war seemed to contradict this. It did not at first suit the German game to fight on this most modern theory, and isolated individual action is uncongenial to the ordinary German temperament and opposed to the organised social tendencies of German life. To this day the Germans attack only in close order; they are unable to produce a real modern infantry for aggressive purposes, and it is a matter of astonishment to military minds on the English side that our hastily trained new armies should turn out to be just as good at the new fighting as the most "seasoned troops." But there is no reason whatever why they should not be. "Leading," in the sense of going ahead of the men and making them move about mechanically at the word of command, has ceased. On the British side our magnificent new subalterns and our equally magnificent new non-commissioned officers play the part of captains of football teams; they talk their men individually into an understanding of the job before them; they criticise style and performance. On the French side things have gone even farther. Every man in certain attacks has been given a large scale map of the ground over which he has to go, and has had his own individual job clearly marked and explained to him. All the Allied infantrymen tend to become specialised, as bombers, as machine-gun men, and so on. The unspecialised common soldier, the infantryman who has stood and marched and moved in ranks and ranks, the "serried lines of men," who are the main substance of every battle story for the last three thousand years, are as obsolete as the dodo. The rifle and bayonet very probably are becoming obsolete too. Knives and clubs and revolvers serve better in the trenches. The pikes and the Roman sword would be as useful. The fine flourish of the

bayonet is only possible in the rare infrequent open. Even the Zulu assegai would serve as well.

The two operations of the infantry attack now are the rush and the "scrap." These come after the artillery preparation. Against the rush, the machine gun is pitted. The machine gun becomes lighter and more and more controllable by one man; as it does so the days of the rifle draw to a close. Against the machine gun we are now directing the "Tank," which goes ahead and puts out the machine gun as soon as it begins to sting the infantry rush. We are also using the swooping aeroplane with a machine gun. Both these devices are of British origin, and they promise very well.

After the rush and the scrap comes the organisation of the captured trench. "Digging in" completes the cycle of modern infantry fighting. You may consider this the first or the last phase of an infantry operation. It is probably at present the least worked-out part of the entire cycle. Here lies the sole German superiority; they bunch and crowd in the rush, they are inferior at the scrap, but they do dig like moles. The weakness of the British is their failure to settle down. they like the rush and the scrap; they press on too far, they get outflanked and lost "in the blue"; they are not naturally clever at the excavating part of the work, and they are not as yet well trained in making dug-outs and shelter-pits rapidly and intelligently. they display most of the faults that were supposed to be most distinctively French before this war came to revolutionise all our conceptions of French character.

2

Now the operations of this modern infantry, which unlike any preceding infantry in the history of war does not fight in

disciplined formations but as highly individualised specialists, are determined almost completely by the artillery preparation. Artillery is now the most essential instrument of war. You may still get along with rather bad infantry; you may still hold out even after the loss of the aerial ascendancy, but so soon as your guns fail you approach defeat. The backbone process of the whole art of war is the manufacture in overwhelming quantities, the carriage and delivery of shell upon the vulnerable points of the enemy's positions. That is, so to speak, the essential blow. Even the infantryman is now hardly more than the residuary legatee after the guns have taken their toll.

I have now followed nearly every phase in the life history of a shell from the moment when it is a segment of steel bar just cut off, to the moment when it is no more than a few dispersed and rusting rags and fragments of steel--pressed upon the stray visitor to the battlefield as souvenirs. All good factories are intensely interesting places to visit, but a good munition factory is romantically satisfactory. It is as nearly free from the antagonism of employer and employed as any factory can be. The busy sheds I visited near Paris struck me as being the most living and active things in the entire war machine. Everywhere else I saw fitful activity, or men waiting. I have seen more men sitting about and standing about, more bored inactivity, during my tour than I have ever seen before in my life. Even the front line trenches seem to slumber; the Angel of Death drowns over them, and moves in his sleep to crush out men's lives. The gunfire has an indolent intermittence. But the munition factories grind on night and day, grinding against the factories in Central Europe, grinding out the slow and costly and necessary victory that should end aggressive warfare in the world for ever.

It would be very interesting if one could arrange a meeting between any typical Allied munition maker on the one hand, and the Kaiser and Hindenburg, those two dominant effigies of the

German nationalists' dream of "world might." Or failing that, Mr. Dyson might draw the encounter. You imagine these two heroic figures got up for the interview, very magnificent in shining helms and flowing cloaks, decorations, splendid swords, spurs. "Here," one would say, "is the power that has held you. You were bolstered up very loyally by the Krupp firm and so forth, you piled up shell, guns, war material, you hoped to snatch your victory before the industrialisation and invention of the world could turn upon you. But you failed. You were not rapid enough. The battle of the Marne was your misfortune. And Ypres. You lost some chances at Ypres. Two can play at destructive industrialism, and now we out-gun you. We are piling up munitions now faster than you. The essentials of this Game of the War Lord are idiotically simple, but it was not of our choosing. It is now merely a question of months before you make your inevitable admission. This is no war to any great commander's glory. This gentleman in the bowler hat is the victor, Sire; not you. Assisted, Sire, by these disrespectful-looking factory girls in overalls."

For example, there is M. Citroen. Before the war I understand he made automobiles; after the war he wants to turn to and make automobiles again. For the duration of the war he makes shell. He has been temporarily diverted from constructive to destructive industrialism. He did me the honours of his factory. He is a compact, active man in dark clothes and a bowler hat, with a pencil and notebook conveniently at hand. He talked to me in carefully easy French, and watched my face with an intelligent eye through his pince-nez for the signs of comprehension. Then he went on to the next point.

He took me through every stage of his process. In his office he showed me the general story. Here were photographs of certain vacant fields and old sheds--"this place"--he indicated the altered prospect from the window--"at the outbreak of the war."

He showed me a plan of the first undertaking. "Now we have rather over nine thousand workpeople."

He showed me a little row of specimens. "These we make for Italy. These go to Russia. These are the Rumanian pattern."

Thence to the first stage, the chopping up of the iron bars, the furnace, the punching out of the first shape of the shell; all this is men's work. I had seen this sort of thing before in peace ironworks, but I saw it again with the same astonishment, the absolute precision of movement on the part of the half-naked sweating men, the calculated efficiency of each worker, the apparent heedlessness, the real certitude, with which the blazing hot cylinder is put here, dropped there, rolls to its next appointed spot, is chopped up and handed on, the swift passage to the cooling crude, pinkish-purple shell shape. Down a long line one sees in perspective a practical symmetry, of furnace and machine group and the shells marching on from this first series of phases to undergo the long succession of operations, machine after machine, across the great width of the shed in which eighty per cent of the workers are women. There is a thick dust of sounds in the air, a rumble of shafting, sudden thuddings, clankings, and M. Citroen has to raise his voice. He points out where he has made little changes in procedures, cut out some wasteful movement.... He has an idea and makes a note in the ever-ready notebook.

There is a beauty about all these women, there is extraordinary grace in their finely adjusted movements. I have come from an after-lunch coffee upon the boulevards and from watching the ugly fashion of our time; it is a relief to be reminded that most women can after all be beautiful--if only they would not "dress." these women wear simple overalls and caps. In the cap is a rosette. Each shed has its own colour of rosette.

"There is much esprit de corps here," says M. Citroen.

"And also," he adds, showing obverse as well as reverse of the world's problem of employment and discipline, "we can see at once if a woman is not in her proper shed."

Across the great sheds under the shafting--how fine it must look at night!--the shells march, are shaped, cut, fitted with copper bands, calibrated, polished, varnished....

Then we go on to another system of machines in which lead is reduced to plastic ribbons and cut into shrapnel bullets as the sweetstuff makers pull out and cut up sweetstuff. And thence into a warren of hot underground passages in which run the power cables. There is not a cable in the place that is not immediately accessible to the electricians. We visit the dynamos and a vast organisation of switchboards....

These things are more familiar to M. Citroen than they are to me. He wants me to understand, but he does not realise that I would like a little leisure to wonder. What is interesting him just now, because it is the newest thing, is his method of paying his workers. He lifts a hand gravely: "I said, what we must do is abolish altogether the counting of change."

At a certain hour, he explained, came pay-time. The people had done; it was to his interest and their that they should get out of the works as quickly as possible and rest and amuse themselves. He watched them standing in queues at the wickets while inside someone counted; so many francs, so many centimes. It bored him to see this useless, tiresome waiting. It is abolished. Now at the end of each week the worker goes to a window under the initial of his name, and is handed a card on which these items have been entered:

Balance from last week.
So many hours at so much.
Premiums.

The total is so many francs, so many centimes. This is divided into the nearest round number, 100, 120, 80 francs as the case may be, and a balance of the odd francs and centimes. The latter is carried forward to the next week's account. At the bottom of the card is a tear-off coupon with a stamp, coloured to indicate the round sum, green, let us say, for 100, blue for 130 francs. This is taken to a wicket marked 100 or 130 as the case may be, and there stands a cashier with his money in piles of 100 or 130 francs counted ready to hand; he sweeps in the coupon, sweeps out the cash. "/Next!/"

I became interested in the worker's side of this organisation. I insist on seeing the entrances, the clothes-changing places, the lavatories, and so forth of the organisation. As we go about we pass a string of electric trolleys steered by important-looking girls, and loaded with shell, finished as far as these works are concerned and on their way to the railway siding. We visit the hospital, for these works demand a medical staff. It is not only that men and women faint or fall ill, but there are accidents, burns, crushings, and the like. The war casualties begin already here, and they fall chiefly among the women. I saw a wounded woman with a bandaged face sitting very quietly in the corner.

The women here face danger, perhaps not quite such obvious danger as the women who, at the next stage in the shell's career, make and pack the explosives in their silk casing, but quite considerable risk. And they work with a real enthusiasm. They know they are fighting the Bloches as well as any men. Certain of them wear Russian decorations. The women of this particular factory have been thanked by the Tsar, and a number of decorations were sent by him for distribution among them.

The shell factory and the explosives shed stand level with the drill yard as the real first stage in one of the two essential /punches/ in modern war. When one meets the shell again it is being unloaded from the railway truck into an ammunition dump. And here the work of control is much more the work of a good traffic manager than of the old-fashioned soldier.

The dump I best remember I visited on a wet and windy day. Over a great space of ground the sidings of the rail-head spread, the normal gauge rail-head spread out like a fan and interdigitated with the narrow gauge lines that go up practically to the guns. And also at the sides camions were loading, and an officer from the Midi in charge of one of these was being dramatically indignant at five minutes' delay. Between these two sets of lines, shells were piled of all sizes, I should think some hundreds of thousands of shells altogether, wet and shining in the rain. French reservists, soldiers from Madagascar, and some Senegalese were busy at different points loading and unloading the precious freights. A little way from me were despondent-looking German prisoners handling timber. All this dump was no more than an eddy as it were in the path of the shell from its birth from the steel bars near Paris to the accomplishment of its destiny in the destruction or capture of more Germans.

And next the visitor meets the shell coming up upon a little trolley to the gun. He sees the gunners, as drilled and precise as the men he saw at the forges, swing out the breech block and run the shell, which has met and combined with its detonators and various other industrial products since it left the main dump, into the gun. The breech closes like a safe door, and hides the shell from the visitor. It is "good-bye." He receives

exaggerated warning of the danger to his ears, stuffs his fingers into them, and opens his mouth as instructed, hears a loud but by no means deafening report, and sees a spit of flame near the breech. Regulations of a severe character prevent his watching from an aeroplane the delivery of the goods upon the customers opposite.

I have already described the method of locating enemy guns and so forth by photography. Many of the men at this work are like dentists rather than soldiers; they are busy in carefully lit rooms, they wear white overalls, they have clean hands and laboratory manners. The only really romantic figure in the whole of this process, the only figure that has anything of the old soldierly swagger about him still, is the aviator. And, as one friend remarked to me when I visited the work of the British flying corps, "The real essential strength of this arm is the organisation of its repairs. Here is one of the repair vans through which our machine guns go. It is a motor workshop on wheels. But at any time all this park, everything, can pack up and move forward like Barnum and Bailey's Circus. The machine guns come through this shop in rotation; they go out again, cleaned, repaired, made new again. Since we got all that working we have heard nothing of a machine gun jamming in any air fight at all."...

The rest of the career of the shell after it has left the gun one must imagine chiefly from the incoming shell from the enemy. You see suddenly a flying up of earth and stones and anything else that is movable in the neighbourhood of the shell-burst, the instantaneous unfolding of a dark cloud of dust and reddish smoke, which comes very quickly to a certain size and then begins slowly to fray out and blow away. Then, after seeing the cloud of the burst you hear the hiss of the shell's approach, and finally you are hit by the sound of the explosion. This is the climax and end of the life history of any shell that is not a dud

shell. Afterwards the battered fuse may serve as some journalist's paper-weight. The rest is scrap iron.

Such is, so to speak, the primary process of modern warfare. I will not draw the obvious pacifist moral of the intense folly of human concentration upon such a process. The Germans willed it. We Allies have but obeyed the German will for warfare because we could not do otherwise, we have taken up this simple game of shell delivery, and we are teaching them that we can play it better, in the hope that so we and the world may be freed from the German will-to-power and all its humiliating and disgusting consequences henceforth for ever. Europe now is no more than a household engaged in holding up and if possible overpowering a monomaniac member.

4

Now the whole of this process of the making and delivery of a shell, which is the main process of modern warfare, is one that can be far better conducted by a man accustomed to industrial organisation or transit work than by the old type of soldier. This is a thing that cannot be too plainly stated or too often repeated. Germany nearly won this way because of her tremendously modern industrial resources; but she blundered into it and she is losing it because she has too many men in military uniform and because their tradition and interests were too powerful with her. All the state and glories of soldiering, the bright uniforms, the feathers and spurs, the flags, the march-past, the disciplined massed advance, the charge; all these are as needless and obsolete now in war as the masks and shields of an old-time Chinese brave. Liberal-minded people talk of the coming dangers of militarism in the face of events that prove conclusively that professional militarism is already as dead as Julius Caesar. What is coming is not so much the conversion

of men into soldiers as the socialisation of the economic organisation of the country with a view to both national and international necessities. We do not want to turn a chemist or a photographer into a little figure like a lead soldier, moving mechanically at the word of command, but we do want to make his chemistry or photography swiftly available if the national organisation is called upon to fight.

We have discovered that the modern economic organisation is in itself a fighting machine. It is so much so that it is capable of taking on and defeating quite easily any merely warrior people that is so rash as to pit itself against it. Within the last sixteen years methods of fighting have been elaborated that have made war an absolutely hopeless adventure for any barbaric or non-industrialised people. In the rush of larger events few people have realised the significance of the rapid squashing of the Senussi in western Egypt, and the collapse of De Wet's rebellion in South Africa. Both these struggles would have been long, tedious and uncertain even in A.D. 1900. This time they have been, so to speak, child's play.

Occasionally into the writer's study there come to hand drifting fragments of the American literature upon the question of "preparedness," and American papers discussing the Mexican situation. In none of these is there evident any clear realisation of the fundamental revolution that has occurred in military methods during the last two years. It looks as if a Mexican war, for example, was thought of as an affair of rather imperfectly trained young men with rifles and horses and old-fashioned things like that. A Mexican war on that level might be as tedious as the South African war. But if the United States preferred to go into Mexican affairs with what I may perhaps call a 1916 autumn outfit instead of the small 1900 outfit she seems to possess at present, there is no reason why America should not clear up any and every Mexican guerilla force she wanted to in a

few weeks.

To do that she would need a plant of a few hundred aeroplanes, for the most part armed with machine guns, and the motor repair vans and so forth needed to go with the aeroplanes; she would need a comparatively small army of infantry armed with machine guns, with motor transport, and a few small land ironclads. Such a force could locate, overtake, destroy and disperse any possible force that a country in the present industrial condition of Mexico could put into the field. No sort of entrenchment or fortification possible in Mexico could stand against it. It could go from one end of the country to the other without serious loss, and hunt down and capture anyone it wished....

The practical political consequence of the present development of warfare, of the complete revolution in the conditions of warfare since this century began, is to make war absolutely hopeless for any peoples not able either to manufacture or procure the very complicated appliances and munitions now needed for its prosecution. Countries like Mexico, Bulgaria, Serbia, Afghanistan or Abyssinia are no more capable of going to war without the connivance and help of manufacturing states than horses are capable of flying. And this makes possible such a complete control of war by the few great states which are at the necessary level of industrial development as not the most Utopian of us have hitherto dared to imagine.

5

Infantrymen with automobile transport, plentiful machine guns, Tanks and such-like accessories; that is the first Arm in modern war. The factory hand and all the material of the shell route from the factory to the gun constitute the second Arm. Thirdly comes the artillery, the guns and the photographic aeroplanes

working with the guns. Next I suppose we must count sappers and miners as a fourth Arm of greatly increased importance. The fifth and last combatant Arm is the modern substitute for cavalry; and that also is essentially a force of aeroplanes supported by automobiles. Several of the French leaders with whom I talked seemed to be convinced that the horse is absolutely done with in modern warfare. There is nothing, they declared, that cavalry ever did that cannot now be done better by aeroplane.

This is something to break the hearts of the Prussian junkers and of old-fashioned British army people. The hunt across the English countryside, the preservation of the fox as a sacred animal, the race meeting, the stimulation of betting in all classes of the public; all these things depend ultimately upon the proposition that the "breed of horses" is of vital importance to the military strength of Great Britain. But if the arguments of these able French soldiers are sound, the cult of the horse ceases to be of any more value to England than the elegant activities of the Toxophilite Society. Moreover, there has been a colossal buying of horses for the British army, a tremendous organisation for the purchase and supply of fodder, then employment of tens of thousands of men as grooms, minders and the like, who would otherwise have been in the munition factories or the trenches.

To what possible use can cavalry be put? Can it be used in attack? Not against trenches; that is better done by infantrymen following up gunfire. Can it be used against broken infantry in the open? Not if the enemy has one or two machine guns covering their retreat. Against expose infantry the swooping aeroplane with a machine gun is far more deadly and more difficult to hit. Behind it your infantry can follow to receive surrenders; in most circumstances they can come up on cycles if it is a case of getting up quickly across a wide space. Similarly for pursuit

the use of wire and use of the machine gun have abolished the possibility of a pouring cavalry charge. The swooping aeroplane does everything that cavalry can do in the way of disorganising the enemy, and far more than it can do in the way of silencing machine guns. It can capture guns in retreat much more easily by bombing traction engines and coming down low and shooting horses and men. An ideal modern pursuit would be an advance of guns, automobiles full of infantry, motor cyclists and cyclists, behind a high screen of observation aeroplanes and a low screen of bombing and fighting aeroplanes. Cavalry /might/ advance across fields and so forth, but only as a very accessory part of the general advance....

And what else is there for the cavalry to do?

It may be argued that horses can go over country that is impossible for automobiles. That is to ignore altogether what has been done in this war by such devices as caterpillar wheels. So far from cavalry being able to negotiate country where machines would stick and fail, mechanism can now ride over places where any horse would flounder.

I submit these considerations to the horse-lover. They are not my original observations; they have been put to me and they have convinced me. Except perhaps as a parent of transport mules I see no further part henceforth for the horse to play in war.

6

The form and texture of the coming warfare--if there is still warfare to come--are not yet to be seen in their completeness upon the modern battlefield. One swallow does not make a summer, nor a handful of aeroplanes, a "Tank" or so, a few acres of shell craters, and a village here and there, pounded out of

recognition, do more than foreshadow the spectacle of modernised war on land. War by these developments has become the monopoly of the five great industrial powers; it is their alternative to end or evolve it, and if they continue to disagree, then it must needs become a spectacle of majestic horror such as no man can yet conceive. It has been wise of Mr. Pennell therefore, who has recently been drawing his impressions of the war upon stone, to make his pictures not upon the battlefield, but among the huge industrial apparatus that is thrusting behind and thrusting up through the war of the gentlemen in spurs. He gives us the splendours and immensities of forge and gun pit, furnace and mine shaft. He shows you how great they are and how terrible. Among them go the little figures of men, robbed of all dominance, robbed of all individual quality. He leaves it for you to draw the obvious conclusion that presently, if we cannot contrive to put an end to war, blacknesses like these, enormities and flares and towering threats, will follow in the track of the Tanks and come trampling over the bickering confusion of mankind.

There is something very striking in these insignificant and incidental men that Mr. Pennell shows us. Nowhere does a man dominate in all these wonderful pictures. You may argue perhaps that that is untrue to the essential realities; all this array of machine and workshop, all this marshalled power and purpose, has been the creation of inventor and business organiser. But are we not a little too free with that word "creation"? Falstaff was a "creation" perhaps, or the Sistine sibyls; there we have indubitably an end conceived and sought and achieved; but did these inventors and business organisers do more than heed certain unavoidable imperatives? Seeking coal they were obliged to mine in a certain way; seeking steel they had to do this and this and not that and that; seeking profit they had to obey the imperative of the economy. So little did they plan their ends that most of these manufacturers speak with a kind of astonishment of the deadly use to which their works are put. They find themselves

making the new war as a man might wake out of some drugged condition to find himself strangling his mother.

So that Mr. Pennell's sketchy and transient human figures seem altogether right to me. He sees these forges, workshops, cranes and the like, as inhuman and as wonderful as cliffs or great caves or icebergs or the stars. They are a new aspect of the logic of physical necessity that made all these older things, and he seizes upon the majesty and beauty of their dimensions with an entire impartiality. And they are as impartial. Through all these lithographs runs one present motif, the motif of the supreme effort of western civilisation to save itself and the world from the dominance of the reactionary German Imperialism of modern science. The pictures are arranged to shape out the life of a shell, from the mine to the great gun; nothing remains of their history to show except the ammunition dump, the gun in action and the shell-burst. Upon this theme all these great appearances are strung to-day. But to-morrow they may be strung upon some other and nobler purpose. These gigantic beings of which the engineer is the master and slave, are neither benevolent nor malignant. To-day they produce destruction, they are the slaves of the spur; to-morrow we hope they will bridge and carry and house and help again.

For that peace we struggle against the dull inflexibility of the German Will-to-Power.

V. TANKS

1

It is the British who have produced the "land ironclad" since I returned from France, and used it apparently with very good

effect. I felt no little chagrin at not seeing them there, because I have a peculiar interest in these contrivances. It would be more than human not to claim a little in this matter. I described one in a story in /The Strand Magazine/ in 1903, and my story could stand in parallel columns beside the first account of these monsters in action given by Mr. Beach Thomas or Mr. Philip Gibbs. My friend M. Joseph Reinach has successfully passed off long extracts from my story as descriptions of the Tanks upon British officers who had just seen them. The filiation was indeed quite traceable. They were my grandchildren-- I felt a little like King Lear when first I read about them. Yet let me state at once that I was certainly not their prime originator. I took up an idea, manipulated it slightly, and handed it on. The idea was suggested to me by the contrivances of a certain Mr. Diplock, whose "ped-rail" notion, the notion of a wheel that was something more than a wheel, a wheel that would take locomotives up hill-sides and over ploughed fields, was public property nearly twenty years ago. Possibly there were others before Diplock. To the Ped-rail also Commander Murray Sueter, one of the many experimentalists upon the early tanks, admits his indebtedness, and it would seem that Mr. Diplock was actually concerned in the earlier stage of the tanks.

Since my return I have been able to see the Tank at home, through the courtesy of the Ministry of Munitions. They have progressed far beyond any recognisable resemblance to the initiatives of Mr. Diplock; they have approximated rather to the American caterpillar. As I suspected when first I heard of these devices, the War Office and the old army people had practically nothing to do with their development. They took to it very reluctantly--as they have taken to every novelty in this war. One brilliant general scrawled over an early proposal the entirely characteristic comment that it was a pity the inventor could not use his imagination to better purpose. (That foolish British trick of sneering at "imagination" has cost us hundreds of

thousands of useless casualties and may yet lose us the war.) Tanks were first mooted at the front about a year and a half ago; Mr. Winston Churchill was then asking questions about their practicability; he filled many simple souls with terror; they thought him a most dangerous lunatic. The actual making of the Tanks arose as an irregular side development of the armoured-car branch of the Royal Naval Air Service work. The names most closely associated with the work are (I quote a reply of Dr. Macnamara's in the House of Commons) Mr. d'Eyncourt, the Director of Naval Construction, Mr. W. O. Tritton, Lieut. Wilson, R.N.A.S., Mr. Bussell, Lieut. Stern, R.N.A.S., who is now Colonel Stern, Captain Symes, and Mr. F. Skeens. There are many other claims too numerous to mention in detail.

But however much the Tanks may disconcert the gallant Colonel Newcomes who throw an air of restraint over our victorious front, there can be no doubt that they are an important as well as a novel development of the modern offensive. Of course neither the Tanks nor their very obvious next developments going to wrest the decisive pre-eminence from the aeroplane. The aeroplane remains now more than ever the instrument of victory upon the western front. Aerial ascendancy, properly utilised, is victory. But the mobile armoured big gun and the Tank as a machine-gun silencer must enormously facilitate an advance against the blinded enemy. Neither of them can advance against properly aimed big gun fire. That has to be disposed of before they make their entrance. It remains the function of the aeroplane to locate the hostile big guns and to direct the /tir de demolition/ upon them before the advance begins-- possibly even to bomb them out. But hitherto, after the destruction of driving back of the defender's big guns has been effected, the dug-out and the machine gun have still inflicted heavy losses upon the advancing infantry until the fight is won. So soon as the big guns are out, the tanks will advance, destroying machine guns, completing the destruction of the wire,

and holding prisoners immobile. Then the infantry will follow to gather in the sheaves. Multitudinously produced and--I write it with a defiant eye on Colonel Newcome--/properly handled/, these land ironclads are going to do very great things in shortening the war, in pursuit, in breaking up the retreating enemy. Given the air ascendancy, and I am utterly unable to imagine any way of conclusively stopping or even greatly delaying an offensive thus equipped.

2

The young of even the most horrible beasts have something piquant and engaging about them, and so I suppose it is in the way of things that the land ironclad which opens a new and more dreadful and destructive phase in the human folly of warfare, should appear first as if it were a joke. Never has any such thing so completely masked its wickedness under an appearance of genial silliness. The Tank is a creature to which one naturally flings a pet name; the five or six I was shown wandering, rooting and climbing over obstacles, round a large field near X, were as amusing and disarming as a little of lively young pigs.

At first the War Office prevented the publication of any pictures or descriptions of these contrivances except abroad; then abruptly the embargo was relaxed, and the press was flooded with photographs. The reader will be familiar now with their appearance. They resemble large slugs with an underside a little like the flattened rockers of a rocking-horse, slugs between 20 and 40 feet long. They are like flat-sided slugs, slugs of spirit, who raise an enquiring snout, like the snout of a dogfish, into the air. They crawl upon their bellies in a way that would be tedious to describe to the general reader and unnecessary to describe to the enquiring specialists. They go over the ground with the sliding speed of active snails. Behind

them trail two wheels, supporting a flimsy tail, wheels that strike one as incongruous as if a monster began kangaroo and ended doll's perambulator. (These wheels annoy me.) They are not steely monsters; they are painted with drab and unassuming colours that are fashionable in modern warfare, so that the armour seems rather like the integument of a rhinoceros. At the sides of the head project armoured checks, and from above these stick out guns that look like stalked eyes. That is the general appearance of the contemporary tank.

It slides on the ground; the silly little wheels that so detract from the genial bestiality of its appearance dandle and bump behind it. It swings about its axis. It comes to an obstacle, a low wall let us say, or a heap of bricks, and sets to work to climb it with its snout. It rears over the obstacle, it raises its straining belly, it overhangs more and more, and at last topples forward; it sways upon the heap and then goes plunging downwards, sticking out the weak counterpoise of its wheeled tail. If it comes to a house or a tree or a wall or such-like obstruction it rams against it so as to bring all its weight to bear upon it--it weighs /some/ tons--and then climbs over the debris. I saw it, and incredulous soldiers of experience watched it at the same time, cross trenches and wallow amazingly through muddy exaggerations of small holes. Then I repeated the tour inside.

Again the Tank is like a slug. The slug, as every biological student knows, is unexpectedly complicated inside. The Tank is as crowded with inward parts as a battleship. It is filled with engines, guns and ammunition, and in the interstices men.

"You will smash your hat," said Colonel Stern. "No; keep it on, or else you will smash your head."

Only Mr. C. R. W. Nevinson could do justice to the interior of a

Tank. You see a hand gripping something; you see the eyes and forehead of an engineer's face; you perceive that an overall bluishness beyond the engine is the back of another man. "Don't hold that," says someone; "it is too hot. Hold on to that." The engines roar, so loudly that I doubt whether one could hear guns without; the floor begins to slope and slopes until one seems to be at forty-five degrees or thereabouts; then the whole concern swings up and sways and slants the other way. You have crossed a bank. You heel sideways. Through the door which has been left open you see the little group of engineers, staff officers and naval men receding and falling away behind you. You straighten up and go up hill. You halt and begin to rotate. Through the open door, the green field, with its red walls, rows of worksheds and forests of chimneys in the background, begins a steady processional movement. The group of engineers and officers and naval men appears at the other side of the door and farther off. Then comes a sprint down hill. You descend and stretch your legs.

About the field other Tanks are doing their stunts. One is struggling in an apoplectic way in the mud pit with a cheek half buried. It noses its way out and on with an air of animal relief.

They are like jokes by Heath Robinson. One forgets that these things have already saved the lives of many hundreds of our soldiers and smashed and defeated thousands of Germans.

Said one soldier to me: "In the old attacks you used to see the British dead lying outside the machine-gun emplacements like birds outside a butt with a good shot inside. /Now/, these things walk through."

I saw other things that day at X. The Tank is only a beginning in a new phase of warfare. Of these other things I may only write in the most general terms.

But though Tanks and their collaterals are being made upon a very considerable scale in X, already I realised as I walked through gigantic forges as high and marvellous as cathedrals, and from workshed to workshed where gun carriages, ammunition carts and a hundred such things were flowing into existence with the swelling abundance of a river that flows out of a gorge, that as the demand for the new developments grows clear and strong, the resources of Britain are capable still of a tremendous response. /If only we do not rob these great factories and works of their men./

Upon this question certain things need to be said very plainly. The decisive factor in the sort of war we are now waging is production and right use of mechanical material; victory in this war depends now upon three things: the aeroplane, the gun, and the Tank developments. These--and not crowds of men--are the prime necessity for a successful offensive. Every man we draw from munition making to the ranks brings our western condition nearer to the military condition of Russia. In these things we may be easily misled by military "experts" We have to remember that the military "expert" is a man who learnt his business before 1914, and that the business of war has been absolutely revolutionised since 1914; the military expert is a man trained to think of war as essentially an affair of cavalry, infantry in formation, and field guns, whereas cavalry is entirely obsolete, infantry no longer fights in formation, and the methods of gunnery have been entirely changed. The military man I observe still runs about the world in spurs, he travels in trains in spurs, he walks in spurs, he thinks in terms of spurs. He has still to discover that it is about as ridiculous as if he were to

carry a crossbow. I take it these spurs are only the outward and visible sign of an inward obsolescence. The disposition of the military "expert" is still to think too little of machinery and to demand too much of the men. Behind our front at the time of my visit there were, for example, many thousands of cavalry, men tending horses, men engaged in transporting bulky fodder for horses and the like. These men were doing about as much in this war as if they had been at Timbuctoo. Every man who is taken from munition making at X to spur-worshipping in khaki, is a dead loss to the military efficiency of the country. Every man that is needed or is likely to be needed for the actual operations of modern warfare can be got by combing out the cavalry, the brewing and distilling industries, the theatres and music halls, and the like unproductive occupations. The under-staffing of munition works, the diminution of their efficiency by the use of aged and female labour, is the straight course to failure in this war.

In X, in the forges and machine shops, I saw already too large a proportion of boys and grey heads.

War is a thing that changes very rapidly, and we have in the Tanks only the first of a great series of offensive developments. They are bound to be improved, at a great pace. The method of using them will change very rapidly. Any added invention will necessitate the scrapping of old types and the production of the new patterns in quantity. It is of supreme necessity to the Allies if they are to win this war outright that the lead in inventions and enterprise which the British have won over the Germans in this matter should be retained. It is our game now to press the advantage for all it is worth. We have to keep ahead to win. We cannot do so unless we have unstinted men and unstinted material to produce each new development as its use is realised.

Given that much, the Tank will enormously enhance the advantage

of the new offensive method on the French front; the method that is of gun demolition after aerial photography, followed by an advance; it is a huge addition to our prospect of decisive victory. What does it do? It solves two problems. The existing Tank affords a means of advancing against machine-gun fire and of destroying wire and machine guns without much risk of loss, so soon as the big guns have done their duty by the enemy guns. And also behind the Tank itself, it is useless to conceal, lies the possibility of bringing up big guns and big gun ammunition, across nearly any sort of country, as fast as the advance can press forward. Hitherto every advance has paid a heavy toll to the machine gun, and every advance has had to halt after a couple of miles or so while the big guns (taking five or six days for the job) toiled up to the new positions.

4

It is impossible to restrain a note of sharp urgency from what one has to say about these developments. The Tanks remove the last technical difficulties in our way to decisive victory and a permanent peace; they also afford a reason for straining every nerve to bring about a decision and peace soon. At the risk of seeming an imaginative alarmist I would like to point out the reasons these things disclose for hurrying this war to a decision and doing our utmost to arrange the world's affairs so as to make another war improbable. Already these serio-comic Tanks, weighing something over twenty tons or so, have gone slithering around and sliding over dead and wounded men. That is not an incident for sensitive minds to dwell upon, but it is a mere little child's play anticipation of what the big land ironclads /that are bound to come if there is no world pacification/, are going to do.

What lies behind the Tank depends upon this fact; there is no

definable upward limit of mass. Upon that I would lay all the stress possible, because everything turns upon that.

You cannot make a land ironclad so big and heavy but that you cannot make a caterpillar track wide enough and strong enough to carry it forward. Tanks are quite possible that will carry twenty-inch or twenty-five inch guns, besides minor armament. Such Tanks may be undesirable; the production may exceed the industrial resources of any empire to produce; but there is no inherent impossibility in such things. There are not even the same limitations as to draught and docking accommodation that sets bounds to the size of battleships. It follows, therefore, as a necessary deduction that if the world's affairs are so left at the end of the war that the race of armaments continues, that Tank will develop steadily into a tremendous instrument of warfare, driven by engines of scores of thousands of horse-power, tracking on a track scores of hundreds of yards wide and weighing hundreds or thousands of tons. Nothing but a world agreement not to do so can prevent this logical development of the land ironclad. Such a structure will make wheel-ruts scores of feet deep; it will plough up, devastate and destroy the country it passes over altogether.

For my own part I never imagined the land ironclad idea would get loose into war. I thought that the military intelligence was essentially unimaginative and that such an aggressive military power as Germany, dominated by military people, would never produce anything of the sort. I thought that this war would be fought out without Tanks and that then war would come to an end. For of course it is mere stupidity that makes people doubt the ultimate ending of war. I have been so far justified in these expectations of mine, that it is not from military sources that these things have come. They have been thrust upon the soldiers from without. But now that they are loose, now that they are in war, we have to face their full possibilities, to use our

advantage in them and press on to the end of the war. In support of a photo-aero directed artillery, even our present Tanks can be used to complete an invisible offensive. We shall not so much push as ram. It is doubtful if the Germans can get anything of the sort into action before six months are out. We ought to get the war on to German soil before the Tanks have grown to more than three or four times their present size. Then it will not matter so much how much bigger they grow. It will be the German landscape that will suffer.

After one has seen the actual Tanks it is not very difficult to close one's eyes and figure the sort of Tank that may be arguing with Germany in a few months' time about the restoration of Belgium and Serbia and France, the restoration of the sunken tonnage, the penalties of the various Zeppelin and submarine murders, the freedom of seas and land alike from piracy, the evacuation of all Poland including Posen and Cracow, and the guarantees for the future peace of Europe. The machine will be perhaps as big as a destroyer and more heavily armed and equipped. It will swim over and through the soil at a pace of ten or twelve miles an hour. In front of it will be corn, land, neat woods, orchards, pasture, gardens, villages and towns. It will advance upon its belly with a swaying motion, devouring the ground beneath it. Behind it masses of soil and rock, lumps of turf, splintered wood, bits of houses, occasional streaks of red, will drop from its track, and it will leave a wake, six or seven times as wide as a high road, from which all soil, all cultivation, all semblance to cultivated or cultivatable land will have disappeared. It will not even be a track of soil. It will be a track of subsoil laid bare. It will be a flayed strip of nature. In the course of its fighting the monster may have to turnabout. It will then halt and spin slowly round, grinding out an arena of desolation with a diameter equal to its length. If it has to retreat and advance again these streaks and holes of destruction will increase and multiply. Behind the fighting line

these monsters will manoeuvre to and fro, destroying the land for all ordinary agricultural purposes for ages to come. The first imaginative account of the land ironclad that was ever written concluded with the words, "They are the /reductio ad absurdum/ of war." They are, and it is to the engineers, the ironmasters, the workers and the inventive talent of Great Britain and France that we must look to ensure that it is in Germany, the great teacher of war, that this demonstration of war's ultimate absurdity is completed.

For forty years Frankenstein Germany invoked war, turned every development of material and social science to aggressive ends, and at last when she felt the time was ripe she let loose the new monster that she had made of war to cow the spirit of mankind. She set the thing trampling through Belgium. She cannot grumble if at last it comes home, stranger and more dreadful even than she made it, trampling the German towns and fields with German blood upon it and its eyes towards Berlin.

This logical development of the Tank idea may seem a gloomy prospect for mankind. But it is open to question whether the tremendous development of warfare that has gone on in the last two years does after all open a prospect of unmitigated gloom. There has been a good deal of cheap and despondent sneering recently at the phrase, "The war that will end war." It is still possible to maintain that that may be a correct description of this war. It has to be remembered that war, as the aeroplane and the Tank have made it, has already become an impossible luxury for any barbaric or uncivilised people. War on the grade that has been achieved on the Somme predicates an immense industrialism behind it. Of all the States in the world only four can certainly be said to be fully capable of sustaining war at the level to which it has now been brought upon the western front. These are Britain, France, Germany, and the United States of America. Less certainly equal to the effort are Italy, Japan,

Russia, and Austria. These eight powers are the only powers /capable of warfare under modern conditions./ Five are already Allies and one is incurably pacific. There is no other power or people in the world that can go to war now without the consent and connivance of these great powers. If we consider their alliances, we may count it that the matter rests now between two groups of Allies and one neutral power. So that while on the one hand the development of modern warfare of which the Tank is the present symbol opens a prospect of limitless senseless destruction, it opens on the other hand a prospect of organised world control. This Tank development must ultimately bring the need of a real permanent settlement within the compass of the meanest of diplomatic intelligences. A peace that will restore competitive armaments has now become a less desirable prospect for everyone than a continuation of the war. Things were bad enough before, when the land forces were still in a primitive phase of infantry, cavalry and artillery, and when the only real race to develop monsters and destructors was for sea power. But the race for sea power before 1914 was mere child's play to the breeding of engineering monstrosities for land warfare that must now follow any indeterminate peace settlement. I am no blind believer in the wisdom of mankind, but I cannot believe that men are so insensate and headstrong as to miss the plain omens of the present situation.

So that after all the cheerful amusement the sight of a Tank causes may not be so very unreasonable. These things may be no more than one of those penetrating flashes of wit that will sometimes light up and dispel the contentions of an angry man. If they are not that, then they are the grimmest jest that ever set men grinning. Wait and see, if you do not believe me.

HOW PEOPLE THINK ABOUT THE WAR

I. DO THEY REALLY THINK AT ALL?

All human affairs are mental affairs; the bright ideas of to-day are the realities of to-morrow. The real history of mankind is the history of how ideas have arisen, how they have taken possession of men's minds, how they have struggled, altered, proliferated, decayed. There is nothing in this war at all but a conflict of ideas, traditions, and mental habits. The German Will clothed in conceptions of aggression and fortified by cynical falsehood, struggles against the fundamental sanity of the German mind and the confused protest of mankind. So that the most permanently important thing in the tragic process of this war is the change of opinion that is going on. What are people making of it? Is it producing any great common understandings, any fruitful unanimities?

No doubt it is producing enormous quantities of cerebration, but is it anything more than chaotic and futile cerebration? We are told all sorts of things in answer to that, things without a scrap of evidence or probability to support them. It is, we are assured, turning people to religion, making them moral and thoughtful. It is also, we are assured with equal confidence, turning them to despair and moral disaster. It will be followed by (1) a period of moral renaissance, and (2) a debauch. It is going to make the workers (1) more and (2) less obedient and industrious. It is (1) inuring men to war and (2) filling them with a passionate resolve never to suffer war again. And so on. I propose now to ask what is really happening in this matter? How is human opinion changing? I have opinions of my own and they are bound to colour my discussion. The reader must allow for that, and as far as possible I will remind him where necessary to make his allowance.

Now first I would ask, is any really continuous and thorough mental process going on at all about this war? I mean, is there any considerable number of people who are seeing it as a whole, taking it in as a whole, trying to get a general idea of it from which they can form directing conclusions for the future? Is there any considerable number of people even trying to do that? At any rate let me point out first that there is quite an enormous mass of people who--in spite of the fact that their minds are concentrated on aspects of this war, who are at present hearing, talking, experiencing little else than the war--are nevertheless neither doing nor trying to do anything that deserves to be called thinking about it at all. They may even be suffering quite terribly by it. But they are no more mastering its causes, reasons, conditions, and the possibility of its future prevention than a monkey that has been rescued in a scorching condition from the burning of a house will have mastered the problem of a fire. It is just happening to and about them. It may, for anything they have learnt about it, happen to them again.

A vast majority of people are being swamped by the spectacular side of the business. It was very largely my fear of being so swamped myself that made me reluctant to go as a spectator to the front. I knew that my chances of being hit by a bullet were infinitesimal, but I was extremely afraid of being hit by some too vivid impression. I was afraid that I might see some horribly wounded man or some decayed dead body that would so scar my memory and stamp such horror into me as to reduce me to a mere useless, gibbering, stop-the-war-at-any-price pacifist. Years ago my mind was once darkened very badly for some weeks with a kind of fear and distrust of life through a sudden unexpected encounter one tranquil evening with a drowned body. But in this journey in Italy and France, although I have had glimpses of much death and seen many wounded men, I have had no really horrible

impressions at all. That side of the business has, I think, been overwritten. The thing that haunts me most is the impression of a prevalent relapse into extreme untidiness, of a universal discomfort, of fields, and of ruined houses treated disregardedly.... But that is not what concerns us now in this discussion. What concerns us now is the fact that this war is producing spectacular effects so tremendous and incidents so strange, so remarkable, so vivid, that the mind forgets both causes and consequences and simply sits down to stare.

For example, there is this business of the Zeppelin raids in England. It is a supremely silly business; it is the most conclusive demonstration of the intellectual inferiority of the German to the Western European that it should ever have happened. There was the clearest /a priori/ case against the gas-bag. I remember the discussions ten or twelve years ago in which it was established to the satisfaction of every reasonable man that ultimately the "heavier than air" machine (as we called it then) must fly better than the gas-bag, and still more conclusively that no gas-bag was conceivable that could hope to fight and defeat aeroplanes. Nevertheless the German, with that dull faith of his in mere "Will," persisted along his line. He knew instinctively that he could not produce aviators to meet the Western European; all his social instincts made him cling to the idea of a great motherly, almost sow-like bag of wind above him. At an enormous waste of resources Germany has produced these futile monsters, that drift in the darkness over England promiscuously dropping bombs on fields and houses. They are now meeting the fate that was demonstrably certain ten years ago. If they found us unready for them it is merely that we were unable to imagine so idiotic an enterprise would ever be seriously sustained and persisted in. We did not believe in the probability of Zeppelin raids any more than we believed that Germany would force the world into war. It was a thing too silly to be believed. But they came--to their certain fate. In the

month after I returned from France and Italy, no less than four of these fatuities were exploded and destroyed within thirty miles of my Essex home.... There in chosen phrases you have the truth about these things. But now mark the perversion of thought due to spectacular effect.

I find over the Essex countryside, which has been for more than a year and a half a highway for Zeppelins, a new and curious admiration for them that has arisen out of these very disasters. Previously they were regarded with dislike and a sort of distrust, as one might regard a sneaking neighbour who left his footsteps in one's garden at night. But the Zeppelins of Billericay and Potter's Bar are--heroic things. (The Cuffley one came down too quickly, and the fourth one which came down for its crew to surrender is despised.) I have heard people describe the two former with eyes shining with enthusiasm.

"First," they say, "you saw a little round red glow that spread. Then you saw the whole Zeppelin glowing. Oh, it was /beautiful!/ Then it began to turn over and come down, and it flames and pieces began to break away. And then down it came, leaving flaming pieces all up the sky. At last it was a pillar of fire eight thousand feet high.... Everyone said, 'Oooooo!' And then someone pointed out the little aeroplane lit up by the flare--such a leetle thing up there in the night! It is the greatest thing I have ever seen. Oh! the most wonderful--most wonderful!"

There is a feeling that the Germans really must after all be a splendid people to provide such magnificent pyrotechnics.

Some people in London the other day were pretending to be shocked by an American who boasted that he had been in "two /bully/ bombardments," but he was only saying what everyone feels more or less. We are at a spectacle that--as a spectacle--our grandchildren will envy. I understand now better the story of

the man who stared at the sparks raining up from his own house as it burnt in the night and whispered "/Lovely! Lovely!/"

The spectacular side of the war is really an enormous distraction from thought. And against thought there also fights the native indolence of the human mind. The human mind, it seems, was originally developed to think about the individual; it thinks reluctantly about the species. It takes refuge from that sort of thing if it possibly can. And so the second great preventive of clear thinking is the tranquillising platitude.

The human mind is an instrument very easily fatigued. Only a few exceptions go on thinking restlessly--to the extreme exasperation of their neighbours. The normal mind craves for decisions, even wrong or false decisions rather than none. It clutches at comforting falsehoods. It loves to be told, "/There/, don't you worry. That'll be all right. That's /settled./" This war has come as an almost overwhelming challenge to mankind. To some of us it seems as if it were the Sphynx proffering the alternative of its riddle or death. Yet the very urgency of this challenge to think seems to paralyse the critical intelligence of very many people altogether. They will say, "This war is going to produce enormous changes in everything." They will then subside mentally with a feeling of having covered the whole ground in a thoroughly safe manner. Or they will adopt an air of critical aloofness. They will say, "How is it possible to foretell what may happen in this tremendous sea of change?" And then, with an air of superior modesty, they will go on doing--whatever they feel inclined to do. Many others, a degree less simple in their methods, will take some entirely partial aspect, arrive at some guesswork decision upon that, and then behave as though that met every question we have to face. Or they will make a sort of admonitory forecast that is conditional upon the good behaviour of other people. "Unless the Trade Unions are more reasonable," they will say. Or, "Unless the shipping

interest is grappled with and controlled." Or, "Unless England wakes up." And with that they seem to wash their hands of further responsibility for the future.

One delightful form of put-off is the sage remark, "Let us finish the war first, and then let us ask what is going to happen after it." One likes to think of the beautiful blank day after the signing of the peace when these wise minds swing round to pick up their deferred problems....

I submit that a man has not done his duty by himself as a rational creature unless he has formed an idea of what is going on, as one complicated process, until he has formed an idea sufficiently definite for him to make it the basis of a further idea, which is his own relationship to that process. He must have some notion of what the process is going to do to him, and some notion of what he means to do, if he can, to the process. That is to say, he must not only have an idea how the process is going, but also an idea of how he wants it to go. It seems so natural and necessary for a human brain to do this that it is hard to suppose that everyone has not more or less attempted it. But few people, in Great Britain at any rate, have the habit of frank expression, and when people do not seem to have made out any of these things for themselves there is a considerable element of secretiveness and inexpressiveness to be allowed for before we decide that they have not in some sort of fashion done so. Still, after all allowances have been made, there remains a vast amount of jerry-built and ready-made borrowed stuff in most of people's philosophies of the war. The systems of authentic opinion in this world of thought about the war are like comparatively rare thin veins of living mentality in a vast world of dead repetitions and echoed suggestions. And that being the case, it is quite possible that history after the war, like history before the war, will not be so much a display of human will and purpose as a resultant of human vacillations,

obstructions, and inadvertences. We shall still be in a drama of blind forces following the line of least resistance.

One of the people who is often spoken of as if he were doing an enormous amount of concentrated thinking is "the man in the trenches." We are told--by gentlemen writing for the most part at home--of the most extraordinary things that are going on in those devoted brains, how they are getting new views about the duties of labour, religion, morality, monarchy, and any other notions that the gentleman at home happens to fancy and wished to push. Now that is not at all the impression of the khaki mentality I have reluctantly accepted as correct. For the most part the man in khaki is up against a round of tedious immediate duties that forbid consecutive thought; he is usually rather crowded and not very comfortable. He is bored.

The real horror of modern war, when all is said and done, is the boredom. To get killed or wounded may be unpleasant, but it is at any rate interesting; the real tragedy is in the desolated fields, the desolated houses, the desolated hours and days, the bored and desolated minds that hang behind the melee and just outside the melee. The peculiar beastliness of the German crime is the way the German war cant and its consequences have seized upon and paralysed the mental movement of Western Europe. Before 1914 war was theoretically unpopular in every European country; we thought of it as something tragic and dreadful. Now everyone knows by experience that it is something utterly dirty and detestable. We thought it was the Nemean lion, and we have found it is the Augean stable. But being bored by war and hating war is quite unproductive /unless you are thinking about its nature and causes so thoroughly that you will presently be able to take hold of it and control it and end it./ It is no good for everyone to say unanimously, "We will have no more war," unless you have thought out how to avoid it, and mean to bring that end about. It is as

if everyone said, "We will have no more catarrh," or "no more flies," or "no more east wind." And my point is that the immense sorrows at home in every European country and the vast boredom of the combatants are probably not really producing any effective remedial mental action at all, and will not do so unless we get much more thoroughly to work upon the thinking-out process.

In such talks as I could get with men close up to the front I found beyond this great boredom and attempts at distraction only very specialised talk about changes in the future. Men were keen upon questions of army promotion, of the future of conscription, of the future of the temporary officer, upon the education of boys in relation to army needs. But the war itself was bearing them all upon its way, as unquestioned and uncontrolled as if it were the planet on which they lived.

II. THE YIELDING PACIFIST AND THE CONSCIENTIOUS OBJECTOR

1

Among the minor topics that people are talking about behind the western fronts is the psychology of the Yielding Pacifist and the Conscientious Objector. Of course, we are all pacifists nowadays; I know of no one who does not want not only to end this war but to put an end to war altogether, except those blood-red terrors Count Reventlow, Mr. Leo Maxse--how he does it on a vegetarian dietary I cannot imagine!--and our wild-eyed desperados of /The Morning Post./ But most of the people I meet, and most of the people I met on my journey, are pacifists like myself who want to /make/ peace by beating the armed man until he gives in and admits the error of his ways, disarming him and reorganising the world for the forcible suppression of military adventures in the future. They want belligerency put

into the same category as burglary, as a matter of forcible suppression. The Yielding Pacifist who will accept any sort of peace, and the Conscientious Objector who will not fight at all, are not of that opinion.

Both Italy and France produce parallel types to those latter, but it would seem that in each case England displays the finer developments. The Latin mind is directer than the English, and its standards--shall I say?--more primitive; it gets more directly to the fact that here are men who will not fight. And it is less charitable. I was asked quite a number of times for the English equivalent of an /embusque./ "We don't generalise," I said, "we treat each case on its merits!"

One interlocutor near Udine was exercised by our Italian Red Cross work.

"Here," he said, "are sixty or seventy young Englishmen, all fit for military service.... Of course they go under fire, but it is not like being junior officers in the trenches. Not one of them has been killed or wounded."

He reflected. "One, I think, has been decorated," he said....

My French and Italian are only for very rough common jobs; when it came to explaining the Conscientious Objector sympathetically they broke down badly. I had to construct long parenthetical explanations of our antiquated legislative methods to show how it was that the "conscientious objector" had been so badly defined. The foreigner does not understand the importance of vague definition in British life. "Practically, of course, we offered to exempt anyone who conscientiously objected to fight or serve. Then the Pacifist and German people started a campaign to enrol objectors. Of course every shirker, every coward and slacker in the country decided at once to be a conscientious objector.

Anyone but a British legislator could have foreseen that. Then we started Tribunals to wrangle with the objectors about their /bona fides./ Then the Pacifists and the Pro-Germans issued little leaflets and started correspondence courses to teach people exactly how to lie to the Tribunals. Trouble about freedom of the pamphleteer followed. I had to admit--it has been rather a sloppy business. "The people who made the law knew their own minds, but we English are not an expressive people."

These are not easy things to say in Elementary (and slightly Decayed) French or in Elementary and Corrupt Italian.

"But why do people support the sham conscientious objector and issue leaflets to help him--when there is so much big work clamouring to be done?"

"That," I said, "is the Whig tradition."

When they pressed me further, I said: "I am really the questioner. I am visiting /your/ country, and you have to tell /me/ things. It is not right that I should do all the telling. Tell me all about Romain Rolland."

And so I pressed them about the official socialists in Italy and the Socialist minority in France until I got the question out of the net of national comparisons and upon a broader footing. In several conversations we began to work out in general terms the psychology of those people who were against the war. But usually we could not get to that; my interlocutors would insist upon telling me just what they would like to do or just what they would like to see done to stop-the-war pacifists and conscientious objectors; pleasant rather than fruitful imaginative exercises from which I could effect no more than platitudinous uplifts.

But the general drift of such talks as did seem to penetrate the question was this, that among these stop-the-war people there are really three types. First there is a type of person who hates violence and the infliction of pain under any circumstances, and who have a mystical belief in the rightness (and usually the efficacy) of non-resistance. These are generally Christians, and then their cardinal text is the instruction to "turn the other cheek." Often they are Quakers. If they are consistent they are vegetarians and wear /Lederlos/ boots. They do not desire police protection for their goods. They stand aloof from all the force and conflict of life. They have always done so. This is an understandable and respectable type. It has numerous Hindu equivalents. It is a type that finds little difficulty about exemptions--provided the individual has not been too recently converted to his present habits. But it is not the prevalent type in stop-the-war circles. Such genuine ascetics do not number more than a thousand or so, all three of our western allied countries. The mass of the stop-the-war people is made up quite other elements.

2

In the complex structure of the modern community there are two groups or strata or pockets in which the impulse of social obligation, the gregarious sense of a common welfare, is at its lowest; one of these is the class of the Resentful Employee, the class of people who, without explanation, adequate preparation or any chance, have been shoved at an early age into uncongenial work and never given a chance to escape, and the other is the class of people with small fixed incomes or with small salaries earned by routine work, or half independent people practising some minor artistic or literary craft, who have led uneventful, irresponsible lives from their youth up, and never came at any point into relations of service to the state. This latter class

was more difficult to define than the former--because it is more various within itself. My French friends wanted to talk of the "Psychology of the Rentier." I was for such untranslatable phrases as the "Genteel Whig," or the "Donnish Liberal." But I lit up an Italian--he is a Milanese manufacturer--with "these Florentine English who would keep Italy in a glass case." "I know," he said. Before I go on to expand this congenial theme, let me deal first with the Resentful Employee, who is a much more considerable, and to me a much more sympathetic, figure in European affairs. I began life myself as a Resentful Employee. By the extremest good luck I have got my mind and spirit out of the distortions of that cramping beginning, but I can still recall even the anger of those old days.

He becomes an employee between thirteen and fifteen; he is made to do work he does not like for no other purpose that he can see except the profit and glory of a fortunate person called his employer, behind whom stand church and state blessing and upholding the relationship. He is not allowed to feel that he has any share whatever in the employer's business, or that any end is served but the employer's profit. He cannot see that the employer acknowledges any duty to the state. Neither church nor state seems to insist that the employer has any public function. At no point does the employee come into a clear relationship of mutual obligation with the state. There does not seem to be any way out for the employee from a life spent in this subordinate, toilsome relationship. He feels put upon and cheated out of life. He is without honour. If he is a person of ability or stubborn temper he struggles out of his position; if he is a kindly and generous person he blames his "luck" and does his work and lives his life as cheerfully as possible--and so live the bulk of our amazing European workers; if he is a being of great magnanimity he is content to serve for the ultimate good of the race; if he has imagination, he says, "Things will not always be like this," and becomes a socialist or a guild socialist, and

tries to educate the employer to a sense of reciprocal duty; but if he is too human for any of these things, then he begins to despise and hate the employer and the system that made him. He wants to hurt them. Upon that hate it is easy to trade.

A certain section of what is called the Socialist press and the Socialist literature in Europe is no doubt great-minded; it seeks to carve a better world out of the present. But much of it is socialist only in name. Its spirit is Anarchistic. Its real burthen is not construction but grievance; it tells the bitter tale of the employee, it feeds and organises his malice, it schemes annoyance and injury for the hated employer. The state and the order of the world is confounded with the capitalist. Before the war the popular so-called socialist press reeked with the cant of rebellion, the cant of any sort of rebellion. "I'm a rebel," was the silly boast of the young disciple. "Spoil something, set fire to something," was held to be the proper text for any girl or lad of spirit. And this blind discontent carried on into the war. While on the one hand a great rush of men poured into the army saying, "Thank God! we can serve our country at last instead of some beastly profiteer," a sourer remnant, blind to the greater issues of the war, clung to the reasonless proposition, "the state is only for the Capitalist. This war is got up by Capitalists. Whatever has to be done--/we are rebels./"

Such a typical paper as the British /Labour Leader/, for example, may be read in vain, number after number, for any sound and sincere constructive proposal. It is a prolonged scream of extreme individualism, a monotonous repetition of incoherent discontent with authority, with direction, with union, with the European effort. It wants to do nothing. It just wants effort to stop--even at the price of German victory. If the whole fabric of society in western Europe were to be handed over to those pseudo-socialists to-morrow, to be administered for the

common good, they would fly the task in terror. They would make excuses and refuse the undertaking. They do not want the world to go right. The very idea of the world going right does not exist in their minds. They are embodied discontent and hatred, making trouble, and that is all they are. They want to be "rebels"--to be admired as "rebels".

That is the true psychology of the Resentful Employee. He is a de-socialised man. His sense of the State has been destroyed.

The Resentful Employees are the outcome of our social injustices. They are the failures of our social and educational systems. We may regret their pitiful degradation, we may exonerate them from blame; none the less they are a pitiful crew. I have seen the hardship of the trenches, the gay and gallant wounded. I do a little understand what our soldiers, officers and men alike, have endured and done. And though I know I ought to allow for all that I have stated, I cannot regard these conscientious objectors with anything but contempt. Into my house there pours a dismal literature rehearsing the hardships of these men who set themselves up to be martyrs for liberty; So and So, brave hero, has been sworn at--positively sworn at by a corporal; a nasty rough man came into the cell of So and So and dropped several h's; So and So, refusing to undress and wash, has been undressed and washed, and soap was rubbed into his eyes--perhaps purposely; the food and accommodation are not of the best class; the doctors in attendance seem hasty; So and So was put into a damp bed and has got a nasty cold. Then I recall a jolly vanload of wounded men I saw out there....

But after all, we must be just. A church and state that permitted these people to be thrust into dreary employment in their early 'teens, without hope or pride, deserves such citizens as these. The marvel is that there are so few. There are a poor thousand or so of these hopeless, resentment-poisoned creatures

in Great Britain. Against five willing millions. The Allied countries, I submit, have not got nearly all the conscientious objectors they deserve.

3

If the Resentful Employee provides the emotional impulse of the resisting pacifist, whose horizon is bounded by his one passionate desire that the particular social system that has treated him so ill should collapse and give in, and its leaders and rulers be humiliated and destroyed, the intellectual direction of a mischievous pacifism comes from an entirely different class.

The Genteel Whig, though he differs very widely in almost every other respect from the Resentful Employee, has this much in common, that he has never been drawn into the whirl of collective life in any real and assimilative fashion. This is what is the matter with both of them. He is a little loose, shy, independent person. Except for eating and drinking--in moderation, he has never done anything real from the day he was born. He has frequently not even faced the common challenge of matrimony. Still more frequently is he childless, or the daring parent of one particular child. He has never traded nor manufactured. He has drawn his dividends or his salary with an entire unconsciousness of any obligations to policemen or navy for these punctual payments. Probably he has never ventured even to reinvest his little legacy. He is acutely aware of possessing an exceptionally fine intelligence, but he is entirely unconscious of a fundamental unreality. Nothing has ever occurred to him to make him ask why the mass of men were either not possessed of his security or discontented with it. The impulses that took his school friends out upon all sorts of odd feats and adventures struck him as needless. As he grew up he turned with an equal

distrust from passion or ambition. His friends went out after love, after adventure, after power, after knowledge, after this or that desire, and became men. But he noted merely that they became fleshly, that effort strained them, that they were sometimes angry or violent or heated. He could not but feel that theirs were vulgar experiences, and he sought some finer exercise for his exceptional quality. He pursued art or philosophy or literature upon their more esoteric levels, and realised more and more the general vulgarity and coarseness of the world about him, and his own detachment. The vulgarity and crudity of the things nearest him impressed him most; the dreadful insincerity of the Press, the meretriciousness of success, the loudness of the rich, the baseness of common people in his own land. The world overseas had by comparison a certain glamour. Except that when you said "United States" to him he would draw the air sharply between his teeth and beg you not to...

Nobody took him by the collar and shook him.

If our world had considered the advice of William James and insisted upon national service from everyone, national service in the drains or the nationalised mines or the nationalised deep-sea fisheries if not in the army or navy, we should not have had any such men. If it had insisted that wealth and property are no more than a trust for the public benefit, we should have had no genteel indispensables. These discords in our national unanimity are the direct consequence of our bad social organisation. We permit the profiteer and the usurer; they evoke the response of the Reluctant Employee, and the inheritor of their wealth becomes the Genteel Whig.

But that is by the way. It was of course natural and inevitable that the German onslaught upon Belgium and civilisation generally should strike these recluse minds not as a monstrous ugly wickedness to be resisted and overcome at any cost, but merely as

a nerve-racking experience. Guns were going off on both sides. The Genteel Whig was chiefly conscious of a repulsive vast excitement all about him, in which many people did inelegant and irrational things. They waved flags--nasty little flags. This child of the ages, this last fruit of the gigantic and tragic tree of life, could no more than stick its fingers in its ears as say, "Oh, please, do /all/ stop!" and then as the strain grew intenser and intenser set itself with feeble pawings now to clamber "Au-dessus de la Melee," and now to--in some weak way--stop the conflict. ("Au-dessus de la Melee"--as the man said when they asked him where he was when the bull gored his sister.) The efforts to stop the conflict at any price, even at the price of entire submission to the German Will, grew more urgent as the necessity that everyone should help against the German Thing grew more manifest.

Of all the strange freaks of distressed thinking that this war has produced, the freaks of the Genteel Whig have been among the most remarkable. With an air of profound wisdom he returns perpetually to his proposition that there are faults on both sides. To say that is his conception of impartiality. I suppose that if a bull gored his sister he would say that there were faults on both sides; his sister ought not to have strayed into the field, she was wearing a red hat of a highly provocative type; she ought to have been a cow and then everything would have been different. In the face of the history of the last forty years, the Genteel Whig struggles persistently to minimise the German outrage upon civilisation and to find excuses for Germany. He does this, not because he has any real passion for falsehood, but because by training, circumstance, and disposition he is passionately averse from action with the vulgar majority and from self-sacrifice in a common cause, and because he finds in the justification of Germany and, failing that, in the blackening of the Allies to an equal blackness, one line of defence against the wave of impulse that threatens to submerge his private self. But

when at last that line is forced he is driven back upon others equally extraordinary. You can often find simultaneously in the same Pacifist paper, and sometimes even in the utterances of the same writer, two entirely incompatible statements. The first is that Germany is so invincible that it is useless to prolong the war since no effort of the Allies is likely to produce any material improvement in their position, and the second is that Germany is so thoroughly beaten that she is now ready to abandon militarism and make terms and compensations entirely acceptable to the countries she has forced into war. And when finally facts are produced to establish the truth that Germany, though still largely wicked and impenitent, is being slowly and conclusively beaten by the sanity, courage and persistence of the Allied common men, then the Genteel Whig retorts with his last defensive absurdity. He invents a national psychology for Germany. Germany, he invents, loves us and wants to be our dearest friend. Germany has always loved us. The Germans are a loving, unenvious people. They have been a little misled--but nice people do not insist upon that fact. But beware of beating Germany, beware of humiliating Germany; then indeed trouble will come. Germany will begin to dislike us. She will plan a revenge. Turning aside from her erstwhile innocent career, she may even think of hate. What are our obligations to France, Italy, Serbia and Russia, what is the happiness of a few thousands of the Herero, a few millions of the Belgians--whose numbers moreover are constantly diminishing--when we might weigh them against the danger, the most terrible danger, of incurring /permanent German hostility?.../

A Frenchman I talked to knew better than that. "What will happen to Germany," I asked, "if we are able to do so to her and so; would she take to dreams of a /Revanche?/"

"She will take to Anglomania," he said, and added after a flash of reflection, "In the long run it will be the worse for you."

III. THE RELIGIOUS REVIVAL

1

One of the indisputable things about the war, so far as Britain and France go--and I have reason to believe that on a lesser scale things are similar in Italy--is that it has produced a very great volume of religious thought and feeling. About Russia in these matters we hear but little at the present time, but one guesses at parallelism. People habitually religious have been stirred to new depths of reality and sincerity, and people are thinking of religion who never thought of religion before. But as I have already pointed out, thinking and feeling about a matter is of no permanent value unless something is /thought out/, unless there is a change of boundary or relationship, and it an altogether different question to ask whether any definite change is resulting from this universal ferment. If it is not doing so, then the sleeper merely dreams a dream that he will forget again....

Now in no sort of general popular mental activity is there so much froth and waste as in religious excitements. This has been the case in all periods of religious revival. The number who are rather impressed, who for a few days or weeks take to reading their Bibles or going to a new place of worship or praying or fasting or being kind and unselfish, is always enormous in relation to the people whose lives are permanently changed. The effort needed if a contemporary is to blow off the froth, is always very considerable.

Among the froth that I would blow off is I think most of the tremendous efforts being made in England by the Anglican church

to attract favourable attention to itself /apropos/ of the war. I came back from my visit to the Somme battlefields to find the sylvan peace of Essex invaded by a number of ladies in blue dresses adorned with large white crosses, who, regardless of the present shortage of nurses, were visiting every home in the place on some mission of invitation whose details remained obscure. So far as I was able to elucidate this project, it was in the nature of a magic incantation; a satisfactory end of the war was to be brought about by convergent prayer and religious assiduities. The mission was shy of dealing with me personally, although as a lapsed communicant I should have thought myself a particularly hopeful field for Anglican effort, and it came to my wife and myself merely for our permission and countenance in an appeal to our domestic servants. My wife consulted the household; it seemed very anxious to escape from that appeal, and as I respect Christianity sufficiently to detest the identification of its services with magic processes, the mission retired--civilly repulsed. But the incident aroused an uneasy curiosity in my mind with regard to the general trend of Anglican teaching and Anglican activities at the present time. The trend of my enquiries is to discover the church much more incoherent and much less religious--in any decent sense of the word--than I had supposed it to be.

Organisation is the life of material and the death of mental and spiritual processes. There could be no more melancholy exemplification of this than the spectacle of the Anglican and Catholic churches at the present time, one using the tragic stresses of war mainly for pew-rent touting, and the other paralysed by its Austrian and South German political connections from any clear utterance upon the moral issues of the war. Through the opening phases of the war the Established Church of England was inconspicuous; this is no longer the case, but it may be doubted whether the change is altogether to its advantage. To me this is a very great disappointment. I have always had a very

high opinion of the intellectual values of the leading divines of both the Anglican and Catholic communions. The self-styled Intelligentsia of Great Britain is all too prone to sneer at their equipment; but I do not see how any impartial person can deny that Father Bernard Vaughn is in mental energy, vigour of expression, richness of thought and variety of information fully the equal of such an influential lay publicist as Mr. Horatio Bottomley. One might search for a long time among prominent laymen to find the equal of the Bishop of London. Nevertheless it is impossible to conceal the impression of tawdriness that this latter gentleman's work as head of the National Mission has left upon my mind. Attired in khaki he has recently been preaching in the open air to the people of London upon Tower Hill, Piccadilly, and other conspicuous places. Obsessed as I am by the humanities, and impressed as I have always been by the inferiority of material to moral facts, I would willingly have exchanged the sight of two burning Zeppelins for this spectacle of ecclesiastical fervour. But as it is, I am obliged to trust to newspaper reports and the descriptions of hearers and eye-witnesses. They leave to me but little doubt of the regrettable superficiality of the bishop's utterances.

We have a multitude of people chastened by losses, ennobled by a common effort, needing support in that effort, perplexed by the reality of evil and cruelty, questioning and seeking after God. What does the National Mission offer? On Tower Hill the bishop seems to have been chiefly busy with a wrangling demonstration that ten thousand a year is none too big a salary for a man subject to such demands and expenses as his see involves. So far from making anything out of his see he was, he declared, two thousand a year to the bad. Some day, when the church has studied efficiency, I suppose that bishops will have the leisure to learn something about the general state of opinion and education in their dioceses. The Bishop of London was evidently unaware of the almost automatic response of the sharp socialists

among his hearers. Their first enquiry would be to learn how he came by that mysterious extra two thousand a year with which he supplemented his stipend. How did he earn /that?/ And if he didn't earn it---! And secondly, they would probably have pointed out to him that his standard of housing, clothing, diet and entertaining was probably a little higher than theirs. It is really no proof of virtuous purity that a man's expenditure exceeds his income. And finally some other of his hearers were left unsatisfied by his silence with regard to the current proposal to pool all clerical stipends for the common purposes of the church. It is a reasonable proposal, and if bishops must dispute about stipends instead of preaching the kingdom of God, then they are bound to face it. The sooner they do so, the more graceful will the act be. From these personal apologetics the bishop took up the question of the exemption, at the request of the bishops, of the clergy from military service. It is one of our contrasts with French conditions--and it is all to the disadvantage of the British churches.

In his Piccadilly contribution to the National Mission of Repentance and Hope the bishop did not talk politics but sex. He gave his hearers the sort of stuff that is handed out so freely by the Cinema Theatres, White Slave Traffic talk, denunciations of "Night Hawks"--whatever "Night Hawks" may be--and so on. One this or another occasion the bishop--he boasts that he himself is a healthy bachelor--lavished his eloquence upon the Fall in the Birth Rate, and the duty of all married people, from paupers upward, to have children persistently. Now sex, like diet, is a department of conduct and a very important department, but /it isn't religion!/ The world is distressed by international disorder, by the monstrous tragedy of war; these little hot talks about indulgence and begetting have about as much to do with the vast issues that concern us as, let us say, a discussion of the wickedness of eating very new and indigestible bread. It is talking round and about the essential issue. It is fogging the

essential issue, which is the forgotten and neglected kingship of God. The sin that is stirring the souls of men is the sin of this war. It is the sin of national egotism and the devotion of men to loyalties, ambitions, sects, churches, feuds, aggressions, and divisions that are an outrage upon God's universal kingdom.

2

The common clergy of France, sharing the military obligations and the food and privations of their fellow parishioners, contrast very vividly with the home-staying types of the ministries of the various British churches. I met and talked to several. Near Frise there were some barge gunboats--they have since taken their place in the fighting, but then they were a surprise--and the men had been very anxious to have their craft visited and seen. The priest who came after our party to see if he could still arrange that, had been decorated for gallantry. Of course the English too have their gallant chaplains, but they are men of the officer caste, they are just young officers with peculiar collars; not men among men, as are the French priests.

There can be no doubt that the behaviour of the French priests in this war has enormously diminished anti-clerical bitterness in France. There can be no doubt that France is far more a religious country than it was before the war. But if you ask whether that means any return to the church, any reinstatement of the church, the answer is a doubtful one. Religion and the simple priest are stronger in France to-day; the church, I think, is weaker.

I trench on no theological discussion when I record the unfavourable impression made upon all western Europe by the failure of the Holy Father to pronounce definitely upon the

rights and wrongs of the war. The church has abrogated its right of moral judgement. Such at least seemed to be the opinion of the Frenchmen with whom I discussed a remarkable interview with Cardinal Gasparri that I found one morning in /Le Journal./

It was not the sort of interview to win the hearts of men who were ready to give their lives to set right what they believe to be the greatest outrage that has ever been inflicted upon Christendom, that is to say the forty-three years of military preparation and of diplomacy by threats that culminated in the ultimatum to Serbia, the invasion of Belgium and the murder of the Visé villagers. It was adorned with a large portrait of "Benoit XV.," looking grave and discouraging over his spectacles, and the headlines insisted it was "/La Pensee du Pape./" Cross-heads sufficiently indicated the general tone. One read:

/"Le Saint Siege impartial...
Au-dessus de la bataille...."/

The good Cardinal would have made a good lawyer. He had as little to say about God and the general righteousness of things as the Bishop of London. But he got in some smug reminders of the severance of diplomatic relations with the Vatican. Perhaps now France will be wiser. He pointed out that the Holy See in its Consistorial Allocution of January 22nd, 1915, invited the belligerents to observe the rules of war. Could anything more be done than that? Oh!--in the general issue of the war, if you want a judgement on the war as a whole, how is it possible that the Vatican to decide? Surely the French know that excellent principle of justice, /Audiatur et altera pars/, and how under existing circumstances can the Vatican do that...? The Vatican is cut off from communication with Austria and Germany. The Vatican has been deprived of its temporal power and local independence (another neat point)....

So France is bowed out. When peace is restored, the Vatican will perhaps be able to enquire if there was a big German army in 1914, if German diplomacy was aggressive from 1875 onward, if Belgium was invaded unrighteously, if (Catholic) Austria forced the pace upon (non-Catholic) Russia. But now--now the Holy See must remain as impartial as an unbought mascot in a shop window....

The next column of /Le Journal/ contained an account of the Armenian massacres; the blood of the Armenian cries out past the Holy Father to heaven; but then Armenians are after all heretics, and here again the principle of /Audiatur et altera pars/ comes in. Communications are not open with the Turks. Moreover, Armenians, like Serbs, are worse than infidels; they are heretics. Perhaps God is punishing them....

/Audiatur et altera pars/, and the Vatican has not forgotten the infidelity and disrespect of both France and Italy in the past. These are the things, it seems, that really matter to the Vatican. Cardinal Gasparri's portrait, in the same issue of /Le Journal/, displays a countenance of serene contentment, a sort of incarnate "Told-you-so."

So the Vatican lifts its pontifical skirts and shakes the dust of western Europe off its feet.

It is the most astounding renunciation in history.

Indubitably the Christian church took a wide stride from the kingship of God when it placed a golden throne for the unbaptised Constantine in the midst of its most sacred deliberations at Nicaea. But it seems to me that this abandonment of moral judgments in the present case by the Holy See is an almost wider step from the church's allegiance to God....

Thought about the great questions of life, thought and reasoned direction, this is what the multitude demands mutely and weakly, and what the organised churches are failing to give. They have not the courage of their creeds. Either their creeds are intellectual flummery or they are the solution to the riddles with which the world is struggling. But the churches make no mention of their creeds. They chatter about sex and the magic effect of church attendance and simple faith. If simple faith is enough, the churches and their differences are an imposture. Men are stirred to the deepest questions about life and God, and the Anglican church, for example, obliges--as I have described.

It is necessary to struggle against the unfavourable impression made by these things. They must not blind us to the deeper movement that is in progress in a quite considerable number of minds in England and France alike towards the realisation of the kingdom of God.

What I conceive to be the reality of the religious revival is to be found in quarters remote from the religious professionals. Let me give but one instance of several that occur to me. I met soon after my return from France a man who has stirred my curiosity for years, Mr. David Lubin, the prime mover in the organisation of the International Institute of Agriculture in Rome. It is a movement that has always appealed to my imagination. The idea is to establish and keep up to date a record of the food supplies in the world with a view to the ultimate world control of food supply and distribution. When its machinery has developed sufficiently to a control in the interests of civilisation of many other staples besides foodstuffs. It is in fact the suggestion and beginning of the economic world peace and the economic world state, just as the

Hague Tribunal is the first faint sketch of a legal world state. The King of Italy has met Mr. Lubin's idea with open hands. (It was because of this profoundly interesting experiment that in a not very widely known book of mine, /The World Set Free/ (May, 1914), in which I represented a world state as arising out of Armageddon, I made the first world conference meet at Brissago in Italian Switzerland under the presidency of the King of Italy.) So that when I found I could meet Mr. Lubin I did so very gladly. We lunched together in a pretty little room high over Knightsbridge, and talked through an afternoon.

He is a man rather after the type of Gladstone; he could be made to look like Gladstone in a caricature, and he has that compelling quality of intense intellectual excitement which was one of the great factors in the personal effectiveness of Gladstone. He is a Jew, but until I had talked to him for some time that fact did not occur to me. He is in very ill health, he has some weakness of the heart that grips him and holds him at times white and silent.

At first we talked of his Institute and its work. Then we came to shipping and transport. Whenever one talks now of human affairs one comes presently to shipping and transport generally. In Paris, in Italy, when I returned to England, everywhere I found "cost of carriage" was being discovered to be a question of fundamental importance. Yet transport, railroads and shipping, these vitally important services in the world's affairs, are nearly everywhere in private hands and run for profit. In the case of shipping they are run for profit on such antiquated lines that freights vary from day to day and from hour to hour. It makes the business of food supply a gamble. And it need not be a gamble.

But that is by the way in the present discussion. As we talked, the prospect broadened out from a prospect of the growing and

distribution of food to a general view of the world becoming one economic community.

I talked of various people I had been meeting in the previous few weeks. "So many of us," I said, "seem to be drifting away from the ideas of nationalism and faction and policy, towards something else which is larger. It is an idea of a right way of doing things for human purposes, independently of these limited and localised references. Take such things as international hygiene for example, take /this/ movement. We are feeling our way towards a bigger rule."

"The rule of Righteousness," said Mr. Lubin.

I told him that I had been coming more and more to the idea--not as a sentimentality or a metaphor, but as the ruling and directing idea, the structural idea, of all one's political and social activities--of the whole world as one state and community and of God as the King of that state.

"But /I/ say that," cried Mr. Lubin, "I have put my name to that. And--it is /here!/"

He struggled up, seized an Old Testament that lay upon a side table. He stood over it and rapped its cover. "It is /here/," he said, looking more like Gladstone than ever, "in the Prophets."

4

That is all I mean to tell at present of that conversation.

We talked of religion for two hours. Mr. Lubin sees things in terms of Israel and I do not. For all that we see things very

much after the same fashion. That talk was only one of a number of talks about religion that I have had with hard and practical men who want to get the world straighter than it is, and who perceive that they must have a leadership and reference outside themselves. That is why I assert so confidently that there is a real deep religious movement afoot in the world. But not one of those conversations could have gone on, it would have ceased instantly, if anyone bearing the uniform and brand of any organised religious body, any clergyman, priest, mollah, of suchlike advocate of the ten thousand patented religions in the world, had come in. He would have brought in his sectarian spites, his propaganda of church-going, his persecution of the heretic and the illegitimate, his ecclesiastical politics, his taboos, and his doctrinal touchiness.... That is why, though I perceive there is a great wave of religious revival in the world to-day, I doubt whether it bodes well for the professional religions....

The other day I was talking to an eminent Anglican among various other people and someone with an eye to him propounded this remarkable view.

"There are four stages between belief and utter unbelief. There are those who believe in God, those who doubt like Huxley the Agnostic, those who deny him like the Atheists but who do at least keep his place vacant, and lastly those who have set up a Church in his place. That is the last outrage of unbelief."

IV. THE RIDDLE OF THE BRITISH

All the French people I met in France seemed to be thinking and talking about the English. The English bring their own atmosphere with them; to begin with they are not so talkative, and I did not find among them anything like the same vigour of examination, the same resolve to understand the Anglo-French

reaction, that I found among the French. In intellectual processes I will confess that my sympathies are undisguisedly with the French; the English will never think nor talk clearly until they get clerical "Greek" and sham "humanities" out of their public schools and sincere study and genuine humanities in; our disingenuous Anglican compromise is like a cold in the English head, and the higher education in England is a training in evasion. This is an always lamentable state of affairs, but just now it is particularly lamentable because quite tremendous opportunities for the good of mankind turn on the possibility of a thorough and entirely frank mutual understanding between French, Italians, and English. For years there has been a considerable amount of systematic study in France of English thought and English developments. Upon almost any question of current English opinion and upon most current English social questions, the best studies are in French. But there has been little or no reciprocal activity. The English in France seem to confine their French studies to *La Vie Parisienne*. It is what they have been led to expect of French literature.

There can be no doubt in any reasonable mind that this war is binding France and England very closely together. They dare not quarrel for the next fifty years. They are bound to play a central part in the World League for the Preservation of Peace that must follow this struggle. There is no question of their practical union. It is a thing that must be. But it is remarkable that while the French mind is agog to apprehend every fact and detail it can about the British, to make the wisest and fullest use of our binding necessities, that strange English "incuria"--to use the new slang--attains to its most monumental in this matter.

So there is not much to say about how the British think about the French. They do not think. They feel. At the outbreak of the war, when the performance of France seemed doubtful, there was an

enormous feeling for France in Great Britain; it was like the formless feeling one has for a brother. It was as if Britain had discovered a new instinct. If France had crumpled up like paper, the English would have fought on passionately to restore her. That is ancient history now. Now the English still feel fraternal and fraternally proud; but in a mute way they are dazzled. Since the German attack on Verdun began, the French have achieved a crescendo. None of us could have imagined it. It did not seem possible to very many of us at the end of 1915 that either France or Germany could hold on for another year. There was much secret anxiety for France. It has given place now to unstinted confidence and admiration. In their astonishment the British are apt to forget the impressive magnitude of their own effort, the millions of soldiers, the innumerable guns, the endless torrent of supplies that pour into France to avenge the little army of Mons. It seems natural to us that we should so exert ourselves under the circumstances. I suppose it is wonderful, but, as a sample Englishman, I do not feel that it is at all wonderful. I did not feel it wonderful even when I saw the British aeroplanes lording it in the air over Martinpuich, and not a German to be seen. Since Michael would have it so, there, at last, they were.

There was a good deal of doubt in France about the vigour of the British effort, until the Somme offensive. All that had been dispelled in August when I reached Paris. There was not the shadow of a doubt remaining anywhere of the power and loyalty of the British. These preliminary assurances have to be made, because it is in the nature of the French mind to criticise, and it must not be supposed that criticisms of detail and method affect the fraternity and complete mutual confidence which is the stuff of the Anglo-French relationship.

Now first the French have been enormously astonished by the quality of the ordinary British soldiers in our new armies. One Colonial colonel said something almost incredible to me--almost incredible as coming as from a Frenchman; it was a matter to solemn for any compliments or polite exaggerations; he said in tones of wonder and conviction, "/They are as good as ours./" It was his acme of all possible praise.

That means any sort of British soldier. Unless he is assisted by a kilt the ordinary Frenchman is unable to distinguish between one sort of British soldier and another. He cannot tell--let the ardent nationalist mark the fact!--a Cockney from an Irishman or the Cardiff from the Essex note. He finds them all extravagantly and unquenchably cheerful and with a generosity--"like good children." There his praise is a little tinged by doubt. The British are reckless--recklessness in battle a Frenchman can understand, but they are also reckless about to-morrow's bread and whether the tent is safe against a hurricane in the night. He is struck too by the fact that they are much more vocal than the French troops, and that they seem to have a passion for bad lugubrious songs. There he smiles and shrugs his shoulders, and indeed what else can any of us do in the presence of that mystery? At any rate the legend of the "phlegmatic" Englishman has been scattered to the four winds of heaven by the guns of the western front. The men are cool in action, it is true; but for the rest they are, by the French standards, quicksilver.

But I will not expand further upon the general impression made by the English in France. Philippe Millet's */En Liaison avec les Anglais/* gives in a series of delightful pictures portraits of British types from the French angle. There can be little doubt that the British quality, genial naive, plucky and generous, has

won for itself a real affection in France wherever it has had a chance to display itself....

But when it comes to British methods then the polite Frenchman's difficulties begin. Translating hints into statements and guessing at reservations, I would say that the French fall very short of admiration of the way in which our higher officers set about their work, they are disagreeably impressed by a general want of sedulousness and close method in our leading. They think we economise brains and waste blood. They are shocked at the way in which obviously incompetent or inefficient men of the old army class are retained in their positions even after serious failures, and they were profoundly moved by the bad staff work and needlessly heavy losses of our opening attacks in July. They were ready to condone the blunderings and flounderings of the 1915 offensive as the necessary penalties of an "amateur" army, they had had to learn their own lesson in Champagne, but they were surprised to find how much the British had still to learn in July, 1916. The British officers excuse themselves because, they plead, they are still amateurs. "That is no reason," says the Frenchman, "why they should be amateurish."

No Frenchman said as much as this to me, but their meaning was as plain as daylight. I tackled one of my guides on this matter; I said that it was the plain duty of the French military people to criticise British military methods sharply if they thought they were wrong. "It is not easy," he said. "Many British officers do not think they have anything to learn. And English people do not like being told things. What could we do? We could hardly send a French officer or so to your headquarters in a tutorial capacity. You have to do things in your own way." When I tried to draw General Castelnau into this dangerous question by suggesting that we might borrow a French general or so, he would say only, "There is only one way to learn war, and that is to make war." When it was too late, in the lift, I thought of the

answer to that. There is only one way to make war, and that is by the sacrifice of incapables and the rapid promotion of able men. If old and tried types fail now, new types must be sought. But to do that we want a standard of efficiency. We want a conception of intellectual quality in performance that is still lacking....

M. Joseph Reinach, in whose company I visited the French part of the Somme front, was full of a scheme, which he has since published, for the breaking up and recomposition of the French and British armies into a series of composite armies which would blend the magnificent British manhood and material with French science and military experience. He pointed out the endless advantages of such an arrangement; the stimulus of emulation, the promotion of intimate fraternal feeling between the peoples of the two countries. "At present," he said, "no Frenchman ever sees an Englishman except at Amiens or on the Somme. Many of them still have no idea of what the English are doing...."

"Have I ever told you the story of compulsory Greek at Oxford and Cambridge?" I asked abruptly.

"What has that to do with it?"

"Or how two undistinguished civil service commissioners can hold up the scientific education of our entire administrative class?"

M. Reinach protested further.

"Because you are proposing to loosen the grip of a certain narrow and limited class upon British affairs, and you propose it as though it were a job as easy as rearranging railway fares or sending a van to Calais. That is the problem that every decent Englishman is trying to solve to-day, every man of that Greater Britain which has supplied these five million volunteers, these

magnificent temporary officers and all this wealth of munitions. And the oligarchy is so invincibly fortified! Do you think it will let in Frenchmen to share its controls? It will not even let in Englishmen. It holds the class schools; the class universities; the examinations for our public services are its class shibboleths; it is the church, the squirearchy, the permanent army class, permanent officialdom; it makes every appointment, it is the fountain of honour; what it does not know is not knowledge, what it cannot do must not be done. It rules India ignorantly and obstructively; it will wreck the empire rather than relinquish its ascendancy in Ireland. It is densely self-satisfied and instinctively monopolistic. It is on our backs, and with it on our backs we common English must bleed and blunder to victory.... And you make this proposal!"

3

The antagonistic relations of the Anglican oligarchy with the greater and greater-spirited Britain that thrust behind it in this war are probably paralleled very closely in Germany, probably they are exaggerated in Germany with a bigger military oligarchy and a relatively lesser civil body under it. This antagonism is the oddest outcome of the tremendous /demilitarisation/ of war that has been going on. In France it is probably not so marked because of the greater flexibility and adaptability of the French culture.

All military people--people, that is, professionally and primarily military--are inclined to be conservative. For thousands of years the military tradition has been a tradition of discipline. The conception of the common soldier has been a mechanically obedient, almost dehumanised man, of the officer a highly trained autocrat. In two years all this has been absolutely reversed. Individual quality, inventive organisation

and industrialism will win this war. And no class is so innocent of these things as the military caste. Long accustomed as they are to the importance of moral effect they put a brave face upon the business; they save their faces astonishingly, but they are no longer guiding and directing this war, they are being pushed from behind by forces they never foresaw and cannot control. The aeroplanes and great guns have bolted with them, the tanks begotten of naval and civilian wits, shove them to victory in spite of themselves.

Wherever I went behind the British lines the officers were going about in spurs. These spurs at last got on my nerves. They became symbolical. They became as grave an insult to the tragedy of the war as if they were false noses. The British officers go for long automobile rides in spurs. They walk about the trenches in spurs. Occasionally I would see a horse; I do not wish to be unfair in this matter, there were riding horses sometimes within two or three miles of the ultimate front, but they were rarely used.

I do not say that the horse is entirely obsolescent in this war. In was nothing is obsolete. In the trenches men fight with sticks. In the Pasubio battle the other day one of the Alpini silenced a machine gun by throwing stones. In the West African campaign we have employed troops armed with bows and arrows, and they have done very valuable work. But these are exceptional cases. The military use of the horse henceforth will be such an exceptional case. It is ridiculous for these spurs still to clink about the modern battlefield. What the gross cost of the spurs and horses and trappings of the British army amount to, and how many men are grooming and tending horses who might just as well be ploughing and milking at home, I cannot guess; it must be a total so enormous as seriously to affect the balance of the war.

And these spurs and their retention are only the outward and visible symbol of the obstinate resistance of the Anglican intelligence to the clear logic of the present situation. It is not only the external equipment of our leaders that falls behind the times; our political and administrative services are in the hands of the same desolatingly inadapted class. The British are still wearing spurs in Ireland; they are wearing them in India; and the age of the spur has passed. At the outset of this war there was an absolute cessation of criticism of the military and administrative castes; it is becoming a question whether we may not pay too heavily in blundering and waste, in military and economic lassitude, in international irritation and the accumulation of future dangers in Ireland, Egypt, India, and elsewhere, for an apparent absence of internal friction. These people have no gratitude for tacit help, no spirit of intelligent service, and no sense of fair play to the outsider. The latter deficiency indeed they call */esprit de corps/* and prize it as if it were a noble quality.

It becomes more and more imperative that the foreign observer should distinguish between this narrower, older official Britain and the greater newer Britain that struggles to free itself from the entanglement of a system outgrown. There are many Englishmen who would like to say to the French and Irish and the Italians and India, who indeed feel every week now a more urgent need of saying, "Have patience with us." The Riddle of the British is very largely solved if you will think of a great modern liberal nation seeking to slough an exceedingly tough and tight skin....

Nothing is more illuminating and self-educational than to explain one's home politics to an intelligent foreigner enquirer; it strips off all the secondary considerations, the allusiveness, the merely tactical considerations, the allusiveness, the merely tactical considerations. One sees the forest not as a confusion of trees but as something with a definite shape and place. I was

asked in Italy and in France, "Where does Lord Northcliffe come into the British system--or Lloyd George? Who is Mr. Redmond? Why is Lloyd George a Minister, and why does not Mr. Redmond take office? Isn't there something called an ordnance department, and why is there a separate ministry of munitions? Can Mr. Lloyd George remove an incapable general?..."

I found it M. Joseph Reinach particularly penetrating and persistent. It is an amusing but rather difficult exercise to recall what I tried to convey to him by way of a theory of Britain. He is by no means an uncritical listener. I explained that there is an "inner Britain," official Britain, which is Anglican or official Presbyterian, which at the outside in the whole world cannot claim to speak for twenty million Anglican or Presbyterian communicants, which monopolises official positions, administration and honours in the entire British empire, dominates the court, and, typically, is spurred and red-tabbed. (It was just at this time that the spurs were most on my nerves.)

This inner Britain, I went on to explain, holds tenaciously to its positions of advantage, from which it is difficult to dislodge it without upsetting the whole empire, and it insists upon treating the rest of the four hundred millions who constitute that empire as outsiders, foreigners, subject races and suspected persons.

"To you," I said, "it bears itself with an appearance of faintly hostile, faintly contemptuous apathy. It is still so entirely insular that it shudders at the thought of the Channel Tunnel. This is the Britain which irritates and puzzles you so intensely--that you are quite unable to conceal these feelings from me. Unhappily it is the Britain you see most of. Well, outside this official Britain is 'Greater Britain'--the real Britain with which you have to reckon in the future." (From this point a

faint flavour of mysticism crept into my dissertation. I found myself talking with something in my voice curiously reminiscent of those liberal Russians who set themselves to explain the contrasts and contradictions of "official" Russia and "true" Russia.) "This Greater Britain," I asserted, "is in a perpetual conflict with official Britain, struggling to keep it up to its work, shoving it towards its ends, endeavouring in spite of its tenacious mischievousness of the privileged to keep the peace and a common aim with the French and Irish and Italians and Russians and Indians. It is to that outer Britain that those Englishmen you found so interesting and sympathetic, Lloyd George and Lord Northcliffe, for example, belong. It is the Britain of the great effort, the Britain of the smoking factories and the torrent of munitions, the Britain of the men and subalterns of the new armies, the Britain which invents and thinks and achieves, and stands now between German imperialism and the empire of the world. I do not want to exaggerate the quality of greater Britain. If the inner set are narrowly educated, the outer set is often crudely educated. If the inner set is so close knit as to seem like a conspiracy, the outer set is so loosely knit as to seem like a noisy confusion. Greater Britain is only beginning to realise itself and find itself. For all its crudity there is a giant spirit in it feeling its way towards the light. It has quite other ambitions for the ending of the war than some haggled treaty of alliance with France and Italy; some advantage that will invalidate German competition; it begins to realise newer and wider sympathies, possibilities of an amalgamation of interests and community of aim that is utterly beyond the habits of the old oligarchy to conceive, beyond the scope of that tawdry word 'Empire' to express...."

I descended from my rhetoric to find M. Reinach asking how and when this greater Britain was likely to become politically effective.

V. THE SOCIAL CHANGES IN PROGRESS

1

"Nothing will be the same after the war." This is one of the consoling platitudes with which people cover over voids of thought. They utter it with an air of round-eyed profundity. But to ask in reply, "Then how will things be different?" is in many cases to rouse great resentment. It is almost as rude as saying, "Was that thought of yours really a thought?"

Let us in this chapter confine ourselves to the social-economic processes that are going on. So far as I am able to distinguish among the things that are being said in these matters, they may be classified out into groups that centre upon several typical questions. There is the question of "How to pay for the war?" There is the question of the behaviour of labour after the war. "Will there be a Labour Truce or a violent labour struggle?" There is the question of the reconstruction of European industry after the war in the face of an America in a state of monetary and economic repletion through non-intervention. My present purpose in this chapter is a critical one; it is not to solve problems but to set out various currents of thought that are flowing through the general mind. Which current is likely to seize upon and carry human affairs with it, is not for our present speculation.

There seem to be two distinct ways of answering the first of the questions I have noted. They do not necessarily contradict each other. Of course the war is being largely paid for immediately out of the accumulated private wealth of the past. We are buying off the "hold-up" of the private owner upon the material and resources we need, and paying in paper money and war loans. This

is not in itself an impoverishment of the community. The wealth of individuals is not the wealth of nations; the two things may easily be contradictory when the rich man's wealth consists of land or natural resources or franchises or privileges the use of which he reluctantly yields for high prices. The conversion of held-up land and material into workable and actively used material in exchange for national debt may be indeed a positive increase in the wealth of the community. And what is happening in all the belligerent countries is the taking over of more and more of the realities of wealth from private hands and, in exchange, the contracting of great masses of debt to private people. The nett tendency is towards the disappearance of a reality holding class and the destruction of realities in warfare, and the appearance of a vast /rentier/ class in its place. At the end of the war much material will be destroyed for evermore, transit, food production and industry will be everywhere enormously socialised, and the country will be liable to pay every year in interest, a sum of money exceeding the entire national expenditure before the war. From the point of view of the state, and disregarding material and moral damages, that annual interest is the annual instalment of the price to be paid for the war.

Now the interesting question arises whether these great belligerent states may go bankrupt, and if so to what extent. States may go bankrupt to the private creditor without repudiating their debts or seeming to pay less to him. They can go bankrupt either by a depreciation of their currency or--without touching the gold standard--through a rise in prices. In the end both these things work out to the same end; the creditor gets so many loaves or pairs of boots or workman's hours of labour for his pound /less/ than he would have got under the previous conditions. One may imagine this process of price (and of course wages) increase going on to a limitless extent. Many people are inclined to look to such an increase in prices as a

certain outcome of the war, and just so far as it goes, just so far will the burthen of the /rentier/ class, their call, tax is, for goods and services, be lightened. This expectation is very generally entertained, and I can see little reason against it. The intensely stupid or dishonest "labour" press, however, which in the interests of the common enemy misrepresents socialism and seeks to misguide labour in Great Britain, ignores these considerations, and positively holds out this prospect of rising prices as an alarming one to the more credulous and ignorant of its readers.

But now comes the second way of meeting the after-the-war obligations. This second way is by increasing the wealth of the state and by increasing the national production to such an extent that the payment of the /rentier/ class will not be an overwhelming burthen. Rising prices bilk the creditor. Increased production will check the rise in prices and get him a real payment. The outlook for the national creditor seems to be that he will be partly bilked and partly paid; how far he will be bilked and how far depends almost entirely upon this possible increase in production; and there is consequently a very keen and quite unprecedented desire very widely diffused among intelligent and active people, holding War Loan scrip and the like, in all the belligerent countries, to see bold and hopeful schemes for state enrichment pushed forward. The movement towards socialism is receiving an impulse from a new and unexpected quarter, there is now a /rentier/ socialism, and it is interesting to note that while the London /Times/ is full of schemes of great state enterprises, for the exploitation of Colonial state lands, for the state purchase and wholesaling of food and many natural products, and for the syndication of shipping and the great staple industries into vast trusts into which not only the British but the French and Italian governments may enter as partners, the so-called socialist press of Great Britain is chiefly busy about the draughts in the cell of Mr. Fenner

Brockway and the refusal of Private Scott Duckers to put on his khaki trousers. /The New Statesman/ and the Fabian Society, however, display a wider intelligence.

There is a great variety of suggestions for this increase of public wealth and production. Many of them have an extreme reasonableness. The extent to which they will be adopted depends, no doubt, very largely upon the politician and permanent official, and both these classes are prone to panic in the presence of reality. In spite of its own interests in restraining a rise in prices, the old official "salaried" is likely to be obstructive to any such innovations. It is the resistance of spurs and red tabs to military innovations over again. This is the resistance of quills and red tape. On the other hand the organisation of Britain for war has "officialised" a number of industrial leaders, and created a large body of temporary and adventurous officials. They may want to carry on into peace production the great new factories the war has created. At the end of the war, for example, every belligerent country will be in urgent need of cheap automobiles for farmers, tradesmen, and industrial purposes generally, America is now producing such automobiles at a price of eighty pounds. But Europe will be heavily in debt to America, her industries will be disorganised, and there will therefore be no sort of return payment possible for these hundreds of thousands of automobiles. A country that is neither creditor nor producer cannot be an importer. Consequently though those cheap tin cars may be stacked as high as the Washington Monument in America, they will never come to Europe. On the other hand the great shell factories of Europe will be standing idle and ready, their staffs disciplined and available, for conversion to the new task. The imperative common sense of the position seems to be that the European governments should set themselves straight away to out-Ford Ford, and provide their own people with cheap road transport.

But here comes in the question whether this common-sense course is inevitable. Suppose the mental energy left in Europe after the war is insufficient for such a constructive feat as this. There will certainly be the obstruction of official pedantry, the hold-up of this vested interest and that, the greedy desire of "private enterprise" to exploit the occasion upon rather more costly and less productive lines, the general distrust felt by ignorant and unimaginative people of a new way of doing things. The process after all may not get done in the obviously wise way. This will not mean that Europe will buy American cars. It will be quite unable to buy American cars. It will be unable to make anything that America will not be able to make more cheaply for itself. But it will mean that Europe will go on without cheap cars, that is to say it will go on a more sluggishly and clumsily and wastefully at a lower economic level. Hampered transport means hampered production of other things, and in increasing inability to buy abroad. And so we go down and down.

It does not follow that because a course is the manifestly right and advantageous course for the community that it will be taken. I am reminded of this by a special basket in my study here, into which I pitch letters, circulars, pamphlets and so forth as they come to hand from a gentleman named Gattie, and his friends Mr. Adrian Ross, Mr. Roy Horniman, Mr. Henry Murray and others. His particular project is the construction of a Railway Clearing House for London. It is an absolutely admirable scheme. It would cut down the heavy traffic in the streets of London to about one-third; it would enable us to run the goods traffic of England with less than half the number of railway trucks we now employ; it would turn over enormous areas of valuable land from their present use as railway goods yards and sidings; it would save time in the transit of goods and labour in their handling. It is a quite beautifully worked out scheme. For the last eight or ten years this group of devoted fanatics has been pressing

this undertaking upon an indifferent country with increasing vehemence and astonishment at that indifference. The point is that its adoption, though it would be of general benefit, would be of no particular benefit to any leading man or highly placed official. On the other hand it would upset all sorts of individuals who are in a position to obstruct it quietly--and they do so. Meaning no evil. I dip my hand in the accumulation and extract a leaflet by the all too zealous Mr. Murray. In it he denounces various public officials by name as he cheats and scoundrels, and invites a prosecution for libel.

In that fashion nothing will ever get done. There is no prosecution, but for all that I do not agree with Mr. Murray about the men he names. These gentlemen are just comfortable gentlemen, own brothers to these old generals of ours who will not take off their spurs. They are probably quite charming people except that they know nothing of that Fear of God which searches by heart. Why should they bother?

So many of these after-the-war problems bring one back to the question of how far the war has put the Fear of God into the hearts of responsible men. There is really no other reason in existence that I can imagine why they should ask themselves the question, "Have I done my best?" and that still more important question, "Am I doing my best now?" And so while I hear plenty of talk about the great reorganisations that are to come after the war, while there is the stir of doubt among the /rentiers/ whether, after all, they will get paid, while the unavoidable stresses and sacrifices of the war are making many people question the rightfulness of much that they did as a matter of course, and of much that they took for granted, I perceive there is also something dull and not very articulate in this European world, something resistant and inert, that is like the obstinate rolling over of a heavy sleeper after he has been called upon to get up. "Just a little longer.... Just for

/my/ time."

One thought alone seems to make these more intractable people anxious. I thrust it in as my last stimulant when everything else has failed. "There will be /frightful/ trouble with labour after the war," I say.

They try to persuade themselves that military discipline is breaking in labour....

2

What does British labour think of the outlook after the war?

As a distinctive thing British labour does not think. "Class-conscious labour," as the Marxists put it, scarcely exists in Britain. The only convincing case I ever met was a bath-chairman of literary habits Eastbourne. The only people who are, as a class, class-conscious in the British community are the Anglican gentry and their fringe of the genteel. Everybody else is "respectable." The mass of British workers find their thinking in the ordinary halfpenny papers or in /John Bull./ The so-called labour papers are perhaps less representative of British Labour than any other section of the press; the /Labour Leader/, for example, is the organ of such people as Bertrand Russell, Vernon Lee, Morel, academic /rentiers/ who know about as much as of the labour side of industrialism as they do of cock-fighting. All the British peoples are racially willing and good-tempered people, quite ready to be led by those they imagine to be abler than themselves. They make the most cheerful and generous soldiers in the whole world, without insisting upon that democratic respect which the Frenchman exacts. They do not criticise and they do not trouble themselves much about the general plan of operations, so long as they have confidence in

the quality and good will of their leading. But British soldiers will hiss a general when they think he is selfish, unfeeling, or a muff. And the socialist propaganda has imported ideas of public service into private employment. Labour in Britain has been growing increasingly impatient of bad or selfish industrial leadership. Labour trouble in Great Britain turns wholly upon the idea crystallised in the one word "profiteer." Legislation and regulation of hours of labour, high wages, nothing will keep labour quiet in Great Britain if labour thinks it is being exploited for private gain.

Labour feels very suspicious of private gain. For that suspicion a certain rather common type of employer is mainly to blame. Labour believes that employers is mainly to blame. Labour believes that employers as a class cheat workmen as a class, plan to cheat them of their full share in the common output, and drive hard bargains. It believes that private employers are equally ready to sacrifice the welfare of the nation and the welfare of the workers for mere personal advantage. It has a traditional experience to support these suspicions.

In no department of morals have ideas changed so completely during the last eight years as in relation to "profits". Eighty years ago everyone believed in the divine right of property to do what it pleased its advantages, a doctrine more disastrous socially than the divine right of kings. There was no such sense of the immorality of "holding up" as pervades the public conscience to-day. The worker was expected not only to work, but to be grateful for employment. The property owner held his property and handed it out for use and development or not, just as he thought fit. These ideas are not altogether extinct today. Only a few days ago I met a magnificent old lady of seventy nine or eighty, who discoursed upon the wickedness of her gardener in demanding another shilling a week because of war prices.

She was a valiant and handsome personage. A face that had still a healthy natural pinkness looked out from under blond curls, and an elegant and carefully tended hand tossed back some fine old lace to gesticulate more freely. She had previously charmed her hearers by sweeping aside certain rumours that were drifting about.

"Germans invade /Us!/" she cried. "Who'd /let/ 'em, I'd like to know? Who'd /let/ 'em?"

And then she reverted to her grievance about the gardener.

"I told him that after the war he'd be glad enough to get anything. Grateful! They'll all be coming back after the war-- all of 'em, glad enough to get anything. Asking for another shilling indeed!"

Everyone who heard her looked shocked. But that was the tone of everyone of importance in the dark years that followed the Napoleonic wars. That is just one survivor of the old tradition. Another is Blight the solicitor, who goes about bewailing the fact that we writers are "holding out false hopes of higher agricultural wages after the war." But these are both exceptions. They are held to be remarkable people even by their own class. The mass of property owners and influential people in Europe to-day no more believe in the sacred right of property to hold up development and dictate terms than do the more intelligent workers. The ideas of collective ends and of the fiduciary nature of property, had been soaking through the European community for years before the war. The necessity for sudden and even violent co-operations and submersions of individuality in a common purpose, is rapidly crystallising out these ideas into clear proposals.

War is an evil thing, but most people who will not learn from reason must have an ugly teacher. This war has brought home to everyone the supremacy of the public need over every sort of individual claim.

One of the most remarkable things in the British war press is the amount of space given to the discussion of labour developments after the war. This in its completeness peculiar to the British situation. Nothing on the same scale is perceptible in the press of the Latin allies. A great movement on the part of capitalists and business organisers is manifest to assure the worker of a change of heart and a will to change method. Labour is suspicious, not foolishly but wisely suspicious. But labour is considering it.

"National industrial syndication," say the business organisers.

"Guild socialism," say the workers.

There is also a considerable amount of talking and writing about "profit-sharing" and about giving the workers a share in the business direction. Neither of these ideas appeals to the shrewder heads among the workers. So far as direction goes their disposition is to ask the captain to command the ship. So far as profits go, they think the captain has no more right than the cabin boy to speculative gains; he should do his work for his pay whether it is profitable or unprofitable work. There is little balm for labour discontent in these schemes for making the worker also an infinitesimal profiteer.

During my journey in Italy and France I met several men who were keenly interested in business organisation. Just before I started my friend N, who has been the chief partner in the building up of a very big and very extensively advertised American business, came to see me on his way back to America. He

is as interested in his work as a scientific specialist, and as ready to talk about it to any intelligent and interested hearer. He was particularly keen upon the question of continuity in the business, when it behoves the older generation to let in the younger to responsible management and to efface themselves. He was a man of five-and-forty. Incidentally he mentioned that he had never taken anything for his private life out of the great business he had built up but a salary, "a good salary," and that now he was going to grant himself a pension. "I shan't interfere any more. I shall come right away and live in Europe for a year so as not to be tempted to interfere. The boys have got to run it some day, and they had better get their experience while they're young and capable of learning by it. I did."

I like N's ideas. "Practically," I said, "you've been a public official. You've treated your business like a public service."

That was his idea.

"Would you mind if it was a public service?"

He reflected, and some disagreeable memory darkened his face. "Under the politicians?" he said.

I took the train of thought N had set going abroad with me next day. I had the good luck to meet men who were interesting industrially. Captain Pirelli, my guide in Italy, has a name familiar to every motorist; his name goes wherever cars go, spelt with a big long capital P. Lieutenant de Tessin's name will recall one of the most interesting experiments in profit-sharing to the student of social science. I tried over N's problem on both of them. I found in both their minds just the same attitude as he takes up towards his business. They think any businesses that are worthy of respect, the sorts of businesses that interest them, are public functions. Money-lenders and speculators,

merchants and gambling gentlefolk may think in terms of profit; capable business directors certainly do nothing of the sort.

I met a British officer in France who is also a landowner. I got him to talk about his administrative work upon his property. He was very keen upon new methods. He said he tried to do his duty by his land.

"How much land?" I asked.

"Just over nine thousand acres," he said.

"But you could manage forty or fifty thousand with little more trouble."

"If I had it. In some ways it would be easier."

"What a waste!" I said. "Of course you ought not to /own/ these acres; what you ought to be is the agricultural controller of just as big an estate of the public lands as you could manage--with a suitable salary."

He reflected upon that idea. He said he did not get much of a salary out of his land as it was, and made a regrettable allusion to Mr. Lloyd George. "When a man tries to do his duty by his land," he said...

But here running through the thoughts of the Englishman and the Italian and the Frenchman and the American alike one finds just the same idea of a kind of officialdom in ownership. It is an idea that pervades our thought and public discussion to-day everywhere, and it is an idea that is scarcely traceable at all in the thought of the early half of the nineteenth century. The idea of service and responsibility in property has increased and is increasing, the conception of "hold-up," the usurer's

conception of his right to be bought out of the way, fades. And the process has been enormously enhanced by the various big-scale experiments in temporary socialism that have been forced upon the belligerent powers. Men of the most individualistic quality are being educated up to the possibilities of concerted collective action. My friend and fellow-student Y, inventor and business organiser, who used to make the best steam omnibuses in the world, and who is now making all sorts of things for the army, would go pink with suspicious anger at the mere words "inspector" or "socialism" three or four years ago. He does not do so now.

A great proportion of this sort of man, this energetic directive sort of man in England, is thinking socialism to-day. They may not be saying socialism, but they are thinking it. When labour begins to realise what is adrift it will be divided between two things: between appreciative co-operation, for which guild socialism in particular has prepared its mind, and traditional suspicion. I will not over to guess here which will prevail.

3

The impression I have of the present mental process in the European communities is that while the official class and the /rentier/ class is thinking very poorly and inadequately and with a merely obstructive disposition; while the churches are merely wasting their energies in futile self-advertisement; while the labour mass is suspicious and disposed to make terms for itself rather than come into any large schemes of reconstruction that will abolish profit as a primary aim in economic life, there is still a very considerable movement towards such a reconstruction. Nothing is so misleading as a careless analogy. In the dead years that followed the Napoleonic wars, which are often quoted as a precedent for expectation now, the spirit of collective service was near its minimum; it was never so strong

and never so manifestly spreading and increasing as it is to-day.

But service to what?

I have my own very strong preconceptions here, and since my temperament is sanguine they necessarily colour my view. I believe that this impulse to collective service can satisfy itself only under the formula that mankind is one state of which God is the undying king, and that the service of men's collective needs is the true worship of God. But eagerly as I would grasp at any evidence that this idea is being developed and taken up by the general consciousness, I am quite unable to persuade myself that anything of the sort is going on. I do perceive a search for large forms into which the prevalent impulse to devotion can be thrown. But the organised religious bodies, with their creeds and badges and their instinct for self-preservation at any cost, stand between men and their spiritual growth in just the same way the forestallers stand between men and food. Their activities at present are an almost intolerable nuisance. One cannot say "God" but some tout is instantly seeking to pluck one into his particular cave of flummery and orthodoxy. What a rational man means by God is just God. The more you define and argue about God the more he remains the same simple thing. Judaism, Christianity, Islam, modern Hindu religious thought, all agree in declaring that there is one God, master and leader of all mankind, in unending conflict with cruelty, disorder, folly and waste. To my mind, it follows immediately that there can be no king, no government of any sort, which is not either a subordinate or a rebel government, a local usurpation, in the kingdom of God. But no organised religious body has ever had the courage and honesty to insist upon this. They all pander to nationalism and to powers and princes. They exist so to pander. Every organised religion in the world exists only to exploit and divert and waste the religious impulse in man.

This conviction that the world kingdom of God is the only true method of human service, is so clear and final in my own mind, it seems so inevitably the conviction to which all right-thinking men must ultimately come, that I feel almost like a looker-on at a game of blind-man's bluff as I watch the discussion of synthetic political ideas. The blind man thrusts his seeking hands into the oddest corners, he clutches at chairs and curtains, but at last he must surely find and hold and feel over and guess the name of the plainly visible quarry.

Some of the French and Italian people I talked to said they were fighting for "Civilisation." That is one name for the kingdom of God, and I have heard English people use it too. But much of the contemporary thought of England stills wanders with its back to the light. Most of it is pawing over jerry-built, secondary things. I have before me a little book, the joint work of Dr. Grey and Mr. Turner, of an ex-public schoolmaster and a manufacturer, called */Eclipse or Empire?/* (The title */World Might or Downfall?/* had already been secured in another quarter.) It is a book that has been enormously advertised; it has been almost impossible to escape its column-long advertisements; it is billed upon the hoardings, and it is on the whole a very able and right-spirited book. It calls for more and better education, for more scientific methods, for less class suspicion and more social explicitness and understanding, for a franker and fairer treatment of labour. But why does it call for these things? Does it call for them because they are right? Because in accomplishing them one serves God?

Not at all. But because otherwise this strange sprawling empire of ours will drop back into a secondary place in the world. These two writers really seem to think that the slack workman, the slacker wealthy man, the negligent official, the conservative schoolmaster, the greedy usurer, the comfortable obstructive, confronted with this alternative, terrified at this idea of

something or other called the Empire being "eclipsed," eager for the continuance of this undefined glory over their fellow-creatures called "Empire," will perceive the error of their ways and become energetic, devoted, capable. They think an ideal of that sort is going to change the daily lives of men.... I sympathise with their purpose, and I deplore their conception of motives. If men will not give themselves for righteousness, they will not give themselves for a geographical score. If they will not work well for the hatred of bad work, they will not work well for the hatred of Germans. This "Empire" idea has been cadging about the British empire, trying to collect enthusiasm and devotion, since the days of Disraeli. It is, I submit, too big for the mean-spirited, and too tawdry and limited for the fine and generous. It leaves out the French and the Italians and the Belgians and all our blood brotherhood of allies. It has no compelling force in it. We British are not naturally Imperialist; we are something greater--or something less. For two years and a half now we have been fighting against Imperialism in its most extravagant form. It is a poor incentive to right living to propose to parody the devil we fight against.

The blind man must lunge again.

For when the right answer is seized it answers not only the question why men should work for their fellow-men but also why nation should cease to arm and plan and contrive against nation. The social problem is only the international problem in retail, the international problem is only the social one in gross.

My bias rules me altogether here. I see men in social, in economic and in international affairs alike, eager to put an end to conflict, inexpressibly weary of conflict and the waste and pain and death it involves. But to end conflict one must abandon aggressive or uncordial pretensions. Labour is sick at the idea of more strikes and struggles after the war, industrialism is

sick of competition and anxious for service, everybody is sick of war. But how can they end any of these clashes except by the definition and recognition of a common end which will establish a standard for the trial of every conceivable issue, to which, that is, every other issue can be subordinated; and what common end can there be in all the world except this idea of the world kingdom of God? What is the good of orienting one's devotion to a firm, or to class solidarity, or /La Republique Francais/, or Poland, or Albania, or such love and loyalty as people profess for King George or King Albert or the Duc d'Orleans--it puzzles me why--or any such intermediate object of self-abandonment? We need a standard so universal that the platelayer may say to the barrister or the duchess, or the Red Indian to the Limehouse sailor, or the Anzac soldier to the Sinn Feiner or the Chinaman, "What are we two doing for it?" And to fill the place of that "it," no other idea is great enough or commanding enough, but only the world kingdom of God.

However long he may have to hunt, the blind man who is seeking service and an end to bickerings will come to that at last, because of all the thousand other things he may clutch at, nothing else can satisfy his manifest need.

VI. THE ENDING OF THE WAR

1

About the end of the war there are two chief ways of thinking, there is a simpler sort of mind which desires merely a date, and a more complex kind which wants particulars. To the former class belong most of the men out at the front. They are so bored by this war that they would welcome any peace that did not definitely admit defeat--and examine the particulars later. The

"tone" of the German army, to judge by its captured letters, is even lower. It would welcome peace in any form. Never in the whole history of the world has a war been so universally unpopular as this war.

The mind of the soldier is obsessed by a vision of home-coming for good, so vivid and alluring that it blots out nearly every other consideration. The visions of people at home are of plenty instead of privation, lights up, and the cessation of a hundred tiresome restrictions. And it is natural therefore that a writer rather given to guesses and forecasts should be asked very frequently to guess how long the war has still to run.

All such forecasting is the very wildest of shooting. There are the chances of war to put one out, and of a war that changes far faster than the military intelligence. I have made various forecasts. At the outset I thought that military Germany would fight at about the 1899 level, would be lavish with cavalry and great attacks, that it would be reluctant to entrench, and that the French and British had learnt the lesson of the Boer war better than the Germans. I trusted to the melodramatic instinct of the Kaiser. I trusted to the quickened intelligence of the British military caste. The first rush seemed to bear me out, and I opened my paper day by day expecting to read of the British and French entrenched and the Germans beating themselves to death against wire and trenches. In those days I wrote of the French being over the Rhine before 1915. But it was the Germans who entrenched first.

Since then I have made some other attempts. I did not prophesy at all in 1915, so far as I can remember. If I had I should certainly have backed the Gallipoli attempt to win. It was the right thing to do, and it was done abominably. It should have given us Constantinople and brought Bulgaria to our side; it gave us a tragic history of administrative indolence and negligence,

and wasted bravery and devotion. I was very hopeful of the western offensive in 1915; and in 1916 I counted still on our continuing push. I believe we were very near something like decision this last September, but some archaic dream of doing it with cavalry dashed these hopes. The "Tanks" arrived too late to do their proper work, and their method of use is being worked out very slowly.... I still believe in the western push, if only we push it for all we are worth. If only we push it with our brains, with our available and still unorganised brains; if only we realise that the art of modern war is to invent and invent and invent. Hitherto I have always hoped and looked for decision, a complete victory that would enable the Allies to dictate peace. But such an expectation is largely conditioned by these delicate questions of adaptability that my tour of the front has made very urgent in my mind. A spiteful German American writer has said that the British would rather kill twenty thousand of their men than break one general. Even a grain of truth in such a remark is a very valid reasoning for lengthening one's estimate of the duration of the war.

There can be no doubt that the Western allies are playing a winning game upon the western front, and that this is the front of decision now. It is not in doubt that they are beating the Germans and shoving them back. The uncertain factor is the rate at which they are shoving them back. If they can presently get to so rapid an advance as to bring the average rate since July 1st up to two or three miles a day, then we shall still see the Allies dictating terms. But if the shove drags on at its present pace of less than a mile and four thousand prisoners a week over the limited Somme front only, if nothing is attempted elsewhere to increase the area of pressure, [*This was written originally before the French offensive at Verdun.] then the intolerable stress and boredom of the war will bring about a peace long before the Germans are decisively crushed. But the war, universally detested, may go on into 1918 or 1919. Food riots,

famine, and general disorganisation will come before 1920, if it does. The Allies have a winning game before them, but they seem unable to discover and promote the military genius needed to harvest an unquestionable victory. In the long run this may not be an unmixed evil. Victory, complete and dramatic, may be bought too dearly. We need not triumphs out of this war but the peace of the world.

This war is altogether unlike any previous war, and its ending, like its development, will follow a course of its own. For a time people's minds ran into the old grooves, the Germans were going /nach Paris/ and /nach London/; Lord Curzon filled our minds with a pleasant image of the Bombay Lancers riding down /Unter den Linden./ But the Versailles precedent of a council of victors dictating terms to the vanquished is not now so evidently in men's minds. The utmost the Allies talk upon now is to say, "We must end the war on German soil." The Germans talk frankly of "holding out." I have guessed that the western offensive will be chiefly on German soil by next June; it is a mere guess, and I admit it is quite conceivable that the "push" may still be grinding out its daily tale of wounded and prisoners in 1918 far from that goal.

None of the combatants expected such a war as this, and the consequence is that the world at large has no idea how to get out of it. The war may stay with us like a schoolboy caller, because it does not know how to go. The Italians said as much to me. "Suppose we get to Innsbruck and Laibach and Trieste," they said, "it isn't an end!" Lord Northcliffe, I am told, came away from Italy with the conviction that the war would last six years.

There is the clearest evidence that nearly everyone is anxious to get out of the war now. Nobody at all, except perhaps a few people who may be called to account, and a handful of greedy profit-seekers, wants to keep it going. Quietly perhaps and

unobtrusively, everyone I know is now trying to find the way out of the war, and I am convinced that the same is the case in Germany. That is what makes the Peace-at-any-price campaign so exasperating. It is like being chased by clamorous geese across a common in the direction in which you want to go. But how are we to get out--with any credit--in such a way as to prevent a subsequent collapse into another war as frightful?

At present three programmes are before the world of the way in which the war can be ended. The first of these assumes a complete predominance of our Allies. It has been stated in general terms by Mr. Asquith. Evacuation, reparation, due punishment of those responsible for the war, and guarantees that nothing of the sort shall happen again. There is as yet no mention of the nature of these guarantees. Just exactly what is to happen to Poland, Austria, and the Turkish Empire does not appear in this prospectus. The German Chancellor is equally elusive. The Kaiser has stampeded the peace-at-any-price people of Great Britain by proclaiming that Germany wants peace. We knew that. But what sort of peace? It would seem that we are promised vaguely evacuation and reparation on the western frontier, and in addition there are to be guarantees--but it is quite evident that they are altogether different guarantees from Mr. Asquith's--that nothing of the sort is ever to happen again. The programme of the British and their Allies seems to contemplate something like a forcible disarmament and military occupation of Belgium, the desertion of Serbia and Russia, and the surrender to Germany of every facility for a later and more successful German offensive in the west. But it is clear that on these terms as stated the war must go on to the definite defeat of one side or the other, or a European chaos. They are irreconcilable sets of terms.

Yet it is hard to say how they can be modified on either side, if the war is to be decided only between the belligerents and by

standards of national interest only, without reference to any other considerations. Our Allies would be insane to leave the Hohenzollern at the end of the war with a knife in his hand, after the display he has made of his quality. To surrender his knife means for the Hohenzollern the abandonment of his dreams, the repudiation of the entire education and training of Germany for half a century. When we realise the fatality of this antagonism, we realise how it is that, in this present anticipation of hell, the weary, wasted and tormented nations must still sustain their monstrous dreary struggle. And that is why this thought that possible there may be a side way out, a sort of turning over of the present endlessly hopeless game into a new and different and manageable game through the introduction of some external factor, creeps and spreads as I find it creeping and spreading.

That is what the finer intelligences of America are beginning to realise, and why men in Europe continually turn their eyes to America, with a surmise, with a doubt.

A point of departure for very much thinking in this matter is the recent speech of President Wilson that heralded the present discussion. All Europe was impressed by the truth, and by President Wilson's recognition of the truth, that from any other great war after this America will be unable to abstain. Can America come into this dispute at the end to insist upon something better than a new diplomatic patchwork, and so obviate the later completer Armageddon? Is there, above the claims and passions of Germany, France, Britain, and the rest of them, a conceivable right thing to do for all mankind, that it might also be in the interest of America to support? Is there a Third Party solution, so to speak, which may possibly be the way out from this war?

And further I would go on to ask, is not this present exchange of

Notes, appealing to the common sense of the world, really the beginning, and the proper beginning, of the unprecedented Peace Negotiations to end this unprecedented war? And, I submit, the longer this open discussion goes on before the doors close upon the secret peace congress the better for mankind.

2

Let me sketch out here what I conceive to be the essentials of a world settlement. Some of the items are the mere commonplaces of everyone who discusses this question; some are less frequently insisted upon. I have been joining up one thing to another, suggestions I have heard from this man and that, and I believe that it is really possible to state a solution that will be acceptable to the bulk of reasonable men all about the world. Directly we put the panic-massacres of Dinant and Louvain, the crime of the /Lusitania/ and so on into the category of symptoms rather than essentials, outrages that call for special punishments and reparations, but that do not enter further into the ultimate settlement, we can begin to conceive a possible world treaty. Let me state the broad outlines of this pacification. The outlines depend one upon the other; each is a condition of the other. It is upon these lines that the thoughtful, as distinguished from the merely the combative people, seem to be drifting everywhere.

In the first place, it is agreed that there would have to be an identical treaty between all the great powers of the world binding them to certain things. It would have to provide:---

That the few great industrial states capable of producing modern war equipment should take over and control completely the manufacture of all munitions of war in the world. And that they

should absolutely close the supply of such material to all the other states in the world. This is a far easier task than many people suppose. War has now been so developed on its mechanical side that the question of its continuance or abolition rests now entirely upon four or five great powers.

Next comes the League of Peace idea; that there should be an International Tribunal for the discussion and settlement of international disputes. That the dominating powers should maintain land and sea forces only up to a limit agreed upon and for internal police use only or for the purpose of enforcing the decisions of the Tribunal. That they should all be bound to attack and suppress any power amongst them which increases its war equipment beyond its defined limits.

That much has already been broached in several quarters. But so far is not enough. It ignores the chief processes of that economic war that aids and abets and is inseparably a part of modern international conflicts. If we are to go as far as we have already stated in the matter of international controls, then we must go further and provide that the International Tribunal should have power to consider and set aside all tariffs and localised privileges that seem grossly unfair or seriously irritating between the various states of the world. It should have power to pass or revise all new tariff, quarantine, alien exclusion, or the like legislation affecting international relations. Moreover, it should take over and extend the work of the International Bureau of Agriculture at Rome with a view to the control of all staple products. It should administer the sea law of the world, and control and standardise freights in the common interests of mankind. Without these provisions it would be merely preventing the use of certain weapons; it would be doing nothing to prevent countries strangling or suffocating each other by commercial warfare. It would not abolish war.

Now upon this issue people do not seem to me to be yet thinking very clearly. It is the exception to find anyone among the peace talkers who really grasps how inseparably the necessity for free access for everyone to natural products, to coal and tropical products, e.g. free shipping at non-discriminating tariffs, and the recognition by a Tribunal of the principle of common welfare in trade matters, is bound up with the ideal of a permanent world peace. But any peace that does not provide for these things will be merely laying down of the sword in order to take up the cudgel. And a "peace" that did not rehabilitate industrial Belgium, Poland, and the north of France would call imperatively for the imposition upon the Allies of a system of tariffs in the interests of these countries, and for a bitter economic "war after the war" against Germany. That restoration is, of course, an implicit condition to any attempt to set up an economic peace in the world.

These things being arranged for the future, it would be further necessary to set up an International Boundary Commission, subject to certain defining conditions agreed upon by the belligerents, to re-draw the map of Europe, Asia, and Africa. This war does afford an occasion such as the world may never have again of tracing out the "natural map" of mankind, the map that will secure the maximum of homogeneity and the minimum of racial and economic freedom. All idealistic people hope for a restored Poland. But it is a childish thing to dream of a contented Poland with Posen still under the Prussian heel, with Cracow cut off, and without a Baltic port. These claims of Poland to completeness have a higher sanction than the mere give and take of belligerents in congress.

Moreover this International Tribunal, if it was indeed to prevent war, would need also to have power to intervene in the affairs of any country or region in a state of open and manifest disorder, for the protection of foreign travellers and of persons and

interests localised in that country but foreign to it.

Such an agreement as I have here sketched out would at once lift international politics out of the bloody and hopeless squalor of the present conflict. It is, I venture to assert, the peace of the reasonable man in any country whatever. But it needs the attention of such a disengaged people as the American people to work it out and supply it with--weight. It needs putting before the world with some sort of authority greater than its mere entire reasonableness. Otherwise it will not come before the minds of ordinary men with the effect of a practicable proposition. I do not see any such plant springing from the European battlefields. It is America's supreme opportunity. And yet it is the common sense of the situation, and the solution that must satisfy a rational German as completely as a rational Frenchman or Englishman. It has nothing against it but the prejudice against new and entirely novel things.

3

In throwing out the suggestion that America should ultimately undertake the responsibility of proposing a world peace settlement, I admit that I run counter to a great deal of European feeling. Nowhere in Europe now do people seem to be in love with the United States. But feeling is a colour that passes. And the question is above matters of feeling. Whether the belligerents dislike Americans or the Americans dislike the belligerents is an incidental matter. The main question is of the duty of a great and fortunate nation towards the rest of the world and the future of mankind.

I do not know how far Americans are aware of the trend of feeling in Europe at the present time. Both France and Great Britain have a sense of righteousness in this war such as no nation, no

people, has ever felt in war before. We know we are fighting to save all the world from the rule of force and the unquestioned supremacy of the military idea. Few Frenchmen or Englishmen can imagine the war presenting itself to an American intelligence under any other guise. At the invasion of Belgium we were astonished that America did nothing. At the sinking of the /Lusitania/ all Europe looked to America. The British mind contemplates the spectacle of American destroyers acting as bottleholders to German submarines with a dazzled astonishment. "Manila," we gasp. In England we find excuses for America in our own past. In '64 we betrayed Denmark; in '70 we deserted France. The French have not these memories. They do not understand the damning temptations of those who feel they are "/au-dessus de la meele./" They believe they had some share in the independence of America, that there is a sacred cause in republicanism, that there are grounds for a peculiar sympathy between France and the United States in republican institutions. They do not realise that Germany and America have a common experience in recent industrial development, and a common belief in the "degeneracy" of all nations with a lower rate of trade expansion. They do not realise how a political campaign with the slogan of "Peace and a Full Dinner-Pail" looks in the middle west, what an honest, simple, rational appeal it makes there. Atmospheres alter values. In Europe, strung up to tragic and majestic issues, to Europe gripping a gigantic evil in a death struggle, that would seem an inscription worthy of a pigsty. A child in Europe would know now that the context is, "until the bacon-buyer calls," and it is difficult to realise that adult citizens in America may be incapable of realising that obvious context.

I set these things down plainly. There is a very strong disposition in all the European countries to believe America fundamentally indifferent to the rights and wrongs of the European struggle; sentimentally interested perhaps, but

fundamentally indifferent. President Wilson is regarded as a mere academic sentimentalist by a great number of Europeans. There is a very widespread disposition to treat America lightly and contemptuously, to believe that America, as one man put it to me recently, "hasn't the heart to do anything great or the guts to do anything wicked." There is a strong undercurrent of hostility therefore to the idea of America having any voice whatever in the final settlement after the war. It is not for a British writer to analyse the appearance that have thus affected American world prestige. I am telling what I have observed.

Let me relate two trivial anecdotes.

X came to my hotel in Paris one day to take me to see a certain munitions organisation. He took from his pocket a picture postcard that had been sent him by a well-meaning American acquaintance from America. It bore a portrait of General Lafayette, and under it was printed the words, "General Lafayette, /Colonel in the United States army./"

"Oh! These Americans!" said X with a gesture.

And as I returned to Paris from the French front, our train stopped at some intermediate station alongside of another train of wounded men. Exactly opposite our compartment was a car. It arrested our conversation. It was, as it were, an ambulance /de grand luxe/; it was a thing of very light, bright wood and very golden decorations; at one end of it was painted very large and fair the Stars and Stripes, and at the other fair-sized letters of gold proclaimed--I am sure the lady will not resent this added gleam of publicity--"Presented by Mrs. William Vanderbilt."

My companions were French writers and French military men, and they were discussing with very keen interest that persistent

question, "the ideal battery." But that ambulance sent a shaft of light into our carriage, and we stared together.

Then Colonel Z pointed with two fingers and remarked to us, without any excess of admiration:

"/America!/"

Then he shrugged his shoulders and pulled down the corners of his mouth.

We felt there was nothing more to add to that, and after a little pause the previous question was resumed.

I state these things in order to make it clear that America will start at a disadvantage when she starts upon the mission of salvage and reconciliation which is, I believe, her proper role in this world conflict. One would have to be blind and deaf on this side to be ignorant of European persuasion of America's triviality. I would not like to be an American travelling in Europe now, and those I meet here and there have some of the air of men who at any moment may be dunned for a debt. They explode without provocation into excuses and expostulations.

And I will further confess that when Viscount Grey answered the intimations of President Wilson and ex-President Taft of an American initiative to found a World League for Peace, by asking if America was prepared to back that idea with force, he spoke the doubts of all thoughtful European men. No one but an American deeply versed in the idiosyncrasies of the American population can answer that question, or tell us how far the delusion of world isolation which has prevailed in America for several generations has been dispelled. But if the answer to Lord Grey is "Yes," then I think history will emerge with a

complete justification of the obstinate maintenance of neutrality by America. It is the end that reveals a motive. It is our ultimate act that sometimes teaches us our original intention. No one can judge the United States yet. Were you neutral because you are too mean and cowardly, or too stupidly selfish, or because you had in view an end too great to be sacrificed to a moment of indignant pride and a force in reserve too precious to dispel? That is the still open question for America.

Every country is a mixture of many strands. There is a Base America, there is a Dull America, there is an Ideal and Heroic America. And I am convinced that at present Europe underrates and misjudges the possibilities of the latter.

All about the world to-day goes a certain freemasonry of thought. It is an impalpable and hardly conscious union of intention. It thinks not in terms of national but human experience; it falls into directions and channels of thinking that lead inevitably to the idea of a world-state under the rule of one righteousness. In no part of the world is this modern type of mind so abundantly developed, less impeded by antiquated and perverse political and religious forms, and nearer the sources of political and administrative power, than in America. It does not seem to matter what thousand other things America may happen to be, seeing that it is also that. And so, just as I cling to the belief, in spite of hundreds of adverse phenomena, that the religious and social stir of these times must ultimately go far to unify mankind under the kingship of God, so do I cling also to the persuasion that there are intellectual forces among the rational elements in the belligerent centres, among the other neutrals and in America, that will co-operate in enabling the United States to play that role of the Unimpassioned Third Party, which becomes more and more necessary to a generally satisfactory ending of the war.

The idea that the settlement of this war must be what one might call an unimpassioned settlement or, if you will, a scientific settlement or a judicial and not a treaty settlement, a settlement, that is, based upon some conception of what is right and necessary rather than upon the relative success or failure of either set of belligerents to make its Will the standard of decision, is one that, in a great variety of forms and partial developments, I find gaining ground in the most different circles. The war was an adventure, it was the German adventure under the Hohenzollern tradition, to dominate the world. It was to be the last of the Conquests. It has failed. Without calling upon the reserve strength of America the civilised world has defeated it, and the war continues now partly upon the issue whether it shall be made for ever impossible, and partly because Germany has no organ but its Hohenzollern organisation through which it can admit its failure and develop its latent readiness for a new understanding on lines of mutual toleration. For that purpose nothing more reluctant could be devised than Hohenzollern imperialism. But the attention of every new combatant--it is not only Germany now--has been concentrated upon military necessities; every nation is a clenched nation, with its powers of action centred in its own administration, bound by many strategic threats and declarations, and dominated by the idea of getting and securing advantages. It is inevitable that a settlement made in a conference of belligerents alone will be shortsighted, harsh, limited by merely incidental necessities, and obsessed by the idea of hostilities and rivalries continuing perennially; it will be a trading of advantages for subsequent attacks. It will be a settlement altogether different in effect as well as in spirit from a world settlement made primarily to establish a new phase in the history of mankind.

Let me take three instances of the impossibility of complete victory /on either side/ giving a solution satisfactory to the conscience and intelligence of reasonable men.

The first--on which I will not expatiate, for everyone knows of its peculiar difficulty--is Poland.

The second is a little one, but one that has taken hold of my imagination. In the settlement of boundaries preceding this war the boundary between Serbia and north-eastern Albania was drawn with an extraordinary disregard of the elementary needs of the Albanians of that region. It ran along the foot of the mountains which form their summer pastures and their refuge from attack, and it cut their mountains off from their winter pastures and market towns. Their whole economic life was cut to pieces and existence rendered intolerable for them. Now an intelligent Third Party settling Europe would certainly restore these market towns, Ipek, Jakova, and Prisrend, to Albania. But the Albanians have no standing in this war; theirs is the happy lot that might have fallen to Belgium had she not resisted; the war goes to and fro through Albania; and when the settlement comes, it is highly improbable that the slightest notice will be taken of Albania's plight in the region. In which case these particular Albanians will either be driven into exile to America or they will be goaded to revolt, which will be followed no doubt by the punitive procedure usual in the Balkan peninsula.

For my third instance I would step from a matter as small as three market towns and the grazing of a few thousand head of sheep to a matter as big as the world. What is going to happen to the shipping of the world after this war? The Germans, with that combination of cunning and stupidity which baffles the rest of mankind, have set themselves to destroy the mercantile marine not merely of Britain and France but of Norway and Sweden, Holland, and all the neutral countries. The German papers openly

boast that they are building up a big mercantile marine that will start out to take up the world's overseas trade directly peace is declared. Every such boast receives careful attention in the British press. We have heard a very great deal about the German will-to-power in this war, but there is something very much older and tougher and less blatant and conspicuous, the British will. In the British papers there has appeared and gained a permanent footing this phrase, "ton for ton." This means that Britain will go on fighting until she has exacted and taken over from Germany the exact equivalent of all the British shipping Germany has submarined. People do not realise that a time may come when Germany will be glad and eager to give Russia, France and Italy all that they require of her, when Great Britain may be quite content to let her allies make an advantageous peace and herself still go on fighting Germany. She does not intend to let that furtively created German mercantile marine ship or coal or exist upon the high seas--so long as it can be used as an economic weapon against her. Neither Britain nor France nor Italy can tolerate anything of the sort.

It has been the peculiar boast of Great Britain that her shipping has been unpatriotic. She has been the impartial carrier of the whole world. Her shippers may have served their own profit; they have never served hers. The fluctuations of freight charges may have been a universal nuisance, but they have certainly not been an aggressive national conspiracy. It is Britain's case against any German ascendancy at sea, an entirely convincing case, that such an ascendancy would be used ruthlessly for the advancement of German world power. The long-standing freedom of the seas vanishes at the German touch. So beyond the present war there opens the agreeable prospect of a mercantile struggle, a bitter freight war and a war of Navigation Acts for the ultimate control in the interests of Germany or of the Anti-German allies, of the world's trade.

Now how in any of these three cases can the bargaining and trickery of diplomatists and the advantage-hunting of the belligerents produce any stable and generally beneficial solution? What all the neutrals want, what every rational and far-sighted man in the belligerent countries wants, what the common sense of the whole world demands, is neither the "ascendancy" of Germany nor the "ascendancy" of Great Britain nor the "ascendancy" of any state or people or interest in the shipping of the world. The plain right thing is a world shipping control, as impartial as the Postal Union. What right and reason and the welfare of coming generations demand in Poland is a unified and autonomous Poland, with Cracow, Danzig, and Posen brought into the same Polish-speaking ring-fence with Warsaw. What everyone who has looked into the Albanian question desires is that the Albanians shall pasture their flocks and market their sheepskins in peace, free of Serbian control. In every country at present at war, the desire of the majority of people is for a non-contentious solution that will neither crystallise a triumph nor propitiate an enemy, but which will embody the economic and ethnological and geographical common sense of the matter. But while the formulae of national belligerence are easy, familiar, blatant, and instantly present, the gentler, greater formulae of that wider and newer world pacifism has still to be generally understood. It is so much easier to hate and suspect than negotiate generously and patiently; it is so much harder to think than to let go in a shrill storm of hostility. The rational pacifist is hampered not only by belligerency, but by a sort of malignant extreme pacifism as impatient and silly as the extremest patriotism.

5

I sketch out these ideas of a world pacification from a third-party standpoint, because I find them crystallising out in men's

minds. I note how men discuss the suggestion that America may play a large part in such a permanent world pacification. There I end my account rendered. These things are as much a part of my impression of the war as a shell-burst on the Carso or the yellow trenches at Martinpuich. But I do not know how opinion is going in America, and I am quite unable to estimate the power of these new ideas I set down, relative to the blind forces of instinct and tradition that move the mass of mankind. On the whole I believe more in the reason-guided will-power of men than I did in the early half of 1914. If I am doubtful whether after all this war will "end war," I think on the other hand it has had such an effect of demonstration that it may start a process of thought and conviction, it may sow the world with organisations and educational movements considerable enough to grapple with an either arrest or prevent the next great war catastrophe. I am by no means sure even now that this is not the last great war in the experience of men. I still believe it may be.

The most dangerous thing in the business so far is concerned is the wide disregard of the fact that national economic fighting is bound to cause war, and the almost universal ignorance of the necessity of subjecting shipping and overseas and international trade to some kind of international control. These two things, restraint of trade and advantage of shipping, are the chief material causes of anger between modern states. But they would not be in themselves dangerous things if it were not for the exaggerated delusions of kind and difference, and the crack-brained "loyalties" arising out of these, that seem still to rule men's minds. Years ago I came to the conviction that much of the evil in human life was due to the inherent vicious disposition of the human mind to intensify classification.[*See my "First and Last Things," Book I. and my "Modern Utopia," Chapter X.] I do not know how it will strike the reader, but to me this war, this slaughter of eight or nine million people, is due almost entirely to this little, almost universal lack of clear-headedness; I

believe that the share of wickedness in making war is quite secondary to the share of this universal shallow silliness of outlook. These effigies of emperors and kings and statesmen that lead men into war, these legends of nationality and glory, would collapse before our universal derision, if they were not stuffed tight and full with the unthinking folly of the common man.

There is in all of us an indolent capacity for suffering evil and dangerous things, that I contemplate each year of my life with a deepening incredulity. I perceive we suffer them; I record the futile protests of the intelligence. It seems to me incredible that men should not rise up out of this muddy, bloody, wasteful mess of a world war, with a resolution to end for ever the shams, the prejudices, the pretences and habits that have impoverished their lives, slaughtered our sons, and wasted the world, a resolution so powerful and sustained that nothing could withstand it.

But it is not apparent that any such will arises. Does it appear at all? I find it hard to answer that question because my own answer varies with my mood. There are moods when it seems to me that nothing of the sort is happening. This war has written its warning in letters of blood and flame and anguish in the skies of mankind for two years and a half. When I look for the collective response to that warning, I see a multitude of little chaps crawling about their private ends like mites in an old cheese. The kings are still in their places, not a royal prince has been killed in this otherwise universal slaughter; when the fatuous portraits of the monarchs flash upon the screen the widows and orphans still break into loyal song. The ten thousand religions of mankind are still ten thousand religions, all busy at keeping men apart and hostile. I see scarcely a measurable step made anywhere towards that world kingdom of God, which is, I assert, the manifest solution, the only formula that can bring peace to all mankind. Mankind as a whole seems to have learnt nothing and

forgotten nothing in thirty months of war.

And then on the other hand I am aware of much quiet talking. This book tells of how I set out to see the war, and it is largely conversation.... Perhaps men have always expected miracles to happen; if one had always lived in the night and only heard tell of the day, I suppose one would have expected dawn to come as a vivid flash of light. I suppose one would still think it was night long after the things about one had crept out of the darkness into visibility. In comparison with all previous wars there has been much more thinking and much more discussion. If most of the talk seems to be futile, if it seems as if everyone were talking and nobody doing, it does not follow that things are not quietly slipping and sliding out of their old adjustments amidst the babble and because of the babble. Multitudes of men must be struggling with new ideas. It is reasonable to argue that there must be reconsideration, there must be time, before these millions of mental efforts can develop into a new collective purpose and really /show/--in consequences.

But that they will do so is my hope always and, on the whole, except in moods of depression and impatience, my belief. When one has travelled to a conviction so great as mine it is difficult to doubt that other men faced by the same universal facts will not come to the same conclusion. I believe that only through a complete simplification of religion to its fundamental idea, to a world-wide realisation of God as the king of the heart and of all mankind, setting aside monarchy and national egotism altogether, can mankind come to any certain happiness and security. The precedent of Islam helps my faith in the creative inspiration of such a renaissance of religion. The Sikh, the Moslem, the Puritan have shown that men can fight better for a Divine Idea than for any flag or monarch in the world. It seems to me that illusions fade and effigies lose credit everywhere. It is a very wonderful thing to me that China is now a

republic.... I take myself to be very nearly an average man, abnormal only by reason of a certain mental rapidity. I conceive myself to be thinking as the world thinks, and if I find no great facts, I find a hundred little indications to reassure me that God comes. Even those who have neither the imagination nor the faith to apprehend God as a reality will, I think, realise presently that the Kingdom of God over a world-wide system of republican states, is the only possible formula under which we may hope to unify and save mankind.

THE SECRET PLACES OF THE HEART

CHAPTER THE FIRST

THE CONSULTATION

Section 1

The maid was a young woman of great natural calmness; she was accustomed to let in visitors who had this air of being annoyed and finding one umbrella too numerous for them. It mattered nothing to her that the gentleman was asking for Dr. Martineau as if he was asking for something with an unpleasant taste. Almost imperceptibly she relieved him of his umbrella and juggled his hat and coat on to a massive mahogany stand. "What name, Sir?" she asked, holding open the door of the consulting room.

"Hardy," said the gentleman, and then yielding it reluctantly with its distasteful three-year-old honour, "Sir Richmond Hardy."

The door closed softly behind him and he found himself in undivided possession of the large indifferent apartment in which the nervous and mental troubles of the outer world eddied for a time on their way to the distinguished specialist. A bowl of daffodils, a handsome bookcase containing bound Victorian magazines and antiquated medical works, some paintings of Scotch scenery, three big armchairs, a buhl clock, and a bronze Dancing Faun, by their want of any collective idea enhanced rather than mitigated the promiscuous disregard of the room. He drifted to the midmost of the three windows and stared out despondently at Harley Street.

For a minute or so he remained as still and limp as an empty jacket on its peg, and then a gust of irritation stirred him.

"Damned fool I was to come here," he said..."DAMNED fool!

"Rush out of the place? . . .

"I've given my name." . . .

He heard the door behind him open and for a moment pretended not to hear. Then he turned round. "I don't see what you can do for me," he said.

"I'm sure I don't," said the doctor. "People come here and talk."

There was something reassuringly inaggressive about the figure that confronted Sir Richmond. Dr. Martineau's height wanted at least three inches of Sir Richmond's five feet eleven; he was humanly plump, his face was round and pink and cheerfully wistful, a little suggestive of the full moon, of what the full moon might be if it could get fresh air and exercise. Either his tailor had made his trousers too short or he had braced them too high so that he seemed to have grown out of them quite recently. Sir Richmond had been dreading an encounter with some dominating and mesmeric personality; this amiable presence dispelled his preconceived resistances.

Dr. Martineau, a little out of breath as though he had been running upstairs, with his hands in his trouser pockets, seemed intent only on disavowals. "People come here and talk. It does them good, and sometimes I am able to offer a suggestion.

"Talking to someone who understands a little," he expanded the idea.

"I'm jangling damnably...overwork... . . ."

"Not overwork," Dr. Martineau corrected. "Not overwork. Overwork never hurt anyone. Fatigue stops that. A man can work--good straightforward work, without internal resistance, until he drops,--and never hurt himself. You must be working against friction."

"Friction! I'm like a machine without oil. I'm grinding to death. . . . And it's so DAMNED important I SHOULDN'T break down. It's VITALLY important."

He stressed his words and reinforced them with a quivering gesture of his upraised clenched hand. "My temper's in rags. I explode at any little thing. I'm RAW. I can't work steadily for ten minutes and I can't leave off working."

"Your name," said the doctor, "is familiar. Sir Richmond Hardy? In the papers. What is it?"

"Fuel."

"Of course! The Fuel Commission. Stupid of me! We certainly can't afford to have you ill."

"I AM ill. But you can't afford to have me absent from that Commission."

"Your technical knowledge--"

"Technical knowledge be damned! Those men mean to corner the

national fuel supply. And waste it! For their profits. That's what I'm up against. You don't know the job I have to do. You don't know what a Commission of that sort is. The moral tangle of it. You don't know how its possibilities and limitations are canvassed and schemed about, long before a single member is appointed. Old Cassidy worked the whole thing with the prime minister. I can see that now as plain as daylight. I might have seen it at first. . . . Three experts who'd been got at; they thought I'd been got at; two Labour men who'd do anything you wanted them to do provided you called them 'level-headed.' Wagstaffe the socialist art critic who could be trusted to play the fool and make nationalization look silly, and the rest mine owners, railway managers, oil profiteers, financial adventurers. . . . "

He was fairly launched. "It's the blind folly of it! In the days before the war it was different. Then there was abundance. A little grabbing or cornering was all to the good. All to the good. It prevented things being used up too fast. And the world was running by habit; the inertia was tremendous. You could take all sorts of liberties. But all this is altered. We're living in a different world. The public won't stand things it used to stand. It's a new public. It's--wild. It'll smash up the show if they go too far. Everything short and running shorter--food, fuel, material. But these people go on. They go on as though nothing had changed. . . . Strikes, Russia, nothing will warn them. There are men on that Commission who would steal the brakes off a mountain railway just before they went down in it. . . . It's a struggle with suicidal imbeciles. It's--! But I'm talking! I didn't come here to talk Fuel."

"You think there may be a smash-up?"

"I lie awake at night, thinking of it."

"A social smash-up."

"Economic. Social. Yes. Don't you?"

"A social smash-up seems to me altogether a possibility. All sorts of people I find think that," said the doctor. "All sorts of people lie awake thinking of it."

"I wish some of my damned Committee would!"

The doctor turned his eyes to the window. "I lie awake too," he said and seemed to reflect. But he was observing his patient acutely--with his ears.

"But you see how important it is," said Sir Richmond, and left his sentence unfinished.

"I'll do what I can for you," said the doctor, and considered swiftly what line of talk he had best follow.

Section 2

"This sense of a coming smash is epidemic," said the doctor. "It's at the back of all sorts of mental trouble. It is a new state of mind. Before the war it was abnormal--a phase of neurasthenia. Now it is almost the normal state with whole classes of intelligent people. Intelligent, I say. The others always have been casual and adventurous and always will be. A loss of confidence in the general background of life. So that we seem to float over abysses."

"We do," said Sir Richmond.

"And we have nothing but the old habits and ideas acquired in

the days of our assurance. There is a discord, a jarring."

The doctor pursued his train of thought. "A new, raw and dreadful sense of responsibility for the universe. Accompanied by a realization that the job is overwhelmingly too big for us."

"We've got to stand up to the job," said Sir Richmond. "Anyhow, what else is there to do? We MAY keep things together. . . . "I've got to do my bit. And if only I could hold myself at it, I could beat those fellows. But that's where the devil of it comes in. Never have I been so desirous to work well in my life. And never have I been so slack and weak-willed and inaccurate. . . . Sloppy. . . . Indolent. . . . VISCIOUS! . . . "

The doctor was about to speak, but Sir Richmond interrupted him. "What's got hold of me? What's got hold of me? I used to work well enough. It's as if my will had come untwisted and was ravelling out into separate strands. I've lost my unity. I'm not a man but a mob. I've got to recover my vigour. At any cost."

Again as the doctor was about to speak the word was taken out of his mouth. "And what I think of it, Dr. Martineau, is this: it's fatigue. It's mental and moral fatigue. Too much effort. On too high a level. And too austere. One strains and fags. FLAGS! 'Flags' I meant to say. One strains and flags and then the lower stuff in one, the subconscious stuff, takes control."

There was a flavour of popularized psychoanalysis about this, and the doctor drew in the corners of his mouth and gave his head a critical slant. "M'm." But this only made Sir Richmond raise his voice and quicken his speech. "I want," he said, "a

good tonic. A pick-me-up, a stimulating harmless drug of some sort. That's indicated anyhow. To begin with. Something to pull me together, as people say. Bring me up to the scratch again."

"I don't like the use of drugs," said the doctor.

The expectation of Sir Richmond's expression changed to disappointment. "But that's not reasonable," he cried.

"That's not reasonable. That's superstition. Call a thing a drug and condemn it! Everything is a drug. Everything that affects you. Food stimulates or tranquillizes. Drink. Noise is a stimulant and quiet an opiate. What is life but response to stimulants? Or reaction after them? When I'm exhausted I want food. When I'm overactive and sleepless I want tranquillizing. When I'm dispersed I want pulling together."

"But we don't know how to use drugs," the doctor objected.

"But you ought to know."

Dr. Martineau fixed his eye on a first floor window sill on the opposite side of Harley Street. His manner suggested a lecturer holding on to his theme.

"A day will come when we shall be able to manipulate drugs--all sorts of drugs--and work them in to our general way of living. I have no prejudice against them at all. A time will come when we shall correct our moods, get down to our reserves of energy by their help, suspend fatigue, put off sleep during long spells of exertion. At some sudden crisis for example. When we shall know enough to know just how far to go with this, that or the other stuff. And how to wash out its after effects I quite agree with you,--in principle But that time hasn't come yet. . . .

Decades of research yet. . . . If we tried that sort of thing now, we should be like children playing with poisons and explosives. . . . It's out of the question."

"I've been taking a few little things already. Easton Syrup for example."

"Strychnine. It carries you for a time and drops you by the way. Has it done you any good--any NETT good? It has--I can see--broken your sleep."

The doctor turned round again to his patient and looked up into his troubled face.

"Given physiological trouble I don't mind resorting to a drug. Given structural injury I don't mind surgery. But except for any little mischief your amateur drugging may have done you do not seem to me to be either sick or injured. You've no trouble either of structure or material. You are--worried--ill in your mind, and otherwise perfectly sound. It's the current of your thoughts, fermenting. If the trouble is in the mental sphere, why go out of the mental sphere for a treatment? Talk and thought; these are your remedies. Cool deliberate thought. You're unravelled. You say it yourself. Drugs will only make this or that unravelled strand behave disproportionately. You don't want that. You want to take stock of yourself as a whole--find out where you stand.

"But the Fuel Commission?"

"Is it sitting now?"

"Adjourned till after Whitsuntide. But there's heaps of work to be done.

"Still," he added, "this is my one chance of any treatment."

The doctor made a little calculation. "Three weeks. . . .
It's scarcely time enough to begin."

"You're certain that no regimen of carefully planned and
chosen tonics--"

"Dismiss the idea. Dismiss it." He decided to take a plunge.
"I've just been thinking of a little holiday for myself. But
I'd like to see you through this. And if I am to see you
through, there ought to be some sort of beginning now. In
this three weeks. Suppose. . . ."

Sir Richmond leapt to his thought. "I'm free to go anywhere."

"Golf would drive a man of your composition mad?"

"It would."

"That's that. Still--. The country must be getting beautiful
again now,--after all the rain we have had. I have a little
two-seater. I don't know. . . . The repair people promise to
release it before Friday."

"But I have a choice of two very comfortable little cars.
Why not be my guest?"

"That might be more convenient."

"I'd prefer my own car."

"Then what do you say?"

"I agree. Peripatetic treatment."

"South and west. We could talk on the road. In the evenings. By the wayside. We might make the beginnings of a treatment. . . . A simple tour. Nothing elaborate. You wouldn't bring a man?"

"I always drive myself."

Section 3

"There's something very pleasant, said the doctor, envisaging his own rash proposal, "in travelling along roads you don't know and seeing houses and parks and villages and towns for which you do not feel in the slightest degree responsible. They hide all their troubles from the road. Their backyards are tucked away out of sight, they show a brave face; there's none of the nasty self-betrayals of the railway approach. And everything will be fresh still. There will still be a lot of apple-blossom--and bluebells. . . . And all the while we can be getting on with your affair."

He was back at the window now. "I want the holiday myself," he said.

He addressed Sir Richmond over his shoulder. "Have you noted how fagged and unstable EVERYBODY is getting? Everybody intelligent, I mean."

"It's an infernally worrying time."

"Exactly. Everybody suffers."

"It's no GOOD going on in the old ways--"

"It isn't. And it's a frightful strain to get into any new

ways. So here we are.

"A man," the doctor expanded, "isn't a creature in vacuo. He's himself and his world. He's a surface of contact, a system of adaptations, between his essential self and his surroundings. Well, our surroundings have become--how shall I put it?--a landslide. The war which seemed such a definable catastrophe in 1914 was, after all, only the first loud crack and smash of the collapse. The war is over and--nothing is over. This peace is a farce, reconstruction an exploded phrase. The slide goes on,--it goes, if anything, faster, without a sign of stopping. And all our poor little adaptations! Which we have been elaborating and trusting all our lives! . . . One after another they fail us. We are stripped. . . . We have to begin all over again. . . . I'm fifty-seven and I feel at times nowadays like a chicken new hatched in a thunderstorm."

The doctor walked towards the bookcase and turned.

"Everybody is like that...it isn't--what are you going to do? It isn't--what am I going to do? It's--what are we all going to do! . . . Lord! How safe and established everything was in 1910, say. We talked of this great war that was coming, but nobody thought it would come. We had been born in peace, comparatively speaking; we had been brought up in peace. There was talk of wars. There were wars--little wars--that altered nothing material. . . . Consols used to be at 112 and you fed your household on ten shillings a head a week. You could run over all Europe, barring Turkey and Russia, without even a passport. You could get to Italy in a day. Never were life and comfort so safe--for respectable people. And we WERE respectable people. . . . That was the world that made us what we are. That was the sheltering and friendly greenhouse in which we grew. We fitted our minds to that. . . . And here

we are with the greenhouse falling in upon us lump by lump, smash and clatter, the wild winds of heaven tearing in through the gaps."

Upstairs on Dr. Martineau's desk lay the typescript of the opening chapters of a book that was intended to make a great splash in the world, his PSYCHOLOGY OF A NEW AGE. He had his metaphors ready.

"We said: 'This system will always go on. We needn't bother about it.' We just planned our lives accordingly. It was like a bird building its nest of frozen snakes. My father left me a decent independence. I developed my position; I have lived between here and the hospital, doing good work, enormously interested, prosperous, mildly distinguished. I had been born and brought up on the good ship Civilization. I assumed that someone else was steering the ship all right. I never knew; I never enquired."

"Nor did I" said Sir Richmond, "but--"

"And nobody was steering the ship," the doctor went on. "Nobody had ever steered the ship. It was adrift."

"I realized that. I--"

"It is a new realization. Always hitherto men have lived by faith--as children do, as the animals do. At the back of the healthy mind, human or animal, has been this persuasion: 'This is all right. This will go on. If I keep the rule, if I do so and so, all will be well. I need not trouble further; things are cared for.'"

"If we could go on like that!" said Sir Richmond.

"We can't. That faith is dead. The war--and the peace--have killed it."

The doctor's round face became speculative. His resemblance to the full moon increased. He seemed to gaze at remote things. "It may very well be that man is no more capable of living out of that atmosphere of assurance than a tadpole is of living out of water. His mental existence may be conditional on that. Deprived of it he may become incapable of sustained social life. He may become frantically self-seeking--incoherent . . . a stampede. . . . Human sanity may--DISPERSE.

"That's our trouble," the doctor completed. "Our fundamental trouble. All our confidences and our accustomed adaptations are destroyed. We fit together no longer. We are--loose. We don't know where we are nor what to do. The psychology of the former time fails to give safe responses, and the psychology of the New Age has still to develop."

Section 4

"That is all very well," said Sir Richmond in the resolute voice of one who will be pent no longer. "That is all very well as far as it goes. But it does not cover my case. I am not suffering from inadaptation. I HAVE adapted. I have thought things out. I think--much as you do. Much as you do. So it's not that. But-- . . . Mind you, I am perfectly clear where I am. Where we are. What is happening to us all is the breakup of the entire system. Agreed! We have to make another system or perish amidst the wreckage. I see that clearly. Science and plan have to replace custom and tradition in human affairs. Soon. Very soon. Granted. Granted. We used to say all that. Even before the war. Now we mean it. We've muddled about in the old ways overlong. Some new sort of

world, planned and scientific, has to be got going. Civilization renewed. Rebuilding civilization--while the premises are still occupied and busy. It's an immense enterprise, but it is the only thing to be done. In some ways it's an enormously attractive enterprise. Inspiring. It grips my imagination. I think of the other men who must be at work. Working as I do rather in the dark as yet. With whom I shall presently join up. . . The attempt may fail; all things human may fail; but on the other hand it may succeed. I never had such faith in anything as I have in the rightness of the work I am doing now. I begin at that. But here is where my difficulty comes in. The top of my brain, my innermost self says all that I have been saying, but-- The rest of me won't follow. The rest of me refuses to attend, forgets, straggles, misbehaves."

"Exactly."

The word irritated Sir Richmond. "Not 'exactly' at all. 'Amazingly,' if you like. . . . I have this unlimited faith in our present tremendous necessity--for work--for devotion; I believe my share, the work I am doing, is essential to the whole thing--and I work sluggishly. I work reluctantly. I work damnably."

"Exact--" The doctor checked himself . "All that is explicable. Indeed it is. Listen for a moment to me! Consider what you are. Consider what we are. Consider what a man is before you marvel at his ineptitudes of will. Face the accepted facts. Here is a creature not ten thousand generations from the ape, his ancestor. Not ten thousand. And that ape again, not a score of thousands from the monkey, his forebear. A man's body, his bodily powers, are just the body and powers of an ape, a little improved, a little adapted to novel needs. That brings me to my point. CAN HIS MIND AND

WILL BE ANYTHING BETTER? For a few generations, a few hundreds at most, knowledge and wide thought have flared out on the darkneses of life. . . . But the substance of man is ape still. He may carry a light in his brain, but his instincts move in the darkness. Out of that darkness he draws his motives."

"Or fails to draw them," said Sir Richmond.

"Or fails. . . . And that is where these new methods of treatment come in. We explore that failure. Together. What the psychoanalyst does--and I will confess that I owe much to the psychoanalyst--what he does is to direct thwarted, disappointed and perplexed people to the realities of their own nature. Which they have been accustomed to ignore and forget. They come to us with high ambitions or lovely illusions about themselves, torn, shredded, spoilt. They are morally denuded. Dreams they hate pursue them; abhorrent desires draw them; they are the prey of irresistible yet uncongenial impulses; they succumb to black despairs. The first thing we ask them is this: 'What else could you expect?'"

"What else could I expect?" Sir Richmond repeated, looking down on him. "H'm!"

"The wonder is not that you are sluggish, reluctantly unselfish, inattentive, spasmodic. The wonder is that you are ever anything else. . . . Do you realize that a few million generations ago, everything that stirs in us, everything that exalts human life, self-devotions, heroisms, the utmost triumphs of art, the love--for love it is--that makes you and me care indeed for the fate and welfare of all this round world, was latent in the body of some little lurking beast that crawled and hid among the branches of vanished and

forgotten Mesozoic trees? A petty egg-laying, bristle-covered beast it was, with no more of the rudiments of a soul than bare hunger, weak lust and fear. . . . People always seem to regard that as a curious fact of no practical importance. It isn't: it's a vital fact of the utmost practical importance. That is what you are made of. Why should you expect--because a war and a revolution have shocked you--that you should suddenly be able to reach up and touch the sky?"

"H'm!" said Sir Richmond. "Have I been touching the sky!"

"You are trying to play the part of an honest rich man."

"I don't care to see the whole system go smash."

"Exactly," said the doctor, before he could prevent himself.

"But is it any good to tell a man that the job he is attempting is above him--that he is just a hairy reptile twice removed--and all that sort of thing?"

"Well, it saves him from hoping too much and being too greatly disappointed. It recalls him to the proportions of the job. He gets something done by not attempting everything. . . . And it clears him up. We get him to look into himself, to see directly and in measurable terms what it is that puts him wrong and holds him back. He's no longer vaguely incapacitated. He knows."

"That's diagnosis. That's not treatment."

"Treatment by diagnosis. To analyze a mental knot is to untie it."

"You propose that I shall spend my time, until the Commission

meets, in thinking about myself. I wanted to forget myself."

"Like a man who tries to forget that his petrol is running short and a cylinder missing fire. . . . No. Come back to the question of what you are," said the doctor. "A creature of the darkness with new lights. Lit and half-blinded by science and the possibilities of controlling the world that it opens out. In that light your will is all for service; you care more for mankind than for yourself. You begin to understand something of the self beyond your self. But it is a partial and a shaded light as yet; a little area about you it makes clear, the rest is still the old darkness--of millions of intense and narrow animal generations. . . . You are like someone who awakens out of an immemorial sleep to find himself in a vast chamber, in a great and ancient house, a great and ancient house high amidst frozen and lifeless mountains--in a sunless universe. You are not alone in it. You are not lord of all you survey. Your leadership is disputed. The darkness even of the room you are in is full of ancient and discarded but quite unsubjected powers and purposes. . . . They thrust ambiguous limbs and claws suddenly out of the darkness into the light of your attention. They snatch things out of your hand, they trip your feet and jog your elbow. They crowd and cluster behind you. Wherever your shadow falls, they creep right up to you, creep upon you and struggle to take possession of you. The souls of apes, monkeys, reptiles and creeping things haunt the passages and attics and cellars of this living house in which your consciousness has awakened "

The doctor gave this quotation from his unpublished book the advantages of an abrupt break and a pause.

Sir Richmond shrugged his shoulders and smiled. "And you propose a vermin hunt in the old tenement?"

"The modern man has to be master in his own house. He has to take stock and know what is there."

"Three weeks of self vivisection."

"To begin with. Three weeks of perfect honesty with yourself. As an opening. . . . It will take longer than that if we are to go through with the job."

It is a considerable--process."

"It is."

"Yet you shrink from simple things like drugs!"

"Self-knowledge--without anaesthetics."

"Has this sort of thing ever done anyone any good at all?"

"It has turned hundreds back to sanity and steady work."

"How frank are we going to be? How full are we going to be? Anyhow--we can break off at any time. . . . We'll try it. We'll try it. . . . And so for this journey into the west of England. . . . And--if we can get there--I'm not sure that we can get there--into the secret places of my heart.

CHAPTER THE SECOND

LADY HARDY

The patient left the house with much more self possession than he had shown when entering it. Dr. Martineau had thrust him back from his intenser prepossessions to a more generalized view of himself, had made his troubles objective and detached him from them. He could even find something amusing now in his situation. He liked the immense scope of the theoretical duet in which they had indulged. He felt that most of it was entirely true--and, in some untraceable manner, absurd. There were entertaining possibilities in the prospect of the doctor drawing him out--he himself partly assisting and partly resisting.

He was a man of extensive reservations. His private life was in some respects exceptionally private.

"I don't confide Do I even confide in myself? I imagine I do Is there anything in myself that I haven't looked squarely in the face? . . . How much are we going into? Even as regards facts?"

"Does it really help a man--to see himself?. . ."

Such thoughts engaged him until he found himself in his study. His desk and his writing table were piled high with a heavy burthen of work. Still a little preoccupied with Dr. Martineau's exposition, he began to handle this confusion. . . .

At half past nine he found himself with three hours of good work behind him. It had seemed like two. He had not worked like this for many weeks. "This is very cheering," he said.

"And unexpected. Can old Moon-face have hypnotized me? Anyhow--. . . Perhaps I've only imagined I was ill. . . . Dinner?" He looked at his watch and was amazed at the time. "Good Lord! I've been at it three hours. What can have happened? Funny I didn't hear the gong."

He went downstairs and found Lady Hardy reading a magazine in a dining-room armchair and finely poised between devotion and martyrdom. A shadow of vexation fell athwart his mind at the sight of her.

"I'd no idea it was so late," he said. "I heard no gong."

"After you swore so at poor Bradley I ordered that there should be no gongs when we were alone. I did come up to your door about half past eight. I crept up. But I was afraid I might upset you if I came in."

"But you've not waited--"

"I've had a mouthful of soup." Lady Hardy rang the bell.

"I've done some work at last," said Sir Richmond, astride on the hearthrug.

"I'm glad," said Lady Hardy, without gladness. "I waited for three hours."

Lady Hardy was a frail little blue-eyed woman with uneven shoulders and a delicate sweet profile. Hers was that type of face that under even the most pleasant and luxurious circumstances still looks bravely and patiently enduring. Her refinement threw a tinge of coarseness over his eager consumption of his excellent clear soup.

"What's this fish, Bradley?" he asked.

"Turbot, Sir Richmond."

"Don't you have any?" he asked his wife.

"I've had a little fish, " said Lady Hardy.

When Bradley was out of the room, Sir Richmond remarked: "I saw that nerves man, Dr. Martineau, to-day. He wants me to take a holiday. "

The quiet patience of the lady's manner intensified. She said nothing. A flash of resentment lit Sir Richmond's eyes. When he spoke again, he seemed to answer unspoken accusations. "Dr. Martineau's idea is that he should come with me."

The lady adjusted herself to a new point of view.

"But won't that be reminding you of your illness and worries?"

"He seems a good sort of fellow. . . . I'm inclined to like him. He'll be as good company as anyone. . . . This TOURNEDOS looks excellent. Have some."

"I had a little bird," said Lady Hardy, "when I found you weren't coming."

"But I say--don't wait here if you've dined. Bradley can see to me."

She smiled and shook her head with the quiet conviction of one who knew her duty better. "Perhaps I'll have a little ice pudding when it comes," she said.

Sir Richmond detested eating alone in an atmosphere of observant criticism. And he did not like talking with his mouth full to an unembarrassed interlocutor who made no conversational leads of her own. After a few mouthfuls he pushed his plate away from him. "Then let's have up the ice pudding," he said with a faint note of bitterness.

"But have you finished--?"

"The ice pudding!" he exploded wrathfully. "The ice pudding!"

Lady Hardy sat for a moment, a picture of meek distress. Then, her delicate eyebrows raised, and the corners of her mouth drooping, she touched the button of the silver table-bell.

CHAPTER THE THIRD

THE DEPARTURE

Section 1

No wise man goes out upon a novel expedition without misgivings. And between their first meeting and the appointed morning both Sir Richmond Hardy and Dr. Martineau were the prey of quite disagreeable doubts about each other, themselves, and the excursion before them. At the time of their meeting each had been convinced that he gauged the other sufficiently for the purposes of the proposed tour. Afterwards each found himself trying to recall the other with greater distinctness and able to recall nothing but queer, ominous and minatory traits. The doctor's impression of the great fuel specialist grew ever darker, leaner, taller and more impatient. Sir Richmond took on the likeness of a monster obdurate and hostile, he spread upwards until like the Djinn out of the bottle, he darkened the heavens. And he talked too much. He talked ever so much too much. Sir Richmond also thought that the doctor talked too much. In addition, he read into his imperfect memory of the doctor's face, an expression of protruded curiosity. What was all this problem of motives and inclinations that they were "going into" so gaily? He had merely consulted the doctor on a simple, straightforward need for a nervous tonic--that was what he had needed--a tonic. Instead he had engaged himself for--he scarcely knew what--an indiscreet, indelicate, and altogether undesirable experiment in confidences.

Both men were considerably reassured when at last they set eyes on each other again. Indeed each was surprised to find something almost agreeable in the appearance of the other. Dr. Martineau at once perceived that the fierceness of Sir

Richmond was nothing more than the fierceness of an overwrought man, and Sir Richmond realized at a glance that the curiosity of Dr. Martineau's bearing had in it nothing personal or base; it was just the fine alertness of the scientific mind.

Sir Richmond had arrived nearly forty minutes late, and it would have been evident to a much less highly trained observer than Dr. Martineau that some dissension had arisen between the little, ladylike, cream and black Charmeuse car and its owner. There was a faint air of resentment and protest between them. As if Sir Richmond had been in some way rude to it.

The cap of the radiator was adorned with a little brass figure of a flying Mercury. Frozen in a sprightly attitude, its stiff bound and its fixed heavenward stare was highly suggestive of a forced and tactful disregard of current unpleasantness.

Nothing was said, however, to confirm or dispel this suspicion of a disagreement between the man and the car. Sir Richmond directed and assisted Dr. Martineau's man to adjust the luggage at the back, and Dr. Martineau watched the proceedings from his dignified front door. He was wearing a suit of fawn tweeds, a fawn Homburg hat and a light Burberry, with just that effect of special preparation for a holiday which betrays the habitually busy man. Sir Richmond's brown gauntness was, he noted, greatly set off by his suit of grey. There had certainly been some sort of quarrel. Sir Richmond was explaining the straps to Dr. Martineau's butler with the coldness a man betrays when he explains the uncongenial habits of some unloved intimate. And when the moment came to start and the little engine did not immediately respond to the electric starter, he said: "Oh! COME up, you--!"

His voice sank at the last word as though it was an entirely confidential communication to the little car. And it was an extremely low and disagreeable word. So Dr. Martineau decided that it was not his business to hear it. . . .

It was speedily apparent that Sir Richmond was an experienced and excellent driver. He took the Charmeuse out into the traffic of Baker Street and westward through brisk and busy streets and roads to Brentford and Hounslow smoothly and swiftly, making a score of unhesitating and accurate decisions without apparent thought. There was very little conversation until they were through Brentford. Near Shepherd's Bush, Sir Richmond had explained, "This is not my own particular car. That was butted into at the garage this morning and its radiator cracked. So I had to fall back on this. It's quite a good little car. In its way. My wife drives it at times. It has one or two constitutional weaknesses--incidental to the make--gear-box over the back axle for example--gets all the vibration. Whole machine rather on the flimsy side. Still--"

He left the topic at that.

Dr. Martineau said something of no consequence about its being a very comfortable little car.

Somewhere between Brentford and Hounslow, Sir Richmond plunged into the matter between them. "I don't know how deep we are going into these psychological probings of yours," he said. "But I doubt very much if we shall get anything out of them."

"Probably not," said Dr. Martineau.

"After all, what I want is a tonic. I don't see that there is anything positively wrong with me. A certain lack of energy--"

"Lack of balance," corrected the doctor. "You are wasting energy upon internal friction. "But isn't that inevitable? No machine is perfectly efficient. No man either. There is always a waste. Waste of the type; waste of the individual idiosyncrasy. This little car, for instance, isn't pulling as she ought to pull--she never does. She's low in her class. So with myself; there is a natural and necessary high rate of energy waste. Moods of apathy and indolence are natural to me. (Damn that omnibus! All over the road!)"

"We don't deny the imperfection--" began the doctor.

"One has to fit oneself to one's circumstances," said Sir Richmond, opening up another line of thought.

"We don't deny the imperfection" the doctor stuck to it. "These new methods of treatment are based on the idea of imperfection. We begin with that. I began with that last Tuesday. . . ."

Sir Richmond, too, was sticking to his argument. "A man, and for that matter the world he lives in, is a tangle of accumulations. Your psychoanalyst starts, it seems to me, with a notion of stripping down to something fundamental. The ape before was a tangle of accumulations, just as we are. So it was with his forebears. So it has always been. All life is an endless tangle of accumulations."

"Recognize it," said the doctor.

"And then?" said Sir Richmond, controversially.

"Recognize in particular your own tangle."

"Is my particular tangle very different from the general tangle? (Oh! Damn this feeble little engine!) I am a creature of undecided will, urged on by my tangled heredity to do a score of entirely incompatible things. Mankind, all life, is that."

"But our concern is the particular score of incompatible things you are urged to do. We examine and weigh--we weigh--"

The doctor was still saying these words when a violent and ultimately disastrous struggle began between Sir Richmond and the little Charmeuse car. The doctor stopped in mid-sentence.

It was near Taplow station that the mutual exasperation of man and machine was brought to a crisis by the clumsy emergence of a laundry cart from a side road. Sir Richmond was obliged to pull up smartly and stopped his engine. It refused an immediate obedience to the electric starter. Then it picked up, raced noisily, disengaged great volumes of bluish smoke, and displayed an unaccountable indisposition to run on any gear but the lowest. Sir Richmond thought aloud, unpleasing thoughts. He addressed the little car as a person; he referred to ancient disputes and temperamental incompatibilities. His anger betrayed him a coarse, ill-bred man. The little car quickened under his reproaches. There were some moments of hope, dashed by the necessity of going dead slow behind an interloping van. Sir Richmond did not notice the outstretched arm of the driver of the van, and stalled his engine for a second time. The electric starter refused its office altogether.

For some moments Sir Richmond sat like a man of stone.

"I must wind it up " he said at last in a profound and awful voice. "I must wind it up."

"I get out, don't I?" asked the doctor, unanswered, and did so. Sir Richmond, after a grim search and the displacement and replacement of the luggage, produced a handle from the locker at the back of the car and prepared to wind.

There was a little difficulty. "Come UP!" he said, and the small engine roared out like a stage lion.

The two gentlemen resumed their seats. The car started and then by an unfortunate inadvertency Sir Richmond pulled the gear lever over from the first speed to the reverse. There was a metallic clangour beneath the two gentlemen, and the car slowed down and stopped although the engine was still throbbing wildly, and the dainty veil of blue smoke still streamed forward from the back of the car before a gentle breeze. The doctor got out almost precipitately, followed by a gaunt madman, mouthing vileness, who had only a minute or so before been a decent British citizen. He made some blind lunges at the tremulous but obdurate car, but rather as if he looked for offences and accusations than for displacements to adjust. Quivering and refusing, the little car was extraordinarily like some recalcitrant little old aristocratic lady in the hands of revolutionaries, and this made the behaviour of Sir Richmond seem even more outrageous than it would otherwise have done. He stopped the engine, he went down on his hands and knees in the road to peer up at the gear-box, then without restoring the spark, he tried to wind up the engine again. He spun the little handle with an insane violence, faster and faster for--as it seemed to the doctor--the better part of a minute. Beads of perspiration appeared upon his brow and ran together; he bared his teeth

in a snarl; his hat slipped over one eye. He groaned with rage. Then, using the starting handle as a club, he assailed the car. He smote the brazen Mercury from its foothold and sent it and a part of the radiator cap with it flying across the road. He beat at the wings of the bonnet, until they bent in under his blows. Finally, he hurled the starting-handle at the wind-screen and smashed it. The starting-handle rattled over the bonnet and fell to the ground. . . .

The paroxysm was over. Ten seconds later this cataclysmal lunatic had reverted to sanity--a rather sheepish sanity.

He thrust his hands into his trouser pockets and turned his back on the car. He remarked in a voice of melancholy detachment: "It was a mistake to bring that coupe."

Dr. Martineau had assumed an attitude of trained observation on the side path. His hands rested on his hips and his hat was a little on one side. He was inclined to agree with Sir Richmond. "I don't know," he considered. "You wanted some such blow-off as this."

"Did I? "

"The energy you have! That car must be somebody's whipping boy."

"The devil it is!" said Sir Richmond, turning round sharply and staring at it as if he expected it to display some surprising and yet familiar features. Then he looked questioningly and suspiciously at his companion.

"These outbreaks do nothing to amend the originating grievance," said the doctor. "No. And at times they are even costly. But they certainly lift a burthen from the nervous

system. . . . And now I suppose we have to get that little ruin to Maidenhead."

"Little ruin!" repeated Sir Richmond. "No. There's lots of life in the little beast yet."

He reflected. "She'll have to be towed." He felt in his breast pocket. "Somewhere I have the R.A.C. order paper, the Badge that will Get You Home. We shall have to hail some passing car to take it into Maidenhead."

Dr. Martineau offered and Sir Richmond took and lit a cigarette.

For a little while conversation hung fire. Then for the first time Dr. Martineau heard his patient laugh.

"Amazing savage," said Sir Richmond. "Amazing savage!"

He pointed to his handiwork. "The little car looks ruffled. Well it may."

He became grave again. "I suppose I ought to apologize.

"Dr. Martineau weighed the situation. "As between doctor and patient," he said. "No."

"Oh!" said Sir Richmond, turned to a new point of view. "But where the patient ends and the host begins. . . . I'm really very sorry." He reverted to his original train of thought which had not concerned Dr. Martineau at all. "After all, the little car was only doing what she was made to do."

Section 2

The affair of the car effectively unsealed Sir Richmond's mind. Hitherto Dr. Martineau had perceived the possibility and danger of a defensive silence or of a still more defensive irony; but now that Sir Richmond had once given himself away, he seemed prepared to give himself away to an unlimited extent. He embarked upon an apologetic discussion of the choleric temperament.

He began as they stood waiting for the relief car from the Maidenhead garage. "You were talking of the ghosts of apes and monkeys that suddenly come out from the darkness of the subconscious"

"You mean--when we first met at Harley Street?"

"That last apparition of mine seems to have been a gorilla at least."

The doctor became precise. Gorillaesque. We are not descended from gorillas."

"Queer thing a fit of rage is!"

"It's one of nature's cruder expedients. Crude, but I doubt if it is fundamental. There doesn't seem to be rage in the vegetable world, and even among the animals--? No, it is not universal." He ran his mind over classes and orders. "Wasps and bees certainly seem to rage, but if one comes to think, most of the invertebrata show very few signs of it."

"I'm not so sure," said Sir Richmond. "I've never seen a snail in a towering passion or an oyster slamming its shell behind it. But these are sluggish things. Oysters sulk, which is after all a smouldering sort of rage. And take any more active invertebrate. Take a spider. Not a smashing and

swearing sort of rage perhaps, but a disciplined, cold-blooded malignity. Crabs fight. A conger eel in a boat will rage dangerously."

"A vertebrate. Yes. But even among the vertebrata; who has ever seen a furious rabbit?"

"Don't the bucks fight?" questioned Sir Richmond.

Dr. Martineau admitted the point.

"I've always had these fits of passion. As far back as I can remember. I was a kicking, screaming child. I threw things. I once threw a fork at my elder brother and it stuck in his forehead, doing no serious damage--happily. There were whole days of wrath--days, as I remember them. Perhaps they were only hours. . . . I've never thought before what a peculiar thing all this raging is in the world. WHY do we rage? They used to say it was the devil. If it isn't the devil, then what the devil is it? "After all," he went on as the doctor was about to answer his question; "as you pointed out, it isn't the lowlier things that rage. It's the HIGHER things and US."

"The devil nowadays," the doctor reflected after a pause, "so far as man is concerned, is understood to be the ancestral ape. And more particularly the old male ape."

But Sir Richmond was away on another line of thought. "Life itself, flaring out. Brooking no contradiction." He came round suddenly to the doctor's qualification. "Why male? Don't little girls smash things just as much?"

"They don't," said Dr. Martineau. "Not nearly as much."

Sir Richmond went off at a tangent again. "I suppose you have watched any number of babies?"

"Not nearly as many as a general practitioner would do. There's a lot of rage about most of them at first, male or female. "

"Queer little eddies of fury. . . . Recently--it happens--I've been seeing one. A spit of red wrath, clenching its fists and squalling threats at a damned disobedient universe."

The doctor was struck by an idea and glanced quickly and questioningly at his companion's profile.

"Blind driving force," said Sir Richmond, musing.

"Isn't that after all what we really are?" he asked the doctor. "Essentially--Rage. A rage in dead matter, making it alive."

"Schopenhauer," footnoted the doctor. "Boehme."

"Plain fact," said Sir Richmond. "No Rage--no Go."

"But rage without discipline?"

"Discipline afterwards. The rage first."

"But rage against what? And FOR what?"

"Against the Universe. And for--? That's more difficult. What IS the little beast squalling itself crimson for? Ultimately? . . . What is it clutching after? In the long run, what will it get?"

("Yours the car in distress what sent this?" asked an unheeded voice.)

"Of course, if you were to say 'desire'," said Dr. Martineau, "then you would be in line with the psychoanalysts. They talk of LIBIDO, meaning a sort of fundamental desire. Jung speaks of it at times almost as if it were the universal driving force."

"No," said Sir Richmond, in love with his new idea. "Not desire. Desire would have a definite direction, and that is just what this driving force hasn't. It's rage."

"Yours the car in distress what sent this?" the voice repeated. It was the voice of a mechanic in an Overland car. He was holding up the blue request for assistance that Sir Richmond had recently filled in.

The two philosophers returned to practical matters.

Section 3

For half an hour after the departure of the little Charmeuse car with Sir Richmond and Dr. Martineau, the brass Mercury lay unheeded in the dusty roadside grass. Then it caught the eye of a passing child.

He was a bright little boy of five. From the moment when he caught the gleam of brass he knew that he had made the find of his life. But his nurse was a timorous, foolish thing. "You did ought to of left it there, Masterrarry," she said.

"Findings ain't keepings nowadays, not by no manner of means, Masterrarry.

"Yew'd look silly if a policeman came along arsting people if they seen a goldennimage.

"Arst yer 'ow you come by it and look pretty straight at you."

All of which grumblings Master Harry treated with an experienced disregard. He knew definitely that he would never relinquish this bright and lovely possession again. It was the first beautiful thing he had ever possessed. He was the darling of fond and indulgent parents and his nursery was crowded with hideous rag and sawdust dolls, golliwogs, comic penguins, comic lions, comic elephants and comic policemen and every variety of suchlike humorous idiocy and visual beastliness. This figure, solid, delicate and gracious, was a thing of a different order.

There was to be much conflict and distress, tears and wrath, before the affinity of that cleanlimbed, shining figure and his small soul was recognized. But he carried his point at last. The Mercury became his inseparable darling, his symbol, his private god, the one dignified and serious thing in a little life much congested by the quaint, the burlesque, and all the smiling, dull condescensions of adult love.

CHAPTER THE FOURTH

AT MAIDENHEAD

Section 1

The little Charmeuse was towed to hospital and the two psychiatrists took up their quarters at the Radiant Hotel with its pleasant lawns and graceful landing stage at the bend towards the bridge. Sir Richmond, after some trying work at the telephone, got into touch with his own proper car. A man would bring the car down in two days' time at latest, and afterwards the detested coupe could go back to London. The day was still young, and after lunch and coffee upon a sunny lawn a boat seemed indicated. Sir Richmond astonished the doctor by going to his room, reappearing dressed in tennis flannels and looking very well in them. It occurred to the doctor as a thing hitherto unnoted that Sir Richmond was not indifferent to his personal appearance. The doctor had no flannels, but he had brought a brown holland umbrella lined with green that he had acquired long ago in Algiers, and this served to give him something of the riverside quality.

The day was full of sunshine and the river had a Maytime animation. Pink geraniums, vivid green lawns, gay awnings, bright glass, white paint and shining metal set the tone of Maidenhead life. At lunch there had been five or six small tables with quietly affectionate couples who talked in undertones, a tableful of bright-coloured Jews who talked in overtones, and a family party from the Midlands, badly smitten with shyness, who did not talk at all. "A resort, of honeymoon couples," said the doctor, and then rather knowingly: "Temporary honeymoons, I fancy, in one or two of the cases."

"Decidedly temporary," said Sir Richmond, considering the company--"in most of the cases anyhow. The two in the corner might be married. You never know nowadays."

He became reflective. . . .

After lunch and coffee he rowed the doctor up the river towards Cliveden.

"The last time I was here," he said, returning to the subject, "I was here on a temporary honeymoon."

The doctor tried to look as though he had not thought that could be possible.

"I know my Maidenhead fairly well," said Sir Richmond. "Aquatic activities, such as rowing, punting, messing about with a boat-hook, tying up, buzzing about in motor launches, fouling other people's boats, are merely the stage business of the drama. The ruling interests of this place are love--largely illicit--and persistent drinking. . . . Don't you think the bridge charming from here?"

"I shouldn't have thought--drinking," said Dr. Martineau, after he had done justice to the bridge over his shoulder.

"Yes, the place has a floating population of quiet industrious soakers. The incurable river man and the river girl end at that."

Dr. Martineau encouraged Sir Richmond by an appreciative silence.

"If we are to explore the secret places of the heart," Sir Richmond went on, "we shall have to give some attention to

this Maidenhead side of life. It is very material to my case. I have,--as I have said--BEEN HERE. This place has beauty and charm; these piled-up woods behind which my Lords Astor and Desborough keep their state, this shining mirror of the water, brown and green and sky blue, this fringe of reeds and scented rushes and forget-me-not and lilies, and these perpetually posing white swans: they make a picture. A little artificial it is true; one feels the presence of a Conservancy Board, planting the rushes and industriously nicking the swans; but none the less delightful. And this setting has appealed to a number of people as an invitation, as, in a way, a promise. They come here, responsive to that promise of beauty and happiness. They conceive of themselves here, rowing swiftly and gracefully, punting beautifully, brandishing boat-hooks with ease and charm. They look to meet, under pleasant or romantic circumstances, other possessors and worshippers of grace and beauty here. There will be glowing evenings, warm moonlight, distant voices singing. . . . There is your desire, doctor, the desire you say is the driving force of life. But reality mocks it. Boats bump and lead to coarse ungracious quarrels; rowing can be curiously fatiguing; punting involves dreadful indignities. The romance here tarnishes very quickly. Romantic encounters fail to occur; in our impatience we resort to--accosting. Chilly mists arise from the water and the magic of distant singing is provided, even excessively, by boatloads of cads--with collecting dishes. When the weather keeps warm there presently arises an extraordinary multitude of gnats, and when it does not there is a need for stimulants. That is why the dreamers who come here first for a light delicious brush with love, come down at last to the Thameside barmaid with her array of spirits and cordials as the quintessence of all desire."

"I say," said the doctor. "You tear the place to pieces."

"The desires of the place," said Sir Richmond.

"I'm using the place as a symbol."

He held his sculls awash, rippling in the water.

"The real force of life, the rage of life, isn't here," he said. "It's down underneath, sulking and smouldering. Every now and then it strains and cracks the surface. This stretch of the Thames, this pleasure stretch, has in fact a curiously quarrelsome atmosphere. People scold and insult one another for the most trivial things, for passing too close, for taking the wrong side, for tying up or floating loose. Most of these notice boards on the bank show a thoroughly nasty spirit. People on the banks jeer at anyone in the boats. You hear people quarrelling in boats, in the hotels, as they walk along the towing path. There is remarkably little happy laughter here. The RAGE, you see, is hostile to this place, the RAGE breaks through. . . . The people who drift from one pub to another, drinking, the people who fuddle in the riverside hotels, are the last fugitives of pleasure, trying to forget the rage. . . ."

"Isn't it that there is some greater desire at the back of the human mind?" the doctor suggested. "Which refuses to be content with pleasure as an end?"

"What greater desire?" asked Sir Richmond, disconcertingly.

"Oh! . . . " The doctor cast about.

"There is no such greater desire," said Sir Richmond. "You cannot name it. It is just blind drive. I admit its discontent with pleasure as an end--but has it any end of its

own? At the most you can say that the rage in life is seeking its desire and hasn't found it."

"Let us help in the search," said the doctor, with an afternoon smile under his green umbrella. "Go on."

Section 2

"Since our first talk in Harley Street," said Sir Richmond, "I have been trying myself over in my mind. (We can drift down this backwater.) "

"Big these trees are," said the doctor with infinite approval.

"I am astonished to discover what a bundle of discordant motives I am. I do not seem to deserve to be called a personality. I cannot discover even a general direction. Much more am I like a taxi-cab in which all sorts of aims and desires have travelled to their destination and got out. Are we all like that?"

"A bundle held together by a name and address and a certain thread of memory?" said the doctor and considered. "More than that. More than that. We have leading ideas, associations, possessions, liabilities."

"We build ourselves a prison of circumstances that keeps us from complete dispersal."

"Exactly," said the doctor. "And there is also something, a consistency, that we call character."

"It changes."

"Consistently with itself."

"I have been trying to recall my sexual history," said Sir Richmond, going off at a tangent. "My sentimental education. I wonder if it differs very widely from yours or most men's."

"Some men are more eventful in these matters than others," said the doctor,--it sounded--wistfully.

"They have the same jumble of motives and traditions, I suspect, whether they are eventful or not. The brakes may be strong or weak but the drive is the same. I can't remember much of the beginnings of curiosity and knowledge in these matters. Can you?"

"Not much," said the doctor. "No."

"Your psychoanalysts tell a story of fears, suppressions, monstrous imaginations, symbolic replacements. I don't remember much of that sort of thing in my own case. It may have faded out of my mind. There were probably some uneasy curiosities, a grotesque dream or so perhaps; I can't recall anything of that sort distinctly now. I had a very lively interest in women, even when I was still quite a little boy, and a certain--what shall I call it?--imaginative slavishness--not towards actual women but towards something magnificently feminine. My first love--"

Sir Richmond smiled at some secret memory. "My first love was Britannia as depicted by Tenniel in the cartoons in PUNCH. I must have been a very little chap at the time of the Britannia affair. I just clung to her in my imagination and did devoted things for her. Then I recall, a little later, a secret abject adoration for the white goddesses of the Crystal Palace. Not for any particular one of them that I can

remember,--for all of them. But I don't remember anything very monstrous or incestuous in my childish imaginations,--such things as Freud, I understand, lays stress upon. If there was an Oedipus complex or anything of that sort in my case it has been very completely washed out again. Perhaps a child which is brought up in a proper nursery of its own and sees a lot of pictures of the nude human body, and so on, gets its mind shifted off any possible concentration upon the domestic aspect of sex. I got to definite knowledge pretty early. By the time I was eleven or twelve."

"Normally? "

"What is normally? Decently, anyhow. Here again I may be forgetting much secret and shameful curiosity. I got my ideas into definite form out of a little straightforward physiological teaching and some dissecting of rats and mice. My schoolmaster was a capable sane man in advance of his times and my people believed in him. I think much of this distorted perverse stuff that grows up in people's minds about sex and develops into evil vices and still more evil habits, is due to the mystery we make about these things."

"Not entirely," said the doctor.

"Largely. What child under a modern upbringing ever goes through the stuffy horrors described in James Joyce's **PORTRAIT OF THE ARTIST AS A YOUNG MAN.**"

"I've not read it."

"A picture of the Catholic atmosphere; a young soul shut up in darkness and ignorance to accumulate filth. In the name of purity and decency and under threats of hell fire."

"Horrible!"

"Quite. A study of intolerable tensions, the tensions that make young people write unclean words in secret places. "

"Yes, we certainly ventilate and sanitize in those matters nowadays. Where nothing is concealed, nothing can explode."

"On the whole I came up to adolescence pretty straight and clean," said Sir Richmond. "What stands out in my memory now is this idea, of a sort of woman goddess who was very lovely and kind and powerful and wonderful. That ruled my secret imaginations as a boy, but it was very much in my mind as I grew up."

"The mother complex," said Dr. Martineau as a passing botanist might recognize and name a flower.

Sir Richmond stared at him for a moment.

"It had not the slightest connexion with my mother or any mother or any particular woman at all. Far better to call it the goddess complex."

"The connexion is not perhaps immediately visible," said the doctor.

"There was no connexion," said Sir Richmond. "The women of my adolescent dreams were stripped and strong and lovely. They were great creatures. They came, it was clearly traceable, from pictures sculpture--and from a definite response in myself to their beauty. My mother had nothing whatever to do with that. The women and girls about me were fussy bunches of clothes that I am sure I never even linked with that dream world of love and worship."

"Were you co-educated?"

"No. But I had a couple of sisters, one older, one younger than myself, and there were plenty of girls in my circle. I thought some of them pretty--but that was a different affair. I know that I didn't connect them with the idea of the loved and worshipped goddesses at all, because I remember when I first saw the goddess in a real human being and how amazed I was at the discovery. . . . I was a boy of twelve or thirteen. My people took me one summer to Dymchurch in Romney Marsh; in those days before the automobile had made the Marsh accessible to the Hythe and Folkestone crowds, it was a little old forgotten silent wind-bitten village crouching under the lee of the great sea wall. At low water there were miles of sand as smooth and shining as the skin of a savage brown woman. Shining and with a texture--the very same. And one day as I was mucking about by myself on the beach, boy fashion,--there were some ribs of a wrecked boat buried in the sand near a groin and I was busy with them--a girl ran out from a tent high up on the beach and across the sands to the water. She was dressed in a tight bathing dress and not in the clumsy skirts and frills that it was the custom to inflict on women in those days. Her hair was tied up in a blue handkerchief. She ran swiftly and gracefully, intent upon the white line of foam ahead. I can still remember how the sunlight touched her round neck and cheek as she went past me. She was the loveliest, most shapely thing I have ever seen--to this day. She lifted up her arms and thrust through the dazzling white and green breakers and plunged into the water and swam; she swam straight out for a long way as it seemed to me, and presently came in and passed me again on her way back to her tent, light and swift and sure. The very prints of her feet on the sand were beautiful. Suddenly I realized that there could be living people in the world as

lovely as any goddess. . . . She wasn't in the least out of breath.

"That was my first human love. And I love that girl still. I doubt sometimes whether I have ever loved anyone else. I kept the thing very secret. I wonder now why I have kept the thing so secret. Until now I have never told a soul about it. I resorted to all sorts of tortuous devices and excuses to get a chance of seeing her again without betraying what it was I was after."

Dr. Martineau retained a simple fondness for a story.

"And did you meet her again?"

"Never. Of course I may have seen her as a dressed-up person and not recognized her. A day or so later I was stabbed to the heart by the discovery that the tent she came out of had been taken away. "

"She had gone?"

"For ever."

Sir Richmond smiled brightly at the doctor's disappointment.

Section 3

"I was never wholehearted and simple about sexual things," Sir Richmond resumed presently. "Never. I do not think any man is. We are too much plastered-up things, too much the creatures of a tortuous and complicated evolution."

Dr. Martineau, under his green umbrella, nodded his conceded agreement.

"This--what shall I call it?--this Dream of Women, grew up in my mind as I grew up--as something independent of and much more important than the reality of Women. It came only very slowly into relation with that. That girl on the Dymchurch beach was one of the first links, but she ceased very speedily to be real--she joined the women of dreamland at last altogether. She became a sort of legendary incarnation. I thought of these dream women not only as something beautiful but as something exceedingly kind and helpful. The girls and women I met belonged to a different creation. . . ."

Sir Richmond stopped abruptly and rowed a few long strokes.

Dr. Martineau sought information.

"I suppose," he said, "there was a sensuous element in these dreamings?"

"Certainly. A very strong one. It didn't dominate but it was a very powerful undertow."

"Was there any tendency in all this imaginative stuff to concentrate? To group itself about a single figure, the sort of thing that Victorians would have called an ideal?"

"Not a bit of it," said Sir Richmond with conviction. "There was always a tremendous lot of variety in my mind. In fact the thing I liked least in the real world was the way it was obsessed by the idea of pairing off with one particular set and final person. I liked to dream of a blonde goddess in her own Venusberg one day, and the next I would be off over the mountains with an armed Brunhild."

"You had little thought of children?"

"As a young man?"

"Yes."

"None at all. I cannot recall a single philoprogenitive moment. These dream women were all conceived of, and I was conceived of, as being concerned in some tremendous enterprise--something quite beyond domesticity. It kept us related--gave us dignity. . . . Certainly it wasn't babies."

"All this is very interesting, very interesting, from the scientific point of view. A PRIORI it is not what one might have expected. Reasoning from the idea that all instincts and natural imaginations are adapted to a biological end and seeing that sex is essentially a method of procreation, one might reasonably expect a convergence, if not a complete concentration, upon the idea of offspring. It is almost as if there were other ends to be served. It is clear that Nature has not worked this impulse out to any sight of its end. Has not perhaps troubled to do so. The instinct of the male for the female isn't primarily for offspring--not even in the most intelligent and farseeing types. The desire just points to glowing satisfactions and illusions. Quite equally I think the desire of the female for the male ignores its end. Nature has set about this business in a CHEAP sort of way. She is like some pushful advertising tradesman. She isn't frank with us; she just humbugs us into what she wants with us. All very well in the early Stone Age--when the poor dear things never realized that their mutual endearments meant all the troubles and responsibilities of parentage. But NOW--!"

He shook his head sideways and twirled the green umbrella like an animated halo around his large broad-minded face.

Sir Richmond considered. "Desire has never been the chief incentive of my relations with women. Never. So far as I can analyze the thing, it has been a craving for a particular sort of life giving companionship."

"That I take it is Nature's device to keep the lovers together in the interest of the more or less unpremeditated offspring."

"A poor device, if that is its end. It doesn't keep parents together; more often it tears them apart. The wife or the mistress, so soon as she is encumbered with children, becomes all too manifestly not the companion goddess. . . ."

Sir Richmond brooded over his sculls and thought.

"Throughout my life I have been an exceedingly busy man. I have done a lot of scientific work and some of it has been very good work. And very laborious work. I've travelled much. I've organized great business developments. You might think that my time has been fairly well filled without much philandering. And all the time, all the time, I've been--about women--like a thirsty beast looking for water. . . . Always. Always. All through my life."

Dr. Martineau waited through another silence.

"I was very grave about it at first. I married young. I married very simply and purely. I was not one of those young men who sow a large crop of wild oats. I was a fairly decent youth. It suddenly appeared to me that a certain smiling and dainty girl could make herself into all the goddesses of my dreams. I had but to win her and this miracle would occur. Of course I forget now the exact things I thought and felt then,

but surely I had some such persuasion. Or why should I have married her? My wife was seven years younger than myself,--a girl of twenty. She was charming. She is charming. She is a wonderfully intelligent and understanding woman. She has made a home for me--a delightful home. I am one of those men who have no instinct for home making. I owe my home and all the comfort and dignity of my life to her ability. I have no excuse for any misbehaviour--so far as she is concerned. None at all. By all the rules I should have been completely happy. But instead of my marriage satisfying me, it presently released a storm of long-controlled desires and imprisoned cravings. A voice within me became more and more urgent. 'This will not do. This is not love. Where are your goddesses? This is not love.' . . . And I was unfaithful to my wife within four years of my marriage. It was a sudden overpowering impulse. But I suppose the ground had been preparing for a long time. I forget now all the emotions of that adventure. I suppose at the time it seemed beautiful and wonderful. . . . I do not excuse myself. Still less do I condemn myself. I put the facts before you. So it was."

"There were no children by your marriage?"

"Your line of thought, doctor, is too philoprogenitive. We have had three. My daughter was married two years ago. She is in America. One little boy died when he was three. The other is in India, taking up the Mardipore power scheme again now that he is out of the army. . . . No, it is simply that I was hopelessly disappointed with everything that a good woman and a decent marriage had to give me. Pure disappointment and vexation. The anti-climax to an immense expectation built up throughout an imaginative boyhood and youth and early manhood. I was shocked and ashamed at my own disappointment. I thought it mean and base. Nevertheless this orderly household into which I had placed my life, these almost

methodical connubialities"

He broke off in mid-sentence.

Dr. Martineau shook his head disapprovingly.

"No," he said, "it wasn't fair to your wife."

"It was shockingly unfair. I have always realized that. I've done what I could to make things up to her. . . . Heaven knows what counter disappointments she has concealed. . . . But it is no good arguing about rights and wrongs now. This is not an apology for my life. I am telling you what happened.

"Not for me to judge," said Dr. Martineau. "Go on."

"By marrying I had got nothing that my soul craved for, I had satisfied none but the most transitory desires and I had incurred a tremendous obligation. That obligation didn't restrain me from making desperate lunges at something vaguely beautiful that I felt was necessary to me; but it did cramp and limit these lunges. So my story flops down into the comedy of the lying, cramped intrigues of a respectable, married man. . . I was still driven by my dream of some extravagantly beautiful inspiration called love and I sought it like an area sneak. Gods! What a story it is when one brings it all together! I couldn't believe that the glow and sweetness I dreamt of were not in the world--somewhere. Hidden away from me. I seemed to catch glimpses of the dear lost thing, now in the corners of a smiling mouth, now in dark eyes beneath a black smoke of hair, now in a slim form seen against the sky. Often I cared nothing for the woman I made love to. I cared for the thing she seemed to be hiding from me"

Sir Richmond's voice altered.

"I don't see what possible good it can do to talk over these things." He began to row and rowed perhaps a score of strokes. Then he stopped and the boat drove on with a whisper of water at the bow and over the outstretched oar blades.

"What a muddle and mockery the whole thing is!" he cried.

"What a fumbling old fool old Mother Nature has been! She drives us into indignity and dishonour: and she doesn't even get the children which are her only excuse for her mischief. See what a fantastic thing I am when you take the machine to pieces! I have been a busy and responsible man throughout my life. I have handled complicated public and industrial affairs not unsuccessfully and discharged quite big obligations fully and faithfully. And all the time, hidden away from the public eye, my life has been laced by the thread of these--what can one call them? --love adventures. How many? you ask. I don't know. Never have I been a whole-hearted lover; never have I been able to leave love alone. . . . Never has love left me alone.

"And as I am made, said Sir Richmond with sudden insistence, "AS I AM MADE--I do not believe that I could go on without these affairs. I know that you will be disposed to dispute that.

Dr. Martineau made a reassuring noise.

"These affairs are at once unsatisfying and vitally necessary. It is only latterly that I have begun to perceive this. Women MAKE life for me. Whatever they touch or see or desire becomes worth while and otherwise it is not worth while. Whatever is lovely in my world, whatever is

delightful, has been so conveyed to me by some woman. Without the vision they give me, I should be a hard dry industry in the world, a worker ant, a soulless rage, making much, valuing nothing."

He paused.

"You are, I think, abnormal," considered the doctor.

"Not abnormal. Excessive, if you like. Without women I am a wasting fever of distressful toil. Without them there is no kindness in existence, no rest, no sort of satisfaction. The world is a battlefield, trenches, barbed wire, rain, mud, logical necessity and utter desolation--with nothing whatever worth fighting for. Whatever justifies effort, whatever restores energy is hidden in women"

"An access of sex," said Dr. Martineau. " This is a phase. . . ."

"It is how I am made," said Sir Richmond.

A brief silence fell upon that. Dr. Martineau persisted. "It isn't how you are made. We are getting to something in all this. It is, I insist, a mood of how you are made. A distinctive and indicative mood."

Sir Richmond went on, almost as if he soliloquized.

"I would go through it all again. . . . There are times when the love of women seems the only real thing in the world to me. And always it remains the most real thing. I do not know how far I may be a normal man or how far I may not be, so to speak, abnormally male, but to me life has very little personal significance and no value or power until it has a

woman as intermediary. Before life can talk to me and say anything that matters a woman must be present as a medium. I don't mean that it has no significance mentally and logically; I mean that irrationally and emotionally it has no significance. Works of art, for example, bore me, literature bores me, scenery bores me, even the beauty of a woman bores me, unless I find in it some association with a woman's feeling. It isn't that I can't tell for myself that a picture is fine or a mountain valley lovely, but that it doesn't matter a rap to me whether it is or whether it isn't until there is a feminine response, a sexual motif, if you like to call it that, coming in. Whatever there is of loveliness or pride in life doesn't LIVE for me until somehow a woman comes in and breathes upon it the breath of life. I cannot even rest until a woman makes holiday for me. Only one thing can I do without women and that is work, joylessly but effectively, and latterly for some reason that it is up to you to discover, doctor, even the power of work has gone from me."

Section 4

"This afternoon brings back to me very vividly my previous visit here. It was perhaps a dozen or fifteen years ago. We rowed down this same backwater. I can see my companion's hand--she had very pretty hands with rosy palms--trailing in the water, and her shadowed face smiling quietly under her sunshade, with little faint streaks of sunlight, reflected from the ripples, dancing and quivering across it. She was one of those people who seem always to be happy and to radiate happiness.

"By ordinary standards," said Sir Richmond, "she was a thoroughly bad lot. She had about as much morality, in the narrower sense of the word, as a monkey. And yet she stands out in my mind as one of the most honest women I have ever

met. She was certainly one of the kindest. Part of that effect of honesty may have been due to her open brow, her candid blue eyes, the smiling frankness of her manner. . . . But--no! She was really honest.

"We drifted here as we are doing now. She pulled at the sweet rushes and crushed them in her hand. She adds a remembered brightness to this afternoon.

"Honest. Friendly. Of all the women I have known, this woman who was here with me came nearest to being my friend. You know, what we call virtue in a woman is a tremendous handicap to any real friendliness with a man. Until she gets to an age when virtue and fidelity are no longer urgent practical concerns, a good woman, by the very definition of feminine goodness, isn't truly herself. Over a vast extent of her being she is RESERVED. She suppresses a vast amount of her being, holds back, denies, hides. On the other hand, there is a frankness and honesty in openly bad women arising out of the admitted fact that they are bad, that they hide no treasure from you, they have no peculiarly precious and delicious secrets to keep, and no poverty to conceal. Intellectually they seem to be more manly and vigorous because they are, as people say, unsexed. Many old women, thoroughly respectable old women, have the same quality. Because they have gone out of the personal sex business. Haven't you found that?"

"I have never," said the doctor, known what you call an openly bad woman,--at least, at all intimately. . . . "

Sir Richmond looked with quick curiosity at his companion. "You have avoided them!"

"They don't attract me."

"They repel you?"

"For me," said the doctor, "for any friendliness, a woman must be modest. . . . My habits of thought are old-fashioned, I suppose, but the mere suggestion about a woman that there were no barriers, no reservation, that in any fashion she might more than meet me half way . . . "

His facial expression completed his sentence.

"Now I wonder," whispered Sir Richmond, and hesitated for a moment before he carried the great research into the explorer's country. "You are afraid of women?" he said, with a smile to mitigate the impertinence.

"I respect them."

"An element of fear."

"Well, I am afraid of them then. Put it that way if you like. Anyhow I do not let myself go with them. I have never let myself go."

"You lose something. You lose a reality of insight."

There was a thoughtful interval.

"Having found so excellent a friend," said the doctor, "why did you ever part from her?"

Sir Richmond seemed indisposed to answer, but Dr. Martineau's face remained slantingly interrogative. He had found the effective counterattack and he meant to press it. "I was jealous of her," Sir Richmond admitted. "I couldn't stand that side of it."

Section 5

After a meditative silence the doctor became briskly professional again.

"You care for your wife," he said. "You care very much for your wife. She is, as you say, your great obligation and you are a man to respect obligations. I grasp that. Then you tell me of these women who have come and gone. . . . About them too you are perfectly frank. . . There remains someone else." Sir Richmond stared at his physician.

"Well," he said and laughed. "I didn't pretend to have made my autobiography anything more than a sketch."

"No, but there is a special person, the current person."

"I haven't dilated on my present situation, I admit."

"From some little things that have dropped from you, I should say there is a child."

"That," said Sir Richmond after a brief pause, "is a good guess." "Not older than three." "Two years and a half."

"You and this lady who is, I guess, young, are separated. At any rate, you can't go to her. That leaves you at loose ends, because for some time, for two or three years at least, you have ceased to be--how shall I put it?--an emotional wanderer." "I begin to respect your psychoanalysis."

"Hence your overwhelming sense of the necessity of feminine companionship for weary men. I guess she is a very jolly companion to be with, amusing, restful--interesting."

"H'm," said Sir Richmond. "I think that is a fair description. When she cares, that is. When she is in good form."

"Which she isn't at present," hazarded the doctor. He exploded a mine of long-pent exasperation.

"She is the clumsiest hand at keeping well that I have ever known. Health is a woman's primary duty. But she is incapable of the most elementary precautions. She is maddeningly receptive to every infection. At the present moment, when I am ill, when I am in urgent need of help and happiness, she has let that wretched child get measles and she herself won't let me go near her because she has got something disfiguring, something nobody else could ever have or think of having, called CARBUNCLE. Carbuncle!"

"It is very painful," said Dr. Martineau. "No doubt it is," said Sir Richmond.

"No doubt it is." His voice grew bitter. He spoke with deliberation. "A perfectly aimless, useless illness,--and as painful as it CAN be."

He spoke as if he slammed a door viciously. And indeed he had slammed a door. The doctor realized that for the present there was no more self-dissection to be got from Sir Richmond.

For some time Sir Richmond had been keeping the boat close up to the foaming weir to the left of the lock by an occasional stroke. Now with a general air of departure he swung the boat round and began to row down stream towards the bridge and the Radiant Hotel.

"Time we had tea," he said,

Section 6

After tea Dr. Martineau left Sir Richmond in a chair upon the lawn, brooding darkly--apparently over the crime of the carbuncle. The doctor went to his room, ostensibly to write a couple of letters and put on a dinner jacket, but really to make a few notes of the afternoon's conversation and meditate over his impressions while they were fresh.

His room proffered a comfortable armchair and into this he sank. . . A number of very discrepant things were busy in his mind. He had experienced a disconcerting personal attack. There was a whirl of active resentment in the confusion.

"Apologetics of a rake," he tried presently.

"A common type, stripped of his intellectual dressing. Every third manufacturer from the midlands or the north has some such undertow of 'affairs.' A physiological uneasiness, an imaginative laxity, the temptations of the trip to London--weakness masquerading as a psychological necessity. The Lady of the Carbuncle seems to have got rather a hold upon him. She has kept him in order for three or four years."

The doctor scrutinized his own remarks with a judicious expression.

"I am not being fair. He ruffled me. Even if it is true, as I said, that every third manufacturer from the midlands is in much the same case as he is, that does not dismiss the case. It makes it a more important one, much more important: it makes it a type case with the exceptional quality of being

self-expressive. Almost too selfexpressive.

"Sir Richmond does, after all, make out a sort of case for himself. . . .

"A valid case?"

The doctor sat deep in his chair, frowning judicially with the fingers of one hand apposed to the fingers of the other. "He makes me bristle because all his life and ideas challenge my way of living. But if I eliminate the personal element? "

He pulled a sheet of note-paper towards him and began to jot down notes with a silver-cased pencil. Soon he discontinued writing and sat tapping his pencil-case on the table. "The amazing selfishness of his attitude! I do not think that once--not once--has he judged any woman except as a contributor to his energy and peace of mind. . . . Except in the case of his wife. . . .

"For her his habit of respect was formed before his ideas developed. . . .

"That I think explains HER. . . .

"What was his phrase about the unfortunate young woman with the carbuncle? . . . 'Totally Useless and unnecessary illness,' was it? . . .

"Now has a man any right by any standards to use women as this man has used them?

"By any standards?"

The doctor frowned and nodded his head slowly with the

corners of his mouth drawn in.

For some years now an intellectual reverie had been playing an increasing part in the good doctor's life. He was writing this book of his, writing it very deliberately and laboriously, *THE PSYCHOLOGY OF A NEW AGE*, but much more was he dreaming and thinking about this book. Its publication was to mark an epoch in human thought and human affairs generally, and create a considerable flutter of astonishment in the doctor's own little world. It was to bring home to people some various aspects of one very startling proposition: that human society had arrived at a phase when the complete restatement of its fundamental ideas had become urgently necessary, a phase when the slow, inadequate, partial adjustments to two centuries of changing conditions had to give place to a rapid reconstruction of new fundamental ideas. And it was a fact of great value in the drama of these secret dreams that the directive force towards this fundamentally reconstructed world should be the pen of an unassuming Harley Street physician, hitherto not suspected of any great excesses of enterprise.

The written portions of this book were already in a highly polished state. They combined a limitless freedom of proposal with a smooth urbanity of manner, a tacit denial that the thoughts of one intelligent being could possibly be shocking to another. Upon this the doctor was very insistent. Conduct, he held, could never be sufficiently discreet, thought could never be sufficiently free. As a citizen, one had to treat a law or an institution as a thing as rigidly right as a natural law. That the social well-being demands. But as a scientific man, in one's stated thoughts and in public discussion, the case was altogether different. There was no offence in any possible hypothesis or in the contemplation of any possibility. Just as when one played a game one was

bound to play in unquestioning obedience to the laws and spirit of the game, but if one was not playing that game then there was no reason why one should not contemplate the completest reversal of all its methods and the alteration and abandonment of every rule. Correctness of conduct, the doctor held, was an imperative concomitant of all really free thinking. Revolutionary speculation is one of those things that must be divorced absolutely from revolutionary conduct. It was to the neglect of these obvious principles, as the doctor considered them, that the general muddle in contemporary marital affairs was very largely due. We left divorce-law revision to exposed adulterers and marriage reform to hot adolescents and craving spinsters driven by the furies within them to assertions that established nothing and to practical demonstrations that only left everybody thoroughly uncomfortable. Far better to leave all these matters to calm, patient men in easy chairs, weighing typical cases impartially, ready to condone, indisposed to envy.

In return for which restraint on the part of the eager and adventurous, the calm patient man was prepared in his thoughts to fly high and go far. Without giving any guarantee, of course, that he might not ultimately return to the comfortable point of inaction from which he started.

In Sir Richmond, Dr. Martineau found the most interesting and encouraging confirmation of the fundamental idea of THE PSYCHOLOGY OF A NEW AGE, the immediate need of new criteria of conduct altogether. Here was a man whose life was evidently ruled by standards that were at once very high and very generous. He was overworking himself to the pitch of extreme distress and apparently he was doing this for ends that were essentially unselfish. Manifestly there were many things that an ordinary industrial or political magnate would do that Sir Richmond would not dream of doing, and a number

of things that such a man would not feel called upon to do that he would regard as imperative duties. And mixed up with so much fine intention and fine conduct was this disreputable streak of intrigue and this extraordinary claim that such misconduct was necessary to continued vigour of action.

"To energy of thought it is not necessary," said Dr. Martineau, and considered for a time. "Yet--certainly--I am not a man of action. I admit it. I make few decisions.

"The chapters of THE PSYCHOLOGY OF A NEW AGE dealing with women were still undrafted, but they had already greatly exercised the doctor's mind. He found now that the case of Sir Richmond had stirred his imagination. He sat with his hands apposed, his head on one side, and an expression of great intellectual contentment on his face while these emancipated ideas gave a sort of gala performance in his mind.

The good doctor did not dislike women, he had always guarded himself very carefully against misogyny, but he was very strongly disposed to regard them as much less necessary in the existing scheme of things than was generally assumed. Women, he conceded, had laid the foundations of social life. Through their contrivances and sacrifices and patience the fierce and lonely patriarchal family-herd of a male and his women and off spring had grown into the clan and tribe; the woven tissue of related families that constitute the human comity had been woven by the subtle, persistent protection of sons and daughters by their mothers against the intolerant, jealous, possessive Old Man. But that was a thing, of the remote past. Little was left of those ancient struggles now but a few infantile dreams and nightmares. The greater human community, human society, was made for good. And being made, it had taken over the ancient tasks of the woman, one by one,

until now in its modern forms it cherished more sedulously than she did, it educated, it housed and comforted, it clothed and served and nursed, leaving the wife privileged, honoured, protected, for the sake of tasks she no longer did and of a burthen she no longer bore. "Progress has TRIVIALIZED women," said the doctor, and made a note of the word for later consideration.

"And woman has trivialized civilization," the doctor tried.

"She has retained her effect of being central, she still makes the social atmosphere, she raises men's instinctive hopes of help and direction. Except," the doctor stipulated, "for a few highly developed modern types, most men found the sense of achieving her a necessary condition for sustained exertion. And there is no direction in her any more.

"She spends," said the doctor, "she just spends. She spends excitingly and competitively for her own pride and glory, she drives all the energy of men over the weirs of gain. . . .

"What are we to do with the creature?" whispered the doctor.

Apart from the procreative necessity, was woman an unavoidable evil? The doctor's untrammelled thoughts began to climb high, spin, nose dive and loop the loop. Nowadays we took a proper care of the young, we had no need for high birth rates, quite a small proportion of women with a gift in that direction could supply all the offspring that the world wanted. Given the power of determining sex that science was slowly winning today, and why should we have so many women about? A drastic elimination of the creatures would be quite practicable. A fantastic world to a vulgar imagination, no doubt, but to a calmly reasonable mind by no means fantastic. But this was where the case of Sir Richmond became so

interesting. Was it really true that the companionship of women was necessary to these energetic creative types? Was it the fact that the drive of life towards action, as distinguished from contemplation, arose out of sex and needed to be refreshed by the reiteration of that motive? It was a plausible proposition: it marched with all the doctor's ideas of natural selection and of the conditions of a survival that have made us what we are. It was in tune with the Freudian analyses.

"SEX NOT ONLY A RENEWAL OF LIFE IN THE SPECIES," noted the doctor's silver pencil; "SEX MAY BE ALSO A RENEWAL OF ENERGY IN THE INDIVIDUAL."

After some musing he crossed out "sex" and wrote above it "sexual love."

"That is practically what he claims, Dr. Martineau said. "In which case we want the completest revision of all our standards of sexual obligation. We want a new system of restrictions and imperatives altogether."

It was a fixed idea of the doctor's that women were quite incapable of producing ideas in the same way that men do, but he believed that with suitable encouragement they could be induced to respond quite generously to such ideas. Suppose therefore we really educated the imaginations of women; suppose we turned their indubitable capacity for service towards social and political creativeness, not in order to make them the rivals of men in these fields, but their moral and actual helpers. "A man of this sort wants a mistress-mother," said the doctor. "He wants a sort of woman who cares more for him and his work and honour than she does for child or home or clothes or personal pride. "But are there such

women? Can there be such a woman?"

"His work needs to be very fine to deserve her help. But admitting its fineness? . . .

"The alternative seems to be to teach the sexes to get along without each other.

"A neutralized world. A separated world. How we should jostle in the streets! But the early Christians have tried it already. The thing is impossible.

"Very well, then, we have to make women more responsible again. In a new capacity. We have to educate them far more seriously as sources of energy--as guardians and helpers of men. And we have to suppress them far more rigorously as tempters and dissipaters. Instead of mothering babies they have to mother the race. . . . "

A vision of women made responsible floated before his eyes.

"Is that man working better since you got hold of him? If not, why not? "Or again,--Jane Smith was charged with neglecting her lover to the common danger. . . . The inspector said the man was in a pitiful state, morally quite uncombed and infested with vulgar, showy ideas. . . . "

The doctor laughed, telescoped his pencil and stood up.

Section 7

It became evident after dinner that Sir Richmond also had been thinking over the afternoon's conversation.

He and Dr. Martineau sat in wide-armed cane chairs on the

lawn with a wickerwork table bearing coffee cups and little glasses between them. A few other diners chatted and whispered about similar tables but not too close to our talkers to disturb them; the dining room behind them had cleared its tables and depressed its illumination. The moon, in its first quarter, hung above the sunset, sank after twilight, shone brighter and brighter among the western trees, and presently had gone, leaving the sky to an increasing multitude of stars. The Maidenhead river wearing its dusky blue draperies and its jewels of light had recovered all the magic Sir Richmond had stripped from it in the afternoon. The grave arches of the bridge, made complete circles by the reflexion of the water, sustained, as if by some unifying and justifying reason, the erratic flat flashes and streaks and glares of traffic that fretted to and fro overhead. A voice sang intermittently and a banjo tinkled, but remotely enough to be indistinct and agreeable.

"After all," Sir Richmond began abruptly, "the search for some sort of sexual *modus vivendi* is only a means to an end. One does not want to live for sex but only through sex. The main thing in my life has always been my work. This afternoon, under the Maidenhead influence, I talked too much of sex. I babbled. Of things one doesn't usually . . . "

"It was very illuminating," said the doctor.

"No doubt. But a temporary phase. It is the defective bearing talks. . . . Just now--I happen to be irritated."

The darkness concealed a faint smile on the doctor's face.

"The work is the thing," said Sir Richmond. So long as one can keep one's grip on it."

"What," said the doctor after a pause, leaning back and sending wreaths of smoke up towards the star-dusted zenith, "what is your idea of your work? I mean, how do you see it in relation to yourself--and things generally?"

"Put in the most general terms?"

"Put in the most general terms."

"I wonder if I can put it in general terms for you at all. It is hard to put something one is always thinking about in general terms or to think of it as a whole. . . . Now. . . . Fuel? . . .

"I suppose it was my father's business interests that pushed me towards specialization in fuel. He wanted me to have a thoroughly scientific training in days when a scientific training was less easy to get for a boy than it is today. And much more inspiring when you got it. My mind was framed, so to speak, in geology and astronomical physics. I grew up to think on that scale. Just as a man who has been trained in history and law grows to think on the scale of the Roman empire. I don't know what your pocket map of the universe is, the map, I mean, by which you judge all sorts of other general ideas. To me this planet is a little ball of oxides and nickel steel; life a sort of tarnish on its surface. And we, the minutest particles in that tarnish. Who can nevertheless, in some unaccountable way, take in the idea of this universe as one whole, who begin to dream of taking control of it."

"That is not a bad statement of the scientific point of view. I suppose I have much the same general idea of the world. On rather more psychological lines."

"We think, I suppose, said Sir Richmond, of life as something that is only just beginning to be aware of what it is--and what it might be."

"Exactly," said the doctor. "Good."

He went on eagerly. "That is precisely how I see it. You and I are just particles in the tarnish, as you call it, who are becoming dimly awake to what we are, to what we have in common. Only a very few of us have got as far even as this. These others here, for example"

He indicated the rest of Maidenhead by a movement.

"Desire, mutual flattery, egotistical dreams, greedy solitudes fill them up. They haven't begun to get out of themselves."

"We, I suppose, have," doubted Sir Richmond.

"We have."

The doctor had no doubt. He lay back in his chair, with his hands behind his head and his smoke ascending vertically to heaven. With the greatest contentment he began quoting himself. "This getting out of one's individuality--this conscious getting out of one's individuality--is one of the most important and interesting aspects of the psychology of the new age that is now dawning. As compared with any previous age. Unconsciously, of course, every true artist, every philosopher, every scientific investigator, so far as his art or thought went, has always got out of himself,--has forgotten his personal interests and become Man thinking for the whole race. And intimations of the same thing have been at the heart of most religions. But now people are beginning

to get this detachment without any distinctively religious feeling or any distinctive aesthetic or intellectual impulse, as if it were a plain matter of fact. Plain matter of fact, that we are only incidentally ourselves. That really each one of us is also the whole species, is really indeed all life. "

"A part of it."

"An integral part-as sight is part of a man . . . with no absolute separation from all the rest--no more than a separation of the imagination. The whole so far as his distinctive quality goes. I do not know how this takes shape in your mind, Sir Richmond, but to me this idea of actually being life itself upon the world, a special phase of it dependent upon and connected with all other phases, and of being one of a small but growing number of people who apprehend that, and want to live in the spirit of that, is quite central. It is my fundamental idea. We,--this small but growing minority--constitute that part of life which knows and wills and tries to rule its destiny. This new realization, the new psychology arising out of it is a fact of supreme importance in the history of life. It is like the appearance of self-consciousness in some creature that has not hitherto had self-consciousness. And so far as we are concerned, we are the true kingship of the world.

Necessarily. We who know, are the true king. . . .I wonder how this appeals to you. It is stuff I have thought out very slowly and carefully and written and approved. It is the very core of my life. . . . And yet when one comes to say these things to someone else, face to face. . . . It is much more difficult to say than to write."

Sir Richmond noted how the doctor's chair creaked as he rolled to and fro with the uneasiness of these intimate utterances.

"I agree," said Sir Richmond presently. "One DOES think in this fashion. Something in this fashion. What one calls one's work does belong to something much bigger than ourselves.

"Something much bigger," he expanded.

"Which something we become," the doctor urged, "in so far as our work takes hold of us."

Sir Richmond made no answer to this for a little while. "Of course we trail a certain egotism into our work," he said.

"Could we do otherwise? But it has ceased to be purely egotism. It is no longer, 'I am I' but 'I am part.' . . . One wants to be an honourable part."

"You think of man upon his planet," the doctor pursued. "I think of life rather as a mind that tries itself over in millions and millions of trials. But it works out to the same thing."

"I think in terms of fuel," said Sir Richmond.

He was still debating the doctor's generalization. "I suppose it would be true to say that I think of myself as mankind on his planet, with very considerable possibilities and with only a limited amount of fuel at his disposal to achieve them. Yes. . . . I agree that I think in that way. . . . I have not thought much before of the way in which I think about things--but I agree that it is in that way. Whatever enterprises mankind attempts are limited by the sum total of that store of fuel upon the planet. That is very much in my mind. Besides that he has nothing but his annual allowance of energy from the sun."

"I thought that presently we were to get unlimited energy from atoms," said the doctor.

"I don't believe in that as a thing immediately practicable. No doubt getting a supply of energy from atoms is a theoretical possibility, just as flying was in the time of Daedalus; probably there were actual attempts at some sort of glider in ancient Crete. But before we get to the actual utilization of atomic energy there will be ten thousand difficult corners to turn; we may have to wait three or four thousand years for it. We cannot count on it. We haven't it in hand. There may be some impasse. All we have surely is coal and oil,--there is no surplus of wood now--only an annual growth. And water-power is income also, doled out day by day. We cannot anticipate it. Coal and oil are our only capital. They are all we have for great important efforts. They are a gift to mankind to use to some supreme end or to waste in trivialities. Coal is the key to metallurgy and oil to transit. When they are done we shall either have built up such a fabric of apparatus, knowledge and social organization that we shall be able to manage without them--or we shall have travelled a long way down the slopes of waste towards extinction. . . . To-day, in getting, in distribution, in use we waste enormously. . . .As we sit here all the world is wasting fuel fantastically."

"Just as mentally--educationally we waste," the doctor interjected.

"And my job is to stop what I can of that waste, to do what I can to organize, first of all sane fuel getting and then sane fuel using. And that second proposition carries us far. Into the whole use we are making of life.

"First things first," said Sir Richmond. If we set about getting fuel sanely, if we do it as the deliberate, co-operative act of the whole species, then it follows that we shall look very closely into the use that is being made of it. When all the fuel getting is brought into one view as a common interest, then it follows that all the fuel burning will be brought into one view. At present we are getting fuel in a kind of scramble with no general aim. We waste and lose almost as much as we get. And of what we get, the waste is idiotic.

"I won't trouble you," said Sir Richmond, "with any long discourse on the ways of getting fuel in this country. But land as you know is owned in patches and stretches that were determined in the first place chiefly by agricultural necessities. When it was divided up among its present owners nobody was thinking about the minerals beneath. But the lawyers settled long ago that the landowner owned his land right down to the centre of the earth. So we have the superficial landlord as coal owner trying to work his coal according to the superficial divisions, quite irrespective of the lie of the coal underneath. Each man goes for the coal under his own land in his own fashion. You get three shafts where one would suffice and none of them in the best possible place. You get the coal coming out of this point when it would be far more convenient to bring it out at that--miles away. You get boundary walls of coal between the estates, abandoned, left in the ground for ever. And each coal owner sells his coal in his own pettifogging manner... But you know of these things. You know too how we trail the coal all over the country, spoiling it as we trail it, until at last we get it into the silly coal scuttles beside the silly, wasteful, airpoisoning, fog-creating fireplace.

"And this stuff," said Sir Richmond, bringing his hand down

so smartly on the table that the startled coffee cups cried out upon the tray; "was given to men to give them power over metals, to get knowledge with, to get more power with."

"The oil story, I suppose, is as bad."

"The oil story is worse. . . .

"There is a sort of cant," said Sir Richmond in a fierce parenthesis, "that the supplies of oil are inexhaustible--that you can muddle about with oil anyhow. . . . Optimism of knaves and imbeciles. . . . They don't want to be pulled up by any sane considerations. . . ."

For some moments he kept silence--as if in unspeakable commination.

"Here I am with some clearness of vision--my only gift; not very clever, with a natural bad temper, and a strong sexual bias, doing what I can to get a broader handling of the fuel question--as a common interest for all mankind. And I find myself up against a lot of men, subtle men, sharp men, obstinate men, prejudiced men, able to get round me, able to get over me, able to blockade me. . . . Clever men--yes, and all of them ultimately damned--oh! utterly damned--fools. Coal owners who think only of themselves, solicitors who think backwards, politicians who think like a game of cat's-cradle, not a gleam of generosity not a gleam."

"What particularly are you working for?" asked the doctor.

"I want to get the whole business of the world's fuel discussed and reported upon as one affair so that some day it may be handled as one affair in the general interest."

"The world, did you say? You meant the empire?"

"No, the world. It is all one system now. You can't work it in bits. I want to call in foreign representatives from the beginning."

"Advisory--consultative?"

"No. With powers. These things interlock now internationally both through labour and finance. The sooner we scrap this nonsense about an autonomous British Empire complete in itself, contra mundum, the better for us. A world control is fifty years overdue. Hence these disorders. "

"Still--it's rather a difficult proposition, as things are."

"Oh, Lord! don't I know it's difficult!" cried Sir Richmond in the tone of one who swears. "Don't I know that perhaps it's impossible! But it's the only way to do it. Therefore, I say, let's try to get it done. And everybody says, difficult, difficult, and nobody lifts a finger to try. And the only real difficulty is that everybody for one reason or another says that it's difficult. It's against human nature. Granted! Every decent thing is. It's socialism. Who cares? Along this line of comprehensive scientific control the world has to go or it will retrogress, it will muddle and rot. . . ."

"I agree," said Dr. Martineau.

"So I want a report to admit that distinctly. I want it to go further than that. I want to get the beginnings, the germ, of a world administration. I want to set up a permanent world commission of scientific men and economists--with powers, just as considerable powers as I can give them--they'll be feeble powers at the best--but still some sort of SAY in the

whole fuel supply of the world. A say--that may grow at last to a control. A right to collect reports and receive accounts for example, to begin with. And then the right to make recommendations. . . . You see? . . . No, the international part is not the most difficult part of it. But my beastly owners and their beastly lawyers won't relinquish a scrap of what they call their freedom of action. And my labour men, because I'm a fairly big coal owner myself, sit and watch and suspect me, too stupid to grasp what I am driving at and too incompetent to get out a scheme of their own. They want a world control on scientific lines even less than the owners. They try to think that fuel production can carry an unlimited wages bill and the owners try to think that it can pay unlimited profits, and when I say; 'This business is something more than a scramble for profits and wages; it's a service and a common interest,' they stare at me--" Sir Richmond was at a loss for an image. "Like a committee in a thieves' kitchen when someone has casually mentioned the law."

"But will you ever get your Permanent Commission?"

"It can be done. If I can stick it out."

"But with the whole Committee against you!"

"The curious thing is that the whole Committee isn't against me. Every individual is"

Sir Richmond found it difficult to express. "The psychology of my Committee ought to interest you. . . . It is probably a fair sample of the way all sorts of things are going nowadays. It's curious. . . . There is not a man on that Committee who is quite comfortable within himself about the particular individual end he is there to serve. It's there I

get them. They pursue their own ends bitterly and obstinately I admit, but they are bitter and obstinate because they pursue them against an internal opposition--which is on my side. They are terrified to think, if once they stopped fighting me, how far they might not have to go with me."

"A suppressed world conscience in fact. This marches very closely with my own ideas."

"A world conscience? World conscience? I don't know. But I do know that there is this drive in nearly every member of the Committee, some drive anyhow, towards the decent thing. It is the same drive that drives me. But I am the most driven. It has turned me round. It hasn't turned them. I go East and they go West. And they don't want to be turned round. Tremendously, they don't."

"Creative undertow," said Dr. Martineau, making notes, as it were. "An increasing force in modern life. In the psychology of a new age strengthened by education--it may play a directive part."

"They fight every little point. But, you see, because of this creative undertow--if you like to call it that--we do get along. I am leader or whipper-in, it is hard to say which, of a bolting flock. . . .I believe they will report for a permanent world commission; I believe I have got them up to that; but they will want to make it a bureau of this League of Nations, and I have the profoundest distrust of this League of Nations. It may turn out to be a sort of side-tracking arrangement for all sorts of important world issues. And they will find they have to report for some sort of control. But there again they will shy. They will report for it and then they will do their utmost to whittle it down again. They will refuse it the most reasonable powers. They

will alter the composition of the Committee so as to make it innocuous."

"How?"

"Get rid of the independent scientific men, load it up so far as Britain is concerned with muck of the colonial politician type and tame labour representatives, balance with shady new adventurer millionaires, get in still shadier stuff from abroad, let these gentry appoint their own tame experts after their own hearts,--experts who will make merely advisory reports, which will not be published. . . ."

"They want in fact to keep the old system going under the cloak of YOUR Committee, reduced to a cloak and nothing more?"

"That is what it amounts to. They want to have the air of doing right--indeed they do want to have the FEEL of doing right--and still leave things just exactly what they were before. And as I suffer under the misfortune of seeing the thing rather more clearly, I have to shepherd the conscience of the whole Committee. . . . But there is a conscience there. If I can hold out myself, I can hold the Committee."

He turned appealingly to the doctor. "Why should I have to be the conscience of that damned Committee? Why should I do this exhausting inhuman job? In their hearts these others know. . . . Only they won't know. . . . Why should it fall on me?"

"You have to go through with it," said Dr. Martineau.

"I have to go through with it, but it's a hell of utterly inglorious squabbling. They bait me. They have been fighting

the same fight within themselves that they fight with me. They know exactly where I am, that I too am doing my job against internal friction. The one thing before all others that they want to do is to bring me down off my moral high horse. And I loathe the high horse. I am in a position of special moral superiority to men who are on the whole as good men as I am or better. That shows all the time. You see the sort of man I am. I've a broad streak of personal vanity. I fag easily. I'm short-tempered. I've other things, as you perceive. When I fag I become obtuse, I repeat and bore, I get viciously ill-tempered, I suffer from an intolerable sense of ill usage. Then that ass, Wagstaffe, who ought to be working with me steadily, sees his chance to be pleasantly witty. He gets a laugh round the table at my expense. Young Dent, the more intelligent of the labour men, reads me a lecture in committee manners. Old Cassidy sees HIS opening and jabs some ridiculous petty accusation at me and gets me spluttering self-defence like a fool. All my stock goes down, and as my stock goes down the chances of a good report dwindle. Young Dent grieves to see me injuring my own case. Too damned a fool to see what will happen to the report! You see if only they can convince themselves I am just a prig and an egotist and an impractical bore, they escape from a great deal more than my poor propositions. They escape from the doubt in themselves. By dismissing me they dismiss their own consciences. And then they can scamper off and be sensible little piggy-wigs and not bother any more about what is to happen to mankind in the long run. . . . Do you begin to realize the sort of fight, upside down in a dustbin, that that Committee is for me?"

"You have to go through with it," Dr. Martineau repeated.

"I have. If I can. But I warn you I have been near breaking point. And if I tumble off the high horse, if I can't keep

going regularly there to ride the moral high horse, that Committee will slump into utter scoundrelism. It will turn out a long, inconsistent, botched, unreadable report that will back up all sorts of humbugging bargains and sham settlements. It will contain some half-baked scheme to pacify the miners at the expense of the general welfare. It won't even succeed in doing that. But in the general confusion old Cassidy will get away with a series of hauls that may run into millions. Which will last his time--damn him! And that is where we are. . . . Oh! I know! I know! I must do this job. I don't need any telling that my life will be nothing and mean nothing unless I bring this thing through. . . .

"But the thanklessness of playing this lone hand!"

The doctor watched his friend's resentful black silhouette against the lights on the steely river, and said nothing for awhile.

"Why did I ever undertake to play it?" Sir Richmond appealed. "Why has it been put upon me? Seeing what a poor thing I am, why am I not a poor thing altogether?"

Section 8

"I think I understand that loneliness of yours, said the doctor after an interval.

"I am INTOLERABLE to myself."

"And I think it explains why it is that you turn to women as you do. You want help; you want reassurance. And you feel they can give it."

"I wonder if it has been quite like that," Sir Richmond reflected.

By an effort Dr. Martineau refrained from mentioning the mother complex. "You want help and reassurance as a child does," he said. "Women and women alone seem capable of giving that, of telling you that you are surely right, that notwithstanding your blunders you are right; that even when you are wrong it doesn't so much matter, you are still in spirit right. They can show their belief in you as no man can. With all their being they can do that."

"Yes, I suppose they could."

"They can. You have said already that women are necessary to make things real for you."

"Not my work," said Sir Richmond. "I admit that it might be like that, but it isn't like that. It has not worked out like that. The two drives go on side by side in me. They have no logical connexion. All I can say is that for me, with my bifid temperament, one makes a rest from the other, and is so far refreshment and a renewal of energy. But I do not find women coming into my work in any effectual way. "

The doctor reflected further. "I suppose," he began and stopped short.

He heard Sir Richmond move in his chair, creaking an interrogation.

"You have never," said the doctor, "turned to the idea of God?"

Sir Richmond grunted and made no other answer for the better

part of a minute.

As Dr. Martineau waited for his companion to speak, a falling star streaked the deep blue above them.

"I can't believe in a God," said Sir Richmond.

"Something after the fashion of a God," said the doctor insidiously.

"No," said Sir Richmond. "Nothing that reassures."

"But this loneliness, this craving for companionship. . . ."

"We have all been through that," said Sir Richmond. "We have all in our time lain very still in the darkness with our souls crying out for the fellowship of God, demanding some sign, some personal response. The faintest feeling of assurance would have satisfied us."

"And there has never been a response?"

"Have YOU ever had a response?"

"Once I seemed to have a feeling of exaltation and security."

"Well?"

"Perhaps I only persuaded myself that I had. I had been reading William James on religious experiences and I was thinking very much of Conversion. I tried to experience Conversion. . . ."

"Yes? "

"It faded."

"It always fades," said Sir Richmond with anger in his voice.

"I wonder how many people there are nowadays who have passed through this last experience of ineffectual invocation, this appeal to the fading shadow of a vanished God. In the night. In utter loneliness. Answer me! Speak to me! Does he answer? In the silence you hear the little blood vessels whisper in your ears. You see a faint glow of colour on the darkness. . . . "

Dr. Martineau sat without a word.

"I can believe that over all things Righteousness rules. I can believe that. But Righteousness is not friendliness nor mercy nor comfort nor any such dear and intimate things. This cuddling up to Righteousness! It is a dream, a delusion and a phase. I've tried all that long ago. I've given it up long ago. I've grown out of it. Men do--after forty. Our souls were made in the squatting-place of the submen of ancient times. They are made out of primitive needs and they die before our bodies as those needs are satisfied. Only young people have souls, complete. The need for a personal God, feared but reassuring, is a youth's need. I no longer fear the Old Man nor want to propitiate the Old Man nor believe he matters any more. I'm a bit of an Old Man myself I discover. Yes. But the other thing still remains. "

"The Great Mother of the Gods," said Dr. Martineau--still clinging to his theories.

"The need of the woman," said Sir Richmond. "I want mating because it is my nature to mate. I want fellowship because I am a social animal and I want it from another social animal. Not from any God--any inconceivable God. Who fades and

disappears. No. . . .

"Perhaps that other need will fade presently. I do not know. Perhaps it lasts as long as life does. How can I tell?"

He was silent for a little while. Then his voice sounded in the night, as if he spoke to himself. "But as for the God of All Things consoling and helping! Imagine it! That up there--having fellowship with me! I would as soon think of cooling my throat with the Milky Way or shaking hands with those stars."

CHAPTER THE FIFTH

IN THE LAND OF THE FORGOTTEN PEOPLES

Section 1

A gust of confidence on the part of a person naturally or habitually reserved will often be followed by a phase of recoil. At breakfast next morning their overnight talk seemed to both Sir Richmond and Dr. Martineau like something each had dreamt about the other, a quite impossible excess of intimacy. They discussed the weather, which seemed to be settling down to the utmost serenity of which the English spring is capable, they talked of Sir Richmond's coming car and of the possible routes before them. Sir Richmond produced the Michelin maps which he had taken out of the pockets of the little Charmeuse. The Bath Road lay before them, he explained, Reading, Newbury, Hungerford, Marlborough, Silbury Hill which overhangs Avebury. Both travellers discovered a common excitement at the mention of Avebury and Silbury Hill. Both took an intelligent interest in archaeology. Both had been greatly stimulated by the recent work of Elliot Smith and Rivers upon what was then known as the Heliolithic culture. It had revived their interest in Avebury and Stonehenge. The doctor moreover had been reading Hippisley Cox's GREEN ROADS OF ENGLAND.

Neither gentleman had ever seen Avebury, but Dr. Martineau had once visited Stonehenge.

"Avebury is much the oldest," said the doctor. They must have made Silbury Hill long before 2000 B.C. It may be five thousand years old or even more. It is the most important historical relic in the British Isles. And the most

neglected. "

They exchanged archaeological facts. The secret places of the heart rested until the afternoon.

Then Sir Richmond saw fit to amplify his confessions in one particular.

Section 2

The doctor and his patient had discovered a need for exercise as the morning advanced. They had walked by the road to Marlow and had lunched at a riverside inn, returning after a restful hour in an arbour on the lawn of this place to tea at Maidenhead. It was as they returned that Sir Richmond took up the thread of their overnight conversation again.

"In the night," he said, "I was thinking over the account I tried to give you of my motives. A lot of it was terribly out of drawing."

"Facts?" asked the doctor.

"No, the facts were all right. It was the atmosphere, the proportions. . . . I don't know if I gave you the effect of something Don Juanesque? . . ."

"Vulgar poem," said the doctor remarkably. "I discounted that."

"Vulgar!"

"Intolerable. Byron in sexual psychology is like a stink in a kitchen."

Sir Richmond perceived he had struck upon the sort of thing that used to be called a pet aversion.

"I don't want you to think that I run about after women in an habitual and systematic manner. Or that I deliberately hunt them in the interests of my work and energy. Your questions had set me theorizing about myself. And I did my best to improvise a scheme of motives yesterday. It was, I perceive, a jerry-built scheme, run up at short notice. My nocturnal reflections convinced me of that. I put reason into things that are essentially instinctive. The truth is that the wanderings of desire have no single drive. All sorts of motives come in, high and low, down to sheer vulgar imitativeness and competitiveness. What was true in it all was this, that a man with any imagination in a fatigue phase falls naturally into these complications because they are more attractive to his type and far easier and more refreshing to the mind, at the outset, than anything else. And they do work a sort of recovery in him, They send him back to his work refreshed--so far, that is, as his work is concerned."

"At the OUTSET they are easier," said the doctor.

Sir Richmond laughed. "When one is fagged it is only the outset counts. The more tired one is the more readily one moves along the line of least resistance. . . .

"That is one footnote to what I said. So far as the motive of my work goes, I think we got something like the spirit of it. What I said about that was near the truth of things. . . .

"But there is another set of motives altogether, "Sir Richmond went on with an air of having cleared the ground for his real business, "that I didn't go into at all yesterday."

He considered. "It arises out of these other affairs. Before you realize it your affections are involved. I am a man much swayed by my affections."

Mr. Martineau glanced at him. There was a note of genuine self-reproach in Sir Richmond's voice.

"I get fond of people. It is quite irrational, but I get fond of them. Which is quite a different thing from the admiration and excitement of falling in love. Almost the opposite thing. They cry or they come some mental or physical cropper and hurt themselves, or they do something distressingly little and human and suddenly I find they've GOT me. I'm distressed. I'm filled with something between pity and an impulse of responsibility. I become tender towards them. I am impelled to take care of them. I want to ease them off, to reassure them, to make them stop hurting at any cost. I don't see why it should be the weak and sickly and seamy side of people that grips me most, but it is. I don't know why it should be their failures that gives them power over me, but it is. I told you of this girl, this mistress of mine, who is ill just now. SHE'S got me in that way; she's got me tremendously."

"You did not speak of her yesterday with any morbid excess of pity," the doctor was constrained to remark.

"I abused her very probably. I forget exactly what I said. . . ."

The doctor offered no assistance.

"But the reason why I abuse her is perfectly plain. I abuse her because she distresses me by her misfortunes and instead of my getting anything out of her, I go out to her. But I DO

go out to her. All this time at the back of my mind I am worrying about her. She has that gift of making one feel for her. I am feeling that damned carbuncle almost as if it had been my affair instead of hers.

"That carbuncle has made me suffer FRIGHTFULLY. . . . Why should I? It isn't mine."

He regarded the doctor earnestly. The doctor controlled a strong desire to laugh.

"I suppose the young lady--" he began.

"Oh! SHE puts in suffering all right. I've no doubt about that.

"I suppose," Sir Richmond went on, "now that I have told you so much of this affair, I may as well tell you all. It is a sort of comedy, a painful comedy, of irrelevant affections."

The doctor was prepared to be a good listener. Facts he would always listen to; it was only when people told him their theories that he would interrupt with his "Exactly."

"This young woman is a person of considerable genius. I don't know if you have seen in the illustrated papers a peculiar sort of humorous illustrations usually with a considerable amount of bite in them over the name of Martin Leeds?"

"Extremely amusing stuff."

"It is that Martin Leeds. I met her at the beginning of her career. She talks almost as well as she draws. She amused me immensely. I'm not the sort of man who waylays and besieges women and girls. I'm not the pursuing type. But I perceived

that in some odd way I attracted her and I was neither wise enough nor generous enough not to let the thing develop."

"H'm," said Dr. Martineau.

"I'd never had to do with an intellectually brilliant woman before. I see now that the more imaginative force a woman has, the more likely she is to get into a state of extreme self-abandonment with any male thing upon which her imagination begins to crystallize. Before I came along she'd mixed chiefly with a lot of young artists and students, all doing nothing at all except talk about the things they were going to do. I suppose I profited by the contrast, being older and with my hands full of affairs. Perhaps something had happened that had made her recoil towards my sort of thing. I don't know. But she just let herself go at me."

"And you?"

"Let myself go too. I'd never met anything like her before. It was her wit took me. It didn't occur to me that she wasn't my contemporary and as able as I was. As able to take care of herself. All sorts of considerations that I should have shown to a sillier woman I never dreamt of showing to her. I had never met anyone so mentally brilliant before or so helpless and headlong. And so here we are on each other's hands! "

"But the child?"

"It happened to us. For four years now things have just happened to us. All the time I have been overworking, first at explosives and now at this fuel business. She too is full of her work.

"Nothing stops that though everything seems to interfere with

it. And in a distraught, preoccupied way we are abominably fond of each other. 'Fond' is the word. But we are both too busy to look after either ourselves or each other.

"She is much more incapable than I am," said Sir Richmond as if he delivered a weighed and very important judgment.

"You see very much of each other?"

"She has a flat in Chelsea and a little cottage in South Cornwall, and we sometimes snatch a few days together, away somewhere in Surrey or up the Thames or at such a place as Southend where one is lost in a crowd of inconspicuous people. "Then things go well--they usually go well at the start--we are glorious companions. She is happy, she is creative, she will light up a new place with flashes of humour, with a keenness of appreciation "

"But things do not always go well?"

"Things," said Sir Richmond with the deliberation of a man who measures his words, "are apt to go wrong. . . . At the flat there is constant trouble with the servants; they bully her. A woman is more entangled with servants than a man. Women in that position seem to resent the work and freedom of other women. Her servants won't leave her in peace as they would leave a man; they make trouble for her. . . . And when we have had a few days anywhere away, even if nothing in particular has gone wrong--"

Sir Richmond stopped short.

"When they go wrong it is generally her fault," the doctor sounded.

"Almost always."

"But if they don't?" said the psychiatrist.

"It is difficult to describe. . . . The essential incompatibility of the whole thing comes out."

The doctor maintained his expression of intelligent interest.

"She wants to go on with her work. She is able to work anywhere. All she wants is just cardboard and ink. My mind on the other hand turns back to the Fuel Commission"

"Then any little thing makes trouble."

"Any little thing makes trouble. And we always drift round to the same discussion; whether we ought really to go on together."

"It is you begin that?"

"Yes, I start that. You see she is perfectly contented when I am about. She is as fond of me as I am of her."

"Fonder perhaps."

"I don't know. But she is--adhesive. Emotionally adhesive. All she wants to do is just to settle down when I am there and go on with her work. But then, you see, there is MY work."

"Exactly. . . . After all it seems to me that your great trouble is not in yourselves but in social institutions. Which haven't yet fitted themselves to people like you two. It is the sense of uncertainty makes her, as you say,

adhesive. Nervously so. If we were indeed living in a new age
Instead of the moral ruins of a shattered one--"

"We can't alter the age we live in," said Sir Richmond a
little testily.

"No. Exactly. But we CAN realize, in any particular
situation, that it is not the individuals to blame but the
misfit of ideas and forms and prejudices."

"No," said Sir Richmond, obstinately rejecting this pacifying
suggestion; "she could adapt herself. If she cared enough."

"But how?"

"She will not take the slightest trouble to adjust herself to
the peculiarities of our position. . . . She could be
cleverer. Other women are cleverer. Any other woman almost
would be cleverer than she is."

"But if she was cleverer, she wouldn't be the genius she is.
She would just be any other woman."

"Perhaps she would," said Sir Richmond darkly and
desperately. "Perhaps she would. Perhaps it would be better
if she was."

Dr. Martineau raised his eyebrows in a furtive aside.

"But here you see that it is that in my case, the fundamental
incompatibility between one's affections and one's wider
conception of duty and work comes in. We cannot change social
institutions in a year or a lifetime. We can never change
them to suit an individual case. That would be like
suspending the laws of gravitation in order to move a piano.

As things are, Martin is no good to me, no help to me. She is a rival to my duty. She feels that. She is hostile to my duty. A definite antagonism has developed. She feels and treats fuel--and everything to do with fuel as a bore. It is an attack. We quarrel on that. It isn't as though I found it so easy to stick to my work that I could disregard her hostility. And I can't bear to part from her. I threaten it, distress her excessively and then I am overcome by sympathy for her and I go back to her. . . . In the ordinary course of things I should be with her now."

"If it were not for the carbuncle?"

"If it were not for the carbuncle. She does not care for me to see her disfigured. She does not understand--" Sir Richmond was at a loss for a phrase--"that it is not her good looks."

"She won't let you go to her?"

"It amounts to that. . . . And soon there will be all the trouble about educating the girl. Whatever happens, she must have as good a chance as--anyone. . . . "

"Ah! That is worrying you too!"

"Frightfully at times. If it were a boy it would be easier. It needs constant tact and dexterity to fix things up. Neither of us have any. It needs attention. . . . "

Sir Richmond mused darkly.

Dr. Martineau thought aloud. "An incompetent delightful person with Martin Leeds's sense of humour. And her powers of expression. She must be attractive to many people. She could

probably do without you. If once you parted."

Sir Richmond turned on him eagerly.

"You think I ought to part from her? On her account?"

"On her account. It might pain her. But once the thing was done--"

"I want to part. I believe I ought to part."

"Well?"

"But then my affection comes in."

"That extraordinary--TENDERNESS of yours?"

"I'm afraid."

"Of what?"

"Anyone might get hold of her--if I let her down. She hasn't a tithe of the ordinary coolheaded calculation of an average woman. . . . I've a duty to her genius. I've got to take care of her."

To which the doctor made no reply.

"Nevertheless the idea of parting has been very much in my mind lately."

"Letting her go FREE?"

"You can put it in that way if you like."

"It might not be a fatal operation for either of you."

"And yet there are moods when parting is an intolerable idea. When one is invaded by a flood of affection." . . . And old habits of association."

Dr. Martineau thought. Was that the right word,--affection? Perhaps it was.

They had come out on the towing path close by the lock and they found themselves threading their way through a little crowd of boating people and lookers-on. For a time their conversation was broken. Sir Richmond resumed it.

"But this is where we cease to be Man on his Planet and all the rest of it. This is where the idea of a definite task, fanatically followed to the exclusion of all minor considerations, breaks down. When the work is good, when we are sure we are all right, then we may carry off things with a high hand. But the work isn't always good, we aren't always sure. We blunder, we make a muddle, we are fatigued. Then the sacrificed affections come in as accusers. Then it is that we want to be reassured."

"And then it is that Miss Martin Leeds--?"

"Doesn't," Sir Richmond snapped.

Came a long pause.

"And yet--"

"It is extraordinarily difficult to think of parting from Martin."

Section 3

In the evening after dinner Dr. Martineau sought, rather unsuccessfully, to go on with the analysis of Sir Richmond.

But Sir Richmond was evidently a creature of moods. Either he regretted the extent of his confidences or the slight irrational irritation that he felt at waiting for his car affected his attitude towards his companion, or Dr. Martineau's tentatives were ill-chosen. At any rate he would not rise to any conversational bait that the doctor could devise. The doctor found this the more regrettable because it seemed to him that there was much to be worked upon in this Martin Leeds affair. He was inclined to think that she and Sir Richmond were unduly obsessed by the idea that they had to stick together because of the child, because of the look of the thing and so forth, and that really each might be struggling against a very strong impulse indeed to break off the affair. It seemed evident to the doctor that they jarred upon and annoyed each other extremely. On the whole separating people appealed to a doctor's mind more strongly than bringing them together. Accordingly he framed his enquiries so as to make the revelation of a latent antipathy as easy as possible.

He made several not very well-devised beginnings. At the fifth Sir Richmond was suddenly conclusive. "It's no use," he said, "I can't fiddle about any more with my motives to-day."

An awkward silence followed. On reflection Sir Richmond seemed to realize that this sentence needed some apology. "I admit," he said, "that this expedition has already been a wonderfully good thing for me. These confessions have made me look into all sorts of things-squarely. But--

"I'm not used to talking about myself or even thinking directly about myself. What I say, I afterwards find disconcerting to recall. I want to alter it. I can feel myself wallowing into a mess of modifications and qualifications."

"Yes, but--"

"I want a rest anyhow. . . ."

There was nothing for Dr. Martineau to say to that.

The two gentlemen smoked for some time in a slightly uncomfortable silence. Dr. Martineau cleared his throat twice and lit a second cigar. They then agreed to admire the bridge and think well of Maidenhead. Sir Richmond communicated hopeful news about his car, which was to arrive the next morning before ten--he'd just ring the fellow up presently to make sure--and Dr. Martineau retired early and went rather thoughtfully to bed. The spate of Sir Richmond's confidences, it was evident, was over.

Section 4

Sir Richmond's car arrived long before ten, brought down by a young man in a state of scared alacrity--Sir Richmond had done some vigorous telephoning before turning in,--the Charmeuse set off in a repaired and chastened condition to town, and after a leisurely breakfast our two investigators into the springs of human conduct were able to resume their westward journey. They ran through scattered Twyford with its pleasant looking inns and through the commonplace urbanities of Reading, by Newbury and Hungerford's pretty bridge and up long wooded slopes to Savernake forest, where they found the

road heavy and dusty, still in its war-time state, and so down a steep hill to the wide market street which is Marlborough. They lunched in Marlborough and went on in the afternoon to Silbury Hill, that British pyramid, the largest artificial mound in Europe. They left the car by the roadside and clambered to the top and were very learned and inconclusive about the exact purpose of this vast heap of chalk and earth, this heap that men had made before the temples at Karnak were built or Babylon had a name.

Then they returned to the car and ran round by a winding road into the wonder of Avebury. They found a clean little inn there kept by pleasant people, and they garaged the car in the cowshed and took two rooms for the night that they might the better get the atmosphere of the ancient place. Wonderful indeed it is, a vast circumvallation that was already two thousand years old before the dawn of British history; a great wall of earth with its ditch most strangely on its inner and not on its outer side; and within this enclosure gigantic survivors of the great circles of unhewn stone that, even as late as Tudor days, were almost complete. A whole village, a church, a pretty manor house have been built, for the most part, out of the ancient megaliths; the great wall is sufficient to embrace them all with their gardens and paddocks; four cross-roads meet at the village centre. There are drawings of Avebury before these things arose there, when it was a lonely wonder on the plain, but for the most part the destruction was already done before the MAYFLOWER sailed. To the southward stands the cone of Silbury Hill; its shadow creeps up and down the intervening meadows as the seasons change. Around this lonely place rise the Downs, now bare sheep pastures, in broad undulations, with a wart-like barrow here and there, and from it radiate, creeping up to gain and hold the crests of the hills, the abandoned trackways of that forgotten world. These trackways, these green roads of

England, these roads already disused when the Romans made their highway past Silbury Hill to Bath, can still be traced for scores of miles through the land, running to Salisbury and the English Channel, eastward to the crossing at the Straits and westward to Wales, to ferries over the Severn, and southwestward into Devon and Cornwall.

The doctor and Sir Richmond walked round the walls, surveyed the shadow cast by Silbury upon the river flats, strolled up the down to the northward to get a general view of the village, had tea and smoked round the walls again in the warm April sunset. The matter of their conversation remained prehistoric. Both were inclined to find fault with the archaeological work that had been done on the place. "Clumsy treasure hunting," Sir Richmond said. "They bore into Silbury Hill and expect to find a mummified chief or something sensational of that sort, and they don't, and they report nothing. They haven't sifted finely enough; they haven't thought subtly enough. These walls of earth ought to tell what these people ate, what clothes they wore, what woods they used. Was this a sheep land then as it is now, or a cattle land? Were these hills covered by forests? I don't know. These archaeologists don't know. Or if they do they haven't told me, which is just as bad. I don't believe they know.

"What trade came here along these tracks? So far as I know, they had no beasts of burthen. But suppose one day someone were to find a potsherd here from early Knossos, or a fragment of glass from Pepi's Egypt."

The place had stirred up his imagination. He wrestled with his ignorance as if he thought that by talking he might presently worry out some picture of this forgotten world, without metals, without beasts of burthen, without letters,

without any sculpture that has left a trace, and yet with a sense of astronomical fact clear enough to raise the great gnomon of Silbury, and with a social system complex enough to give the large and orderly community to which the size of Avebury witnesses and the traffic to which the green roads testify.

The doctor had not realized before the boldness and liveliness of his companion's mind. Sir Richmond insisted that the climate must have been moister and milder in those days; he covered all the downlands with woods, as Savernake was still covered; beneath the trees he restored a thicker, richer soil. These people must have done an enormous lot with wood. This use of stones here was a freak. It was the very strangeness of stones here that had made them into sacred things. One thought too much of the stones of the Stone Age. Who would carve these lumps of quartzite when one could carve good oak? Or beech--a most carvable wood. Especially when one's sharpest chisel was a flint. "It's wood we ought to look for," said Sir Richmond. "Wood and fibre." He declared that these people had their tools of wood, their homes of wood, their gods and perhaps their records of wood. "A peat bog here, even a few feet of clay, might have pickled some precious memoranda. . . . No such luck. . . . Now in Glastonbury marshes one found the life of the early iron age--half way to our own times--quite beautifully pickled."

Though they wrestled mightily with the problem, neither Sir Richmond nor the doctor could throw a gleam of light upon the riddle why the ditch was inside and not outside the great wall.

"And what was our Mind like in those days?" said Sir Richmond. "That, I suppose, is what interests you. A vivid childish mind, I guess, with not a suspicion as yet that it

was Man ruling his Planet or anything of that sort."

The doctor pursed his lips. "None," he delivered judicially. "If one were able to recall one's childhood--at the age of about twelve or thirteen--when the artistic impulse so often goes into abeyance and one begins to think in a troubled, monstrous way about God and Hell, one might get something like the mind of this place."

"Thirteen. You put them at that already? . . . These people, you think, were religious?"

"Intensely. In that personal way that gives death a nightmare terror. And as for the fading of the artistic impulse, they've left not a trace of the paintings and drawings and scratchings of the Old Stone people who came before them."

"Adults with the minds of thirteen-year-old children. Thirteen-year-old children with the strength of adults--and no one to slap them or tell them not to. . . . After all, they probably only thought of death now and then. And they never thought of fuel. They supposed there was no end to that. So they used up their woods and kept goats to nibble and kill the new undergrowth. DID these people have goats? "

"I don't know," said the doctor. So little is known."

"Very like children they must have been. The same unending days. They must have thought that the world went on for ever--just as they knew it--like my damned Committee does. . . . With their fuel wasting away and the climate changing imperceptibly, century by century. . . . Kings and important men followed one another here for centuries and centuries. . . . They had lost their past and had no idea of any future. . . . They had forgotten how they came into the land . . . When

I was a child I believed that my father's garden had been there for ever. . . .

"This is very like trying to remember some game one played when one was a child. It is like coming on something that one built up with bricks and stones in some forgotten part of the garden. . . ."

"The life we lived here," said the doctor, has left its traces in traditions, in mental predispositions, in still unanalyzed fundamental ideas."

"Archaeology is very like remembering," said Sir Richmond. "Presently we shall remember a lot more about all this. We shall remember what it was like to live in this place, and the long journey hither, age by age out of the south. We shall remember the sacrifices we made and the crazy reasons why we made them. We sowed our corn in blood here. We had strange fancies about the stars. Those we brought with us out of the south where the stars are brighter. And what like were those wooden gods of ours? I don't remember. . . . But I could easily persuade myself that I had been here before."

They stood on the crest of the ancient wall and the setting sun cast long shadows of them athwart a field of springing wheat.

"Perhaps we shall come here again," the doctor carried on Sir Richmond's fancy; "after another four thousand years or so, with different names and fuller minds. And then I suppose that this ditch won't be the riddle it is now."

"Life didn't seem so complicated then," Sir Richmond mused. "Our muddles were unconscious. We drifted from mood to mood

and forgot. There was more sunshine then, more laughter perhaps, and blacker despair. Despair like the despair of children that can weep itself to sleep. . . . It's over. . . . Was it battle and massacre that ended that long afternoon here? Or did the woods catch fire some exceptionally dry summer, leaving black hills and famine? Or did strange men bring a sickness--measles, perhaps, or the black death? Or was it cattle pest? Or did we just waste our woods and dwindle away before the new peoples that came into the land across the southern sea? I can't remember. . . . "

Sir Richmond turned about. "I would like to dig up the bottom of this ditch here foot by foot--and dry the stuff and sift it--very carefully. . . . Then I might begin to remember things."

Section 5

In the evening, after a pleasant supper, they took a turn about the walls with the moon sinking over beyond Silbury, and then went in and sat by lamplight before a brightly fussy wood fire and smoked. There were long intervals of friendly silence.

"I don't in the least want to go on talking about myself, " said Sir Richmond abruptly.

"Let it rest then," said the doctor generously.

"To-day, among these ancient memories, has taken me out of myself wonderfully. I can't tell you how good Avebury has been for me. This afternoon half my consciousness has seemed to be a tattooed creature wearing a knife of stone. . . . "

"The healing touch of history."

"And for the first time my damned Committee has mattered scarcely a rap. "

Sir Richmond stretched himself in his chair and blinked cheerfully at his cigar smoke.

"Nevertheless," he said, "this confessional business of yours has been an excellent exercise. It has enabled me to get outside myself, to look at myself as a Case. Now I can even see myself as a remote Case. That I needn't bother about further. . . . So far as that goes, I think we have done all that there is to be done."

"I shouldn't say that--quite--yet," said the doctor.

"I don't think I'm a subject for real psychoanalysis at all. I'm not an overlaid sort of person. When I spread myself out there is not much indication of a suppressed wish or of anything masked or buried of that sort. What you get is a quite open and recognized discord of two sets of motives."

The doctor considered. "Yes, I think that is true. Your LIBIDO is, I should say, exceptionally free. Generally you are doing what you want to do--overdoing, in fact, what you want to do and getting simply tired."

"Which is the theory I started with. I am a case of fatigue under irritating circumstances with very little mental complication or concealment."

"Yes," said the doctor. "I agree. You are not a case for psychoanalysis, strictly speaking, at all. You are in open conflict with yourself, upon moral and social issues. Practically open. Your problems are problems of conscious

conduct."

"As I said."

"Of what renunciations you have consciously to make."

Sir Richmond did not answer that. . . .

"This pilgrimage of ours," he said, presently, "has made for magnanimity. This day particularly has been a good day. When we stood on this old wall here in the sunset I seemed to be standing outside myself in an immense still sphere of past and future. I stood with my feet upon the Stone Age and saw myself four thousand years away, and all my distresses as very little incidents in that perspective. Away there in London the case is altogether different; after three hours or so of the Committee one concentrates into one little inflamed moment of personality. There is no past any longer, there is no future, there is only the rankling dispute. For all those three hours, perhaps, I have been thinking of just what I had to say, just how I had to say it, just how I looked while I said it, just how much I was making myself understood, how I might be misunderstood, how I might be misrepresented, challenged, denied. One draws in more and more as one is used up. At last one is reduced to a little, raw, bleeding, desperately fighting, pin-point of SELF. . . . One goes back to one's home unable to recover. Fighting it over again. All night sometimes I get up and walk about the room and curse Martineau, how is one to get the Avebury frame of mind to Westminster?"

"When Westminster is as dead as Avebury," said the doctor, unhelpfully. He added after some seconds, "Milton knew of these troubles. 'Not without dust and heat' he wrote--a great phrase."

"But the dust chokes me," said Sir Richmond.

He took up a copy of THE GREEN ROADS OF ENGLAND that lay beside him on the table. But he did not open it. He held it in his hand and said the thing he had had in mind to say all that evening. "I do not think that I shall stir up my motives any more for a time. Better to go on into the west country cooling my poor old brain in these wide shadows of the past."

"I can prescribe nothing better," said Dr. Martineau.

"Incidentally, we may be able to throw a little more light on one or two of your minor entanglements."

"I don't want to think of them, said Sir Richmond. "Let me get right away from everything. Until my skin has grown again."

CHAPTER THE SIXTH

THE ENCOUNTER AT STONEHENGE

Section 1

Next day in the early afternoon after a farewell walk over the downs round Avebury they went by way of Devizes and Netheravon and Amesbury to Stonehenge.

Dr. Martineau had seen this ancient monument before, but now, with Avebury fresh in his mind, he found it a poorer thing than he had remembered it to be. Sir Richmond was frankly disappointed. After the real greatness and mystery of the older place, it seemed a poor little heap of stones; it did not even dominate the landscape; it was some way from the crest of the swelling down on which it stood and it was further dwarfed by the colossal air-ship hangars and clustering offices of the air station that the great war had called into existence upon the slopes to the south-west. "It looks," Sir Richmond said, "as though some old giantess had left a discarded set of teeth on the hillside." Far more impressive than Stonehenge itself were the barrows that capped the neighbouring crests.

The sacred stones were fenced about, and our visitors had to pay for admission at a little kiosk by the gate. At the side of the road stood a travelstained middle-class automobile, with a miscellany of dusty luggage, rugs and luncheon things therein--a family automobile with father no doubt at the wheel. Sir Richmond left his own trim coupe at its tail.

They were impeded at the entrance by a difference of opinion between the keeper of the turnstile and a small but resolute boy of perhaps five or six who proposed to leave the

enclosure. The custodian thought that it would be better if his nurse or his mother came out with him.

"She keeps on looking at it, " said the small boy. "It isunt anything. I want to go and clean the car."

"You won't SEE Stonehenge every day, young man," said the custodian, a little piqued.

"It's only an old beach," said the small boy, with extreme conviction. "It's rocks like the seaside. And there isunt no sea."

The man at the turnstile mutely consulted the doctor.

"I don't see that he can get into any harm here," the doctor advised, and the small boy was released from archaeology.

He strolled to the family automobile, produced an EN-TOUT-CAS pocket-handkerchief and set himself to polish the lamps with great assiduity. The two gentlemen lingered at the turnstile for a moment or so to watch his proceedings. "Modern child," said Sir Richmond. "Old stones are just old stones to him. But motor cars are gods."

"You can hardly expect him to understand--at his age," said the custodian, jealous for the honor of Stonehenge. . . .

"Reminds me of Martin's little girl," said Sir Richmond, as he and Dr. Martineau went on towards the circle. "When she encountered her first dragon-fly she was greatly delighted. 'Oh, dee' lill' a'eplane,' she said."

As they approached the grey old stones they became aware of a certain agitation among them. A voice, an authoritative bass

voice, was audible, crying, "Anthony!" A nurse appeared remotely going in the direction of the aeroplane sheds, and her cry of "Master Anthony" came faintly on the breeze. An extremely pretty young woman of five or six and twenty became visible standing on one of the great prostrate stones in the centre of the place. She was a black-haired, sun-burnt individual and she stood with her arms akimbo, quite frankly amused at the disappearance of Master Anthony, and offering no sort of help for his recovery. On the greensward before her stood the paterfamilias of the family automobile, and he was making a trumpet with his hands in order to repeat the name of Anthony with greater effect. A short lady in grey emerged from among the encircling megaliths, and one or two other feminine personalities produced effects of movement rather than of individuality as they flitted among the stones. "Well," said the lady in grey, with that rising intonation of humorous conclusion which is so distinctively American, "those Druids have GOT him."

"He's hiding," said the automobilist, in a voice that promised chastisement to a hidden hearer. "That's what he is doing. He ought not to play tricks like this. A great boy who is almost six."

"If you are looking for a small, resolute boy of six," said Sir Richmond, addressing himself to the lady on the rock rather than to the angry parent below, "he's perfectly safe and happy. The Druids haven't got him. Indeed, they've failed altogether to get him. 'Stonehenge,' he says, 'is no good.' So he's gone back to clean the lamps of your car."

"Aa-oo. So THAT'S it! " said Papa. "Winnie, go and tell Price he's gone back to the car. . . . They oughtn't to have let him out of the enclosure. . . ."

The excitement about Master Anthony collapsed. The rest of the people in the circles crystallized out into the central space as two apparent sisters and an apparent aunt and the nurse, who was packed off at once to supervise the lamp cleaning. The head of the family found some difficulty, it would seem, in readjusting his mind to the comparative innocence of Anthony, and Sir Richmond and the young lady on the rock sought as if by common impulse to establish a general conversation. There were faint traces of excitement in her manner, as though there had been some controversial passage between herself and the family gentleman.

"We were discussing the age of this old place," she said, smiling in the frankest and friendliest way. "How old do YOU think it is?"

The father of Anthony intervened, also with a shadow of controversy in his manner. "I was explaining to the young lady that it dates from the early bronze age. Before chronology existed. . . . But she insists on dates."

"Nothing of bronze has ever been found here," said Sir Richmond.

"Well, when was this early bronze age, anyhow?" said the young lady.

Sir Richmond sought a recognizable datum. "Bronze got to Britain somewhere between the times of Moses and Solomon."

"Ah! " said the young lady, as who should say, 'This man at least talks sense.'

"But these stones are all shaped," said the father of the family. "It is difficult to see how that could have been done

without something harder than stone."

"I don't SEE the place," said the young lady on the stone. "I can't imagine how they did it up--not one bit."

"Did it up!" exclaimed the father of the family in the tone of one accustomed to find a gentle sport in the intellectual frailties of his womenkind.

"It's just the bones of a place. They hung things round it. They draped it."

"But what things?" asked Sir Richmond.

"Oh! they had things all right. Skins perhaps. Mats of rushes. Bast cloth. Fibre of all sorts. Wadded stuff."

"Stonehenge draped! It's really a delightful idea;" said the father of the family, enjoying it.

"It's quite a possible one," said Sir Richmond.

"Or they may have used wicker," the young lady went on, undismayed. She seemed to concede a point. "Wicker IS likelier."

"But surely," said the father of the family with the expostulatory voice and gesture of one who would recall erring wits to sanity, "it is far more impressive standing out bare and noble as it does. In lonely splendour."

"But all this country may have been wooded then," said Sir Richmond. "In which case it wouldn't have stood out. It doesn't stand out so very much even now."

"You came to it through a grove," said the young lady, eagerly picking up the idea.

"Probably beech," said Sir Richmond.

"Which may have pointed to the midsummer sunrise," said Dr. Martineau, unheeded.

"These are NOVEL ideas," said the father of the family in the reproving tone of one who never allows a novel idea inside HIS doors if he can prevent it.

"Well," said the young lady, "I guess there was some sort of show here anyhow. And no human being ever had a show yet without trying to shut people out of it in order to make them come in. I guess this was covered in all right. A dark hunched old place in a wood. Beech stems, smooth, like pillars. And they came to it at night, in procession, beating drums, and scared half out of their wits. They came in THERE and went round the inner circle with their torches. And so they were shown. The torches were put out and the priests did their mysteries. Until dawn broke. That is how they worked it."

"But even you can't tell what the show was, V.V." said the lady in grey, who was standing now at Dr. Martineau's elbow.

"Something horrid," said Anthony's younger sister to her elder in a stage whisper.

"BLUGGY," agreed Anthony's elder sister to the younger, in a noiseless voice that certainly did not reach father.

"SQUEALS!"

This young lady who was addressed as "V.V." was perhaps one

or two and twenty, Dr. Martineau thought,--he was not very good at feminine ages. She had a clear sun-browned complexion, with dark hair and smiling lips. Her features were finely modelled, with just that added touch of breadth in the brow and softness in the cheek bones, that faint flavour of the Amerindian, one sees at times in American women. Her voice was a very soft and pleasing voice, and she spoke persuasively and not assertively as so many American women do. Her determination to make the dry bones of Stonehenge live shamed the doctor's disappointment with the place. And when she had spoken, Dr. Martineau noted that she looked at Sir Richmond as if she expected him at least to confirm her vision. Sir Richmond was evidently prepared to confirm it.

With a queer little twinge of infringed proprietorship, the doctor saw Sir Richmond step up on the prostrate megalith and stand beside her, the better to appreciate her point of view. He smiled down at her. "Now why do you think they came in THERE?" he asked.

The young lady was not very clear about her directions. She did not know of the roadway running to the Avon river, nor of the alleged race course to the north, nor had she ever heard that the stones were supposed to be of two different periods and that some of them might possibly have been brought from a very great distance.

Section 2

Neither Dr. Martineau nor the father of the family found the imaginative reconstruction of the Stonehenge rituals quite so exciting as the two principals. The father of the family endured some further particulars with manifest impatience, no longer able, now that Sir Richmond was encouraging the girl,

to keep her in check with the slightly derisive smile proper to her sex. Then he proclaimed in a fine loud tenor, "All this is very imaginative, I'm afraid." And to his family, "Time we were pressing on. Turps, we must go-o. Come, Phoebe!"

As he led his little flock towards the exit his voice came floating back. "Talking wanton nonsense. . . . Any professional archaeologist would laugh, simply laugh. . . ."

He passed out of the world.

With a faint intimation of dismay Dr. Martineau realized that the two talkative ladies were not to be removed in the family automobile with the rest of the party. Sir Richmond and the younger lady went on very cheerfully to the population, agriculture, housing and general scenery of the surrounding Downland during the later Stone Age. The shorter, less attractive lady, whose accent was distinctly American, came now and stood at the doctor's elbow. She seemed moved to play the part of chorus to the two upon the stone.

"When V.V. gets going," she remarked, "she makes things come alive."

Dr. Martineau hated to be addressed suddenly by strange ladies. He started, and his face assumed the distressed politeness of the moon at its full. "Your friend," he said, "interested in archaeology? "

"Interested!" said the stouter lady. "Why! She's a fiend at it. Ever since we came on Carnac. "

"You've visited Carnac?"

"That's where the bug bit her." said the stout lady with a note of querulous humour. "Directly V.V. set eyes on Carnac, she just turned against all her up-bringing. 'Why wasn't I told of this before?' she said. 'What's Notre Dame to this? This is where we came from. This is the real starting point of the MAYFLOWER. Belinda,' she said, 'we've got to see all we can of this sort of thing before we go back to America. They've been keeping this from us.' And that's why we're here right now instead of being shopping in Paris or London like decent American women."

The younger lady looked down on her companion with something of the calm expert attention that a plumber gives to a tap that is misbehaving, and like a plumber refrained from precipitate action. She stood with the backs of her hands resting on her hips.

"Well," she said slowly, giving most of the remark to Sir Richmond and the rest to the doctor. "it is nearer the beginnings of things than London or Paris."

"And nearer to us, " said Sir Richmond.

"I call that just--paradoxical," said the shorter lady, who appeared to be called Belinda.

"Not paradoxical," Dr. Martineau contradicted gently. "Life is always beginning again. And this is a time of fresh beginnings."

"Now that's after V.V.'s own heart," cried the stout lady in grey. "She'll agree to all that. She's been saying it right across Europe. Rome, Paris, London; they're simply just done. They don't signify any more. They've got to be cleared away."

"You let me tell my own opinions, Belinda," said the young lady who was called V.V. "I said that if people went on building with fluted pillars and Corinthian capitals for two thousand years, it was time they were cleared up and taken away."

"Corinthian capitals?" Sir Richmond considered it and laughed cheerfully. "I suppose Europe does rather overdo that sort of thing."

"The way she went on about the Victor Emmanuele Monument!" said the lady who answered to the name of Belinda. "It gave me cold shivers to think that those Italian officers might understand English. "

The lady who was called V.V. smiled as if she smiled at herself, and explained herself to Sir Richmond. "When one is travelling about, one gets to think of history and politics in terms of architecture. I do anyhow. And those columns with Corinthian capitals have got to be a sort of symbol for me for everything in Europe that I don't want and have no sort of use for. It isn't a bad sort of capital in its way, florid and pretty, but not a patch on the Doric;--and that a whole continent should come up to it and stick at it and never get past it! . . ."

"It's the classical tradition."

"It puzzles me."

"It's the Roman Empire. That Corinthian column is a weed spread by the Romans all over western Europe."

"And it smothers the history of Europe. You can't see Europe because of it. Europe is obsessed by Rome. Everywhere Marble

Arches and ARCS DE TRIOMPHE. You never get away from it. It is like some old gentleman who has lost his way in a speech and keeps on repeating the same thing. And can't sit down. 'The empire, gentlemen--the Empire. Empire.' Rome itself is perfectly frightful. It stares at you with its great round stupid arches as though it couldn't imagine that you could possibly want anything else for ever. Saint Peter's and that frightful Monument are just the same stuff as the Baths of Caracalla and the palaces of the Caesars. Just the same. They will make just the same sort of ruins. It goes on and goes on."

"AVE ROMA IMMORTALIS," said Dr. Martineau.

"This Roman empire seems to be Europe's first and last idea. A fixed idea. And such a poor idea! . . . America never came out of that. It's no good-telling me that it did. It escaped from it. . . . So I said to Belinda here, 'Let's burrow, if we can, under all this marble and find out what sort of people we were before this Roman empire and its acanthus weeds got hold of us.'"

"I seem to remember at Washington, something faintly Corinthian, something called the Capitol," Sir Richmond reflected. "And other buildings. A Treasury."

"That is different," said the young lady, so conclusively that it seemed to leave nothing more to be said on that score.

"A last twinge of Europeanism," she vouchsafed. "We were young in those days."

"You are well beneath the marble here."

She assented cheerfully.

"A thousand years before it."

"Happy place! Happy people!"

"But even this place isn't the beginning of things here. Carnac was older than this. And older still is Avebury. Have you heard in America of Avebury? It may have predated this place, they think, by another thousand years."

"Avebury?" said the lady who was called Belinda.

"But what is this Avebury?" asked V.V. "I've never heard of the place."

"I thought it was a lord," said Belinda.

Sir Richmond, with occasional appeals to Dr. Martineau, embarked upon an account of the glory and wonder of Avebury. Possibly he exaggerated Avebury. . . .

It was Dr. Martineau who presently brought this disquisition upon Avebury to a stop by a very remarkable gesture. He looked at his watch. He drew it out ostentatiously, a thick, respectable gold watch, for the doctor was not the sort of man to wear his watch upon his wrist. He clicked it open and looked at it. Thereby he would have proclaimed his belief this encounter was an entirely unnecessary interruption of his healing duologue with Sir Richmond, which must now be resumed.

But this action had scarcely the effect he had intended it to have. It set the young lady who was called Belinda asking about ways and means of getting to Salisbury; it brought to light the distressing fact that V.V. had the beginnings of a

chafed heel. Once he had set things going they moved much too quickly for the doctor to deflect their course. He found himself called upon to make personal sacrifices to facilitate the painless transport of the two ladies to Salisbury, where their luggage awaited them at the Old George Hotel. In some way too elusive to trace, it became evident that he and Sir Richmond were to stay at this same Old George Hotel. The luggage was to be shifted to the top of the coupe, the young lady called V.V. was to share the interior of the car with Sir Richmond, while the lady named Belinda, for whom Dr. Martineau was already developing a very strong dislike, was to be thrust into an extreme proximity with him and the balance of the luggage in the dicky seat behind.

Sir Richmond had never met with a young woman with a genuine historical imagination before, and he was evidently very greatly excited and resolved to get the utmost that there was to be got out of this encounter.

Section 3

Sir Richmond displayed a complete disregard of the sufferings of Dr. Martineau, shamefully compressed behind him. Of these he was to hear later. He ran his overcrowded little car, overcrowded so far as the dicky went, over the crest of the Down and down into Amesbury and on to Salisbury, stopping to alight and stretch the legs of the party when they came in sight of Old Sarum.

"Certainly they can do with a little stretching," said Dr. Martineau grimly.

This charming young woman had seized upon the imagination of Sir Richmond to the temporary exclusion of all other considerations. The long Downland gradients, quivering very

slightly with the vibration of the road, came swiftly and easily to meet and pass the throbbing little car as he sat beside her and talked to her. He fell into that expository manner which comes so easily to the native entertaining the visitor from abroad.

"In England, it seems to me there are four main phases of history. Four. Avebury, which I would love to take you to see to-morrow. Stonehenge. Old Sarum, which we shall see in a moment as a great grassy mound on our right as we come over one of these crests. Each of them represents about a thousand years. Old Sarum was Keltic; it, saw the Romans and the Saxons through, and for a time it was a Norman city. Now it is pasture for sheep. Latest as yet is Salisbury,--English, real English. It may last a few centuries still. It is little more than seven hundred years old. But when I think of those great hangars back there by Stonehenge, I feel that the next phase is already beginning. Of a world one will fly to the ends of, in a week or so. Our world still. Our people, your people and mine, who are going to take wing so soon now, were made in all these places. We are visiting the old homes. I am glad I came back to it just when you were doing the same thing."

"I'm lucky to have found a sympathetic fellow traveller," she said; "with a car."

"You're the first American I've ever met whose interest in history didn't seem--" He sought for an inoffensive word.

"Silly? Oh! I admit it. It's true of a lot of us. Most of us. We come over to Europe as if it hadn't anything to do with us except to supply us with old pictures and curios generally. We come sight-seeing. It's romantic. It's picturesque. We stare at the natives--like visitors at a Zoo. We don't

realize that we belong. . . . I know our style. . . . But we aren't all like that. Some of us are learning a bit better than that. We have one or two teachers over there to lighten our darkness. There's Professor Breasted for instance. He comes sometimes to my father's house. And there's James Harvey Robinson and Professor Hutton Webster. They've been trying to restore our memory."

"I've never heard of any of them," said Sir Richmond.

"You hear so little of America over here. It's quite a large country and all sorts of interesting things happen there nowadays. And we are waking up to history. Quite fast. We shan't always be the most ignorant people in the world. We are beginning to realize that quite a lot of things happened between Adam and the Mayflower that we ought to be told about. I allow it's a recent revival. The United States has been like one of those men you read about in the papers who go away from home and turn up in some distant place with their memories gone. They've forgotten what their names were or where they lived or what they did for a living; they've forgotten everything that matters. Often they have to begin again and settle down for a long time before their memories come back. That's how it has been with us. Our memory is just coming back to us."

"And what do you find you are?"

"Europeans. Who came away from kings and churches-@-and Corinthian capitals."

"You feel all this country belongs to you?"

"As much as it does to you."

Sir Richmond smiled radiantly at her. "But if I say that

America belongs to me as much as it does to you?"

"We are one people," she said.

"We"

"Europe. These parts of Europe anyhow. And ourselves."

"You are the most civilized person I've met for weeks and weeks." "Well, you are the first civilized person I've met in Europe for a long time. If I understand you."

"There are multitudes of reasonable, civilized people in Europe."

"I've heard or seen very little of them.

"They're scattered, I admit."

"And hard to find."

"So ours is a lucky meeting. I've wanted a serious talk to an American for some time. I want to know very badly what you think you are up to with the world,--our world. "

"I'm equally anxious to know what England thinks she is doing. Her ways recently have been a little difficult to understand. On any hypothesis-that is honourable to her."
"H'm," said Sir Richmond.

"I assure you we don't like it. This Irish business. We feel a sort of ownership in England. It's like finding your dearest aunt torturing the cat."

"We must talk of that," said Sir Richmond.

"I wish you would."

"It is a cat and a dog--and they have been very naughty animals. And poor Aunt Britannia almost deliberately lost her temper. But I admit she hits about in a very nasty fashion."

"And favours the dog."

"She does."

"I want to know all you admit."

"You shall. And incidentally my friend and I may have the pleasure of showing you Salisbury and Avebury. If you are free?"

"We're travelling together, just we two. We are wandering about the south of England on our way to Falmouth. Where I join a father in a few days' time, and I go on with him to Paris. And if you and your friend are coming to the Old George--"

"We are," said Sir Richmond.

"I see no great scandal in talking right on to bedtime. And seeing Avebury to-morrow. Why not? Perhaps if we did as the Germans do and gave our names now, it might mitigate something of the extreme informality of our behaviour."

"My name is Hardy. I've been a munition manufacturer. I was slightly wounded by a stray shell near Arras while I was inspecting some plant I had set up, and also I was hit by a stray knighthood. So my name is now Sir Richmond Hardy. My friend is a very distinguished Harley Street physician."

Chiefly nervous and mental cases. His name is Dr. Martineau. He is quite as civilized as I am. He is also a philosophical writer. He is really a very wise and learned man indeed. He is full of ideas. He's stimulated me tremendously. You must talk to him."

Sir Richmond glanced over his shoulder at the subject of these commendations. Through the oval window glared an expression of malignity that made no impression whatever on his preoccupied mind.

"My name," said the young lady, "is Grammont. The war whirled me over to Europe on Red Cross work and since the peace I've been settling up things and travelling about Europe. My father is rather a big business man in New York."

"The oil Grammont?"

"He is rather deep in oil, I believe. He is coming over to Europe because he does not like the way your people are behaving in Mesopotamia. He is on his way to Paris now. Paris it seems is where everything is to be settled against you. Belinda is a sort of companion I have acquired for the purposes of independent travel. She was Red Cross too. I must have somebody and I cannot bear a maid. Her name is Belinda Seyffert. From Philadelphia originally. You have that? Seyffert, Grammont?"

"And Hardy?" "Sir Richmond and Dr. Martineau."

"And-Ah!--That great green bank there just coming into sight must be Old Sarum. The little ancient city that faded away when Salisbury lifted its spire into the world. We will stop here for a little while. . . ."

Then it was that Dr. Martineau was grim about the stretching of his legs.

Section 4

The sudden prospect which now opened out before Sir Richmond of talking about history and suchlike topics with a charming companion for perhaps two whole days instead of going on with this tiresome, shamefaced, egotistical business of self-examination was so attractive to him that it took immediate possession of his mind, to the entire exclusion and disregard of Dr. Martineau's possible objections to any such modification of their original programme. When they arrived in Salisbury, the doctor did make some slight effort to suggest a different hotel from that in which the two ladies had engaged their rooms, but on the spur of the moment and in their presence he could produce no sufficient reason for refusing the accommodation the Old George had ready for him. He was reduced to a vague: "We don't want to inflict ourselves--" He could not get Sir Richmond aside for any adequate expression of his feelings about Miss Seyffert, before the four of them were seated together at tea amidst the mediaeval modernity of the Old George smoking-room. And only then did he begin to realize the depth and extent of the engagements to which Sir Richmond had committed himself.

"I was suggesting that we run back to Avebury to-morrow," said Sir Richmond. "These ladies were nearly missing it."

The thing took the doctor's breath away. For the moment he could say nothing. He stared over his tea-cup dour-faced. An objection formulated itself very slowly. "But that dicky," he whispered.

His whisper went unnoted. Sir Richmond was talking of the

completeness of Salisbury. From the very beginning it had been a cathedral city; it was essentially and purely that. The church at its best, in the full tide of its mediaeval ascendancy, had called it into being. He was making some extremely loose and inaccurate generalizations about the buildings and ruins each age had left for posterity, and Miss Grammont was countering with equally unsatisfactory qualifications. "Our age will leave the ruins of hotels," said Sir Richmond. "Railway arches and hotels."

"Baths and aqueducts," Miss Grammont compared. "Rome of the Empire comes nearest to it "

As soon as tea was over, Dr. Martineau realized, they meant to walk round and about Salisbury. He foresaw that walk with the utmost clearness. In front and keeping just a little beyond the range of his intervention, Sir Richmond would go with Miss Grammont; he himself and Miss Seyffert would bring up the rear. "If I do," he muttered, "I'll be damned!" an unusually strong expression for him.

"You said--?" asked Miss Seyffert.

"That I have some writing to do--before the post goes," said the doctor brightly.

"Oh! come and see the cathedral!" cried Sir Richmond with ill-concealed dismay. He was, if one may put it in such a fashion, not looking at Miss Seyffert in the directest fashion when he said this.

"I'm afraid," said the doctor mulishly. "Impossible."

(With the unspoken addition of, "You try her for a bit.")

Miss Grammont stood up. Everybody stood up. "We can go first to look for shops," she said. "There's those things you want to buy, Belinda; a fountain pen and the little books. We can all go together as far as that. And while you are shopping, if you wouldn't mind getting one or two things for me. . . ."

It became clear to Dr. Martineau that Sir Richmond was to be let off Belinda. It seemed abominably unjust. And it was also clear to him that he must keep closely to his own room or he might find Miss Seyffert drifting back alone to the hotel and eager to resume with him. . . .

Well, a quiet time in his room would not be disagreeable. He could think over his notes. . . .

But in reality he thought over nothing but the little speeches he would presently make to Sir Richmond about the unwarrantable, the absolutely unwarrantable, alterations that were being made without his consent in their common programme. . . .

For a long time Sir Richmond had met no one so interesting and amusing as this frank-minded young woman from America. "Young woman" was how he thought of her; she didn't correspond to anything so prim and restrained and extensively reserved and withheld as a "young lady "; and though he judged her no older than five and twenty, the word "girl" with its associations of virginal ignorances, invisible purdah, and trite ideas newly discovered, seemed even less appropriate for her than the word "boy." She had an air of having in some obscure way graduated in life, as if so far she had lived each several year of her existence in a distinctive and conclusive manner with the utmost mental profit and no particular tarnish or injury. He could talk

with her as if he talked with a man like himself--but with a zest no man could give him.

It was evident that the good things she had said at first came as the natural expression of a broad stream of alert thought; they were no mere display specimens from one of those jackdaw collections of bright things so many clever women waste their wits in accumulating. She was not talking for effect at all, she was talking because she was tremendously interested in her discovery of the spectacle of history, and delighted to find another person as possessed as she was.

Belinda having been conducted to her shops, the two made their way through the bright evening sunlight to the compact gracefulness of the cathedral. A glimpse through a wrought-iron gate of a delightful garden of spring flowers, alyssum, aubrietia, snow-upon-the-mountains, daffodils, narcissus and the like, held them for a time, and then they came out upon the level, grassy space, surrounded by little ripe old houses, on which the cathedral stands. They stood for some moments surveying it.

"It's a perfect little lady of a cathedral," said Sir Richmond. "But why, I wonder, did we build it? "

"Your memory ought to be better than mine," she said, with her half-closed eyes blinking up at the sunlit spire sharp against the blue. "I've been away for so long-over there-that I forget altogether. Why DID we build it?"

She had fallen in quite early with this freak of speaking and thinking as if he and she were all mankind. It was as if her mind had been prepared for it by her own eager exploration in Europe. "My friend, the philosopher," he had said, "will not

have it that we are really the individuals we think we are. You must talk to him--he is a very curious and subtle thinker. We are just thoughts in the Mind of the Race, he says, passing thoughts. We are--what does he call it? --Man on his Planet, taking control of life."

"Man and woman," she had amended.

But just as man on his planet taking control of life had failed altogether to remember why the ditch at Avebury was on the inside instead of the outside of the vallum, so now Miss Grammont and Sir Richmond found very great difficulty in recalling why they had built Salisbury Cathedral.

"We built temples by habit and tradition," said Sir Richmond. "But the impulse was losing its force. "

She looked up at the spire and then at him with a faintly quizzical expression.

But he had his reply ready.

"We were beginning to feel our power over matter. We were already very clever engineers. What interested us here wasn't the old religion any more. We wanted to exercise and display our power over stone. We made it into reeds and branches. We squirted it up in all these spires and pinnacles. The priest and his altar were just an excuse. Do you think people have ever feared and worshipped in this--this artist's lark--as they did in Stonehenge?"

"I certainly do not remember that I ever worshipped here," she said.

Sir Richmond was in love with his idea. "The spirit of the

Gothic cathedrals," he said, "is the spirit of the sky-scrapers. It is architecture in a mood of flaming ambition. The Freemasons on the building could hardly refrain from jeering at the little priest they had left down below there, performing antiquated puerile mysteries at his altar. He was just their excuse for doing it all."

"Sky-scrapers?" she conceded. "An early display of the sky-scrafer spirit. . . . You are doing your best to make me feel thoroughly at home."

"You are more at home here still than in that new country of ours over the Atlantic. But it seems to me now that I do begin to remember building this cathedral and all the other cathedrals we built in Europe. . . . It was the fun of building made us do it. . . ."

"H'm," she said. "And my sky-scrapers?"

"Still the fun of building. That is the thing I envy most about America. It's still large enough, mentally and materially, to build all sorts of things. . . . Over here, the sites are frightfully crowded. . . ."

"And what do you think we are building now? And what do you think you are building over here?"

"What are we building now? I believe we have almost grown up. I believe it is time we began to build in earnest. For good. . . ."

"But are we building anything at all?"

"A new world."

"Show it me," she said.

"We're still only at the foundations," said Sir Richmond.
Nothing shows as yet."

"I wish I could believe they were foundations."

"But can you doubt we are scrapping the old? . . ."

It was too late in the afternoon to go into the cathedral, so they strolled to and fro round and about the west end and along the path under the trees towards the river, exchanging their ideas very frankly and freely about the things that had recently happened to the world and what they thought they ought to be doing in it.

Section 5

After dinner our four tourists sat late and talked in a corner of the smoking-room. The two ladies had vanished hastily at the first dinner gong and reappeared at the second, mysteriously and pleasantly changed from tweedy pedestrians to indoor company. They were quietly but definitely dressed, pretty alterations had happened to their coiffure, a silver band and deep red stones lit the dusk of Miss Grammont's hair and a necklace of the same colourings kept the peace between her jolly sun-burnt cheek and her soft untanned neck. It was evident her recent uniform had included a collar of great severity. Miss Seyffert had revealed a plump forearm and proclaimed it with a clash of bangles. Dr. Martineau thought her evening throat much too confidential.

The conversation drifted from topic to topic. It had none of the steady continuity of Sir Richmond's duologue with Miss Grammont. Miss Seyffert's methods were too discursive and

exclamatory. She broke every thread that appeared. The Old George at Salisbury is really old; it shows it, and Miss Seyffert laced the entire evening with her recognition of the fact. "Just look at that old beam!" she would cry suddenly. "To think it was exactly where it is before there was a Cabot in America!"

Miss Grammont let her companion pull the talk about as she chose. After the animation of the afternoon a sort of lazy contentment had taken possession of the younger lady. She sat deep in a basket chair and spoke now and then. Miss Seyffert gave her impressions of France and Italy. She talked of the cabmen of Naples and the beggars of Amalfi.

Apropos of beggars, Miss Grammont from the depths of her chair threw out the statement that Italy was frightfully overpopulated. "In some parts of Italy it is like mites on a cheese. Nobody seems to be living. Everyone is too busy keeping alive."

"Poor old women carrying loads big enough for mules," said Miss Seyffert.

"Little children working like slaves," said Miss Grammont.

"And everybody begging. Even the people at work by the roadside. Who ought to be getting wages--sufficient. . . ."

"Begging--from foreigners--is just a sport in Italy," said Sir Richmond. "It doesn't imply want. But I agree that a large part of Italy is frightfully overpopulated. The whole world is. Don't you think so, Martineau?"

"Well--yes--for its present social organization. "

"For any social organization," said Sir Richmond.

"I've no doubt of it," said Miss Seyffert, and added amazingly: "I'm out for Birth Control all the time."

A brief but active pause ensued. Dr. Martineau in a state of sudden distress attempted to drink out of a cold and empty coffee cup.

"The world swarms with cramped and undeveloped lives," said Sir Richmond. "Which amount to nothing. Which do not even represent happiness. And which help to use up the resources, the fuel and surplus energy of the world."

"I suppose they have a sort of liking for their lives," Miss Grammont reflected.

"Does that matter? They do nothing to carry life on. They are just vain repetitions--imperfect dreary, blurred repetitions of one common life. All that they feel has been felt, all that they do has been done better before. Because they are crowded and hurried and underfed and undereducated. And as for liking their lives, they need never have had the chance."

"How many people are there in the world?" she asked abruptly.

"I don't know. Twelve hundred, fifteen hundred millions perhaps."

"And in your world?"

"I'd have two hundred and fifty millions, let us say. At most. It would be quite enough for this little planet, for a time, at any rate. Don't you think so, doctor?"

"I don't know," said Dr. Martineau. "Oddly enough, I have never thought about that question before. At least, not from this angle."

"But could you pick out two hundred and fifty million aristocrats?" began Miss Grammont. "My native instinctive democracy--"

"Need not be outraged," said Sir Richmond. "Any two hundred and fifty million would do, They'd be able to develop fully, all of them. As things are, only a minority can do that. The rest never get a chance."

"That's what I always say," said Miss Seyffert.

"A New Age," said Dr. Martineau; "a New World. We may be coming to such a stage, when population, as much as fuel, will be under a world control. If one thing, why not the other? I admit that the movement of thought is away from haphazard towards control--"

"I'm for control all the time," Miss Seyffert injected, following up her previous success.

"I admit", the doctor began his broken sentence again with marked patience, "that the movement of thought is away from haphazard towards control--in things generally. But is the movement of events?"

"The eternal problem of man," said Sir Richmond. "Can our wills prevail?"

There came a little pause.

Miss Grammont smiled an enquiry at Miss Seyffert. "If YOU

are," said Belinda.

"I wish I could imagine your world," said Miss Grammont, rising, "of two hundred and fifty millions of fully developed human beings with room to live and breathe in and no need for wars. Will they live in palaces? Will they all be healthy? . . . Machines will wait on them. No! I can't imagine it. Perhaps I shall dream of it. My dreaming self may be cleverer."

She held out her hand to Sir Richmond. Just for a moment they stood hand in hand, appreciatively. . . .

"Well!" said Dr. Martineau, as the door closed behind the two Americans, "This is a curious encounter."

"That young woman has brains," said Sir Richmond, standing before the fireplace. There was no doubt whatever which young woman he meant. But Dr. Martineau grunted.

"I don't like the American type," the doctor pronounced judicially.

"I do," Sir Richmond countered.

The doctor thought for a moment or so. "You are committed to the project of visiting Avebury?" he said.

"They ought to see Avebury, " said Sir Richmond.

"H'm," said the doctor, ostentatiously amused by his thoughts and staring at the fire. "Birth Control! I NEVER did."

Sir Richmond smiled down on the top of the doctor's head and said nothing.

"I think" said the doctor and paused. "I shall leave this Avebury expedition to you."

"We can be back in the early afternoon," said Sir Richmond. "To give them a chance of seeing the cathedral. The chapter house here is not one to miss "

"And then I suppose we shall go on?"

"As you please," said Sir Richmond insincerely.

"I must confess that four people make the car at any rate seem tremendously overpopulated. And to tell the truth, I do not find this encounter so amusing as you seem to do. . . . I shall not be sorry when we have waved good-bye to those young ladies, and resume our interrupted conversation."

Sir Richmond considered something mulish in the doctor's averted face.

"I find Miss Grammont an extremely interesting--and stimulating human being.

"Evidently."

The doctor sighed, stood up and found himself delivering one of the sentences he had engendered during his solitary meditations in his room before dinner. He surprised himself by the plainness of his speech. "Let me be frank," he said, regarding Sir Richmond squarely. "Considering the general situation of things and your position, I do not care very greatly for the part of an accessory to what may easily develop, as you know very well, into a very serious flirtation. An absurd, mischievous, irrelevant flirtation.

You may not like the word. You may pretend it is a conversation, an ordinary intellectual conversation. That is not the word. Simply that is not the word. You people eye one another. . . . Flirtation. I give the affair its proper name. That is all. Merely that. When I think--But we will not discuss it now. . . . Good night. . . . Forgive me if I put before you, rather bluntly, my particular point of view."

Sir Richmond found himself alone. With his eyebrows raised.

Section 6

After twenty-four eventful hours our two students of human motives found themselves together again by the fireplace in the Old George smoking-room. They had resumed their overnight conversation, in a state of considerable tension.

"If you find the accommodation of the car insufficient," said Sir Richmond in a tone of extreme reasonableness, and I admit it is, we can easily hire a larger car in a place like this.

I would not care if you hired an omnibus, said Dr. Martineau. "I am not coming on if these young women are."

"But if you consider it scandalous--and really, Martineau, really! as one man to another, it does seem to me to be a bit pernicky of you, a broad and original thinker as you are--"

"Thought is one matter. Rash, inconsiderate action quite another. And above all, if I spend another day in or near the company of Miss Belinda Seyffert I shall--I shall be extremely rude to her."

"But," said Sir Richmond and bit his lower lip and considered.

"We might drop Belinda," he suggested turning to his friend and speaking in low, confidential tones. "She is quite a manageable person. Quite. She could--for example--be left behind with the luggage and sent on by train. I do not know if you realize how the land lies in that quarter. It needs only a word to Miss Grammont. "

There was no immediate reply. For a moment he had a wild hope that his companion would agree, and then he perceived that the doctor's silence meant only the preparation of an ultimatum.

"I object to Miss Grammont and that side of the thing, more than I do to Miss Seyffert."

Sir Richmond said nothing.

"It may help you to see this affair from a slightly different angle if I tell you that twice today Miss Seyffert has asked me if you were a married man."

"And of course you told her I was."

"On the second occasion."

Sir Richmond smiled again.

"Frankly," said the doctor, "this adventure is altogether uncongenial to me. It is the sort of thing that has never happened in my life. This highway coupling--"

"Don't you think," said Sir Richmond, "that you are attaching rather too much--what shall I say--romantic?--flirtatious?--meaning to this affair? I don't mind that after my rather

lavish confessions you should consider me a rather oversexed person, but isn't your attitude rather unfair,--unjust, indeed, and almost insulting, to this Miss Grammont? After all, she's a young lady of very good social position indeed. She doesn't strike you--does she?--as an undignified or helpless human being. Her manners suggest a person of considerable self-control. And knowing less of me than you do, she probably regards me as almost as safe as--a maiden aunt say. I'm twice her age. We are a party of four. There are conventions, there are considerations. . . . Aren't you really, my dear Martineau, overdoing all this side of this very pleasant little enlargement of our interests."

"AM I?" said Dr. Martineau and brought a scrutinizing eye to bear on Sir Richmond's face.

"I want to go on talking to Miss Grammont for a day or so," Sir Richmond admitted.

"Then I shall prefer to leave your party."

There were some moments of silence.

"I am really very sorry to find myself in this dilemma," said Sir Richmond with a note of genuine regret in his voice.

"It is not a dilemma," said Dr. Martineau, with a corresponding loss of asperity. "I grant you we discover we differ upon a question of taste and convenience. But before I suggested this trip, I had intended to spend a little time with my old friend Sir Kenelm Latter at Bournemouth. Nothing simpler than to go to him now"

"I shall be sorry all the same."

"I could have wished," said the doctor, "that these ladies had happened a little later. . . ."

The matter was settled. Nothing more of a practical nature remained to be said. But neither gentleman wished to break off with a harsh and bare decision.

"When the New Age is here," said Sir Richmond, "then, surely, a friendship between a man and a woman will not be subjected to the--the inconveniences your present code would set about it? They would travel about together as they chose?"

"The fundamental principle of the new age," said the doctor, will be *Honi soit qui mal y pense*. In these matters. With perhaps *Fay ce que voudras* as its next injunction. So long as other lives are not affected. In matters of personal behaviour the world will probably be much more free and individuals much more open in their conscience and honour than they have ever been before. In matters of property, economics and public conduct it will probably be just the reverse. Then, there will be much more collective control and much more insistence, legal insistence, upon individual responsibility. But we are not living in a new age yet; we are living in the patched-up ruins of a very old one. And you-- if you will forgive me--are living in the patched up remains of a life that had already had its complications. This young lady, whose charm and cleverness I admit, behaves as if the new age were already here. Well, that may be a very dangerous mistake both for her and for you. . . . This affair, if it goes on for a few days more, may involve very serious consequences indeed, with which I, for one, do not wish to be involved."

Sir Richmond, upon the hearthrug, had a curious feeling that he was back in the head master's study at Caxton.

Dr. Martineau went on with a lucidity that Sir Richmond found rather trying, to give his impression of Miss Grammont and her position in life.

"She is," he said, "manifestly a very expensively educated girl. And in many ways interesting. I have been watching her. I have not been favoured with very much of her attention, but that fact has enabled me to see her in profile. Miss Seyffert is a fairly crude mixture of frankness, insincerity and self-explanatory egotism, and I have been able to disregard a considerable amount of the conversation she has addressed to me. Now I guess this Miss Grammont has had no mother since she was quite little."

"Your guesses, doctor, are apt to be pretty good," said Sir Richmond.

"You know that?"

"She has told me as much."

"H'm. Well--She impressed me as having the air of a girl who has had to solve many problems for which the normal mother provides ready made solutions. That is how I inferred that there was no mother. I don't think there has been any stepmother, either friendly or hostile? There hasn't been. I thought not. She has had various governesses and companions, ladies of birth and education, engaged to look after her and she has done exactly what she liked with them. Her manner with Miss Seyffert, an excellent manner for Miss Seyffert, by the bye, isn't the sort of manner anyone acquires in a day. Or for one person only. She is a very sure and commanding young woman."

Sir Richmond nodded.

"I suppose her father adores and neglects her, and whenever she has wanted a companion or governess butchered, the thing has been done. . . . These business Americans, I am told, neglect their womenkind, give them money and power, let them loose on the world. . . . It is a sort of moral laziness masquerading as affection. . . . Still I suppose custom and tradition kept this girl in her place and she was petted, honoured, amused, talked about but not in a harmful way, and rather bored right up to the time when America came into the war. Theoretically she had a tremendously good time."

"I think this must be near the truth of her biography," said Sir Richmond.

"I suppose she has lovers."

"You don't mean--?" "No, I don't. Though that is a matter that ought to have no special interest for you. I mean that she was surrounded by a retinue of men who wanted to marry her or who behaved as though they wanted to marry her or who made her happiness and her gratifications and her condescensions seem a matter of very great importance to them. She had the flattery of an extremely uncritical and unexacting admiration. That is the sort of thing that gratifies a silly woman extremely. Miss Grammont is not silly and all this homage and facile approval probably bored her more than she realized. To anyone too intelligent to be steadily excited by buying things and wearing things and dancing and playing games and going to places of entertainment, and being given flowers, sweets, jewellery, pet animals, and books bound in a special sort of leather, the prospect of being a rich man's only daughter until such time as it becomes advisable to change into a rich man's

wealthy wife, is probably not nearly so amusing as envious people might suppose. I take it Miss Grammont had got all she could out of that sort of thing some time before the war, and that she had already read and thought rather more than most young women in her position. Before she was twenty I guess she was already looking for something more interesting in the way of men than a rich admirer with an automobile full of presents. Those who seek find."

"What do you think she found?"

"What would a rich girl find out there in America? I don't know. I haven't the material to guess with. In London a girl might find a considerable variety of active, interesting men, rising politicians, university men of distinction, artists and writers even, men of science, men--there are still such men--active in the creative work of the empire.

"In America I suppose there is at least an equal variety, made up of rather different types. She would find that life was worth while to such people in a way that made the ordinary entertainments and amusements of her life a monstrous silly waste of time. With the facility of her sex she would pick up from one of them the idea that made life worth while for him. I am inclined to think there was someone in her case who did seem to promise a sort of life that was worth while. And that somehow the war came to alter the look of that promise.

"How?"

"I don't know. Perhaps I am only romancing. But for this young woman I am convinced this expedition to Europe has meant experience, harsh educational experience and very profound mental disturbance. There have been love

experiences; experiences that were something more than the treats and attentions and proposals that made up her life when she was sheltered over there. And something more than that. What it is I don't know. The war has turned an ugly face to her. She has seen death and suffering and ruin. Perhaps she has seen people she knew killed. Perhaps the man has been killed. Or she has met with cowardice or cruelty or treachery where she didn't expect it. She has been shocked out of the first confidence of youth. She has ceased to take the world for granted. It hasn't broken her but it has matured her. That I think is why history has become real to her. Which so attracts you in her. History, for her, has ceased to be a fabric of picturesque incidents; it is the study of a tragic struggle that still goes on. She sees history as you see it and I see it. She is a very grown-up young woman.

"It's just that," said Sir Richmond. "It's just that. If you see as much in Miss Grammont as all that, why don't you want to come on with us? You see the interest of her."

"I see a lot more than that. You don't know what an advantage it is to be as I am, rather cold and unresponsive to women and unattractive and negligible--negligible, that is the exact word--to them. YOU can't look at a woman for five minutes without losing sight of her in a mist of imaginative excitement. Because she looks back at you. I have the privilege of the negligible--which is a cool head. Miss Grammont has a startled and matured mind, an original mind. Yes. And there is something more to be said. Her intelligence is better than her character."

"I don't quite see what you are driving at."

"The intelligence of all intelligent women is better than

their characters. Goodness in a woman, as we understand it, seems to imply necessarily a certain imaginative fixity. Miss Grammont has an impulsive and adventurous character. And as I have been saying she was a spoiled child, with no discipline. . . . You also are a person of high intelligence and defective controls. She is very much at loose ends. You-- on account of the illness of that rather forgotten lady, Miss Martin Leeds--"

"Aren't you rather abusing the secrets of the confessional?"

"This IS the confessional. It closes to-morrow morning but it is the confessional still. Look at the thing frankly. You, I say, are also at loose ends. Can you deny it? My dear sir, don't we both know that ever since we left London you have been ready to fall in love with any pretty thing in petticoats that seemed to promise you three ha'porth of kindness. A lost dog looking for a master! You're a stray man looking for a mistress. Miss Grammont being a woman is a little more selective than that. But if she's at a loose end as I suppose, she isn't protected by the sense of having made her selection. And she has no preconceptions of what she wants. You are a very interesting man in many ways. You carry marriage and entanglements lightly. With an air of being neither married nor entangled. She is quite prepared to fall in love with you."

"But you don't really think that?" said Sir Richmond, with an ill-concealed eagerness.

Dr. Martineau rolled his face towards Sir Richmond. "These miracles--grotesquely--happen," he said. "She knows nothing of Martin Leeds. . . . You must remember that. . . ."

"And then," he added, "if she and you fall in love, as the phrase goes, what is to follow?"

There was a pause.

Sir Richmond looked at his toes for a moment or so as if he took counsel with them and then decided to take offence.

"Really!" he said, "this is preposterous. You talk of falling in love as though it was impossible for a man and woman to be deeply interested in each other without that. And the gulf in our ages--in our quality! From the Psychologist of a New Age I find this amazing. Are men and women to go on for ever--separated by this possibility into two hardly communicating and yet interpenetrating worlds? Is there never to be friendship and companionship between men and women without passion?"

"You ought to know even better than I do that there is not. For such people as you two anyhow. And at present the world is not prepared to tolerate friendship and companionship WITH that accompaniment. That is the core of this situation."

A pause fell between the two gentlemen. They had smoothed over the extreme harshness of their separation and there was very little more to be said.

"Well," said Sir Richmond in conclusion, "I am very sorry indeed, Martineau, that we have to part like this."

CHAPTER THE SEVENTH

COMPANIONSHIP

Section 1

"Well," said Dr. Martineau, extending his hand to Sir Richmond on the Salisbury station platform, "I leave you to it."

His round face betrayed little or no vestiges of his overnight irritation.

"Ought you to leave me to it?" smiled Sir Richmond.

"I shall be interested to learn what happens."

"But if you won't stay to see!"

"Now Sir, please," said the guard respectfully but firmly, and Dr. Martineau got in.

Sir Richmond walked thoughtfully down the platform towards the exit.

"What else could I do?" he asked aloud to nobody in particular.

For a little while he thought confusedly of the collapse of his expedition into the secret places of his own heart with Dr. Martineau, and then his prepossession with Miss Grammont resumed possession of his mind. Dr. Martineau was forgotten.

Section 2

For the better part of forty hours, Sir Richmond had either been talking to Miss Grammont, or carrying on imaginary conversations with her in her absence, or sleeping and dreaming dreams in which she never failed to play a part, even if at times it was an altogether amazing and incongruous part. And as they were both very frank and expressive people, they already knew a very great deal about each other.

For an American Miss Grammont was by no means autobiographical. She gave no sketches of her idiosyncrasies, and she repeated no remembered comments and prophets of her contemporaries about herself. She either concealed or she had lost any great interest in her own personality. But she was interested in and curious about the people she had met in life, and her talk of them reflected a considerable amount of light upon her own upbringing and experiences. And her liking for Sir Richmond was pleasingly manifest. She liked his turn of thought, she watched him with a faint smile on her lips as he spoke, and she spread her opinions before him carefully in that soft voice of hers like a shy child showing its treasures to some suddenly trusted and favoured visitor.

Their ways of thought harmonized. They talked at first chiefly about the history of the world and the extraordinary situation of aimlessness in a phase of ruin to which the Great War had brought all Europe, if not all mankind. The world excited them both in the same way; as a crisis in which they were called upon to do something--they did not yet clearly know what. Into this topic they peered as into some deep pool, side by side, and in it they saw each other reflected.

The visit to Avebury had been a great success. It had been a perfect springtime day, and the little inn had been delighted at the reappearance of Sir Richmond's car so soon after its

departure. Its delight was particularly manifest in the cream and salad it produced for lunch. Both Miss Grammont and Miss Seyffert displayed an intelligent interest in their food.

After lunch they had all gone out to the stones and the wall. Half a dozen sunburnt children were putting one of the partially overturned megaliths to a happy use by clambering to the top of it and sliding on their little behinds down its smooth and sloping side amidst much mirthful squealing.

Sir Richmond and Miss Grammont had walked round the old circumvallation together, but Belinda Seyffert had strayed away from them, professing an interest in flowers. It was not so much that she felt they had to be left together that made her do this as her own consciousness of being possessed by a devil who interrupted conversations.

When Miss Grammont was keenly interested in a conversation, then Belinda had learnt from experience that it was wiser to go off with her devil out of the range of any temptation to interrupt.

"You really think," said Miss Grammont, "that it would be possible to take this confused old world and reshape it, set it marching towards that new world of yours--of two hundred and fifty million fully developed, beautiful and happy people?"

"Why not? Nobody is doing anything with the world except muddle about. Why not give it a direction? "

"You'd take it in your hands like clay?"

"Obdurate clay with a sort of recalcitrant, unintelligent life of its own."

Her imagination glowed in her eyes and warmed her voice. "I believe what you say is possible. If people dare."

"I am tired of following little motives that are like flames that go out when you get to them. I am tired of seeing all the world doing the same. I am tired of a world in which there is nothing great but great disasters. Here is something mankind can attempt, that we can attempt."

"And will? "

"I believe that as Mankind grows up this is the business Man has to settle down to and will settle down to."

She considered that.

"I've been getting to believe something like this. But-- . . . it frightens me. I suppose most of us have this same sort of dread of taking too much upon ourselves."

"So we just live like pigs. Sensible little piggywiggys. I've got a Committee full of that sort of thing. We live like little modest pigs. And let the world go hang. And pride ourselves upon our freedom from the sin of presumption."

"Not quite that!"

"Well! How do you put it?"

"We are afraid," she said. "It's too vast. We want bright little lives of our own. "

"Exactly--sensible little piggy-wiggys."

"We have a right to life--and happiness."

"First," said Sir Richmond, "as much right as a pig has to food. But whether we get life and happiness or fail to get them we human beings who have imaginations want something more nowadays. . . . Of course we want bright lives, of course we want happiness. Just as we want food, just as we want sleep. But when we have eaten, when we have slept, when we have jolly things about us--it is nothing. We have been made an exception of--and got our rations. The big thing confronts us still. It is vast, I agree, but vast as it is it is the thing we have to think about. I do not know why it should be so, but I am compelled by something in my nature to want to serve this idea of a new age for mankind. I want it as my culminating want. I want a world in order, a disciplined mankind going on to greater things. Don't you?"

"Now you tell me of it," she said with a smile, "I do."

"But before--?"

"No. You've made it clear. It wasn't clear before."

"I've been talking of this sort of thing with my friend Dr. Martineau. And I've been thinking as well as talking. That perhaps is why I'm so clear and positive."

"I don't complain that you are clear and positive. I've been coming along the same way. . . . It's refreshing to meet you."

"I found it refreshing to meet Martineau." A twinge of conscience about Dr. Martineau turned Sir Richmond into a new channel. "He's a most interesting man," he said. "Rather shy in some respects. Devoted to his work. And he's writing a book which has saturated him in these ideas. Only two nights

ago we stood here and talked about it. The Psychology of a New Age. The world, he believes, is entering upon a new phase in its history, the adolescence, so to speak, of mankind. It is an idea that seizes the imagination. There is a flow of new ideas abroad, he thinks, widening realizations, unprecedented hopes and fears. There is a consciousness of new powers and new responsibilities. We are sharing the adolescence of our race. It is giving history a new and more intimate meaning for us. It is bringing us into directer relation with public affairs,--making them matter as formerly they didn't seem to matter. That idea of the bright little private life has to go by the board."

"I suppose it has," she said, meditatively, as though she had been thinking over some such question before.

"The private life," she said, "has a way of coming aboard again."

Her reflections travelled fast and broke out now far ahead of him.

"You have some sort of work cut out for you," she said abruptly.

"Yes. Yes, I have."

"I haven't," she said.

"So that I go about," she added, like someone who is looking for something. I'd like to know if it's not jabbing too searching a question at you--what you have found."

Sir Richmond considered. "Incidentally," he smiled, "I want to get a lasso over the neck of that very forcible and

barbaric person, your father. I am doing my best to help lay the foundation of a scientific world control of fuel production and distribution. We have a Fuel Commission in London with rather wide powers of enquiry into the whole world problem of fuel. We shall come out to Washington presently with proposals. "

Miss Grammont surveyed the landscape. "I suppose," she said, "poor father IS rather like an unbroken mule in business affairs. So many of our big business men in America are. He'll lash out at you."

"I don't mind if only he lashes out openly in the sight of all men."

She considered and turned on Sir Richmond gravely.

"Tell me what you want to do to him. You find out so many things for me that I seem to have been thinking about in a sort of almost invisible half-conscious way. I've been suspecting for a long time that Civilization wasn't much good unless it got people like my father under some sort of control. But controlling father--as distinguished from managing him!" She reviewed some private and amusing memories. "He is a most intractable man."

Section 3

They had gone on to talk of her father and of the types of men who controlled international business. She had had plentiful opportunities for observation in their homes and her own. Gunter Lake, the big banker, she knew particularly well, because, it seemed, she had been engaged or was engaged to marry him. "All these people," she said, "are pushing things about, affecting millions of lives, hurting and

disordering hundreds of thousands of people. They don't seem to know what they are doing. They have no plans in particular. . . . And you are getting something going that will be a plan and a direction and a conscience and a control for them? You will find my father extremely difficult, but some of our younger men would love it.

"And," she went on; "there are American women who'd love it too. We're petted. We're kept out of things. We aren't placed. We don't get enough to do. We're spenders and wasters --not always from choice. While these fathers and brothers and husbands of ours play about with the fuel and power and life and hope of the world as though it was a game of poker. With all the empty unspeakable solemnity of the male. And treat us as though we ought to be satisfied if they bring home part of the winnings.

"That can't go on," she said.

Her eyes went back to the long, low, undulating skyline of the downs. She spoke as though she took up the thread of some controversy that had played a large part in her life. "That isn't going on," she said with an effect of conclusive decision.

Sir Richmond recalled that little speech now as he returned from Salisbury station to the Old George after his farewell to Martineau. He recalled too the soft firmness of her profile and the delicate line of her lifted chin. He felt that this time at any rate he was not being deceived by the outward shows of a charming human being. This young woman had real firmness of character to back up her free and independent judgments. He smiled at the idea of any facile passion in the composition of so sure and gallant a personality. Martineau was very fine-minded in many respects,

but he was an old maid; and like all old maids he saw man and woman in every encounter. But passion was a thing men and women fell back upon when they had nothing else in common. When they thought in the pleasantest harmony and every remark seemed to weave a fresh thread of common interest, then it wasn't so necessary. It might happen, but it wasn't so necessary. . . . If it did it would be a secondary thing to companionship. That's what she was,--a companion.

But a very lovely and wonderful companion, the companion one would not relinquish until the very last moment one could keep with her.

Her views about America and about her own place in the world seemed equally fresh and original to Sir Richmond.

"I realize I've got to be a responsible American citizen," she had said. That didn't mean that she attached very much importance to her recently acquired vote. She evidently classified voters into the irresponsible who just had votes and the responsible who also had a considerable amount of property as well. She had no illusions about the power of the former class. It didn't exist. They were steered to their decisions by people employed, directed or stimulated by "father" and his friends and associates, the owners of America, the real "responsible citizens." Or they fell a prey to the merely adventurous leading of "revolutionaries." But anyhow they were steered. She herself, it was clear, was bound to become a very responsible citizen indeed. She would some day, she laughed, be swimming in oil and such like property. Her interest in Sir Richmond's schemes for a scientific world management of fuel was therefore, she realized, a very direct one. But it was remarkable to find a young woman seeing it like that.

Father it seemed varied very much in his attitude towards her. He despised and distrusted women generally, and it was evident he had made it quite clear to her how grave an error it was on her part to persist in being a daughter and not a son. At moments it seemed to Sir Richmond that she was disposed to agree with father upon that. When Mr. Grammont's sense of her regrettable femininity was uppermost, then he gave his intelligence chiefly to schemes for tying her up against the machinations of adventurers by means of trustees, partners, lawyers, advisers, agreements and suchlike complications, or for acquiring a workable son by marriage. To this last idea it would seem the importance in her life of the rather heavily named Gunter Lake was to be ascribed. But another mood of the old man's was distrust of anything that could not be spoken of as his "own flesh and blood," and then he would direct his attention to a kind of masculinization of his daughter and to schemes for giving her the completest control of all he had to leave her provided she never married nor fell under masculine sway. "After all," he would reflect as he hesitated over the practicability of his life's ideal, "there was Hetty Green."

This latter idea had reft her suddenly at the age of seventeen from the educational care of an English gentlewoman warranted to fit her for marriage with any prince in Europe, and thrust her for the mornings and a moiety of the afternoons of the better part of a year, after a swift but competent training, into a shirt waist and an office down town. She had been entrusted at first to a harvester concern independent of Mr. Grammont, because he feared his own people wouldn't train her hard. She had worked for ordinary wages and ordinary hours, and at the end of the day, she mentioned casually, a large automobile with two menservants and a trustworthy secretary used to pick her out from the torrent of undistinguished workers that poured out of the Synoptical

Building. This masculinization idea had also sent her on a commission of enquiry into Mexico. There apparently she had really done responsible work.

But upon the question of labour Mr. Grammont was fierce, even for an American business man, and one night at a dinner party he discovered his daughter displaying what he considered an improper familiarity with socialist ideas. This had produced a violent revulsion towards the purdah system and the idea of a matrimonial alliance with Gunter Lake. Gunter Lake, Sir Richmond gathered, wasn't half a bad fellow. Generally it would seem Miss Grammont liked him, and she had a way of speaking about him that suggested that in some way Mr. Lake had been rather hardly used and had acquired merit by his behaviour under bad treatment. There was some story, however, connected with her war services in Europe upon which Miss Grammont was evidently indisposed to dwell. About that story Sir Richmond was left at the end of his Avebury day and after his last talk with Dr. Martineau, still quite vaguely guessing.

So much fact about Miss Grammont as we have given had floated up in fragments and pieced itself together in Sir Richmond's mind in the course of a day and a half. The fragments came up as allusions or by way of illustration. The sustaining topic was this New Age Sir Richmond fore shadowed, this world under scientific control, the Utopia of fully developed people fully developing the resources of the earth. For a number of trivial reasons Sir Richmond found himself ascribing the project of this New Age almost wholly to Dr. Martineau, and presenting it as a much completer scheme than he was justified in doing. It was true that Dr. Martineau had not said many of the things Sir Richmond ascribed to him, but also it was true that they had not crystallized out in Sir Richmond's mind before his talks with Dr. Martineau. The idea

of a New Age necessarily carries with it the idea of fresh rules of conduct and of different relationships between human beings. And it throws those who talk about it into the companionship of a common enterprise. To-morrow the New Age will be here no doubt, but today it is the hope and adventure of only a few human beings.

So that it was natural for Miss Grammont and Sir Richmond to ask: "What are we to do with such types as father?" and to fall into an idiom that assumed a joint enterprise. They had agreed by a tacit consent to a common conception of the world they desired as a world scientifically ordered, an immense organization of mature commonsense, healthy and secure, gathering knowledge and power for creative adventures as yet beyond dreaming. They were prepared to think of the makers of the Avebury dyke as their yesterday selves, of the stone age savages as a phase, in their late childhood, and of this great world order Sir Richmond foresaw as a day where dawn was already at hand. And in such long perspectives, the states, governments and institutions of to-day became very temporary-looking and replaceable structures indeed. Both these two people found themselves thinking in this fashion with an unwonted courage and freedom because the other one had been disposed to think in this fashion before. Sir Richmond was still turning over in his mind the happy mutual release of the imagination this chance companionship had brought about when he found himself back again at the threshold of the Old George.

Section 4

Sir Richmond Hardy was not the only man who was thinking intently about Miss Grammont at that particular moment. Two gentlemen were coming towards her across the Atlantic whose minds, it chanced, were very busily occupied by her affairs.

One of these was her father, who was lying in his brass bed in his commodious cabin on the *Hollandia*, regretting his diminishing ability to sleep in the early morning now, even when he was in the strong and soothing air of mid-Atlantic, and thinking of V.V. because she had a way of coming into his mind when it was undefended; and the other was Mr. Gunter Lake on the *Megantic*, one day out from Sandy Hook, who found himself equally sleepless and preoccupied. And although Mr. Lake was a man of vast activities and complicated engagements he was coming now to Europe for the express purpose of seeing V.V. and having things out with her fully and completely because, in spite of all that had happened, she made such an endless series of delays in coming to America.

Old Grammont as he appeared upon the pillow of his bed by the light of a rose-shaded bedside lamp, was a small-headed, grey-haired gentleman with a wrinkled face and sunken brown eyes. Years of business experience, mitigated only by such exercise as the game of poker affords, had intensified an instinctive inexpressiveness. Under the most solitary circumstances old Grammont was still inexpressive, and the face that stared at the ceiling of his cabin and the problem of his daughter might have been the face of a pickled head in a museum, for any indication it betrayed of the flow of thought within. He lay on his back and his bent knees lifted the bed-clothes into a sharp mountain. He was not even trying to sleep.

Why, he meditated, had V.V. stayed on in Europe so much longer than she need have done? And why had Gunter Lake suddenly got into a state of mind about her? Why didn't the girl confide in her father at least about these things? What was afoot? She had thrown over Lake once and it seemed she was going to turn him down again. Well, if she was an ordinary female person that was a silly sort of thing to do.

With her fortune and his--you could buy the world. But suppose she was not all ordinary female person. . . . Her mother hadn't been ordinary anyhow, whatever else you called her, and no one could call Grammont blood all ordinary fluid. . . . Old Grammont had never had any delusions about Lake. If Lake's father hadn't been a big man Lake would never have counted for anything at all. Suppose she did turn him down. In itself that wasn't a thing to break her father's heart.

What did matter was not whether she threw Lake over but what she threw him over for. If it was because he wasn't man enough, well and good. But if it was for some other lover, some good-looking, worthless impostor, some European title or suchlike folly--!

At the thought of a lover for V.V. a sudden flood of anger poured across the old man's mind, behind the still mask of his face. It infuriated him even to think of V.V., his little V.V., his own girl, entertaining a lover, being possibly--most shameful thought--IN LOVE! Like some ordinary silly female, sinking to kisses, to the deeds one could buy and pay for. His V.V.! The idea infuriated and disgusted him. He fought against it as a possibility. Once some woman in New York had ventured to hint something to him of some fellow, some affair with an artist, Caston; she had linked this Caston with V.V.'s red cross nursing in Europe. . . . Old Grammont had made that woman sorry she spoke. Afterwards he had caused enquiries to be made about this Caston, careful enquiries. It seems that he and V.V. had known each other, there had been something. But nothing that V.V. need be ashamed of. When old Grammont's enquiry man had come back with his report, old Grammont had been very particular about that. At first the fellow had not been very clear, rather muddled indeed as to how things were--no doubt he had wanted to make out there was something just to seem to earn his

money. Old Grammont had struck the table sharply and the eyes that looked out of his mask had blazed. "What have you found out against her?" he had asked in a low even voice.

"Absolutely nothing, Sir," said the agent, suddenly white to the lips. . . .

Old Grammont stared at his memory of that moment for a while. That affair was all right, quite all right. Of course it was all right. And also, happily, Caston was among the dead. But it was well her broken engagement with Lake had been resumed as though it had never been broken off. If there had been any talk that fact answered it. And now that Lake had served his purpose old Grammont did not care in the least if he was shelved. V.V. could stand alone.

Old Grammont had got a phrase in his mind that looked like dominating the situation. He dreamt of saying to V.V.: "V.V., I'm going to make a man of you--if you're man enough." That was a large proposition; it implied--oh! it implied all sorts of things. It meant that she would care as little for philandering as an able young business man. Perhaps some day, a long time ahead, she might marry. There wasn't much reason for it, but it might be she would not wish to be called a spinster. "Take a husband," thought old Grammont, "when I am gone, as one takes a butler, to make the household complete." In previous meditations on his daughter's outlook old Grammont had found much that was very suggestive in the precedent of Queen Victoria. She had had no husband of the lord and master type, so to speak, but only a Prince Consort, well in hand. Why shouldn't the Grammont heiress dominate her male belonging, if it came to that, in the same fashion? Why shouldn't one tie her up and tie the whole thing up, so far as any male belonging was concerned, leaving V.V. in all other respects free? How could one do it?

The speculative calm of the sunken brown eyes deepened.

His thoughts went back to the white face of the private enquiry agent. "Absolutely nothing, Sir." What had the fellow thought of hinting? Nothing of that kind in V.V.'s composition, never fear. Yet it was a curious anomaly that while one had a thousand ways of defending one's daughter and one's property against that daughter's husband, there was no power on earth by which a father could stretch his dead hand between that daughter and the undue influence of a lover. Unless you tied her up for good and all, lover or none. . . .

One was left at the mercy of V.V.'s character. . . .

"I ought to see more of her," he thought. "She gets away from me. Just as her mother did." A man need not suspect his womenkind but he should know what they are doing. It is duty, his protective duty to them. These companions, these Seyffert women and so forth, were all very well in their way; there wasn't much they kept from you if you got them cornered and asked them intently. But a father's eye is better. He must go about with the girl for a time, watch her with other men, give her chances to talk business with him and see if she took them. "V.V., I'm going to make a man of you," the phrase ran through his brain. The deep instinctive jealousy of the primordial father was still strong in old Grammont's blood. It would be pleasant to go about with her on his right hand in Paris, HIS girl, straight and lovely, desirable and unapproachable,--above that sort of nonsense, above all other masculine subjugation.

"V.V., I'm going to make a man of you. . . ."

His mind grew calmer. Whatever she wanted in Paris should be hers. He'd just let her rip. They'd be like sweethearts

together, he and his girl.

Old Grammont dozed off into dreamland.

Section 5

The imaginations of Mr. Gunter Lake, two days behind Mr. Grammont upon the Atlantic, were of a gentler, more romantic character. In them V.V. was no longer a daughter in the fierce focus of a father's jealousy, but the goddess enshrined in a good man's heart. Indeed the figure that the limelight of the reverie fell upon was not V.V. at all but Mr. Gunter Lake himself, in his favourite role of the perfect lover.

An interminable speech unfolded itself. "I ask for nothing in return. I've never worried you about that Caston business and I never will. Married to me you shall be as free as if you were unmarried. Don't I know, my dear girl, that you don't love me yet. Let that be as you wish. I want nothing you are not willing to give me, nothing at all. All I ask is the privilege of making life happy--and it shall be happy--for you. . . . All I ask. All I ask. Protect, guard, cherish. . . ."

For to Mr. Gunter Lake it seemed there could be no lovelier thing in life than a wife "in name only" slowly warmed into a glow of passion by the steadfast devotion and the strength and wisdom of a mate at first despised. Until at last a day would come. . . .

"My darling!" Mr. Gunter Lake whispered to the darkness. "My little guurl. IT HAS BEEN WORTH THE WAITING. . . ."

Section 6

Miss Grammont met Sir Richmond in the bureau of the Old George with a telegram in her hand. "My father reported his latitude and longitude by wireless last night. The London people think he will be off Falmouth in four days' time. He wants me to join his liner there and go on to Cherbourg and Paris. He's arranged that. He is the sort of man who can arrange things like that. There'll be someone at Falmouth to look after us and put us aboard the liner. I must wire them where I can pick up a telegram to-morrow."

"Wells in Somerset," said Sir Richmond.

His plans were already quite clear. He explained that he wanted her first to see Shaftesbury, a little old Wessex town that was three or four hundred years older than Salisbury, perched on a hill, a Saxon town, where Alfred had gathered his forces against the Danes and where Canute, who had ruled over all Scandinavia and Iceland and Greenland, and had come near ruling a patch of America, had died. It was a little sleepy place now, looking out dreamily over beautiful views. They would lunch in Shaftesbury and walk round it. Then they would go in the afternoon through the pleasant west country where the Celts had prevailed against the old folk of the Stonehenge temple and the Romans against the Celts and the Saxons against the Romanized Britons and the Danes against the Saxons, a war-scarred landscape, abounding in dykes and entrenchments and castles, sunken now into the deepest peace, to Glastonbury to see what there was to see of a marsh village the Celts had made for themselves three or four hundred years before the Romans came. And at Glastonbury also there were the ruins of a great Benedictine church and abbey that had once rivalled Salisbury. Thence they would go on to Wells to see yet another great cathedral and to dine and sleep. Glastonbury Abbey and Wells Cathedral brought the

story of Europe right up to Reformation times.

"That will be a good day for us," said Sir Richmond. "It will be like turning over the pages of the history of our family, to and fro. There will be nothing nearly so old as Avebury in it, but there will be something from almost every chapter that comes after Stonehenge. Rome will be poorly represented, but that may come the day after at Bath. And the next day too I want to show you something of our old River Severn. We will come right up to the present if we go through Bristol. There we shall have a whiff of America, our new find, from which the tobacco comes, and we shall be reminded of how we set sail thither--was it yesterday or the day before? You will understand at Bristol how it is that the energy has gone out of this dreaming land--to Africa and America and the whole wide world. It was the good men of Bristol, by the bye, with their trade from Africa to America, who gave you your colour problem. Bristol we may go through to-morrow and Gloucester, mother of I don't know how many American Gloucesters. Bath we'll get in somehow. And then as an Anglo-American showman I shall be tempted to run you northward a little way past Tewkesbury, just to go into a church here and there and show you monuments bearing little shields with the stars and stripes upon them, a few stars and a few stripes, the Washington family monuments."

"It was not only from England that America came," said Miss Grammont.

"But England takes an American memory back most easily and most fully--to Avebury and the Baltic Northmen, past the emperors and the Corinthian columns that smothered Latin Europe. . . . For you and me anyhow this is our past, this was our childhood, and this is our land." He interrupted laughing as she was about to reply. "Well, anyhow," he said,

"it is a beautiful day and a pretty country before us with the ripest history in every grain of its soil. So we'll send a wire to your London people and tell them to send their instructions to Wells."

"I'll tell Belinda," she said, "to be quick with her packing."

Section 7

As Miss Grammont and Sir Richmond Hardy fulfilled the details of his excellent programme and revised their impressions of the past and their ideas about the future in the springtime sunlight of Wiltshire and Somerset, with Miss Seyffert acting the part of an almost ostentatiously discreet chorus, it was inevitable that their conversation should become, by imperceptible gradations, more personal and intimate. They kept up the pose, which was supposed to represent Dr. Martineau's philosophy, of being Man and Woman on their Planet considering its Future, but insensibly they developed the idiosyncrasies of their position. They might profess to be Man and Woman in the most general terms, but the facts that she was the daughter not of Everyman but old Grammont and that Sir Richmond was the angry leader of a minority upon the Fuel Commission became more and more important. "What shall we do with this planet of ours? " gave way by the easiest transitions to "What are you and I doing and what have we got to do? How do you feel about it all? What do you desire and what do you dare?"

It was natural that Sir Richmond should talk of his Fuel Commission to a young woman whose interests in fuel were even greater than his own. He found that she was very much better read than he was in the recent literature of socialism, and that she had what he considered to be a most unfeminine grasp

of economic ideas. He thought her attitude towards socialism a very sane one because it was also his own. So far as socialism involved the idea of a scientific control of natural resources as a common property administered in the common interest, she and he were very greatly attracted by it; but so far as it served as a form of expression for the merely insubordinate discontent of the many with the few, under any conditions, so long as it was a formula for class jealousy and warfare, they were both repelled by it. If she had had any illusions about the working class possessing as a class any profounder political wisdom or more generous public impulses than any other class, those illusions had long since departed. People were much the same, she thought, in every class; there was no stratification of either rightness or righteousness.

He found he could talk to her of his work and aims upon the Fuel Commission and of the conflict and failure of motives he found in himself, as freely as he had done to Dr. Martineau and with a surer confidence of understanding. Perhaps his talks with the doctor had got his ideas into order and made them more readily expressible than they would have been otherwise. He argued against the belief that any class could be good as a class or bad as a class, and he instanced the conflict of motives he found in all the members of his Committee and most so in himself. He repeated the persuasion he had already confessed to Dr. Martineau that there was not a single member of the Fuel Commission but had a considerable drive towards doing the right thing about fuel, and not one who had a single-minded, unencumbered drive towards the right thing. "That," said Sir Richmond, "is what makes life so interesting and, in spite of a thousand tragic disappointments, so hopeful. Every man is a bad man, every man is a feeble man and every man is a good man. My motives come and go. Yours do the same. We vary in response to the

circumstances about us. Given a proper atmosphere, most men will be public-spirited, right-living, generous. Given perplexities and darkness, most of us can be cowardly and vile. People say you cannot change human nature and perhaps that is true, but you can change its responses endlessly. The other day I was in Bohemia, discussing Silesian coal with Benes, and I went to see the Festival of the Bohemian Sokols. Opposite to where I sat, far away across the arena, was a great bank of men of the Sokol organizations, an unbroken brown mass wrapped in their brown uniform cloaks. Suddenly the sun came out and at a word the whole body flung back their cloaks, showed their Garibaldi shirts and became one solid blaze of red. It was an amazing transformation until one understood what had happened. Yet nothing material had changed but the sunshine. And given a change in laws and prevailing ideas, and the very same people who are greedy traders, grasping owners and revolting workers to-day will all throw their cloaks aside and you will find them working together cheerfully, even generously, for a common end. They aren't traders and owners and workers and so forth by any inner necessity. Those are just the ugly parts they play in the present drama. Which is nearly at the end of its run."

"That's a hopeful view," said Miss Grammont. "I don't see the flaw in it--if there is a flaw."

"There isn't one, " said Sir Richmond. "It is my chief discovery about life. I began with the question of fuel and the energy it affords mankind, and I have found that my generalization applies to all human affairs. Human beings are fools, weaklings, cowards, passionate idiots,--I grant you. That is the brown cloak side of them, so to speak. But they are not such fools and so forth that they can't do pretty well materially if once we hammer out a sane collective method of getting and using fuel. Which people generally will

understand--in the place of our present methods of snatch and wrangle. Of that I am absolutely convinced. Some work, some help, some willingness you can get out of everybody. That's the red. And the same principle applies to most labour and property problems, to health, to education, to population, social relationships and war and peace. We haven't got the right system, we have inefficient half-baked systems, or no system at all, and a wild confusion and war of ideas in all these respects. But there is a right system possible none the less. Let us only hammer our way through to the sane and reasonable organization in this and that and the other human affairs, and once we have got it, we shall have got it for good. We may not live to see even the beginnings of success, but the spirit of order, the spirit that has already produced organized science, if only there are a few faithful, persistent people to stick to the job, will in the long run certainly save mankind and make human life clean and splendid, happy work in a clear mind. If I could live to see it!"

"And as for us--in our time?"

"Measured by the end we serve, we don't matter. You know we don't matter."

"We have to find our fun in the building and in our confidence that we do really build."

"So long as our confidence lasts there is no great hardship," said Sir Richmond.

"So long as our confidence lasts," she repeated after him.

"Ah!" cried Sir Richmond. "There it is! So long as our confidence lasts! So long as one keeps one's mind steady.

That is what I came away with Dr. Martineau to discuss. I went to him for advice. I haven't known him for more than a month. It's amusing to find myself preaching forth to you. It was just faith I had lost. Suddenly I had lost my power of work. My confidence in the rightness of what I was doing evaporated. My will failed me. I don't know if you will understand what that means. It wasn't that my reason didn't assure me just as certainly as ever that what I was trying to do was the right thing to try to do. But somehow that seemed a cold and personally unimportant proposition. The life had gone out of it. . . . "

He paused as if arrested by a momentary doubt.

"I don't know why I tell you these things," he said.

"You tell them me," she said.

"It's a little like a patient in a hydropath retailing his ailments."

"No. No. Go on."

"I began to think now that what took the go out of me as my work went on was the lack of any real fellowship in what I was doing. It was the pressure of the opposition in the Committee, day afterday. It was being up against men who didn't reason against me but who just showed by everything they did that the things I wanted to achieve didn't matter to them one rap. It was going back to a home, lunching in clubs, reading papers, going about a world in which all the organization, all the possibility of the organization I dream of is tacitly denied. I don't know if it seems an extraordinary confession of weakness to you, but that steady refusal of the majority of my Committee to come into co-

operation with me has beaten me--or at any rate has come very near to beating me. Most of them you know are such able men. You can FEEL their knowledge and commonsense. They, and everybody about me, seemed busy and intent upon more immediate things, that seemed more real to them than this remote, theoretical, PRIGGISH end I have set for myself. . . ."

He paused.

"Go on," said Miss Grammont. "I think I understand this. "

"And yet I know I am right."

"I know you are right. I'm certain. Go on.

"If one of those ten thousand members of the Sokol Society had thrown back his brown cloak and shown red when all the others still kept them selves cloaked--if he was a normal sensitive man--he might have felt something of a fool. He might have felt premature and presumptuous. Red he was and the others he knew were red also, but why show it? That is the peculiar distress of people like ourselves, who have some sense of history and some sense of a larger life within us than our merely personal life. We don't want to go on with the old story merely. We want to live somehow in that larger life and to live for its greater ends and lose something unbearable of ourselves, and in wanting to do that we are only wanting to do what nearly everybody perhaps is ripe to do and will presently want to do. When the New Age Martineau talks about begins to come it may come very quickly--as the red came at Prague. But for the present everyone hesitates about throwing back the cloak."

"Until the cloak becomes unbearable," she said, repeating his

word.

"I came upon this holiday in the queerest state. I thought I was ill. I thought I was overworked. But the real trouble was a loneliness that robbed me of all driving force. Nobody seemed thinking and feeling with me. . . . I have never realized until now what a gregarious beast man is. It needed only a day or so with Martineau, in the atmosphere of ideas and beliefs like my own, to begin my restoration. Now as I talk to you--That is why I have clutched at your company. Because here you are, coming from thousands of miles away, and you talk my ideas, you fall into my ways of thought as though we had gone to the same school."

"Perhaps we HAVE gone to the same school," she said.

"You mean?"

"Disappointment. Disillusionment. Having to find something better in life than the first things it promised us."

"But you--? Disappointed? I thought that in America people might be educating already on different lines--"

"Even in America," Miss Grammont said, "crops only grow on the ploughed land."

Section 8

Glastonbury in the afternoon was wonderful; they talked of Avalon and of that vanished legendary world of King Arthur and his knights, and in the early evening they came to Wells and a pleasant inn, with a quaint little garden before its front door that gave directly upon the cathedral. The three tourists devoted a golden half hour before dinner to the

sculptures on the western face. The great screen of wrought stone rose up warmly, grey and clear and distinct against a clear blue sky in which the moon hung, round and already bright. That western facade with its hundreds of little figures tells the whole story of God and Man from Adam to the Last Judgment, as the mediaeval mind conceived it. It is an even fuller exposition than the carved Bible history that goes round the chapter house at Salisbury. It presented the universe, said Sir Richmond, as a complete crystal globe. It explained everything in life in a simple and natural manner, hope, heaven, devil and despair. Generations had lived and died mentally within that crystal globe, convinced that it was all and complete.

"And now," said Miss Grammont, "we are in limitless space and time. The crystal globe is broken."

"And?" said Belinda amazingly--for she had been silent for some time, "the goldfish are on the floor, V.V. Free to flop about. Are they any happier?"

It was one of those sudden rhetorical triumphs that are best left alone. "I trow not," said Belinda, giving the last touch to it.

After dinner Sir Richmond and Miss Grammont walked round the cathedral and along by the moat of the bishop's palace, and Miss Seyffert stayed in the hotel to send off postcards to her friends, a duty she had neglected for some days. The evening was warm and still and the moon was approaching its full and very bright. Insensibly the soft afterglow passed into moonlight.

At first the two companions talked very little. Sir Richmond was well content with this tacit friendliness and Miss

Grammont was preoccupied because she was very strongly moved to tell him things about herself that hitherto she had told to no one. It was not merely that she wanted to tell him these things but also that for reasons she did not put as yet very clearly to herself she thought they were things he ought to know. She talked of herself at first in general terms.

"Life comes on anyone with a rush, childhood seems lasting for ever and then suddenly one tears into life," she said. It was even more so for women than it was for men. You are shown life, a crowded vast spectacle full of what seems to be intensely interesting activities and endless delightful and frightful and tragic possibilities, and you have hardly had time to look at it before you are called upon to make decisions. And there is something in your blood that urges you to decisive acts. Your mind, your reason resists. "Give me time," it says. "They clamour at you with treats, crowds, shows, theatres, all sorts of things; lovers buzz at you, each trying to fix you part of his life when you are trying to get clear to live a little of your own." Her father had had one merit at any rate. He had been jealous of her lovers and very ready to interfere.

"I wanted a lover to love," she said. "Every girl of course wants that. I wanted to be tremendously excited. . . . And at the same time I dreaded the enormous interference. . . ."

"I wasn't temperamentally a cold girl. Men interested and excited me, but there were a lot of men about and they clashed with each other. Perhaps way down in some out of the way place I should have fallen in love quite easily with the one man who came along. But no man fixed his image. After a year or so I think I began to lose the power which is natural to a young girl of falling very easily into love. I became critical of the youths and men who were attracted to me and I became analytical about myself. . . ."

"I suppose it is because you and I are going to part so soon that I can speak so freely to you. . . . But there are things about myself that I have never had out even with myself. I can talk to myself in you--"

She paused baffled. "I know exactly," said Sir Richmond.

"In my composition I perceive there have always been two ruling strains. I was a spoilt child at home, a rather reserved girl at school, keen on my dignity. I liked respect. I didn't give myself away. I suppose one would call that personal pride. Anyhow it was that streak made me value the position of being a rich married woman in New York. That was why I became engaged to Lake. He seemed to be as good a man as there was about. He said he adored me and wanted me to crown his life. He wasn't ill-looking or ill-mannered. The second main streak in my nature wouldn't however fit in with that."

She stopped short.

"The second streak, " said Sir Richmond.

"Oh!--Love of beauty, love of romance. I want to give things their proper names; I don't want to pretend to you. . . . It was more or less than that. . . . It was--imaginative sensuousness. Why should I pretend it wasn't in me? I believe that streak is in all women."

"I believe so too. In all properly constituted women."

"I tried to devote that streak to Lake," she said. "I did my best for him. But Lake was much too much of a gentleman or an idealist about women, or what you will, to know his business

as a lover. And that side of me fell in love, the rest of me protesting, with a man named Caston. It was a notorious affair. Everybody in New York couples my name with Caston. Except when my father is about. His jealousy has blasted an area of silence--in that matter--all round him. He will not know of that story. And they dare not tell him. I should pity anyone who tried to tell it him."

"What sort of man was this Caston?"

Miss Grammont seemed to consider. She did not look at Sir Richmond; she kept her profile to him.

"He was," she said deliberately, "a very rotten sort of man."

She spoke like one resolved to be exact and judicial. "I believe I always knew he wasn't right. But he was very handsome. And ten years younger than Lake. And nobody else seemed to be all right, so I swallowed that. He was an artist, a painter. Perhaps you know his work." Sir Richmond shook his head. "He could make American business men look like characters out of the Three Musketeers, they said, and he was beginning to be popular. He made love to me. In exactly the way Lake didn't. If I shut my eyes to one or two things, it was delightful. I liked it. But my father would have stood a painter as my husband almost as cheerfully as he would a man of colour. I made a fool of myself, as people say, about Caston. Well--when the war came, he talked in a way that irritated me. He talked like an East Side Annunzio, about art and war. It made me furious to know it was all talk and that he didn't mean business. . . . I made him go."

She paused for a moment. "He hated to go."

"Then I relented. Or I missed him and I wanted to be made

love to. Or I really wanted to go on my own account. I forget. I forget my motives altogether now. That early war time was a queer time for everyone. A kind of wildness got into the blood. . . . I threw over Lake. All the time things had been going on in New York I had still been engaged to Lake. I went to France. I did good work. I did do good work. And also things were possible that would have seemed fantastic in America. You know something of the war-time atmosphere. There was death everywhere and people snatched at gratifications. Caston made 'To-morrow we die' his text. We contrived three days in Paris together--not very cleverly. All sorts of people know about it. . . . We went very far."

She stopped short. "Well?" said Sir Richmond.

"He did die. . . ."

Another long pause. "They told me Caston had been killed. But someone hinted--or I guessed--that there was more in it than an ordinary casualty.

"Nobody, I think, realizes that I know. This is the first time I have ever confessed that I do know. He was--shot. He was shot for cowardice."

"That might happen to any man," said Sir Richmond presently. "No man is a hero all round the twenty-four hours. Perhaps he was caught by circumstances, unprepared. He may have been taken by surprise."

"It was the most calculated, cold-blooded cowardice imaginable. He let three other men go on and get killed. . . ."

"No. It is no good your inventing excuses for a man you know

nothing about. It was vile, contemptible cowardice and meanness. It fitted in with a score of ugly little things I remembered. It explained them all. I know the evidence and the judgment against him were strictly just and true, because they were exactly in character. . . . And that, you see, was my man. That was the lover I had chosen. That was the man to whom I had given myself with both hands."

Her soft unhurrying voice halted for a time, and then resumed in the same even tones of careful statement. "I wasn't disgusted, not even with myself. About him I was chiefly sorry, intensely sorry, because I had made him come out of a life that suited and protected him, to the war. About myself, I was stunned and perplexed. I had the clearest realization that what you and I have been calling the bright little personal life had broken off short and was spoilt and over and done with. I felt as though it was my body they had shot. And there I was, with fifty years of life left in me and nothing particular to do with them."

"That was just the prelude to life, said Sir Richmond.

"It didn't seem so at the time. I felt I had to get hold of something or go to pieces. I couldn't turn to religion. I had no religion. And Duty? What is Duty? I set myself to that. I had a kind of revelation one night. 'Either I find out what all this world is about, I said, or I perish.' I have lost myself and I must forget myself by getting hold of something bigger than myself. And becoming that. That's why I have been making a sort of historical pilgrimage. . . . That's my story, Sir Richmond. That's my education. . . . Somehow though your troubles are different, it seems to me that my little muddle makes me understand how it is with you. What you've got, this idea of a scientific ordering of the world, is what I, in my younger, less experienced way, have been

feeling my way towards. I want to join on. I want to get hold of this idea of a great fuel control in the world and of a still greater economic and educational control of which it is a part. I want to make that idea a part of myself. Rather I want to make myself a part of it. When you talk of it I believe in it altogether."

"And I believe in it, when I talk of it to you."

Section 9

Sir Richmond was stirred very deeply by Miss Grammont's confidences. His dispute with Dr. Martineau was present in his mind, so that he did not want to make love to her. But he was extremely anxious to express his vivid sense of the value of her friendship. And while he hesitated over this difficult and unfamiliar task she began to talk again of herself, and in such a way as to give a new turn to Sir Richmond's thoughts.

"Perhaps I ought to tell you a little more about myself," she said; "now that I have told you so much. I did a thing that still puzzles me. I was filled with a sense of hopeless disaster in France and I suppose I had some sort of desperate idea of saving something out of the situation. . . . I renewed my correspondence with Gunter Lake. He made the suggestion I knew he would make, and I renewed our engagement."

"To go back to wealth and dignity in New York?"

"Yes."

"But you don't love him?"

"That's always been plain to me. But what I didn't realize, until I had given my promise over again, was that I dislike him acutely."

"You hadn't realized that before?"

"I hadn't thought about him sufficiently. But now I had to think about him a lot. The other affair had given me an idea perhaps of what it means to be married to a man. And here I am drifting back to him. The horrible thing about him is the steady ENVELOPING way in which he has always come at me. Without fellowship. Without any community of ideas. Ready to make the most extraordinary bargains. So long as he can in any way fix me and get me. What does it mean? What is there behind those watching, soliciting eyes of his? I don't in the least love him, and this desire and service and all the rest of it he offers me--it's not love. It's not even such love as Caston gave me. It's a game he plays with his imagination."

She had released a flood of new ideas in Sir Richmond's mind.

"This is illuminating," he said. "You dislike Lake acutely. You always have disliked him."

"I suppose I have. But it's only now I admit it to myself."

"Yes. And you might, for example, have married him in New York before the war."

"It came very near to that."

"And then probably you wouldn't have discovered you disliked him. You wouldn't have admitted it to yourself."

"I suppose I shouldn't. I suppose I should have tried to believe I loved him."

"Women do this sort of thing. Odd! I never realized it before. And there are endless wives suppressing an acute dislike. My wife does. I see now quite clearly that she detests me. Reasonably enough. From her angle I'm entirely detestable. But she won't admit it, won't know of it. She never will. To the end of my life, always, she will keep that detestation unconfessed. She puts a face on the matter. We both do. And this affair of yours. . . . Have you thought how unjust it is to Lake?"

"Not nearly so much as I might have done."

"It is unfair to him. Atrociously unfair. He's not my sort of man, perhaps, but it will hurt him cruelly according to the peculiar laws of his being. He seems to me a crawling sort of lover with an immense self-conceit at the back of his crawlingness."

"He has," she endorsed.

"He backs himself to crawl--until he crawls triumphantly right over you I don't like to think of the dream he has I take it he will lose. Is it fair to go into this game with him?"

"In the interests of Lake," she said, smiling softly at Sir Richmond in the moonlight. "But you are perfectly right."

"And suppose he doesn't lose!"

Sir Richmond found himself uttering sentiments.

"There is only one decent way in which a civilized man and a civilized woman may approach one another. Passionate desire

is not enough. What is called love is not enough. Pledges, rational considerations, all these things are worthless. All these things are compatible with hate. The primary essential is friendship, clear understanding, absolute confidence. Then within that condition, in that elect relationship, love is permissible, mating, marriage or no marriage, as you will-- all things are permissible. . . ."

Came a long pause between them.

"Dear old cathedral," said Miss Grammont, a little irrelevantly. She had an air of having concluded something that to Sir Richmond seemed scarcely to have begun. She stood looking at the great dark facade edged with moonlight for some moments, and then turned towards the hotel, which showed a pink-lit window.

"I wonder," she said, "if Belinda is still up, And what she will think when I tell her of the final extinction of Mr. Lake. I think she rather looked forward to being the intimate friend, secrets and everything, of Mrs. Gunter Lake."

Section 10

Sir Richmond woke up at dawn and he woke out of an extraordinary dream. He was saying to Miss Grammont: "There is no other marriage than the marriage of true minds. There is no other marriage than the marriage of true minds." He saw her as he had seen her the evening before, light and cool, coming towards him in the moonlight from the hotel. But also in the inconsistent way of dreams he was very close to her kind, faintly smiling face, and his eyes were wet with tears and he was kissing her hand. "My dear wife and mate," he was saying, and suddenly he was kissing her cool lips.

He woke up and stared at his dream, which faded out only very slowly before the fresh sun rise upon the red tiles and tree boughs outside the open window, and before the first stir and clamour of the birds.

He felt like a court in which some overwhelmingly revolutionary piece of evidence had been tendered. All the elaborate defence had broken down at one blow. He sat up on the edge of his bed, facing the new fact.

"This is monstrous and ridiculous," he said, "and Martineau judged me exactly. I am in love with her. . . . I am head over heels in love with her. I have never been so much in love or so truly in love with anyone before."

Section 11

That was the dawn of a long day of tension for Sir Richmond and Miss Grammont. Because each was now vividly aware of being in love with the other and so neither was able to see how things were with the other. They were afraid of each other. A restraint had come upon them both, a restraint that was greatly enhanced by their sense of Belinda, acutely observant, ostentatiously tactful and self-effacing, and prepared at the slightest encouragement to be overwhelmingly romantic and sympathetic. Their talk waned, and was revived to an artificial activity and waned again. The historical interest had evaporated from the west of England and left only an urgent and embarrassing present.

But the loveliness of the weather did not fail, and the whole day was set in Severn landscapes. They first saw the great river like a sea with the Welsh mountains hanging in the sky behind as they came over the Mendip crest above Shipham. They saw it again as they crossed the hill before Clifton Bridge,

and so they continued, climbing to hill crests for views at Alveston and near Dursley, and so to Gloucester and the lowest bridge and thence back down stream again through fat meadow lands at first and much apple-blossom and then over gentle hills through wide, pale Nownham and Lidney and Alvington and Woolaston to old Chepstow and its brown castle, always with the widening estuary to the left of them and its foaming shoals and shining sand banks. From Chepstow they turned back north along the steep Wye gorge to Tintern, and there at the snug little Beaufort Arms with its prim lawn and flower garden they ended the day's journey.

Tintern Abbey they thought a poor graceless mass of ruin down beside the river, and it was fenced about jealously and locked up from their invasion. After dinner Sir Richmond and Miss Grammont went for a walk in the mingled twilight and moonlight up the hill towards Chepstow. Both of them were absurdly and nervously pressing to Belinda to come with them, but she was far too wise to take this sudden desire for her company seriously. Her dinner shoes, she said, were too thin. Perhaps she would change and come out a little later. "Yes, come later," said Miss Grammont and led the way to the door.

They passed through the garden. "I think we go up the hill?" said Sir Richmond.

"Yes," she agreed, "up the hill."

Followed a silence.

Sir Richmond made an effort, but after some artificial and disconnected talk about Tintern Abbey, concerning, which she had no history ready, and then, still lamer, about whether Monmouthshire is in England or Wales, silence fell again. The silence lengthened, assumed a significance, a dignity that no

common words might break.

Then Sir Richmond spoke. "I love, you, he said, "with all my heart."

Her soft voice came back after a stillness. "I love you," she said, "with all myself."

"I had long ceased to hope, " said Sir -Richmond, that I should ever find a friend . . . a lover . . . perfect companionship "

They went on walking side by side, without touching each other or turning to each other.

"All the things I wanted to think I believe have come alive in me," she said. . . .

"Cool and sweet," said Sir Richmond. "Such happiness as I could not have imagined."

The light of a silent bicycle appeared above them up the hill and swept down upon them, lit their two still faces brightly and passed.

"My dear," she whispered in the darkness between the high hedges.

They stopped short and stood quite still, trembling. He saw her face, dim and tender, looking up to his.

Then he took her in his arms and kissed her lips as he had desired in his dream. . . .

When they returned to the inn Belinda Seyffert offered flat

explanations of why she had not followed them, and enlarged upon the moonlight effect of the Abbey ruins from the inn lawn. But the scared congratulations in her eyes betrayed her recognition that momentous things had happened between the two.

CHAPTER THE EIGHTH

FULL MOON

Section 1

Sir Richmond had talked in the moonlight and shadows of having found such happiness as he could not have imagined. But when he awoke in the night that happiness had evaporated. He awoke suddenly out of this love dream that had lasted now for nearly four days and he awoke in a mood of astonishment and dismay.

He had thought that when he parted from Dr. Martineau he had parted also from that process of self-exploration that they had started together, but now he awakened to find it established and in full activity in his mind. Something or someone, a sort of etherealized Martineau-Hardy, an abstracted intellectual conscience, was demanding what he thought he was doing with Miss Grammont and whither he thought he was taking her, how he proposed to reconcile the close relationship with her that he was now embarked upon with, in the first place, his work upon and engagements with the Fuel Commission, and, in the second place, Martin Leeds. Curiously enough Lady Hardy didn't come into the case at all. He had done his utmost to keep Martin Leeds out of his head throughout the development of this affair. Now in an unruly and determined way that was extremely characteristic of her she seemed resolute to break in.

She appeared as an advocate, without affection for her client but without any hostility, of the claims of Miss Grammont to be let alone. The elaborate pretence that Sir Richmond had maintained to himself that he had not made love to Miss Grammont, that their mutual attraction had been irresistible

and had achieved its end in spite of their resolute and complete detachment, collapsed and vanished from his mind. He admitted to himself that driven by a kind of instinctive necessity he had led their conversation step by step to a realization and declaration of love, and that it did not exonerate him in the least that Miss Grammont had been quite ready and willing to help him and meet him half way. She wanted love as a woman does, more than a man does, and he had steadily presented himself as a man free to love, able to love and loving.

"She wanted a man to love, she wanted perfected fellowship, and you have made her that tremendous promise. That was implicit in your embrace. And how can you keep that promise?"

It was as if Martin spoke; it was her voice; it was the very quality of her thought.

"You belong to this work of yours, which must needs be interrupted or abandoned if you take her. Whatever is not mortgaged to your work is mortgaged to me. For the strange thing in all this is that you and I love one another--and have no power to do otherwise. In spite of all this.

"You have nothing to give her but stolen goods," said the shadow of Martin. "You have nothing to give anyone personally any more. . . .

"Think of the love that she desires and think of this love that you can give. . . .

"Is there any new thing in you that you can give her that you haven't given me? You and I know each other very well; perhaps I know YOU too well. Haven't you loved me as much as you can love anyone? Think of all that there has been between

us that you are ready now, eager now to set aside and forget as though it had never been. For four days you have kept me out of your mind in order to worship her. Yet you have known I was there--for all you would not know. No one else will ever be so intimate with you as I am. We have quarrelled together, wept together, jested happily and jested bitterly. You have spared me not at all. Pitiless and cruel you have been to me. You have reckoned up all my faults against me as though they were sins. You have treated me at times unlovingly--never was lover treated so unlovingly as you have sometimes treated me. And yet I have your love--as no other woman can ever have it. Even now when you are wildly in love with this girl's freshness and boldness and cleverness I come into your mind by right and necessity."

"She is different," argued Sir Richmond.

"But you are the same," said the shadow of Martin with Martin's unsparing return. "Your love has never been a steadfast thing. It comes and goes like the wind. You are an extravagantly imperfect lover. But I have learnt to accept you, as people accept the English weather. . . . Never in all your life have you loved, wholly, fully, steadfastly--as people deserve to be loved--,not your mother nor your father, not your wife nor your children, nor me, nor our child, nor any living thing. Pleasant to all of us at times--at times bitterly disappointing. You do not even love this work of yours steadfastly, this work to which you sacrifice us all in turn. You do not love enough. That is why you have these moods and changes, that is why you have these lassitudes. So it is you are made. . . .

"And that is why you must not take this brave young life, so much simpler and braver than your own, and exalt it--as you can do--and then fail it, as you will do. . . . "

Sir Richmond's mind and body lay very still for a time.

"Should I fail her? . . ."

For a time Martin Leeds passed from the foreground of his mind.

He was astonished to think how planless, instinctive and unforeseeing his treatment of Miss Grammont had been. It had been just a blind drive to get hold of her and possess her. . . .

Suddenly his passion for her became active in its defence again.

"But is there such a thing as a perfect love? Is YOURS a perfect love, my dear Martin, with its insatiable jealousy, its ruthless criticism? Has the world ever seen a perfect lover yet? Isn't it our imperfection that brings us together in a common need? Is Miss Grammont, after all, likely to get a more perfect love in all her life than this poor love of mine? And isn't it good for her that she should love?"

"Perfect love cherishes. Perfect love foregoes."

Sir Richmond found his mind wandering far away from the immediate question. "Perfect love," the phrase was his point of departure. Was it true that he could not love passionately and completely? Was that fundamentally what was the matter with him? Was that perhaps what was the matter with the whole world of mankind? It had not yet come to that power of loving which makes action full and simple and direct and unhesitating. Man upon his planet has not grown up to love, is still an eager, egotistical and fluctuating adolescent. He

lacks the courage to love and the wisdom to love. Love is here. But it comes and goes, it is mixed with greeds and jealousies and cowardice and cowardly reservations. One hears it only in snatches and single notes. It is like something tuning up before the Music begins. . . . The metaphor altogether ran away with Sir Richmond's half dreaming mind. Some day perhaps all life would go to music.

Love was music and power. If he had loved. enough he need never have drifted away from his wife. Love would have created love, would have tolerated and taught and inspired. Where there is perfect love there is neither greed nor impatience. He would have done his work calmly. He would have won his way with his Committee instead of fighting and quarrelling with it perpetually. . . .

"Flimsy creatures," he whispered. "Uncertain health. Uncertain strength. A will that comes and goes. Moods of baseness. Moods of utter beastliness. . . . Love like April sunshine. April? . . ."

He dozed and dreamt for a time of spring passing into a high summer sunshine, into a continuing music, of love. He thought of a world like some great playhouse in which players and orchestra and audience all co-operate in a noble production without dissent or conflict. He thought he was the savage of thirty thousand years ago dreaming of the great world that is still perhaps thirty thousand years ahead. His effort to see more of that coming world than indistinct and cloudy pinnacles and to hear more than a vague music, dissolved his dream and left him awake again and wrestling with the problem of Miss Grammont.

Section 2

The shadow of Martin stood over him, inexorable. He had to release Miss Grammont from the adventure into which he had drawn her. This decision stood out stern-and inevitable in his mind with no conceivable alternative.

As he looked at the task before him he began to realize its difficulty. He was profoundly in love with her, he was still only learning how deeply, and she was not going to play a merely passive part in this affair. She was perhaps as deeply in love with him. . . .

He could not bring himself to the idea of confessions and disavowals. He could not bear to think of her disillusionment. He felt that he owed it to her not to disillusion her, to spoil things for her in that fashion. "To turn into something mean and ugly after she has believed in me. . . . It would be like playing a practical joke upon her. It would be like taking her into my arms and suddenly making a grimace at her. . . . It would scar her with a second humiliation. . . ."

Should he take her on to Bath or Exeter to-morrow and contrive by some sudden arrival of telegrams that he had to go from her suddenly? But a mere sudden parting would not end things between them now unless he went off abruptly without explanations or any arrangements for further communications. At the outset of this escapade there had been a tacit but evident assumption that it was to end when she joined her father at Falmouth. It was with an effect of discovery that Sir Richmond realized that now it could not end in that fashion, that with the whisper of love and the touching of lips, something had been started that would go on, that would develop. To break off now and go away without a word would leave a raw and torn end, would leave her perplexed and perhaps even more humiliated with an aching mystery to

distress her. "Why did he go? Was it something I said?-- something he found out or imagined? "

Parting had disappeared as a possible solution of this problem. She and he had got into each other's lives to stay: the real problem was the terms upon which they were to stay in each other's lives. Close association had brought them to the point of being, in the completest sense, lovers; that could not be; and the real problem was the transmutation of their relationship to some form compatible with his honour and her happiness. A word, an idea, from some recent reading floated into Sir Richmond's head. "Sublimate," he whispered. "We have to sublimate this affair. We have to put this relationship upon a Higher Plane.

His mind stopped short at that.

Presently his voice sounded out of the depths of his heart. "God! How I loathe the Higher Plane!

"God has put me into this Higher Plane business like some poor little kid who has to wear irons on its legs.

"I WANT her. . . . Do you hear, Martin? I want her. "

As if by a lightning flash he saw his car with himself and Miss Grammont--Miss Seyffert had probably fallen out--traversing Europe and Asia in headlong flight. To a sunlit beach in the South Seas. . . .

His thoughts presently resumed as though these unmannerly and fantastic interruptions had not occurred.

"We have to carry the whole affair on to a Higher Plane--and keep it there. We two love one another--that has to be

admitted now. (I ought never to have touched her. I ought never to have thought of touching her.) But we two are too high, our aims and work and obligations are too high for any ordinary love making. That sort of thing would embarrass us, would spoil everything.

"Spoil everything," he repeated, rather like a small boy who learns an unpalatable lesson.

For a time Sir Richmond, exhausted by moral effort, lay staring at the darkness.

"It has to be done. I believe I can carry her through with it if I can carry myself. She's a finer thing than I am. . . . On the whole I am glad it's only one more day. Belinda will be about. . . . Afterwards we can write to each other. . . . If we can get over the next day it will be all right. Then we can write about fuel and politics--and there won't be her voice and her presence. We shall really SUBLIMATE. . . . First class idea-- sublimate! And I will go back to dear old Martin who's all alone there and miserable; I'll be kind to her and play my part and tell her her Carbuncle scar rather becomes her. . . . And in a little while I shall be altogether in love with her again.

"Queer what a brute I've always been to Martin."

"Queer that Martin can come in a dream to me and take the upper hand with me.

"Queer that NOW--I love Martin."

He thought still more profoundly. "By the time the Committee meets again I shall have been tremendously refreshed."

He repeated:--"Put things on the Higher Plane and keep them there. Then go back to Martin. And so to the work. That's it. . . ."

Nothing so pacifies the mind as a clear-cut purpose. Sir Richmond fell asleep during the fourth recapitulation of this programme.

Section 3

When Miss Grammont appeared at breakfast Sir Richmond saw at once that she too had had a restless night. When she came into the little long breakfast room of the inn with its brown screens and its neat white tables it seemed to him that the Miss Grammont of his nocturnal speculations, the beautiful young lady who had to be protected and managed and loved unselfishly, vanished like some exorcised intruder. Instead was this real dear young woman, who had been completely forgotten during the reign of her simulacrum and who now returned completely remembered, familiar, friendly, intimate. She touched his hand for a moment, she met his eyes with the shadow of a smile in her own.

"Oranges!" said Belinda from the table by the window.
"Beautiful oranges."

She had been preparing them, poor Trans-atlantic exile, after the fashion in which grape fruits are prepared upon liners and in the civilized world of the west. "He's getting us tea spoons," said Belinda, as they sat down.

"This is realler England than ever," she said. "I've been up an hour. I found a little path down to the river bank. It's the greenest morning world and full of wild flowers. Look at these."

"That's lady's smock," said Sir Richmond. "It's not really a flower; it's a quotation from Shakespeare."

"And there are cowslips!"

"CUCKOO BUDS OF YELLOW HUE. DO PAINT THE MEADOWS WITH DELIGHT. All the English flowers come out of Shakespeare. I don't know what we did before his time."

The waiter arrived with the tea spoons for the oranges.

Belinda, having distributed these, resumed her discourse of enthusiasm for England. She asked a score of questions about Gloucester and Chepstow, the Severn and the Romans and the Welsh, and did not wait for the answers. She did not want answers; she talked to keep things going. Her talk masked a certain constraint that came upon her companions after the first morning's greetings were over.

Sir Richmond as he had planned upstairs produced two Michelin maps. "To-day," he said, "we will run back to Bath--from which it will be easy for you to train to Falmouth. We will go by Monmouth and then turn back through the Forest of Dean, where you will get glimpses of primitive coal mines still worked by two men and a boy with a windlass and a pail. Perhaps we will go through Cirencester. I don't know. Perhaps it is better to go straight to Bath. In the very heart of Bath you will find yourselves in just the same world you visited at Pompeii. Bath is Pompeii overlaid by Jane Austen's England."

He paused for a moment. "We can wire to your agents from here before we start and we can pick up their reply at Gloucester

or Nailsworth or even Bath itself. So that if your father is nearer than we suppose--But I think to-morrow afternoon will be soon enough for Falmouth, anyhow."

He stopped interrogatively.

Miss Grammont's face was white. "That will do very well," she said.

Section 4,

They started, but presently they came to high banks that showed such masses of bluebells, ragged Robin, great stitchwort and the like that Belinda was not to be restrained. She clamoured to stop the car and go up the bank and pick her hands full, and so they drew up by the roadside and Sir Richmond and Miss Grammont sat down near the car while Belinda carried her enthusiastic onslaught on the flowers up the steep bank and presently out of earshot.

The two lovers said unheeded things about the flowers to each other and then fell silent. Then Miss Grammont turned her head and seemed deliberately to measure her companion's distance. Evidently she judged her out of earshot.

"Well, said Miss Grammont in her soft even voice. "We love one another. Is that so still?"

"I could not love you more."

"It wasn't a dream?"

"No."

"And to-morrow we part?"

He looked her in the eyes. "I have been thinking of that all night," he said at last.

"I too."

"And you think--?"

"That we must part. Just as we arranged it when was it? Three days or three ages ago? There is nothing else in the world to do except for us to go our ways. . . . I love you. That means for a woman--It means that I want to be with you. But that is impossible. . . . Don't doubt whether I love you because I say--impossible. . . . "

Sir Richmond, faced with his own nocturnal decision, was now moved to oppose it flatly. "Nothing that one can do is impossible."

She glanced again at Belinda and bent down towards him. "Suppose," she said, "you got back into that car with me; suppose that instead of going on as we have planned, you took me away. How much of us would go?"

"You would go," said Sir Richmond, "and my heart."

"And this work of yours? And your honour? For the honour of a man in this New Age of yours will be first of all in the work he does for the world. And you will leave your work to be just a lover. And the work that I might do because of my father's wealth; all that would vanish too. We should leave all of that, all of our usefulness, all that much of ourselves. But what has made me love you? Just your breadth of vision, just the sense that you mattered. What has made you love me? Just that I have understood the dream of your

work. All that we should have to leave behind. We should specialize, in our own scandal. We should run away just for one thing. To think, by sharing the oldest, simplest, dearest indulgences in the world, that we had got each other. When really we had lost each other, lost all that mattered. . . ."

Her face was flushed with the earnestness of her conviction. Her eyes were bright with tears. "Don't think I don't love you. It's so hard to say all this. Somehow it seems like going back on something--something supreme. Our instincts have got us. . . . Don't think I'd hold myself from you, dear. I'd give myself to you with both hands. I love you-- When a woman loves--I at any rate--she loves altogether. But this thing--I am convinced--cannot be. I must go my own way, the way I have to go. My father is the man, obstinate, more than half a savage. For me--I know it--he has the jealousy of ten husbands. If you take me--If our secret becomes manifest--If you are to take me and keep me, then his life and your life will become wholly this Feud, nothing but this Feud. You have to fight him anyhow--that is why I of all people must keep out of the quarrel. For him, it would be an immense excitement, full of the possibility of fierce satisfactions; for you, whether you won me or lost me, it would be utter waste and ruin."

She paused and then went on:--"And for me too, waste and ruin. I shall be a woman fought over. I shall be fought over as dogs fight over a bone. I shall sink back to the level of Helen of Troy. I shall cease to be a free citizen, a responsible free person. Whether you win me or lose me it will be waste and ruin for us both. Your Fuel Commission will go to pieces, all the wide, enduring work you have set me dreaming about will go the same way. We shall just be another romantic story. . . . No!"

Sir Richmond sat still, a little like a sullen child, she thought. "I hate all this," he said slowly. "I didn't think of your father before, and now I think of him it sets me bristling for a fight. It makes all this harder to give up. And yet, do you know, in the night I was thinking, I was coming to conclusions, very like yours. For quite other reasons. I thought we ought not to--We have to keep friends anyhow and hear of each other?"

"That goes without saying."

"I thought we ought not to go on to be lovers in any way that would affect you, touch you too closely. . . . I was sorry--I had kissed you."

"Not I. No. Don't be sorry for that. I am glad we have fallen in love, more glad than I have been of anything else in my life, and glad we have spoken plainly. . . . Though we have to part. And--"

Her whisper came close to him. "For a whole day yet, all round the clock twice, you and I have one another."

Miss Seyffert began speaking as soon as she was well within earshot.

"I don't know the name of a single one of these flowers" she cried, "except the bluebells. Look at this great handful I've gotten! Springtime in Italy doesn't compare with it, not for a moment."

Section 5

Because Belinda Seyffert was in the dicky behind them with her alert interest in their emotions all too thinly and

obviously veiled, it seemed more convenient to Sir Richmond and Miss Grammont to talk not of themselves but of Man and Woman and of that New Age according to the prophet Martineau, which Sir Richmond had partly described and mainly invented and ascribed to his departed friend. They talked anthropologically, philosophically, speculatively, with an absurd pretence of detachment, they sat side by side in the little car, scarcely glancing at one another, but side by side and touching each other, and all the while they were filled with tenderness and love and hunger for one another.

In the course of a day or so they had touched on nearly every phase in the growth of Man and Woman from that remote and brutish past which has left its traces in human bones mingled with the bones of hyaenas and cave bears beneath the stalagmites of Wookey Hole near Wells. In those nearly forgotten days the mind of man and woman had been no more than an evanescent succession of monstrous and infantile imaginations. That brief journey in the west country had lit up phase after phase in the long teaching and discipline of man as he had developed depth of memory and fixity of purpose out of these raw beginnings, through the dreaming childhood of Avebury and Stonehenge and the crude boyhood of ancient wars and massacres. Sir Richmond recalled those phases now, and how, as they had followed one another, man's idea of woman and woman's idea of man had changed with them, until nowadays in the minds of civilized men brute desire and possession and a limitless jealousy had become almost completely overlaid by the desire for fellowship and a free mutual loyalty. "Overlaid," he said. "The older passions are still there like the fires in an engine." He invented a saying for Dr. Martineau that the Man in us to-day was still the old man of Palaeolithic times, with his will, his wrath against the universe increased rather than diminished. If to-day he ceases to crack his brother's bones and rape and bully

his womenkind, it is because he has grown up to a greater game and means to crack this world and feed upon its marrow and wrench their secrets from the stars.

And furthermore it would seem that the prophet Martineau had declared that in this New Age that was presently to dawn for mankind, jealousy was to be disciplined even as we had disciplined lust and anger; instead of ruling our law it was to be ruled by law and custom. No longer were the jealousy of strange peoples, the jealousy of ownership and the jealousy of sex to determine the framework of human life. There was to be one peace and law throughout the world, one economic scheme and a universal freedom for men and women to possess and give themselves.

"And how many generations yet must there be before we reach that Utopia?" Miss Grammont asked.

"I wouldn't put it at a very great distance."

"But think of all the confusions of the world!"

"Confusions merely. The world is just a muddle of states and religions and theories and stupidities. There are great lumps of disorderly strength in it, but as a whole it is a weak world. It goes on by habit. There's no great idea in possession and the only possible great idea is this one. The New Age may be nearer than we dare to suppose."

"If I could believe that!"

"There are many more people think as we do than you suppose. Are you and I such very strange and wonderful and exceptional people?"

"No. I don't think so."

"And yet the New World is already completely established in our hearts. What has been done in our minds can be done in most minds. In a little while the muddled angry mind of Man upon his Planet will grow clear and it will be this idea that will have made it clear. And then life will be very different for everyone. That tyranny of disorder which oppresses every life on earth now will be lifted. There will be less and less insecurity, less and less irrational injustice. It will be a better instructed and a better behaved world. We shall live at our ease, not perpetually anxious, not resentful and angry. And that will alter all the rules of love. Then we shall think more of the loveliness of other people because it will no longer be necessary to think so much of the dangers and weaknesses and pitifullnesses of other people. We shall not have to think of those who depend upon us for happiness and selfrespect. We shall not have to choose between a wasteful fight for a personal end or the surrender of our heart's desire."

"Heart's desire," she whispered. "Am I indeed your heart's desire?"

Sir Richmond sank his head and voice in response.

"You are the best of all things. And I have to let you go."

Sir Richmond suddenly remembered Miss Seyffert and half turned his face towards her. Her forehead was just visible over the hood of the open coupe. She appeared to be intelligently intent upon the scenery. Then he broke out suddenly into a tirade against the world. "But I am bored by this jostling unreasonable world. At the bottom of my heart I am bitterly resentful to-day. This is a world of fools and

brutes in which we live, a world of idiotic traditions, imbecile limitations, cowardice, habit, greed and mean cruelty. It is a slum of a world, a congested district, an insanitary jumble of souls and bodies. Every good thing, every sweet desire is thwarted--every one. I have to lead the life of a slum missionary, a sanitary inspector, an underpaid teacher. I am bored. Oh God! how I am bored! I am bored by our laws and customs. I am bored by our rotten empire and its empty monarchy. I am bored by its parades and its flags and its sham enthusiasms. I am bored by London and its life, by its smart life and by its servile life alike. I am bored by theatres and by books and by every sort of thing that people call pleasure. I am bored by the brag of people and the claims of people and the feelings of people. Damn people! I am bored by profiteers and by the snatching they call business enterprise. Damn every business man! I am bored by politics and the universal mismanagement of everything. I am bored by France, by AngloSaxondom, by German self-pity, by Bolshevik fanaticism. I am bored by these fools' squabbles that devastate the world. I am bored by Ireland, Orange and Green. Curse the Irish--north and south together! Lord! how I HATE the Irish from Carson to the last Sinn Feiner! And I am bored by India and by Egypt. I am bored by Poland and by Islam. I am bored by anyone who professes to have rights. Damn their rights! Curse their rights! I am bored to death by this year and by last year and by the prospect of next year. I am bored--I am horribly bored--by my work. I am bored by every sort of renunciation. I want to live with the woman I love and I want to work within the limits of my capacity. Curse all Hullo! Damn his eyes!--Steady, ah! The spark! . . . Good! No skid."

He had come round a corner at five and twenty miles an hour and had stopped his spark and pulled up neatly within a yard of the fore-wheel of a waggon that was turning in the road so

as to block the way completely.

"That almost had me. . . .

"And now you feel better?" said Miss Grammont.

"Ever so much," said Sir Richmond and chuckled.

The waggoner cleared the road and the car started up again.

For a minute or so neither spoke.

"You ought to be smacked hard for that outbreak,--my dear," said Miss Grammont.

"I ought--MY dear. I have no right to be ill-tempered. We two are among the supremely fortunate ones of our time. We have no excuse for misbehaviour. Got nothing to grumble at. Always I am lucky. THAT--with the waggon--was a very near thing. God spoils us.

"We two," he went on, after a pause, "are among the most fortunate people alive. We are both rich and easily rich. That gives us freedoms few people have. We have a vision of the whole world in which we live. It's in a mess--but that is by the way. The mass of mankind never gets enough education to have even a glimpse of the world as a whole. They never get a chance to get the hang of it. It is really possible for us to do things that will matter in the world. All our time is our own; all our abilities we are free to use. Most people, most intelligent and educated people, are caught in cages of pecuniary necessity; they are tied to tasks they can't leave, they are driven and compelled and limited by circumstances they can never master. But we, if we have tasks, have tasks of our own choosing. We may not like the

world, but anyhow we are free to do our best to alter it. If I were a clerk in Hoxton and you were a city typist, then we MIGHT swear. "

"It was you who swore," smiled Miss Grammont.

"It's the thought of that clerk in Hoxton and that city typist who really keep me at my work. Any smacking ought to come from them. I couldn't do less than I do in the face of their helplessness. Nevertheless a day will come--through what we do and what we refrain from doing when there will be no bound and limited clerks in Hoxton and no captive typists in the city. And nobody at all to consider."

"According to the prophet Martineau," said Miss Grammont.

"And then you and I must contrive to be born again. "

"Heighho!" cried Miss Grammont. "A thousand years ahead! When fathers are civilized. When all these phantom people who intervene on your side--no! I don't want to know anything about them, but I know of them by instinct--when they also don't matter."

"Then you and I can have things out with each other--**THOROUGHLY**," said Sir Richmond, with a surprising ferocity in his voice, charging the little hill before him as though he charged at Time.

Section 6

They had to wait at Nailsworth for a telegram from Mr. Grammont's agents; they lunched there and drove on to Bath in the afternoon. They came into the town through unattractive and unworthy outskirts, and only realized the charm of the

place after they had garaged their car at the Pulteney Hotel and walked back over the Pulteney Bridge to see the Avon with the Pump Room and the Roman Baths. The Pulteney they found hung with pictures and adorned with sculpture to an astonishing extent; some former proprietor must have had a mania for replicas and the place is eventful with white marble fauns and sylphs and lions and Caesars and Queen Victorias and packed like an exhibition with memories of Rome, Florence, Milan, Paris, the National Gallery and the Royal Academy, amidst which splendours a competent staff administers modern comforts with an old-fashioned civility. But round and about the Pulteney one has still the scenery of Georgian England, the white, faintly classical terraces and houses of the days of Fielding, Smollett, Fanny Burney and Jane Austen, the graceful bridge with the bright little shops full of "presents from Bath"; the Pump Room with its water drinkers and a fine array of the original Bath chairs.

Down below the Pump Room our travellers explored the memories of the days when the world was Latin from York to the Tigris, and the Corinthian capital flourished like a weed from Bath to Baalbek. And they considered a little doubtfully the seventeenth century statue of Bladud, who is said to have been healed by the Bath waters and to have founded the city in the days when Stonehenge still flourished, eight hundred years before the Romans came.

In the afternoon Miss Seyffert came with Sir Richmond and Miss Grammont and was very enthusiastic about everything, but in the evening after dinner it was clear that her role was to remain in the hotel. Sir Richmond and Miss Grammont went out into the moonlit gloaming; they crossed the bridge again and followed the road beside the river towards the old Abbey Church, that Lantern of the West. Away in some sunken gardens ahead of them a band was playing, and a cluster of little

lights about the bandstand showed a crowd of people down below dancing on the grass. These little lights, these bobbing black heads and the lilting music, this little inflamed Centre of throbbing sounds and ruddy illumination, made the dome of the moonlit world about it seem very vast and cool and silent. Our visitors began to realize that Bath could be very beautiful. They went to the parapet above the river and stood there, leaning over it elbow to elbow and smoking cigarettes. Miss Grammont was moved to declare the Pulteney Bridge, with its noble arch, its effect of height over the swirling river, and the cluster of houses above, more beautiful than the Ponte Vecchio at Florence. Down below was a man in waders with a fishing-rod going to and fro along the foaming weir, and a couple of boys paddled a boat against the rush of the water lower down the stream.

"Dear England!" said Miss Grammont, surveying this gracious spectacle. "How full it is of homely and lovely and kindly things!"

"It is the home we come from."

"You belong to it still."

"No more than you do. I belong to a big overworking modern place called London which stretches its tentacles all over the world. I am as much a home-coming tourist as you are. Most of this western country I am seeing for the first time."

She said nothing for a space. "I've not a word to say to-night," she said. "I'm just full of a sort of animal satisfaction in being close to you. . . . And in being with you among lovely things. . . . Somewhere--Before we part to-night--. . . ."

"Yes?" he said to her pause, and his face came very near to hers.

I want you to kiss me. "

"Yes," he said awkwardly, glancing over his shoulder, acutely aware of the promenaders passing close to them.

"It's a promise?"

"Yes."

Very timidly and guiltily his hand sought hers beside it and gripped it and pressed it. "My dear!" he whispered, tritest and most unavoidable of expressions. It was not very like Man and Woman loving upon their Planet; it was much more like the shy endearments of the shop boys and work girls who made the darkling populous about them with their silent interchanges.

"There are a thousand things I want to talk about to you," she said. "After we have parted to-morrow I shall begin to think of them. But now--every rational thing seems dissolved in this moonlight. . . ."

Presently she made an effort to restore the intellectual dignity of their relationship.

"I suppose I ought to be more concerned tonight about the work I have to do in the world and anxious for you to tell me this and that, but indeed I am not concerned at all about it. I seem to have it in outline all perfectly clear. I mean to play a man's part in the world just as my father wants me to do. I mean to win his confidence and work with him--like a partner. Then some day I shall be a power in the world of fuel. And at the same time I must watch and read and think

and learn how to be the servant of the world. . . . We two have to live like trusted servants who have been made guardians of a helpless minor. We have to put things in order and keep them in order against the time when Man--Man whom we call in America the Common Man--can take hold of his world--"

"And release his servants," said Sir Richmond.

"All that is perfectly clear in my mind. That is what I am going to live for; that is what I have to do."

She stopped abruptly. "All that is about as interesting to-night--in comparison with the touch of your dear fingers--as next month's railway time-table."

But later she found a topic that could hold their attention for a time.

"We have never said a word about religion," she said.

Sir Richmond paused for a moment. "I am a godless man," he said. "The stars and space and time overwhelm my imagination. I cannot imagine anything above or beyond them."

She thought that over. "But there are divine things," she said.

"YOU are divine. . . . I'm not talking lovers' nonsense," he hastened to add. "I mean that there is something about human beings--not just the everyday stuff of them, but something that appears intermittently--as though a light shone through something translucent. If I believe in any divinity at all it is a divinity revealed to me by other people-- And even by myself in my own heart.

"I'm never surprised at the badness of human beings," said Sir Richmond; "seeing how they have come about and what they are; but I have been surprised time after time by fine things Often in people I disliked or thought little of I can understand that I find you full of divine quality, because I am in love with you and all alive to you. Necessarily I keep on discovering loveliness in you. But I have seen divine things in dear old Martineau, for example. A vain man, fussy, timid--and yet filled with a passion for truth, ready to make great sacrifices and to toil tremendously for that. And in those men I am always cursing, my Committee, it is astonishing at times to discover what streaks of goodness even the really bad men can show. . . . But one can't make use of just anyone's divinity. I can see the divinity in Martineau but it leaves me cold. He tired me and bored me. . . . But I live on you. It's only through love that the God can reach over from one human being to another. All real love is a divine thing, a reassurance, a release of courage. It is wonderful enough that we should take food and drink and turn them into imagination, invention and creative energy; it is still more wonderful that we should take an animal urging and turn it into a light to discover beauty and an impulse towards the utmost achievements of which we are capable. All love is a sacrament and all lovers are priests to each other. You and I--"

Sir Richmond broke off abruptly. "I spent three days trying to tell this to Dr. Martineau. But he wasn't the priest I had to confess to and the words wouldn't come. I can confess it to you readily enough"

"I cannot tell," said Miss Grammont, "whether this is the last wisdom in life or moonshine. I cannot tell whether I am thinking or feeling; but the noise of the water going over the weir below is like the stir in my heart. And I am

swimming in love and happiness. Am I awake or am I dreaming you, and are we dreaming one another? Hold my hand--hold it hard and tight. I'm trembling with love for you and all the world. . . . If I say more I shall be weeping."

For a long time they stood side by side saying not a word to one another.

Presently the band down below and the dancing ceased and the little lights were extinguished. The silent moon seemed to grow brighter and larger and the whisper of the waters louder. A crowd of young people flowed out of the gardens and passed by on their way home. Sir Richmond and Miss Grammont strolled through the dispersing crowd and over the Toll Bridge and went exploring down a little staircase that went down from the end of the bridge to the dark river, and then came back to their old position at the parapet looking upon the weir and the Pulteney Bridge. The gardens that had been so gay were already dark and silent as they returned, and the streets echoed emptily to the few people who were still abroad.

"It's the most beautiful bridge in the world," said Miss Grammont, and gave him her hand again.

Some deep-toned clock close by proclaimed the hour eleven.

The silence healed again.

"Well?" said Sir Richmond.

"Well?" said Miss Grammont smiling very faintly.

"I suppose we must go out of all this beauty now, back to the lights of the hotel and the watchful eyes of your dragon. "

"She has not been a very exacting dragon so far, has she?"

"She is a miracle of tact."

"She does not really watch. But she is curious--and very sympathetic. "

"She is wonderful."

"That man is still fishing," said Miss Grammont.

For a time she peered down at the dark figure wading in the foam below as though it was the only thing of interest in the world. Then she turned to Sir Richmond.

"I would trust Belinda with my life, she said. "And anyhow--now--we need not worry about Belinda."

Section 7

At the breakfast table it was Belinda who was the most nervous of the three, the most moved, the most disposed to throw a sacramental air over their last meal together. Her companions had passed beyond the idea of separation; it was as if they now cherished a secret satisfaction at the high dignity of their parting. Belinda in some way perceived they had become different. They were no longer tremulous lovers; they seemed sure of one another and with a new pride in their bearing. It would have pleased Belinda better, seeing how soon they were to be torn apart, if they had not made quite such excellent breakfasts. She even suspected them of having slept well. Yet yesterday they had been deeply stirred. They had stayed out late last night, so late that she had not heard them come in. Perhaps then they had passed the climax

of their emotions. Sir Richmond, she learnt, was to take the party to Exeter, where there would be a train for Falmouth a little after two. If they started from Bath about nine that would give them an ample margin of time in which to deal with a puncture or any such misadventure.

They crested the Mendips above Shepton Mallet, ran through Tilchester and Ilminster into the lovely hill country about Up-Ottery and so to Honiton and the broad level road to Exeter. Sir Richmond and Miss Grammont were in a state of happy gravity; they sat contentedly side by side, talking very little. They had already made their arrangements for writing to one another. There was to be no stream of love-letters or protestations. That might prove a mutual torment. Their love was to be implicit. They were to write at intervals about political matters and their common interests, and to keep each other informed of their movements about the world.

"We shall be working together," she said, speaking suddenly out of a train of thought she had been following, "we shall be closer together than many a couple who have never spent a day apart for twenty years."

Then presently she said: "In the New Age all lovers will have to be accustomed to meeting and parting. We women will not be tied very much by domestic needs. Unless we see fit to have children. We shall be going about our business like men; we shall have world-wide businesses--many of us--just as men will. . . ."

"It will be a world full of lovers' meetings."

Some day--somewhere--we two will certainly meet again."

"Even you have to force circumstances a little," said Sir Richmond.

"We shall meet, she said, "without doing that."

"But where?" he asked unanswered. . . .

"Meetings and partings," she said. "Women will be used to seeing their lovers go away. Even to seeing them go away to other women who have borne them children and who have a closer claim on them."

"No one-" began Sir Richmond, startled.

"But I don't mind very much. It's how things are. If I were a perfectly civilized woman I shouldn't mind at all. If men and women are not to be tied to each other there must needs be such things as this."

"But you," said Sir Richmond. I at any rate am not like that. I cannot bear the thought that YOU--"

"You need not bear it, my dear. I was just trying to imagine this world that is to be. Women I think are different from men in their jealousy. Men are jealous of the other man; women are jealous for their man--and careless about the other woman. What I love in you I am sure about. My mind was empty when it came to you and now it is full to overflowing. I shall feel you moving about in the same world with me. I'm not likely to think of anyone else for a very long time. . . . Later on, who knows? I may marry. I make no vows. But I think until I know certainly that you do not want me any more it will be impossible for me to marry or to have a lover. I don't know, but that is how I believe it will be with me. And my mind feels beautifully clear now and settled.

I've got your idea and made it my own, your idea that we matter scarcely at all, but that the work we do matters supremely. I'll find my rope and tug it, never fear. Half way round the world perhaps some day you will feel me tugging."

"I shall feel you're there," he said, "whether you tug or not. . . ."

"Three miles left to Exeter," he reported presently.

She glanced back at Belinda.

"It is good that we have loved, my dear," she whispered. "Say it is good."

"The best thing in all my life," he said, and lowered his head and voice to say: "My dearest dear."

"Heart's desire--still--?"

"Heart's delight. . . . Priestess of life. . . . Divinity."

She smiled and nodded and suddenly Belinda, up above their lowered heads, accidentally and irrelevantly, no doubt, coughed.

At Exeter Station there was not very much time to spare after all. Hardly had Sir Richmond secured a luncheon basket for the two travellers before the train came into the station. He parted from Miss Grammont with a hand clasp. Belinda was flushed and distressed at the last but her friend was quiet and still. "Au revoir," said Belinda without conviction when Sir Richmond shook her hand.

Section 8.

Sir Richmond stood quite still on the platform as the train ran out of the station. He did not move until it had disappeared round the bend. Then he turned, lost in a brown study, and walked very slowly towards the station exit.

"The most wonderful thing in my life," he thought. "And already--it is unreal.

"She will go on to her father whom she knows ten thousand times more thoroughly than she knows me; she will go on to Paris, she will pick up all the threads of her old story, be reminded of endless things in her life, but never except in the most casual way of these days: they will be cut off from everything else that will serve to keep them real; and as for me--this connects with nothing else in my life at all. . . . It is as disconnected as a dream. . . . Already it is hardly more substantial than a dream. . . .

"We shall write letters. Do letters breathe faster or slower as you read them?

"We may meet.

"Where are we likely to meet again? ... I never realized before how improbable it is that we shall meet again. And if we meet? . . .

"Never in all our lives shall we be really TOGETHER again. It's over--With a completeness. . . .

"Like death."

He came opposite the bookstalls and stopped short and stared with unseeing eyes at the display of popular literature. He

was wondering now whether after all he ought to have let her go. He experienced something of the blank amazement of a child who has burst its toy balloon. His golden globe of satisfaction in an instant had gone. An irrational sense of loss was flooding every other feeling about V.V. If she had loved him truly and altogether could she have left him like this? Neither of them surely had intended so complete a separation. He wanted to go back and recall that train.

A few seconds more, he realized, and he would give way to anger. Whatever happened that must not happen. He pulled himself together. What was it he had to do now? He had not to be angry, he had not even to be sorry. They had done the right thing. Outside the station his car was waiting.

He went outside the station and stared at his car. He had to go somewhere. Of course! down into Cornwall to Martin's cottage. He had to go down to her and be kind and comforting about that carbuncle. To be kind? . . . If this thwarted feeling broke out into anger he might be tempted to take it out of Martin. That at any rate he must not do. He had always for some inexplicable cause treated Martin badly. Nagged her and blamed her and threatened her. That must stop now. No shadow of this affair must lie on Martin. . . . And Martin must never have a suspicion of any of this. . . .

The image of Martin became very vivid in his mind. He thought of her as he had seen her many times, with the tears close, fighting with her back to the wall, with all her wit and vigour gone, because she loved him more steadfastly than he did her. Whatever happened he must not take it out of Martin. It was astonishing how real she had become now--as V.V. became a dream. Yes, Martin was astonishingly real. And if only he could go now and talk to Martin--and face all the facts of life with her, even as he had done with that phantom

Martin in his dream. . . .

But things were not like that.

He looked to see if his car was short of water or petrol; both needed replenishing, and so he would have to go up the hill into Exeter town again. He got into his car and sat with his fingers on the electric starter.

Martin! Old Friend! Eight days were still left before the Committee met again, eight days for golden kindness. He would distress Martin by no clumsy confession. He would just make her happy as she loved to be made happy. . . . Nevertheless. Nevertheless. . . .

Was it Martin who failed him or he who failed Martin?

Incessant and insoluble dispute. Well, the thing now was to go to Martin. . . . And then the work!

He laughed suddenly.

"I'll take it out of the damned Commission. I'll make old Rumford Brown sit up."

He was astonished to find himself thinking of the affairs of the Commission with a lively interest and no trace of fatigue. He had had his change; he had taken his rest; he was equal to his task again already. He started his engine and steered his way past a van and a waiting cab.

"Fuel," he said.

CHAPTER THE NINTH

THE LAST DAYS OF SIR RICHMOND HARDY

Section 1

The Majority and Minority Reports of the Fuel Commission were received on their first publication with much heat and disputation, but there is already a fairly general agreement that they are great and significant documents, broadly conceived and historically important. They do lift the questions of fuel supply and distribution high above the level of parochial jealousies and above the petty and destructive profiteering of private owners and traders, to a view of a general human welfare. They form an important link in a series of private and public documents that are slowly opening out a prospect of new economic methods, methods conceived in the generous spirit of scientific work, that may yet arrest the drift of our western civilization towards financial and commercial squalor and the social collapse that must ensue inevitably on that. In view of the composition of the Committee, the Majority Report is in itself an amazing triumph of Sir Richmond's views; it is astonishing that he was able to drive his opponents so far and then leave them there securely advanced while he carried on the adherents he had altogether won, including, of course, the labour representatives, to the further altitudes of the Minority Report.

After the Summer recess the Majority Report was discussed and adopted. Sir Richmond had shown signs of flagging energy in June, but he had come back in September in a state of exceptional vigour; for a time he completely dominated the Committee by the passionate force of his convictions and the illuminating scorn he brought to bear on the various

subterfuges and weakening amendments by which the meaner interests sought to save themselves in whole or in part from the common duty of sacrifice. But toward the end he fell ill. He had worked to the pitch of exhaustion. He neglected a cold that settled on his chest. He began to cough persistently and betray an increasingly irritable temper. In the last fights in the Committee his face was bright with fever and he spoke in a voiceless whisper, often a vast angry whisper. His place at table was marked with scattered lozenges and scraps of paper torn to the minutest shreds. Such good manners as had hitherto mitigated his behaviour on the Committee departed from him, He carried his last points, gesticulating and coughing and wheezing rather than speaking. But he had so hammered his ideas into the Committee that they took the effect of what he was trying to say.

He died of pneumonia at his own house three days after the passing of the Majority Report. The Minority Report, his own especial creation, he never signed. It was completed by Wast and Carmichael. . . .

After their parting at Salisbury station Dr. Martineau heard very little of Sir Richmond for a time except through the newspapers, which contained frequent allusions to the Committee. Someone told him that Sir Richmond had been staying at Ruan in Cornwall where Martin Leeds had a cottage, and someone else had met him at Bath on his way, he said, in his car from Cornwall to a conference with Sir Peter Davies in Glamorganshire.

But in the interim Dr. Martineau had the pleasure of meeting Lady Hardy at a luncheon party. He was seated next to her and he found her a very pleasing and sympathetic person indeed. She talked to him freely and simply of her husband and of the journey the two men had taken together. Either she knew

nothing of the circumstances of their parting or if she did she did not betray her knowledge. "That holiday did him a world of good," she said. "He came back to his work like a giant. I feel very grateful to you."

Dr. Martineau said it was a pleasure to have helped Sir Richmond's work in any way. He believed in him thoroughly. Sir Richmond was inspired by great modern creative ideas.

"Forgive me if I keep you talking about him," said Lady Hardy. "I wish I could feel as sure that I had been of use to him."

Dr. Martineau insisted. "I know very well that you are."

"I do what I can to help him carry his enormous burthen of toil" she said. "I try to smooth his path. But he is a strange silent creature at times. "

Her eyes scrutinized the doctor's face.

It was not the doctor's business to supplement Sir Richmond's silences. Yet he wished to meet the requirements of this lady if he could. "He is one of those men," he said, "who are driven by forces they do not fully understand. A man of genius."

"Yes," she said in an undertone of intimacy. Genius. . . . A great irresponsible genius. . . . Difficult to help. . . . I wish I could do more for him."

A very sweet and charming lady. It was with great regret that the doctor found the time had come to turn to his left-hand neighbour.

Section 2

It was with some surprise that Dr. Martineau received a fresh appeal for aid from Sir Richmond. It was late in October and Sir Richmond was already seriously ill. But he was still going about his business as though he was perfectly well. He had not mistaken his man. Dr. Martineau received him as though there had never been a shadow of offence between them.

He came straight to the point. "Martineau," he said, "I must have those drugs I asked you for when first I came to you now. I must be bolstered up. I can't last out unless I am. I'm at the end of my energy. I come to you because you will understand. The Commission can't go on now for more than another three weeks. Whatever happens afterwards I must keep going until then."

The doctor did understand. He made no vain objections. He did what he could to patch up his friend for his last struggles with the opposition in the Committee. "Pro forma," he said, stethoscope in hand, "I must order you to bed. You won't go. But I order you. You must know that what you are doing is risking your life. Your lungs are congested, the bronchial tubes already. That may spread at any time. If this open weather lasts you may go about and still pull through. But at any time this may pass into pneumonia. And there's not much in you just now to stand up against pneumonia. . . ."

"I'll take all reasonable care."

"Is your wife at home!"

"She is in Wales with her people. But the household is well trained. I can manage."

"Go in a closed car from door to door. Wrap up like a mummy. I wish the Committee room wasn't down those abominable House of Commons corridors. . . ."

They parted with an affectionate handshake.

Section 3

Death approved of Sir Richmond's determination to see the Committee through. Our universal creditor gave this particular debtor grace to the very last meeting. Then he brushed a gust of chilly rain across the face of Sir Richmond as he stood waiting for his car outside the strangers' entrance to the House. For a couple of days Sir Richmond felt almost intolerably tired, but scarcely noted the changed timbre of the wheezy notes in his throat. He rose later each day and with ebbing vigour, jotted down notes and corrections upon the proofs of the Minority Report. He found it increasingly difficult to make decisions; he would correct and alter back and then repeat the correction, perhaps half a dozen times. On the evening of the second day his lungs became painful and his breathing difficult. His head ached and a sense of some great impending evil came upon him. His skin was suddenly a detestable garment to wear. He took his temperature with a little clinical thermometer he kept by him and found it was a hundred and one. He telephoned hastily for Dr. Martineau and without waiting for his arrival took a hot bath and got into bed. He was already thoroughly ill when the doctor arrived.

"Forgive my sending for you," he said. "Not your line. I know. . . . My wife's G.P.--an exasperating sort of ass. Can't stand him. No one else."

He was lying on a narrow little bed with a hard pillow that

the doctor replaced by one from Lady Hardy's room. He had twisted the bed-clothes into a hopeless muddle, the sheet was on the floor.

Sir Richmond's bedroom was a large apartment in which sleep seemed to have been an admitted necessity rather than a principal purpose. On one hand it opened into a business-like dressing and bath room, on the other into the day study. It bore witness to the nocturnal habits of a man who had long lived a life of irregular impulses to activity and dislocated hours and habits. There was a desk and reading lamp for night work near the fireplace, an electric kettle for making tea at night, a silver biscuit tin; all the apparatus for the lonely intent industry of the small hours. There was a bookcase of bluebooks, books of reference and suchlike material, and some files. Over the mantelpiece was an enlarged photograph of Lady Hardy and a plain office calendar. The desk was littered with the galley proofs of the Minority Report upon which Sir Richmond had been working up to the moment of his hasty retreat to bed. And lying among the proofs, as though it had been taken out and looked at quite recently was the photograph of a girl. For a moment Dr. Martineau's mind hung in doubt and then he knew it for the young American of Stonehenge. How that affair had ended he did not know. And now it was not his business to know.

These various observations printed themselves on Dr. Martineau's mind after his first cursory examination of his patient and while he cast about for anything that would give this large industrious apartment a little more of the restfulness and comfort of a sick room. "I must get in a night nurse at once," he said. "We must find a small table somewhere to put near the bed.

"I am afraid you are very ill," he said, returning to the

bedside. "This is not, as you say, my sort of work. Will you let me call in another man, a man we can trust thoroughly, to consult?"

"I'm in your hands, said Sir Richmond. I want to pull through."

"He will know better where to get the right sort of nurse for the case--and everything."

The second doctor presently came, with the right sort of nurse hard on his heels. Sir Richmond submitted almost silently to his expert handling and was sounded and looked to and listened at.

"H'm," said the second doctor, and then encouragingly to Sir Richmond: "We've got to take care of you."

"There's a lot about this I don't like," said the second doctor and drew Dr. Martineau by the arm towards the study. For a moment or so Sir Richmond listened to the low murmur of their voices, but he did not feel very deeply interested in what they were saying. He began to think what a decent chap Dr. Martineau was, how helpful and fine and forgiving his professional training had made him, how completely he had ignored the smothered incivilities of their parting at Salisbury. All men ought to have some such training, Not a bad idea to put every boy and girl through a year or so of hospital service. . . . Sir Richmond must have dozed, for his next perception was of Dr. Martineau standing over him and saying "I am afraid, my dear Hardy, that you are very ill indeed. Much more so than I thought you were at first."

Sir Richmond's raised eyebrows conveyed that he accepted this fact.

"I think Lady Hardy ought to be sent for."

Sir Richmond shook his head with unexpected vigour.

"Don't want her about," he said, and after a pause, "Don't want anybody about."

"But if anything happens-?"

"Send then."

An expression of obstinate calm overspread Sir Richmond's face. He seemed to regard the matter as settled. He closed his eyes.

For a time Dr. Martineau desisted. He went to the window and turned to look again at the impassive figure on the bed. Did Sir Richmond fully understand? He made a step towards his patient and hesitated. Then he brought a chair and sat down at the bedside.

Sir Richmond opened his eyes and regarded him with a slight frown.

"A case of pneumonia," said the doctor, "after great exertion and fatigue, may take very rapid and unexpected turns."

Sir Richmond, cheek on pillow, seemed to assent.

"I think if you want to be sure that Lady Hardy sees you again-- . . . If you don't want to take risks about that-- . . . One never knows in these cases. Probably there is a night train."

Sir Richmond manifested no surprise at the warning. But he stuck to his point. His voice was faint but firm. "Couldn't make up anything to say to her. Anything she'd like."

Dr. Martineau rested on that for a little while. Then he said: "If there is anyone else?"

"Not possible," said Sir Richmond, with his eyes on the ceiling.

"But to see?"

Sir Richmond turned his head to Dr. Martineau. His face puckered like a peevish child's. "They'd want things said to them...Things to remember...I CAN'T. I'm tired out."

"Don't trouble," whispered Dr. Martineau, suddenly remorseful.

But Sir Richmond was also remorseful. "Give them my love," he said. "Best love...Old Martin. Love."

Dr. Martineau was turning away when Sir Richmond spoke again in a whisper. "Best love...Poor at the best. . . ."

He dozed for a time. Then he made a great effort. "I can't see them, Martineau, until I've something to say. It's like that. Perhaps I shall think of some kind things to say--after a sleep. But if they came now...I'd say something wrong. Be cross perhaps. Hurt someone. I've hurt so many. People exaggerate...People exaggerate--importance these occasions."

"Yes, yes," whispered Dr. Martineau. "I quite understand."

Section 4

For a time Sir Richmond dozed. Then he stirred and muttered.
"Second rate. . . Poor at the best. . . Love. . . Work.
All. . ."

"It had been splendid work," said Dr. Martineau, and was not sure that Sir Richmond heard.

"Those last few days. . . lost my grip. . . Always lose my damned grip.

"Ragged them. . . . Put their backs upSilly....

"Never.... Never done anything--WELL

"It's done. Done. Well or ill....

"Done."

His voice sank to the faintest whisper. "Done for ever and ever ... and ever . . . and ever."

Again he seemed to doze.

Dr. Martineau stood up softly. Something beyond reason told him that this was certainly a dying man. He was reluctant to go and he had an absurd desire that someone, someone for whom Sir Richmond cared, should come and say good-bye to him, and for Sir Richmond to say good-bye to someone. He hated this lonely launching from the shores of life of one who had sought intimacy so persistently and vainly. It was extraordinary--he saw it now for the first time--he loved this man. If it had been in his power, he would at that moment have anointed him with kindness.

The doctor found himself standing in front of the untidy

writing desk, littered like a recent battlefield. The photograph of the American girl drew his eyes. What had happened? Was there not perhaps some word for her? He turned about as if to enquire of the dying man and found Sir Richmond's eyes open and regarding him. In them he saw an expression he had seen there once or twice before, a faint but excessively irritating gleam of amusement.

"Oh!--WELL!" said Dr. Martineau and turned away. He went to the window and stared out as his habit was.

Sir Richmond continued to smile dimly at the doctor's back until his eyes closed again.

It was their last exchange. Sir Richmond died that night in the small hours, so quietly that for some time the night nurse did not observe what had happened. She was indeed roused to that realization by the ringing of the telephone bell in the adjacent study.

Section 5

For a long time that night Dr. Martineau had lain awake unable to sleep. He was haunted by the figure of Sir Richmond lying on his uncomfortable little bed in his big bedroom and by the curious effect of loneliness produced by the nocturnal desk and by the evident dread felt by Sir Richmond of any death-bed partings. He realized how much this man, who had once sought so feverishly for intimacies, had shrunken back upon himself, how solitary his motives had become, how rarely he had taken counsel with anyone in his later years. His mind now dwelt apart. Even if people came about him he would still be facing death alone.

And so it seemed he meant to slip out of life, as a man might

slip out of a crowded assembly, unobserved. Even now he might be going. The doctor recalled how he and Sir Richmond had talked of the rage of life in a young baby, how we drove into life in a sort of fury, how that rage impelled us to do this and that, how we fought and struggled until the rage spent itself and was gone. That eddy of rage that was Sir Richmond was now perhaps very near its end. Presently it would fade and cease, and the stream that had made it and borne it would know it no more.

Dr. Martineau's thoughts relaxed and passed into the picture land of dreams. He saw the figure of Sir Richmond, going as it were away from him along a narrow path, a path that followed the crest of a ridge, between great darknesses, enormous cloudy darknesses, above him and below. He was going along this path without looking back, without a thought for those he left behind, without a single word to cheer him on his way, walking as Dr. Martineau had sometimes watched him walking, without haste or avidity, walking as a man might along some great picture gallery with which he was perhaps even over familiar. His hands would be in his pockets, his indifferent eyes upon the clouds about him. And as he strolled along that path, the darkness closed in upon him. His figure became dim and dimmer.

Whither did that figure go? Did that enveloping darkness hide the beginnings of some strange long journey or would it just dissolve that figure into itself?

Was that indeed the end?

Dr. Martineau was one of that large class of people who can neither imagine nor disbelieve in immortality. Dimmer and dimmer grew the figure but still it remained visible. As one can continue to see a star at dawn until one turns away. Or

one blinks or nods and it is gone.

Vanished now are the beliefs that held our race for countless generations. Where now was that Path of the Dead, mapped so clearly, faced with such certainty, in which the heliolithic peoples believed from Avebury to Polynesia? Not always have we had to go alone and unprepared into uncharted darkneses. For a time the dream artist used a palette of the doctor's vague memories of things Egyptian, he painted a new roll of the Book of the Dead, at a copy of which the doctor had been looking a day or so before. Sir Richmond became a brown naked figure, crossing a bridge of danger, passing between terrific monsters, ferrying a dark and dreadful stream. He came to the scales of judgment before the very throne of Osiris and stood waiting while dogheaded Anubis weighed his conscience and that evil monster, the Devourer of the Dead, crouched ready if the judgment went against him. The doctor's attention concentrated upon the scales. A memory of Swedengorg's Heaven and Hell mingled with the Egyptian fantasy. Now at last it was possible to know something real about this man's soul, now at last one could look into the Secret Places of his Heart. Anubis and Thoth, the god with the ibis head, were reading the heart as if it were a book, reading aloud from it to the supreme judge.

Suddenly the doctor found himself in his own dreams. His anxiety to plead for his friend had brought him in. He too had become a little painted figure and he was bearing a book in his hand. He wanted to show that the laws of the new world could not be the same as those of the old, and the book he was bringing as evidence was his own Psychology of a New Age.

The clear thought of that book broke up his dream by releasing a train of waking troubles. . . . You have been six months on Chapter Ten; will it ever be ready for

Osiris? . . . will it ever be ready for print? . . .

Dream and waking thoughts were mingled like sky and cloud upon a windy day in April. Suddenly he saw again that lonely figure on the narrow way with darkneses above and darkneses below and darkneses on every hand. But this time it was not Sir Richmond. . . . Who was it? Surely it was Everyman. Everyman had to travel at last along that selfsame road, leaving love, leaving every task and every desire. But was it Everyman? . . . A great fear and horror came upon the doctor. That little figure was himself! And the book which was his particular task in life was still undone. He himself stood in his turn upon that lonely path with the engulfing darkneses about him. . . .

He seemed to wrench himself awake.

He lay very still for some moments and then he sat up in bed. An overwhelming conviction had arisen--in his mind that Sir Richmond was dead. He felt he must know for certain. He switched on his electric light, mutely interrogated his round face reflected in the looking glass, got out of bed, shuffled on his slippers and went along the passage to the telephone. He hesitated for some seconds and then lifted the receiver. It was his call which aroused the nurse to the fact of Sir Richmond's death.

Section 6

Lady Hardy arrived home in response to Dr. Martineau's telegram late on the following evening. He was with her next morning, comforting and sympathetic. Her big blue eyes, bright with tears, met his very wistfully; her little body seemed very small and pathetic in its simple black dress. And yet there was a sort of bravery about her. When he came into

the drawing-room she was in one of the window recesses talking to a serious-looking woman of the dressmaker type. She left her business at once to come to him. "Why did I not know in time?" she cried.

"No one, dear lady, had any idea until late last night," he said, taking both her hands in his for a long friendly sympathetic pressure.

"I might have known that if it had been possible you would have told me," she said.

"You know," she added, "I don't believe it yet. I don't realize it. I go about these formalities--"

"I think I can understand that."

"He was always, you know, not quite here It is as if he were a little more not quite here I can't believe it is over. . . ."

She asked a number of questions and took the doctor's advice upon various details of the arrangements. "My daughter Helen comes home to-morrow afternoon," she explained. "She is in Paris. But our son is far, far away in the Punjab. I have sent him a telegram. . . . It is so kind of you to come in to me."

Dr. Martineau went more than half way to meet Lady Hardy's disposition to treat him as a friend of the family. He had conceived a curious, half maternal affection for Sir Richmond that had survived even the trying incident of the Salisbury parting and revived very rapidly during the last few weeks. This affection extended itself now to Lady Hardy. Hers was a type that had always appealed to him. He could understand so

well the perplexed loyalty with which she was now setting herself to gather together some preservative and reassuring evidences of this man who had always been; as she put it, "never quite here." It was as if she felt that now it was at last possible to make a definite reality of him. He could be fixed. And as he was fixed he would stay. Never more would he be able to come in and with an almost expressionless glance wither the interpretation she had imposed upon him. She was finding much comfort in this task of reconstruction. She had gathered together in the drawingroom every presentable portrait she had been able to find of him. He had never, she said, sat to a painter, but there was an early pencil sketch done within a couple of years of their marriage; there was a number of photographs, several of which--she wanted the doctor's advice upon this point--she thought might be enlarged; there was a statuette done by some woman artist who had once beguiled him into a sitting. There was also a painting she had had worked up from a photograph and some notes. She flitted among these memorials, going from one to the other, undecided which to make the standard portrait. "That painting, I think, is most like," she said: "as he was before the war. But the war and the Commission changed him,--worried him and aged him. . . . I grudged him to that Commission. He let it worry him frightfully."

"It meant very much to him," said Dr. Martineau.

"It meant too much to him. But of course his ideas were splendid. You know it is one of my hopes to get some sort of book done, explaining his ideas. He would never write. He despised it--unreasonably. A real thing done, he said, was better than a thousand books. Nobody read books, he said, but women, parsons and idle people. But there must be books. And I want one. Something a little more real than the ordinary official biography. . . . I have thought of young Leighton,

the secretary of the Commission. He seems thoroughly intelligent and sympathetic and really anxious to reconcile Richmond's views with those of the big business men on the Committee. He might do. . . . Or perhaps I might be able to persuade two or three people to write down their impressions of him. A sort of memorial volume. . . . But he was shy of friends. There was no man he talked to very intimately about his ideas unless it was to you . . . I wish I had the writer's gift, doctor."

Section 7

It was on the second afternoon that Lady Hardy summoned Dr. Martineau by telephone. "Something rather disagreeable," she said. "If you could spare the time. If you could come round.

"It is frightfully distressing," she said when he got round to her, and for a time she could tell him nothing more. She was having tea and she gave him some. She fussed about with cream and cakes and biscuits. He noted a crumpled letter thrust under the edge of the silver tray.

"He talked, I know, very intimately with you," she said, coming to it at last. "He probably went into things with you that he never talked about with anyone else. Usually he was very reserved, Even with me there were things about which he said nothing."

"We did," said Dr. Martineau with discretion, "deal a little with his private life.

"There was someone--"

Dr. Martineau nodded and then, not to be too portentous, took and bit a biscuit.

"Did he by any chance ever mention someone called Martin Leeds?"

Dr. Martineau seemed to reflect. Then realizing that this was a mistake, he said: "He told me the essential facts."

The poor lady breathed a sigh of relief. "I'm glad," she said simply. She repeated, "Yes, I'm glad. It makes things easier now."

Dr. Martineau looked his enquiry.

"She wants to come and see him."

"Here?"

"Here! And Helen here! And the servants noticing everything! I've never met her. Never set eyes on her. For all I know she may want to make a scene." There was infinite dismay in her voice.

Dr. Martineau was grave. "You would rather not receive her?"

"I don't want to refuse her. I don't want even to seem heartless. I understand, of course, she has a sort of claim. " She sobbed her reluctant admission. "I know it. I know. . . . There was much between them."

Dr. Martineau pressed the limp hand upon the little tea table. "I understand, dear lady," he said. "I understand. Now . . . suppose I were to write to her and arrange--I do not see that you need be put to the pain of meeting her. Suppose I were to meet her here myself?"

"If you COULD!"

The doctor was quite prepared to save the lady any further distresses, no matter at what trouble to himself. "You are so good to me," she said, letting the tears have their way with her.

"I am silly to cry," she said, dabbing her eyes.

"We will get it over to-morrow," he reassured her. "You need not think of it again."

He took over Martin's brief note to Lady Hardy and set to work by telegram to arrange for her visit. She was in London at her Chelsea flat and easily accessible. She was to come to the house at mid-day on the morrow, and to ask not for Lady Hardy but for him. He would stay by her while she was in the house, and it would be quite easy for Lady Hardy to keep herself and her daughter out of the way. They could, for example, go out quietly to the dressmakers in the closed car, for many little things about the mourning still remained to be seen to.

Section 8

Miss Martin Leeds arrived punctually, but the doctor was well ahead of his time and ready to receive her. She was ushered into the drawing room where he awaited her. As she came forward the doctor first perceived that she had a very sad and handsome face, the face of a sensitive youth rather than the face of a woman. She had fine grey eyes under very fine brows; they were eyes that at other times might have laughed very agreeably, but which were now full of an unrestrained sadness. Her brown hair was very untidy and parted at the side like a man's. Then he noted that she seemed to be very

untidily dressed as if she was that rare and, to him, very offensive thing, a woman careless of her beauty. She was short in proportion to her broad figure and her broad forehead.

"You are Dr. Martineau?" she said. "He talked of you." As she spoke her glance went from him to the pictures that stood about the room. She walked up to the painting and stood in front of it with her distressed gaze wandering about her. "Horrible!" she said. "Absolutely horrible! . . . Did SHE do this?"

Her question disconcerted the doctor very much. "You mean Lady Hardy?" he asked. "She doesn't paint."

"No, no. I mean, did she get all these things together? "

"Naturally," said Dr. Martineau.

"None of them are a bit like him. They are like blows aimed at his memory. Not one has his life in it. How could she do it? Look at that idiot statuette! . . . He was extraordinarily difficult to get. I have burnt every photograph I had of him. For fear that this would happen; that he would go stiff and formal--just as you have got him here. I have been trying to sketch him almost all the time since he died. But I can't get him back. He's gone."

She turned to the doctor again. She spoke to him, not as if she expected him to understand her, but because she had to say these things which burthened her mind to someone. "I have done hundreds of sketches. My room is littered with them. When you turn them over he seems to be lurking among them. But not one of them is like him."

She was trying to express something beyond her power. "It is as if someone had suddenly turned out the light."

She followed the doctor upstairs. "This was his study," the doctor explained.

"I know it. I came here once," she said.

They entered the big bedroom in which the confined body lay. Dr. Martineau, struck by a sudden memory, glanced nervously at the desk, but someone had made it quite tidy and the portrait of Aliss Grammont had disappeared. Miss Leeds walked straight across to the coffin and stood looking down on the waxen inexpressive dignity of the dead. Sir Richmond's brows and nose had become sharper and more clear-cut than they had ever been in life and his lips had set into a faint inane smile. She stood quite still for a long time. At length she sighed deeply.

She spoke, a little as though she thought aloud, a little as though she talked at that silent presence in the coffin. "I think he loved," she said. "Sometimes I think he loved me. But it is hard to tell. He was kind. He could be intensely kind and yet he didn't seem to care for you. He could be intensely selfish and yet he certainly did not care for himself. . . . Anyhow, I loved HIM. . . . There is nothing left in me now to love anyone else--for ever. . . ."

She put her hands behind her back and looked at the dead man with her head a little on one side. "Too kind," she said very softly.

"There was a sort of dishonesty in his kindness. He would not let you have the bitter truth. He would not say he did not love you. . . ."

"He was too kind to life ever to call it the foolish thing it is. He took it seriously because it takes itself seriously. He worked for it and killed himself with work for it "

She turned to Dr. Martineau and her face was streaming with tears. "And life, you know, isn't to be taken seriously. It is a joke--a bad joke--made by some cruel little god who has caught a neglected planet. . . . Like torturing a stray cat. . . . But he took it seriously and he gave up his life for it.

"There was much happiness he might have had. He was very capable of happiness. But he never seemed happy. This work of his came before it. He overworked and fretted our happiness away. He sacrificed his happiness and mine."

She held out her hands towards the doctor. "What am I to do now with the rest of my life? Who is there to laugh with me now and jest?

"I don't complain of him. I don't blame him. He did his best--to be kind.

"But all my days now I shall mourn for him and long for him. . . . "

She turned back to the coffin. Suddenly she lost every vestige of self-control. She sank down on her knees beside the trestle. "Why have you left me!" she cried.

"Oh! Speak to me, my darling! Speak to me, I TELL YOU! Speak to me!"

It was a storm of passion, monstrously childish and dreadful. She beat her hands upon the coffin. She wept loudly and fiercely as a child does....

Dr. Martineau drifted feebly to the window.

He wished he had locked the door. The servants might hear and wonder what it was all about. Always he had feared love for the cruel thing it was, but now it seemed to him for the first time that he realized its monstrous cruelty.
